One of the worst terrorist attacks occurred in 2004 in Tashkent, Uzbekistan, when suicide bombers killed 47 people. The Islamic Movement of Uzbekistan, an organisation affiliated with Al-Qaeda and Islamic Jihad claimed responsibility. Uzbek President, Islam Karimov claimed the perpetrators were ex-members of Hizb-ut-Tahrir.

Uzbekistan

Russia conquered the territory of present-day Uzbekistan in the late 19th century, later establishing a socialist republic in 1924. During the Soviet era, intensive production of "white gold" (cotton) and grain led to overuse of agrochemicals and the depletion of water supplies, leading to significant degradation of the Aral Sea. Independent since 1991, the country is ruled by President Islam Karimov and borders Afghanistan which allows for narcotics, money and other goods to enter and pass through the country. Corruption, narcotics trafficking, and smuggling generate the majority of illicit proceeds. Local and regional drug trafficking and other organised criminal gangs control narcotics markets and proceeds from other criminal activities, such as smuggling of cash, gold, precious stones. Current concerns also include terrorism by Islamic militants.

Islamic Movement of Uzbekistan (IMU) - Afghanistan/Pakistan

The Islamic Movement of Uzbekistan's was designated as a US Foreign Terrorist Organisation on 25 September 2000. The Islamic Movement of Uzbekistan's goal is to overthrow the Uzbek regime and establish an Islamic

state. For most of the past decade, however, the group recruited members from other Central Asian states and Europe and has focused on fighting in Afghanistan and Pakistan. The IMU has a relationship with the Taliban and Tehrik-e Taliban Pakistan (TTP).

In 2011, IMU's leadership cadre remained based in Pakistan's Taliban-controlled North Waziristan and operated primarily along the Afghanistan-Pakistan border and northern Afghanistan. Top IMU leaders have integrated themselves into the Taliban's shadow government in the northern provinces. Operating in cooperation with each other, the Taliban and the IMU have expanded their presence throughout northern Afghanistan and established training camps in the region. Since the beginning of Operation Enduring Freedom, the IMU has been predominantly focused on attacks against US and Coalition soldiers in Afghanistan. In late 2009, NATO forces reported an increase in IMU-affiliated foreign fighters in Afghanistan. In 2010, the IMU continued to fight in Afghanistan and they claimed credit for the 19 September ambush that killed 25 Tajik troops in Tajikistan. On 15 October 2011, IMU claimed responsibility for a suicide assault on a US-led Provincial Reconstruction Team base in the Afghan province of Panjshir. The attack began when a suicide bomber detonated a car packed with explosives at the front gate, killing two Afghan civilians and wounding two security guards at the base. The IMU receives support from a large Uzbek diaspora, terrorist organisations, and donors from Europe, Central and South Asia, and the Middle East.

For details of other groups agitating in the region see Middle East Sections and in East Asia Sections above concerning East Turkestan.

Islamic Jihad Group - Uzbekistan

The Islamic Jihad Group (IJG) is a violent terrorist organisation responsible for several high-profile bombings in Uzbekistan. Islamic Jihad Group is a splinter organisation from the Islamic Movement of Uzbekistan (IMU).

The IJG was previously unknown until April 2004 when the group claimed responsibility for a series of suicide bombings around Tashkent and Bukhara, which killed 47 people. The attacks targeted local government offices, as well as a crowded market. Although IJG released a statement claiming responsibility for the bombings, officials doubted the existence of the unknown group, and blamed other extremist organisations. On 30 July 2004, IJG carried out simultaneous bombing attacks on the US Embassy, the Israeli Embassy, and the Uzbek Prosecutor General, killing at least two people and wounding several. The attacks were highly sophisticated, and they cemented IJG's status as a real terrorist threat in Central Asia. In their claim of responsibility, the IJG wrote: "A group of young Muslims executed martyrdom operations that put fear in the apostate government and its infidel allies, the Americans and Jews. The Mujahideen belonging to Islamic Jihad Group attacked both

the American and Israeli embassies as well as the court building where the trials of a large number of the brothers from the Group had begun. These martyrdom operations that the group is executing will not stop, God willing. It is for the purpose of repelling the injustice of the apostate government and supporting the jihad of our Muslim brothers in Iraq, Palestine, Afghanistan, the Hijaz, and in other Muslim countries ruled by infidels and apostates."

Although IJG has not publicly elucidated their goals and philosophy, from their background and statements it is clear that they are deeply opposed to the current authoritarian-secular rule in Uzbekistan, and wish to set up an Islamic state in its place. Besides being closely linked with IMU, many officials speculate that IJG has close ties to Al-Qaeda given the sophisticated nature of their attacks and targets. The IJG has been designated as a terrorist organisation first by the US in 2005.

Kazakhstan

Ethnic Kazakhs, a mix of Turkic and Mongol nomadic tribes who migrated into the region in the 13th century united as a single nation, before Russia was conquered in the 18th Century, and Kazakhstan became a Soviet Republic in 1936. Since the break up of the Soviet Union and independence Kazakhstan has had one person one party rule under Nursultan Nazarbayev, who assumed leadership of the Soviet Republic, siding with Boris Yeltsin and so able to secure his authority which remains to this day.

Timur Kulibayev is the son-in-law of the President of Kazakhstan marrying Dinara Nazarbayeva and has been for some time seen as the heir apparent to the President. Kulibayev plays a prominent role in the business world, having held a number of commanding positions in the Kazakh economy, including the chairmanships of the sovereign wealth fund, (Timur Kulibayev resigned from the post of Chairman of the Board of Samruk-Kazyna after riots in 2011), the national oil and gas company, and the national railway company. Kulibayev also sits on the board of Russian state-owned energy giant Gazprom. Leaked US diplomatic cables alleged that Timur Kulibayev was the "ultimate controller of 90%" of Kazakhstan's economy.

Kazakhstan's economy is larger than those of all the other Central Asian states largely due to the country's vast natural resources.

Kazakhstan is a producer of cannabis for CIS markets, as well as limited cultivation of opium poppy and ephedra (for the drug ephedrine) and a transit point for Southwest Asian narcotics bound for Russia and the rest of Europe as well as a significant consumer of opiates. Governmental corruption, an organised crime presence and a large shadow economy make the country vulnerable to money laundering and terrorist finance.

Oceania

Oceania includes all the islands of the South Pacific, divided into the subregions of Melanesia, Micronesia, and Polynesia as well as Australasia and in some definitions even Malaysia, but in others not. Whilst Australia is the largest country in the region, itself being the 6th largest in the World with a population of just over 20 million, the region itself is made up of 14 Countries in all and 25 dependencies and home to more than 35 million people. Oceania was named after the pacific ocean which surrounds it in 1812 by French geographer Conrad Malte-Brun and is derived from the french word Océanie. Micronesia is the northern most region of Oceania, parallel to the Philippines, including Kiribati and the Marshall Islands. Melanesia is directly south of Micronesia and includes New Guinea, Vanuatu, Fiji and the Solomon Islands. Polynesia is west of both Micronesia and Melanesia and includes Tonga, the Marshall Islands Guam and Easter Islands, Tuvalu and the Cook Islands. Australasia is usually considered to include both Australia and New Zealand, though some definitions will include also New Guinea and nearby islands and in some other definitions New Zealand is also considered part of Polynesia.

Australia

Clearly the economic dominance of Australia in the region would also suggest predominance in organised crime. Transnational gangs are involved in common activities such as drugs but demonstrate an ability to enter into new illicit activities. As is often the case world wide, gangs in Australia often form on ethnic lines, and there are Chinese Triads, Japanese Yakuza and Vietnamese gangs, but also include Lebanese, Italian, Romanian and even Colombian Syndicates. Of the Triad groups the 14K is well established in Sydney with branches in the other major cities. Also active are the Big Circle syndicate. In Melbourne as well as those already mentioned are the Sun Yee On and the Wo Yee Tong and the Wo Shing Wo. The latter two are sub-groups of the Wo Group. These gangs are active in blackmail, extortion, and illegal gambling as well as the ubiquitous heroin imports. Vietnamese groups have now grown substantially and include armed robbery and heroin distribution in their repertoire. The Australian Federal Police have for several years campaigned against The Yakuza whom it is felt are trying to become established in Queensland. The presence of Italian gangs in Australia is that of a national network of family relationships and areas of mutual interest rather than some sort of Mafia style organisation. They are mainly involved in the growing of cannabis but

some are expanding into the importation and distribution of heroin and cocaine. As a consequence they are also involved in money laundering. On a smaller scale the same could be said for the Lebanese except that they import hashish and heroin from Lebanon. Romanian groups are importing small but significant amounts of heroin and have been involved in social security frauds. The Colombian Cartels use Australia as a transit country for drugs and there is increasing evidence that the country has a laundering function for them as well. There are also worrying signs that they are steadily expanding by increased links to other groups and organically in their own right. Most of the cannabis and amphetamines consumed are also produced within Australia, whilst heroin comes from the Golden Triangle countries and cocaine from South America. Sydney is the main gateway for imported drugs. The immensely long coastline of Australia is clearly not easy to police and shipping, particularly container shipping is increasing all the time. Asian groups are particularly specializing in markets like heroin and are now known to be able to corrupt public and private officials or buy high technology equipment to protect their operations such as electronic scanners to warn them of surveillance. Drugs are the main source of money needing laundering but most other criminal activities are generating illicit funds needing disguise. Gold Smuggling is a facet of laundering in Australia as are Casino's and the luxury goods industry. Illegal trafficking of people is also a growing problem with syndicates of Iraqis and Afghans operating route overland from the Middle East to Indonesia. From there fishing boats take the 'illegals' onto the North West coast. Outlaw Motorcycle Gangs are present in Australia, with international outlaw clubs like the Bandidos and Hells Angels and Gypsy Joker as well as locals such as the Coffin Cheaters, the Comanchero, the Nomads, the Notorious and the largest of the Rebels who have 29 chapters and are run by former boxer and founding member, Alex Vella with around 2,000 members. Youth Gangs have flourished throughout many of the large cities of Australia, especially Melbourne and Sydney, but also more recently throughout the outer suburbs of Brisbane as well. There have also been a few cases of Australian gangs imitating American street gangs such as the Bloods, including gangs such as Butch Lesbian Soldiers (BLS), Village People and FLC. New Zealand's experience of organised crime started in the 1970s. A gang, run by Terry Clark and his English followers dominated drug trafficking and other crimes, but following his imprisonment, others moved in to fill the vacuum. Today organised crime is largely carried out by motor cycle and street gangs, and criminal elements of the Asian community. The major suppliers of drugs, mainly marijuana amphetamines and LSD are the motor cycle gangs and they also are known to deal in firearms. They also have interests in massage parlours and are involved in debt collection! The Hells Angels (Auckland) was in fact the first chapter established outside California (1961). Also two other US groups, The Bandidos and the Outlaws also have interests on the Islands.

Terrorist Designations by Australia

The Australian government lists 18 organisations,²² largely Al-Qaeda and related Islamic terrorist groups including; Abu Sayyaf Group; Al-Qaeda (AQ); AQAP; AQIM; AQI; Al-Shabaab; Ansar al-Islam (formerly known as Ansar al-Sunna); Hamas' Izz al-Din al-Qassam Brigades; Hezbollah External Security Organisation; Islamic Movement of Uzbekistan (IMU); Jabhat al-Nusra; Jaish-e-Mohammed (JeM); Jamiat ul-Ansar (JuA) formerly known as Harakat Ul-Mujahideen; Jemaah Islamiyah (JI); Kurdistan Workers Party (PKK); Lashkar-e-Jhangvi (LeJ); Lashkar-e-Tayyiba (LeT); and the Palestinian Islamic Jihad (PIJ).

New Zealand

The Polynesian Maori reached New Zealand in about AD800. In 1840, their chieftains entered into a compact with Britain, the Treaty of Waitangi, in which they ceded sovereignty to Queen Victoria while retaining territorial rights. That same year, the British began the first organised colonial settlement. A series of land wars between 1843 and 1872 ended with the defeat of the native peoples. The British colony of New Zealand became an independent nation in 1907 and supported the UK militarily in both world wars.

The Asian community in New Zealand has increased dramatically in the last decade as a result of increased immigration and has unwittingly brought with it gangs such as 14K, Sun Yee On and the Wo groups. Other groups emanate from Thailand, Vietnam, Malaysia, Singapore and Japan. Their repertoire includes kidnapping, extortion, fraud, burglary, smuggling (including Humans) and money laundering. Almost all of the heroin traffic is now said to be controlled by these gangs. Proportionately the Asians are far more likely to be arrested than those of European stock. The Maoris are however at the top of the list being predominant in the Mongrel Mob, Black Power and Nomad gangs.

Recently a worrying trend has been collusion between the Mongrel Mob and Asian organised crime.

Mongrel Mob

The Mongrel Mob is a New Zealand gang, originally formed in Hawke's Bay in the 1960s and early-1970s. The gang offers a surrogate 'family' for young men, most of whom are often alienated from their family via joining. Members are from New Zealand's Maori, European or other Polynesian ethnic groups, with Maori or part Maori predominating. The gang currently operates in many cities within New Zealand; some of the best known chapters include Mongrel Mob Hastings, Mongrel Mob Porirua and Mongrel Mob Notorious. Mob members are notorious for their tattooed faces and red bandannas.

Pacific Islands

Outside of Australasia the main money laundering risks are in the Pacific islands that have developed an off-shore banking offering, including company formation, the main ones being, The Solomon Islands, Vanuatu and Nauru. For example, Vanuatu has connections in particular to Thailand, Hong Kong, UK and France. More than 100 banks are registered and companies incorporated run into the thousands. Whilst many of these establishments are used for legitimate purposes, it is often suggested that the lack of transparency and ineffective oversight make them attractive vehicles for criminals who use these corporations to establish bank accounts in other countries and then launder through these foreign banks. There is no real evidence yet of transnational criminal groups operating outside Australasia, although Guam is generally regarded as possibly the most important transshipment point for the heroin in the Pacific which moves from South East Asia to the US Drug traffickers find it useful to 'break bulk' of heroin shipments and use the US Postal System in Guam for smaller quantities

Vanuatu

Vanuatu, previously known as New Hebrides, welcomed waves of colonizers, in the millennia preceding European exploration in the 18th century. This settlement pattern accounts for the complex linguistic diversity found on the archipelago to this day. The British and French, who settled the New Hebrides in the 19th century, agreed in 1906 to an Anglo-French agreement, which administered the islands until independence in 1980, when the new name of Vanuatu was adopted.

Vanuatu is one of the few pure tax havens in the world and particularly in Asia and Oceania it hosts an established pure offshore financial centre located in the South Pacific Region. The finance centre was established in 1971 and has many classic offshore financial features, including: no exchange controls; no reporting in relation to movements of funds; confidentiality being assured, particularly for offshore entities, due to classic secrecy provisions; express establishment of International Business Companies (IBC) (within 1 hour on special request); an IBC need not lodge any other returns and need not disclose the shareholding.

Whilst many of these classic features have legitimacy, they also present opportunities and exhibit vulnerabilities which may encourage criminal enterprises and money launderers to flourish and develop. In particular allegations have been made that Vanuatu has been used aggressively for money laundering by the Russian Mafia.

Americas

The history of the Americas; North, South, and Central America, and the Caribbean, was first inhabited by people migrating to these areas from Asia during the height of the Ice Age, most likely over the then Bering land bridge across what is now Alaska.

Cultural traits brought by the first immigrants later evolved and spawned such cultures as Iroquois on North America and Pirahá of South America. These cultures later developed into civilizations, such as the Norte Chico, Cahokia, Zapotec, Toltec, Olmec, Maya, Aztec, Purepecha, Chimor, Mixtec, Moche, Mississippian, Puebloan, Totonac, Teotihuacan, Huastec people, Tarascan, Izapa, Mazatec, Muiscas, and the Inca.

Around 1000, the Vikings established a short-lived settlement in Newfoundland, but it wasn't until Spain sponsored a major exploration led by Christopher Columbus in 1492; that led to the extensive European colonisation of the Americas. The Europeans brought old world diseases which are thought to have caused catastrophic epidemics and a huge decrease of the native population. Columbus came at a time in which many technical developments in sailing techniques and communication made it possible to report his voyages easily and to spread word of them throughout western Europe. It was also a time of growing religious, imperial and economic rivalries that led to a competition for the establishment of colonies.

America got its name, according to conventional wisdom, from the great Florentine explorer, astronomer and cartographer, Amerigo Vespucci who served first the Spanish and then Portuguese monarchs as a navigator, made three trips to the shores of the land that later would be called South America, in 1499, 1501 and 1503. During these journeys he made up several maps of the new territory, but the originals have not survived. Still later mapmakers seemingly copied these original maps and included a latinised version of Amerigo, placing the name over the location for Brazil, calling it Americus and America.

Whilst the term America has stuck it was often also described as the "New World" covering 28.4% of the world's total land area and home to more than 900 million people, with the most populous countries being the US, Brazil and Mexico and the most populous cities being Mexico City, Sao Paulo and New York City.

In 1494, Spain and Portugal were the two greatest maritime European powers in the world. Anticipating that new lands would be found to the west the two nations, with the blessing and authority of the Pope in Rome, agreed the Treaty of Tordesillas which asserted that all the land outside Europe should be shared exclusively between them. In Tenochtitlan (in what is now Mexico City) on the 1st of July 1520 the Aztec Emperor Montezuma died at the hands of the Spanish invaders led by Hernan Cortes. Thus began the process of imperial expansion that was dominated first by Spain and then Portugal, from Central America throughout the Southern Continent. They would soon be joined in particular in the Caribbean by other maritime powers such as The UK, Denmark, France and the Netherlands.

The formation of sovereign states in the New World begins with the US Declaration of Independence of 1776. The American Revolutionary War lasted until 1783. The Spanish colonies won their independence in the first quarter of the 19th century, in the Spanish American wars of independence. Simón Bolívar and José de San Martín, among others, led their independence struggle. Although Bolívar attempted to keep the Spanish-speaking parts of the continent politically allied, they rapidly became independent of one another as well.

Slavery has had a significant role in the economic development the New World after the colonization of the Americas by the Europeans. The cotton, tobacco, and sugar cane harvested by slaves became important exports for the US and the Caribbean countries.

From the 1823 Monroe Doctrine onwards, the main quasi-imperial push came however from the US.

Whether exerting influence by direct military occupation; coups or economic pressure the US have always seen Central America and beyond this South America as firmly within its sphere of influence. This history informs much of what happens in Central and South America today.

Whilst imperial and colonial powers have left their impressions across the region, both in the form of culture and language, the countries in the Region have matured in most cases as independent democratic nations, though many still retain major challenges. Many countries overcoming terrorist threats but succumbing to organised criminal gangs, not only from South and Central America and in particular from the drug trafficking organisations but also to North American gangs ranging from the traditional Italian American Mafia to Street Gangs, Prison Gangs and Outlaw Motorcycle Gangs.

United States

The US achieved its independence from Britain in 1776. The Union started with 13 States and expanded during the 19th and 20th centuries, adding 37 more states. The US became the world's leading industrial power at the turn of the 20th century and by the

21st Century was the Worlds only remaining superpower, after success in two World Wars and by defeating the Soviet Union in the so cold Cold War. The US has played a major role in outlawing dangerous drugs, calling for a war on drugs, outlawing corruption, aggressively targeting organised crime and financial crime, including going after the proceeds of all crimes and since the 9/11 attack on America is the leader in the so called war on terror, utilising sanctions and co-opting anti money laundering instruments accordingly.

US foreign policy has undoubtedly had an impact, though not all positive, for example, during the Cold War, corrupt and authoritarian regimes were supported as bulwarks against communism and or Islamism, and trafficking in drugs and arms have been at least tolerated in pursuit of other interests. Also notwithstanding the US governments undoubted attempts to combat criminal activity, the US is the world's largest market for criminally generated profits with over 35% of total global criminal proceeds generated in the US. The US is the largest consumer of cocaine (shipped from Colombia and other Andean countries through Mexico and the Caribbean), as well as a major consumer of heroin, marijuana, ecstasy and methamphetamine. It is also the largest consumer of counterfeit and pirated products, and a major destination for trafficked persons, for smuggled goods, for theft and robberies. The US has the largest financial markets in the world and is vulnerable to financial frauds, to insider dealing and market manipulation. There are many infamous examples that can be found throughout Part 2 Section 7 below.

As far as terrorism is concerned, the main threat remains Al-Qaeda and its affiliates and supporters related, although these threats remain largely overseas. Terrorism financing has been largely addressed with respect to US based financing from Charities and other similar groups, in particular for Al-Qaeda but also other Arab terrorist Groups such as Hamas and Hezbollah.

US Designated Terrorist Organisations

The US lists Organisations as Foreign Terrorist Organisations²³ and also places organisations on the Terror Exclusion List.²⁴ Foreign Terrorist Organisations:

Abu Nidal Organisation; Al-Aqsa Martyrs' Brigades; Hamas; Army of Islam; Islamic Jihad Group; Palestine Liberation Front; Popular Front for the Liberation of Palestine; Popular Front for the Liberation of Palestine-General Command; Abdullah Azzam Brigades; Al-Qaeda Kurdish Battalions (formerly Ansar al-Islam); Khata'ib Hezbollah; Kurdistan Workers' Party (PKK) including KADEK and Kongra-Gel; Tanzim Qa'idat al-Jihad fi Bilad al-Rafidayn formerly Jama'a al-Tawhid wa'al-Jihad; the al-Zarqawi Network; or Al-Qaeda in Iraq or Al-Qaeda in the Land of the Two Rivers; Asbat al-Ansar; Hezbollah; Kahane Chai; Party of Free Life of Kurdistan (PJAK); Jundallah; Al-Qaeda; Al-Qaeda in the Arabian Peninsula (AQAP); Al-Qaeda in the Islamic Maghreb (formerly GSPC); Haqqani Network; Harkat-ul-Jihad al-Islami (HUJI-B); Indian Mujahideen (IM); Aum Shinrikyo; Harakat ul-Mujahideen (HUM); Jaish-e-Mohammed (JEM); Lashkar-e Tayyiba (LET); Lashkar i Hangvi; Tehrik-i-Taliban (TTP); Jemaah Anshorut Tauhid (JAT); Jemaah Islamiya; Abu Sayyaf Group (ASG); Communist Party of the Philippines/New People's Army (CPP/NPA); Islamic Movement of Uzbekistan (IMU); Islamic Jihad Union (IJU); Al-Shabaab; Gama'a al-Islamiyya; Libyan Islamic Fighting Group (LIFG); Lord's Resistance Army; Ansar Dine; Continuity Irish Republican Army (CIRA); Real Irish Republican Army (RIRA); 32 County Sovereignty Movement; Revolutionary Organisation 17 November; Revolutionary Struggle; Revolutionary People's Liberation Party/Front; Euskadi Ta Askatasuna (ETA); National Liberation Army (ELN); Revolutionary Armed Forces of Colombia (FARC); United Self-Defense Forces of Colombia; Shining Path (SL).

US Gangs

The US is also home to approximately 1.4 million active Street, Prison and Outlaw Motorcycle gang members, comprising more than 33,000 gangs, are criminally active within the US. This represents a 40% increase from an estimated 1 million gang members in 2009, with Arizona, California, and Illinois with the highest number of gang members. As Gangs are expanding, they are evolving and posing an increasing threat to US communities. Many gangs are sophisticated criminal networks with members who are violent, distribute wholesale quantities of drugs, and develop and maintain close working relationships with members and associates of transnational criminal/drug trafficking organisations. Gangs are becoming more violent while engaging in less typical and lower-

risk crime, such as prostitution and white-collar crime. Gangs are more adaptable, organised, sophisticated, and opportunistic, exploiting new and advanced technology as a means to recruit, communicate discretely, target their rivals, and perpetuate their criminal activity.

Many communities are also experiencing an increase in ethnic-based gangs such as African, Asian, Caribbean, and Eurasian gangs. Major cities and suburban areas experience the most gang-related violence. Local neighborhood-based gangs and drug crews continue to pose the most significant criminal threat in most communities. Aggressive recruitment of juveniles and immigrants, alliances and conflict between gangs, the release of incarcerated gang members from prison, advancements in technology and communication, and Mexican Drug Trafficking Organisation (DTOs) involvement in drug distribution have resulted in gang expansion and violence. Gangs are increasingly engaging in non-traditional gang-related crime, such as alien smuggling, human trafficking, and prostitution. Gangs are also engaging in white-collar crime such as counterfeiting, identity theft, and mortgage fraud, primarily due to the high profitability and much lower visibility and risk of detection and punishment than drug and weapons trafficking. US-based gangs have established strong working relationships with Central American and DTOs to perpetrate illicit cross-border activity, as well as with some organised crime groups in some regions of the US. US-based gangs and DTOs are establishing wide-reaching drug networks; assisting in the smuggling of drugs, weapons, and illegal immigrants along the Southwest Border; and serving as enforcers for DTOs interests on the US side of the border. Many gang members continue to engage in gang activity while incarcerated. Family members play pivotal roles in assisting or facilitating gang activities and recruitment during a gang members' incarceration. Gang members in some correctional facilities are adopting radical religious views while incarcerated. Gangs encourage members, associates, and relatives to obtain law enforcement, judiciary, or legal employment in order to gather information on rival gangs and law enforcement operations. Gang infiltration of the military continues to pose a significant criminal threat, as members have been identified on both domestic and international military installations. Gang members who learn advanced weaponry and combat techniques in the military are at risk of employing these skills on the street when they return to their communities. Gang members are acquiring high-powered, military-style weapons and equipment which poses a significant threat because of the potential to engage in lethal encounters with law enforcement officers and civilians. Typically firearms are acquired through illegal purchases; straw purchases via surrogates or middle-men, and thefts from individuals,

vehicles, residences and commercial establishments. Gangs are becoming increasingly adaptable and sophisticated, employing new and advanced technology to facilitate criminal activity discreetly, enhance their criminal operations, and connect with other gang members, criminal organisations, and potential recruits nationwide and even worldwide.

Gang membership continues to expand throughout communities nationwide, as gangs evolve, adapt to new threats, and form new associations. Consequently, gang-related crime and violence is increasing as gangs employ violence and intimidation to control their territory and illicit operations. Many gangs have advanced beyond their traditional role as local retail drug distributors in large cities to become more organised, adaptable, and influential in large-scale drug trafficking. Gang members are migrating from urban areas to suburban and rural communities to recruit new members, expand their drug distribution territories, form new alliances, and collaborate with rival gangs and criminal organisations for profit and influence. Local neighborhood, hybrid and female gang membership is on the rise in many communities. Prison gang members, who exert control over many street gang members, often engage in crime and violence upon their return to the community.

American Street Gangs

The most notorious American street gangs have been formed from the streets of major cities like Los Angeles, which have spawned the [Crips](#) and the [Bloods](#), [Mara Salvatrucha -13 or MS-13](#) and the [18th Street Gang](#), the [Latin Kings](#), [Wah Ching](#) and the [Black Family](#). First generation gangs are traditional street or prison gangs, essentially focussing on events within a set area, often known as their turf. Protection of their designated area and group loyalty are commonly the primary focus of first generation gangs. Their criminal activity is predominantly opportunistic and of limited sophistication. Second generation gangs are groups focussed on entrepreneurial business, commonly in the drugs trade. Their markets are expanded and maintained using violence, and competition is combated in similar fashion. These gangs sometimes have an explicit political agenda and their operations extend over a larger area than first generation gangs, even crossing national borders. Third generation gangs are organisations that have formulated very clear political goals. These groups operate trans-nationally and even globally, engaging in often large scale mercenary activity.

The Crips - US

The Crips are a primarily, but not exclusively, African-American street gang, with some members being white, Hispanic and Asian and with an estimated

membership of 30-35,000. They were founded in Los Angeles, California, in 1969 by Raymond Washington and Stanley Williams. The states with the highest estimated number of Crips sets are California, Missouri, Oklahoma and Texas. Raymond Washington and Stanley Williams were the founders of the Crips in 1969, both aged 17. The two decided to unite their local gang members from the west and east sides of South Central Los Angeles in order to battle neighboring street gangs. Washington, who attended Fremont High School, was the leader of the East Side Crips, and Williams, who attended Washington High School, led the West Side Crips. The gang's name is said to stem from the amalgamation of the word 'crib' and the acronym R.I.P (Rest In Peace); denoting both the youth of many of its members as well as the birth to death commitment they make in joining the group. The Crips gang began as a small group, later expanding into a network of sects akin to a federal body made up of independently operating sub-units. The original set came into existence after a generational divide within the Avenues Gang led to the formation of the Baby Avenues, who later became the Avenue Crips and eventually the Crips. Lack of centralised authority can however undermine the group's cohesion, allowing feuds to develop between different sects despite their common Crip affiliation. Chief among these inter-Crip rivalries is the long enduring and highly costly feud between the 83 Eight Trays and the Rolling 60s. At their outset the Crips filled a void in the community for teenage youths left by the Black Panthers following the clamp down on this group by law enforcement. In particular the first Crips sects shared a similar ideology of 'armed vanguardism' with their Panther predecessors. The gangs attraction for disillusioned youth was increased further by the downturn in social and economic conditions seen in the Los Angeles area during the 1970s. As the US government introduced a political agenda intent on large-scale disinvestment and privatisation with significant cuts to welfare, unemployment levels soared, as did dissatisfaction with government provisions. Unsurprisingly this afforded the Crips a prime environment in which to recruit members. In terms of organisation each Crip sect claims a territorial patch known as a 'hood', and the proliferation of sects across geographical boundaries comes as a result of both cultural dissemination and structural expansion. Predominantly young people adopt the characteristic traits and image of Crip members in an act of emulation, a process that commonly leads them to join an existing sect or establish their own. Film and music have proved particularly effective avenues by which the gang's sects have proliferated, with Snoop Dogg standing as the foremost example of a Crip artist commanding a global following. In this way some

aspects of Crip culture and ideology have spread almost imperceptibly to distant places and people across the world, causing sects to spring up without a direct connection to existing gangs. The Crip gang identity is therefore largely one of association with characteristic traits rather than the extension of a cohesive network. For the most part the authority within these groups is horizontal, resulting in a more egalitarian relationship between members of the same age.

The Bloods - US

This gang was founded as a predominantly African American group in Los Angeles, borne out of the conflicts between black youth groups and the [Crips](#). It was the aggressive moves towards expansion made by the [Crips](#), attempting to force many other criminal sects into submission and assimilation, which also led to the formation of an allegiance between diverse sects seeking to resist this process. The [Crip](#) opposition at the group's core is evident in the Blood's subculture, formulated according to Dwight Conquergood by a process of 'affirmation by negation' whereby almost every aspect of Blood imagery is dictated by the need to oppose the symbolism of their rivals. Among the most universal symbol employed by the group is the wearing of a red bandana in the back right pocket of their trousers. Members also walk and dance in a signature style known as Blood-walk, and tend to avoid the use of the letter C in writing, replacing it with a K or writing it backwards as a sign of disparagement towards their [Crip](#) enemies. In terms of structure the Bloods maintain a very similar organisational framework to their [Crip](#) adversaries, functioning as individual sects bound together into a single federation style entity. Groups controlling an area are commonly known as 'hoods', within which may be a number of 'sets', each controlling a certain portion of the territory. The Bloods do not possess a formal written constitution or indeed a cemented body of rules. Rather the Blood code of conduct is learnt through interaction with existing members, with new joiners learning by the example of their seniors. While there have been inter-set conflicts within the Bloods, none of these disputes have escalated into a long-term feud. The high level of cohesion within the organisation is demonstrated by the ability of members to transfer from one area to another as required. Expansion of the group has occurred as a result of smaller sects seeking protection, as well as a recruitment boom driven by the cocaine epidemic of the 1980s. Incarceration of members in prisons in other US states has afforded Bloods the opportunity to establish sets across the country, and much like the [Crips](#), cultural dissemination also played an important role in the proliferation of sets, exposing a wide audience to the gang's subculture via film and music. Despite the deeply ingrained feud underwriting the identity of the Bloods,

the history of Crip-Blood relations has not always been one of perpetual conflict. In 1992 a Gang truce was called and peace talks between the two groups followed. While these ultimately failed prominent Blood members continued an attempt to politicise their group and sought to unite the *Crips* and *Bloods* as the vanguard of the new civil rights movement.

Mara Salvatrucha -13 - US

Also known as MS-13, MS and Mara, this gang with a total membership of perhaps 6-19,000, also originated in the streets of Los Angeles amongst predominantly Salvadoran individuals. These men migrated to the US during El Salvador's civil war where, many of them were drilled in the techniques of guerrilla warfare and thoroughly accustomed to a criminal way of life. The gang was originally formed as a means of self protection against the predations of pre-existing Mexican gangs in America, and members of MS-13 were known as Maras. MS-13 now operates in more than 42 states and the District of Columbia, with 6,000-10,000 members nationwide. Members work not only in illegal enterprises, but support themselves financially through involvement with legitimate business. Such involvement in legitimate enterprise can prove a convenient method of disguising the criminal connections of MS-13 members. The reach of the group has extended beyond the US, successfully establishing sects in Canada, Mexico and Central America, controlling village communities in El Salvador, Honduras and Guatemala. MS-13 is known to be heavily involved in the drugs trade and the human trafficking industry, fighting gun battles with Mexican law enforcement in US/Mexican border areas in defence of this revenue stream. Members of the group are also associated with robbery, extortion, prostitution, and the illegal arms trade. Recently their have been unconfirmed fears that MS-13 has embarked upon relations with political terrorists. Group member or Maras are noted for their identifying tattoos, predominantly gothic in style, which cover large portions of the torso and even face. A shaven head and goatee is also a common image amongst the members of MS-13. For the most part it is an all male organisation, though women are permitted to join and a few occupy prominent roles. As with most urban gangs, the majority of membership is derived from marginalised urban areas with high unemployment levels. Areas of economic and social degradation are highly susceptible to inroads from this organised crime network. Of particular concern for law enforcement organisations is MS-13's transnational reach, evidenced most prominently in its transnational communications. Much like the *Crips*, MS-13 also boasts its own culture, one that for MS-13 is centred on the wearing of tattoos and a brutal subcultural moral code. In 2004 the FBI

deemed the risk posed by MS-13 great enough to warrant the creation of a task force singularly dedicated to combating the group; the MS-13 National Gang Task Force (NGFT). This body coordinates efforts to bring law enforcement cases against the gang.

18th Street Gang - US

Though known by a single name 18th Street Gang is in fact a collection of around 20 individual and largely autonomous sects. Formed in the late 1960s in the Rampart areas of Los Angeles, it was at first a sub-sect of the larger Clanton 14th Street neighbourhood gang. The members of 18th street gangs adhere to a strict set of rules, forbidding that they partake in drug abuse and subjecting them to strictly disciplined code of conduct. It is sometimes referred to as the Children's Army due to the recruitment of youths during their elementary and middle school stages of education. 18th Street is involved in a wide spectrum of criminal activity, however it has a heavy involvement in the production of counterfeit immigration and naturalization documents and therefore plays a significant role in both illegal immigration and human trafficking. The gang's main rivalry exists with MS-13, another organised crime network originating in Los Angeles. The gang now has a total membership tally in excess of 30,000 and extends across North America. Originally a Hispanic gang, it is now a multi-racial and multi-national gang, including African Americans, Asians, Caucasians and Native Americans. Some experts suggest that the transnational capabilities of this gang have been aided by US deportation policies, effectively transporting American gang culture to central Mexico. This allowed strong links to form between sects located in America, and those establishing themselves in Central America. As a result of its size and international character it has been claimed that 18th Street gang may have made the transition from a second generation gang into a third generation gang.

Latin Kings - US

The Almighty Latin King and Queen Nation or the Latin Kings for short, is the largest and one of the most organised Hispanic street gangs in the US and was formed in Chicago in the 1940s and consisted predominantly of Puerto Rican males. Although it was created by Puerto Ricans, most factions of the gang are now dominated by Mexicans, specifically in the Midwest, and Chicago - the city with the second largest Mexican population in the US. Originally created with the philosophy of "overcoming racial prejudice" and creating an organisation of "Kings," the Latin Kings evolved into a criminal enterprise operating throughout the US under two umbrella factions—Motherland, also known as KMC (King Manifesto and Constitution),

and Bloodline (New York City). All members of the gang refer to themselves as Latin Kings and, currently, individuals of any nationality are allowed to become members. The membership of Latin Kings is estimated to be 20,000 to 35,000 for KMC and of Bloodline as many as 7,500. The gang's primary source of income is the street-level distribution of powder cocaine, crack cocaine, heroin, and marijuana. Latin Kings continue to portray themselves as a community organisation while engaging in a wide variety of criminal activities, including assault, burglary, homicide, identity theft, and money laundering. A Latin King gang member showing his gang tattoo, a lion with a crown, and signifying the 5 point star with his hands. According to John H Richardson in the February 1997 issue of the New York Magazine, "What also made the Kings different was their unique mixture of intense discipline, revolutionary politics and a homemade religion called "Kingism"—adding idealism and a bootcamp rigor to the usual gang camaraderie—a potent mixture for troubled ghetto kids whose lives lacked structure and hope".²⁵ The Latin Kings operate under strict codes and guidelines that are conveyed in a lengthy constitution, and they follow the teachings of the King Manifesto. According to the Latin King Manifesto, there are three stages or cycles of Nation life that constitute Kingism. They are: The Primitive Stage: wherein the neophyte member is expected to be immature and to be involved in such activities as gang-banging and being a street warrior without the full consciousness of Kingism. The Conservative Stage: which is where a member tires of the street gang life but is still accepting of life as it has been taught to him by the existing system that exploits all people of color, dehumanizes them, and maintains them under the conditions and social yoke of slavery. The New King Stage: where the member "learns that his ills lie at the roots of a system completely alien to his train of thought and his natural development, due to the components of dehumanization that exist therein". According to the Manifesto, "The New King is the end product of complete awareness, perceiving three-hundred and sixty degrees of enlightenment; his observations are free and independent; his thoughts are not clouded by any form of prejudice...For him there are no horizons between races, sexes and senseless labels", including gang labels for recognition. The New King no longer views the rival warrior as the cause of his ills; instead, he fights against the Anti-King System (social injustices and inequality), a system which seeks to deny and oppress his people: the Oppressed Third World Peoples.

Wah Ching - US

Wah Ching also known by slang as "Dub C" is a Chinese street gang that originated in San Francisco's Chinatown in the 1960s. The name literally translates to "Chinese youth," and the group was comprised primarily of immigrant Cantonese boys from Hong Kong who banded together to combat the American-born Chinese who would often pick on them. From its origin in 1966 as a street gang, the Wah Ching has developed into a criminal organisation, with alleged multi-international crime connections. During the 1970s and 1980s, the Wah Ching became an organisation that controlled most of the criminal vices in San Francisco's Chinatown and Los Angeles' Chinese communities. During that time, there may have been as many as 200 Wah Ching members and 500 criminal associates in California. Although primarily headquartered in San Francisco, they have developed strong associations with Asian organised crime groups and gang members in Los Angeles, Seattle, Vancouver, Toronto, Boston, and New York—along with close ties to the Sun Yee On and the 14K Triad in Hong Kong. Today in Los Angeles, The Bay Area California, Vancouver, and the rest of the West Coast of North America there is an estimated 3,000 gang members of Wah Ching and an estimated 1,000 more affiliated with the Wah Ching Gang. Wah Ching first received widespread media attention because of the 1977 Golden Dragon massacre involving another Chinese gang, the Chung Ching Yee (Joe Boys). The event took place at the Golden Dragon Restaurant in San Francisco's Chinatown. The cause of the attack was vandalism by Wah Ching to the graves of several Joe Boy members and a shootout that took place a few months earlier that left one Joe Boy dead and two others wounded. In the 1990s, a Hong Kong Triad called Wo Hop To set foot in San Francisco to take over all Asian Organised Crime in America. At that time Wah Ching and Wo Hop To became partners in crime activities. But later, turned into rivals after one of the Wah Ching leaders was gunned down at Purple Onion Restaurant in North Beach by members of the Wo Hop To, and that triggered a war. Soon, bullets were flying in the streets of Chinatown. More and more Wah Chings were being murdered and Wah Ching was ran out of San Francisco ever since. Wah Ching is located in the Northern California Bay Area and in Southern California. Their main enemies are the Asian Boyz (ABZ) and Vietnamese Boyz (VBZ). Both Wah Ching and Asian Boyz were featured on the television programme, America's Most Wanted, following a vicious shooting at a pool hall. Wah Ching's move from its original home in the Bay Area to the southern California region is a sources of dispute over gang turf. Currently, the gang have shown signs of mixed ideology. Despite the fact that Wah Ching in Chinese literally means "Chinese Youth," there are still some individuals of non-Chinese descent who claim Wah Ching. The gang now consists of a great

number of Vietnamese members, and the same with their rivals, the Vietnamese Boyz holds a great number of Chinese members. It is rumored that their reasoning for this is that it is the "Chinese Youth" gang, and that the members working or fighting for the gang do not have to be of Chinese ethnicity.

Black Guerrilla Family (Black Family, Black Vanguard) - US

Founded in 1966 by George Jackson, located in Marin County, California, the Black Guerrilla family was established in order to maintain Black dignity in prison as well as planning the overthrow of the US government. Standing as one of the most politically influenced gangs, the Black Guerrilla Family has very strong emotions towards Marxism. Today, the Black Family has about 50,000 gang members, many of which who are associated with other gangs. In order to join the gang, one must be black, and must be nominated by an already existing member. Recently it has been said that the gang is experiencing internal conflicts between old and new members

American Prison Gangs - US

Prison gangs are criminal organisations that originated within the penal system and operate within correctional facilities. With over 20 million incarcerated in the US it is no surprise that Prison Gangs are at their most endemic and organised here. Whilst the Gangs originate from the Prison system, released members operate also on the street and so compete with Street Gangs. The main Prison Gangs in the US are the Aryan Brotherhood, Mexican Mafia, La Nuestra Familia and the Texas Syndicate.

The Aryan Brotherhood - US

A white supremacist prison gang and crime syndicate, specialising in drug trafficking, extortion, inmate prostitution and commercial assassination with more than 20,000 members. The organisation was established in 1964 by a group of Irish Bikers directly opposing a militant black group known as the Black Guerrilla Family within San Quentin state prison. This feud has led to their allegiance with the Mexican prison gang Mexican Mafia (La eMe), a bond forged from mutual animosity towards the Black Guerrilla Family. As a result of their racially orientated initial aims the group was dismissed for a time as merely a marginal white supremacist movement. However since then the Aryan Brotherhood has grown to control prisons in California, Illinois, Texas, and Kansas. Despite operating from within prison, the reach of the Aryan Brotherhood extends far beyond their cell walls with released gang members maintaining communications between disparate prisons and exacting the commands of their

predominantly confined leaders. The ability of the Aryan Brotherhood to operate in this manner raises the question of how a criminal organisation already serving punishment sentences in secure facilities can possibly be combated further by law enforcement. A glimmer of hope was offered by the organisation's hierarchical structure, leading prosecutors in 2002 to seek death sentences for the group's most prominent members. By literally striking at the root of the Aryan Brotherhood they hoped to render this seemingly irrepressible group dysfunctional, embarking on the largest death penalty case in US history. It was however an endeavour that ultimately ended in failure, without a single case achieving the sought after death sentence. As a result the organisation's ruling echelon endured and the gang continued to proliferate. Other law enforcement attempts to reduce the influence of the group have met similarly unsuccessful ends, with state authorities separating members by moving them to other prisons. This approach served only to transplant shoots of the Aryan Brotherhood's network, with new sects forming in the other prisons to which group members were rather naively 'exiled'. The extent of the influence exerted by the Aryan Brotherhood within the US penal system is aptly demonstrated by the FBI's calculation that despite the gang constituting less than 1% of the total inmate population, they were nevertheless responsible for almost 18% of prison murders in 2005.²⁶

Mexican Mafia (La eMe) - US

The Mexican Mafia is a gang that has its strongholds in many prisons throughout the US. The gang was started in the 1950s in Tracy California. La eMe is well known for its drug trafficking, extortion, and murder. Closely knit with the Aryan Brotherhood, La eMe has made many contracts with ally gangs in order to kill other rival gang members. The gang doesn't have many rules for its members: no exposing the gang, no homosexual acts, and no cowardice. Mexican Mafia gang members also cannot practice the Christian religion. Once you join the Mexican Mafia and are released from jail, members are expected to send some of their earnings to those lead gang members who are still in jail. The gang isn't known to kill random civilians.

La Nuestra Familia - US

La Nuestra Familia is a Mexican American prison gang that originated in Northern California. The gang has been around since 1968 and has always been a rival of the Mexican Mafia. Many speculate that the gang was created just to deliver a blow to their rival gang. The gang puts a high focus on protecting as well as preserving the Chicano culture, especially while living in a society that is dominated by so many different races. La Nuestra Familia is known to control intra-

prison drug and sex trades. From the prison, high-up gang members call to those outside of the prison directing operations. The gang is known to kill anyone, sometimes members of the gang. Members of La Nuestra Familia are known to be serious criminals and the gang requires a two year time period to join. La Nuestra Familia requires that all gang members put the gang above family, money, drugs, and women. Women cannot join the gang but are sometimes used for running drugs.

Texas Syndicate (Texas 7) - US

Texas Syndicate is a State Prison gang created in response to other gangs like the Mexican Mafia (La eMe) and the Aryan Brotherhood. As the gangs were preying on inmates, especially in Texas, prisoners saw a need to have a rival gang to protect the Texas prisoners as a means of self-protection. The Texas 7 doesn't allow any members that are outside of the Hispanic race. Caucasian members are extremely frowned upon. The gang is made up generally of Mexican immigrant prisoners, not Mexicans who were born and raised in the US. In 2000, the gang was said to have about 1,000 members in jail, and about 830 outside of jail. Texas Syndicate is known for contract murder, gambling, prostitution, extortion, and drug trafficking. Many of the gang's leaders are imprisoned due to drug charges.

Ku Klux Klan - US

The first KKK was founded in 1865 as a charitable organisation to help widows and orphans in the American South at the end of the civil war, when the victorious Union government imposed a version of martial law on the south and began to enforce laws designed to end segregation. When a constitutional amendment granted black men the right to vote in 1870, the group turned to intimidation and violence to try to halt de-segregation and was dismantled in 1871 by law. A second organisation by the same name was founded in 1915 and yet a third incarnation surfaced during World War II. The KKK is a white supremacist group. It holds that only white, heterosexual Christians deserve civil rights. Its mandate, to reverse the equality granted African-Americans after the Civil War expanded as the social demographics of the US changed. It also opposes civil rights for Jews, gays, Catholics, and other ethnic and religious groups. Today, the various local groups that make up the Klan often focus their hatred on immigrants. Probably their most infamous attack was carried out in 1963 with the bombing of the 16th Street Baptist Church in Birmingham, Alabama. Four girls were killed in the bombing. The bombing helped prompt President Johnson to sign the Civil Rights Act of 1964. The Klan is organised as a brotherhood, and has state and national organisation. Some believe

it has as many as 8,000 members today in about 150 Klan chapters, although estimates range from around 2,500-6,000 possible members. They used a variety of tactics to harass and intimidate blacks and sympathetic whites including putting burning crosses on the lawns of individuals, arson, riding in groups by horseback near communities they wanted to frighten, and beating, rape and lynching (hanging). The KKK is distinguished by its unusual costume of long robes and tall, pointy white hats. These were adopted by the first KKK and meant to represent Klansmen as ghosts of angry Confederates. These costumes are still worn today and serve as an intimidating symbol that recalls the violent history of the organisation

Weathermen-Weather Underground - US

The "Weathermen" and later the "Weather Underground," was a splinter organisation founded in 1968 from the Students for a Democratic Society, during a tumultuous time in American and world history. The Students for a Democratic Society was the most prominent symbol was founded in 1960 in Ann Arbor, Michigan, and had a broad platform of goals related to their critiques of American military interventions overseas and their charges of racism and inequality in the US. To many it appeared that national liberation movements and left-leaning revolutionary or guerrilla movements were the future in order to change the world from one that seem still to prevail from the 1950s. The name comes from a song by singer Bob Dylan, "Subterranean Homesick Blues," which contains the line: "You don't need a weather man to know which way the wind blows." The Weather Underground came out of this ethos, but added a militant spin, believing that violent action was required to effect change. Other student groups, in other parts of the world, felt the same in the late 1960s. According to the group's 1970 "Declaration of War" against the US, its goal was to "lead white kids into armed revolution." In the view of the group, "revolutionary violence" was necessary to combat what they perceived as a "war" against African-Americans, and military actions overseas, such as the Vietnam war and the invasion of Cambodia. The group was responsible for a number of attacks, including 1969 "Days of Rage" riot staged by the Weathermen in Chicago, to protest the Vietnam war; the 1971 bombing of the US Capitol and the 1972 bombing of the Pentagon.

Special Focus 13 American Mafia - US

Whilst engaging in a broad range of illegal activities, such as drug trafficking, extortion, smuggling and human trafficking, the Italian American Mafia also get involved in a range of legal business activities, for example setting up industries such as garbage

collection and waste management, construction and cement pouring, supplying Labour and operating Cash intensive business, for example restaurants. There are estimated at over 3,000 members, based largely in NYC, New Jersey, Philadelphia, New England, Detroit and Chicago as well as Montreal in Canada.

The Italian American Mafia evolved into organised criminal gangs at the start of the Twentieth Century emerging as a result of the emigration from Italy of Sicilian Mafia members, known as La Cosa Nostra in the late Nineteenth Century and home grown gangs. In 1900 in New York, Black Hand Gang came to prominence to be succeeded in the 1910s and '20s by the Five Points Gang and in the 1920s in Chicago by Al Capone's Syndicate. "Al" Capone born in New York but plying his trade in Chicago during the Prohibition era in the 1920s was dedicated to smuggling alcohol and was involved in other illegal activities such as prostitution and the bribery of government officials. Despite his illegitimate occupation, Capone became a highly visible public figure. He made various charitable donations using the money he made from his activities, and was viewed by some to be a "modern-day Robin Hood", though was dubbed by the press Americas Public Enemy No 1. Capone was publicly criticised for his involvement in the Saint Valentine's Day Massacre, when seven rival gang members were executed. Capone was eventually convicted on federal charges of tax evasion, and sentenced to federal prison. His incarceration included a term at the new Alcatraz federal prison. He died in 1947.

Despite the governments best attempts to arrest and convict Al Capone for Prohibition violations, by Bureau of Prohibition agent Eliot Ness it was IRS agent Frank J. Wilson who would bring down Al Capone building a case against Capone for income tax violations, which the government decided was more likely material for a

conviction. Frank Wilson, would later become Chief of the US Secret Service between 1937 and 1946. In 1931 Capone was indicted for income tax evasion and various violations of the Volstead Act (Prohibition). Following a long trial, he was found guilty on some income tax evasion counts (the Volstead Act violations were dropped). The judge gave him an 11-year sentence along with heavy fines, and liens were filed against his various properties. His incarceration and the repeal of Prohibition in December 1933, which reduced a major source of revenue, diminished his power.

The key to the case was provided by Edward O'Hare, aka "Easy Eddie" who was a lawyer in Chicago, and working with Al Capone he made fortune. Eddie was the father of Medal of Honor Butch O'Hare, for whom Chicago's O'Hare Airport is now named. For his part in the conviction of Capone Eddie was eventually assassinated in 1939. Frank Wilson would say that, "On the inside of the gang I had one of the best undercover men I have ever known: Eddie O'Hare." By 1930, Eddie was working undercover for the IRS. It is believed Eddie directed investigator Wilson to the Capone bookkeeper who became a key witness at the 1931 trial, and he also helped break the code with which Capone's bookkeepers kept ledgers at various gambling houses throughout the 1920s. During the Capone trial, Eddie tipped the government that Capone had fixed the original jury that was to hear the case and thus alerted, the Judge switched juries with another federal judge just as the Capone tax trial was set to begin. By the end of the 1920s two primary gangs had emerged, leading to a war for control of organised crime in New York City. The murder of gang leader Joseph Masseria brought the war to an abrupt end, the two groups uniting to form America's "La Cosa Nostra". Within six months their leader was dead, but not before establishing La Cosa Nostra's code of conduct, setting up the "family" divisions and structure, and established procedures for resolving disputes. The new leader Charles "Lucky" Luciano became the new leader, set up a "Commission" to rule all La Cosa Nostra activities. The Commission included bosses from the main crime families. Luciano was deported back to Italy in 1946 based on his conviction for operating a prostitution ring. There, he became a liaison between the Sicilian Mafia and La Cosa Nostra.

One of the families that sat on the Commission was the Genovese family for whom one of the more colorful and celebrated Mafia figures worked, Benjamin "Bugsy" Siegel who was behind the large-scale development of metropolitan Las Vegas.

Siegel was born in 1906 in Brooklyn, New York City. Newspapers would refer to him as "Bugsy", (said to

be based on the slang "bugs", meaning "crazy", and used to describe his erratic behavior). In 1934, Siegel had traveled to Nevada searching for opportunities to provide illicit services to the men constructing the Hoover Dam. Whilst Siegel had been given control over the Nevada desert, he failed to exploit it. Its potential was well known, for example, Al Capone had earlier, eyed the empty desert in the mid-'30s, but never forged ahead with his plans of turning it into a hotel and gambling haven. In 1937, Mafia bosses sent Siegel to California to develop gambling ties with Los Angeles mobsters, where he enjoyed a Playboy lifestyle living in Beverly Hills. Bugsy would end up returning to the desert after the end of World War 2 first organizing labour and materials for the construction of a hotel in the middle of nowhere. The Hotel, the Flamingo would soon be owned and controlled by Bugsy for the Mafia and would be the very first Hotel Casino built on the now famous strip in Las Vegas. Bugsy never saw the success that would ultimately flow from the development of Las Vegas, with the Flamingo being built lavishly, massive cost overruns angered his bosses and Bugsy was killed soon after the opening.

With the repeal of Prohibition in 1933, the Mafia moved beyond bootlegging and into a range of underworld activities, from illegal gambling to loan-sharking to prostitution rings. The Mafia also involved itself in labour unions and legitimate businesses, including construction, garbage collection, trucking, restaurants and nightclubs and the New York garment industry, and raked in enormous profits through kickbacks and protection shakedowns. Instrumental to the Mafia's success was its ability to bribe corrupt public officials and business leaders, along with witnesses and juries in court cases.

In 1970, Congress passed the Racketeer Influenced and Corrupt Organisations (RICO) Act, which proved to be a powerful tool in the government's war on the Mafia, as it allowed prosecutors to go after crime families and their sources of revenue, both legal and illegal. During the 1980s and 1990s, RICO laws were used to convict numerous high-level mobsters. Some Mafiosi, faced with long prison sentences, broke the once-sacred code of omerta and testified against their fellow mobsters in exchange for a place in the federal witness-protection programme. By the start of the 21st century, the American Mafia was a shadow of its former self. However, the Mafia remained active in some of its traditional ventures, including loan-sharking and illegal gambling, and its involvement in labour unions and legitimate industries such as construction hasn't been completely eliminated.

Contributing to the Mafia's continued survival may be the fact that following the 11 September 2001, terrorist attacks on America, significant resources devoted to investigating organised crime (which had already seen cuts prior to 9/11) were shifted to counterterrorism work.

The Mafia's criminal activities are international with members and affiliates in Canada, South America, Australia, and parts of Europe. They are also known to collaborate with other international organised crime groups from all over the world, especially in drug trafficking. The major threats to American society posed by these groups are drug trafficking and money laundering. They have been involved in heroin trafficking for decades. Two major investigations that targeted the Italian American Mafia are known as the "French Connection" and the "Pizza Connection" See Part 2, Section 7, Criminal Cases for details.

The Mafia is still most active in New York City, but also New Jersey, Philadelphia, New England, Detroit, and Chicago. Among the five families of New York the current acting bosses include Vincent Badalamenti (Bonanno), Domenico Cefalu (Gambino), Carmine Persico (Colombo), Steven Crea (Lucchese), and Daniel Leo (Genovese). Outside of New York, the Rizzuto clan based in Montreal, Canada and led by Vito Rizzuto are often described as the Sixth Family. Beyond these, the Chicago Outfit is also important and is one of the largest crime syndicate in the US, being influenced by none other than Al Capone. One of the Chicago Outfit's biggest competitors is the Russian Mafia. Unlike most organised crime groups, the Outfit has members from other ethnicities besides Italian Americans. The leader is John "No Nose" DiFronzo.

The five families considered as the original Italian American Mafia crime families of New York City who dominated organised crime and known as La Cosa Nostra in the US since the 1930s are the Lucchese, Bonanno, Gambino, Genovese and Colombo. La Cosa Nostra with its deep ties to the Sicilian Mafia were not the only Italian Organised groups that became active in the US The Camorra or Neapolitan Mafia; the 'Ndrangheta or Calabrian Mafia; and the Sacra Corona Unita or United Sacred Crown from Puglia operate and together with La Cosa Nostra, the four groups have approximately 3,000 members in the US and more than 25,000 worldwide with perhaps 250,000 affiliates. It is believed that nearly 200 Camorra affiliates operate in the US and perhaps around the same number for the 'Ndrangheta or Calabrian Mafia. Very few Sacra Corona Unita members have been identified in the US.

Special Focus 14 Outlaw Motorcycle Gangs - US

Whilst the Hell's Angels are the best known of all the so called "Outlaw Motorcycle Gangs", the Outlaws, the Bandidos and the Pagans, make up the top 4 biker gangs with other gangs the Mongols, the Vagos Motorcycle Club and the Wheels of Soul, each of which stake

claim to territory in North America, and in Europe, particularly in the UK, Scandinavia and elsewhere, even in Australia. Membership is as high as 44,000 in the US with approximately 3,000 gangs or sub gangs in total.

An outlaw motorcycle gang (OMG) is a motorcycle subculture which has its roots in the post-World War II era of American society. It is generally centred around the use of cruiser motorcycles, particularly Harley-Davidsons and choppers, and a set of ideals which celebrate freedom, nonconformity to mainstream culture and loyalty to the biker group. In the US, such clubs were first considered "outlaw" as they are not sanctioned by the American Motorcyclist Association (AMA) and do not adhere to the AMA's rules. Instead the clubs have their own set of bylaws from which the values of the outlaw biker culture arise.

Some outlaw motorcycle clubs consider themselves "one percenters" and they wear a 1% patch on the jackets together with their main patches which designate the gang name, the gang logo and the territory claimed. The one percenter patch of honour is claimed to be a reference to a comment made by the American Motorcyclist Association (AMA) in which they stated that 99% of motorcyclists were law-abiding citizens, implying that the last one percent were outlaws. Numerous law enforcement agencies, in the USA, Canada, the UK and Australia consider OMGs to have significant involvement in both legal and criminal activity. Whilst OMG members may have legitimate jobs, and some of their activities within the Club are legitimate, such as Selling Bykes , Running Byke Events, and providing Security as well raising funds for Charities through Byke Run Events for example which provides positive PR for the OMGs there is ample evidence that the leadership of these organisations if not

all of their members do engage in systematic criminal activity. The FBI asserts that OMGs support themselves primarily through drug dealing, trafficking in stolen goods, and extortion, and that they fight over territory and the illegal drug trade and collect US\$1bio in illegal income annually. Law Enforcement see these groups as unique amongst those engaged regularly in criminality, because they maintain websites, identify themselves through patches and tattoos, have written constitutions and bylaws, trademark their club names and logos, even carry out publicity campaigns aimed at cleaning up their public image.

The US Department of Justice defines the term "Outlaw Motorcycle Gang" (OMG) as an organisation whose members use their motorcycle clubs as "conduits for criminal enterprises".²⁷ Both the US and Canada have designated four MCs as "Outlaw Motorcycle Gangs", the Hells Angels, the Pagans, the Outlaws, and the Bandidos, known as the "Big Four". The California Attorney General also lists the Mongols and the Vagos Motorcycle Club as outlaw motorcycle gangs.

Amongst the Big Four as well as between these and other small Outlaw Motorcycle Gangs there has been a great deal of rivalry with each willing to fight over territory and other issues. At times the level of violence was vicious and included murders to settle a score, retaliate against an attack or to try to intimidate another gang. There was a long running war between, for example, the Hells Angels and the Outlaws in the US for many years which led to fatal casualties on both sides. Today the level of violence is down as cooler heads seemed to have prevailed and most likely working agreements regarding territory have been established and are respected.

Perhaps the greatest violence was in Canada over the past two decades where the Quebec Biker war, involved more than 150 murders, 84 bombings, and 130 cases of arson. The increased violence in Canada was the result of turf wars over control of the illegal drug business also involving the Hell's Angels.

Whilst Law Enforcements view appears to be clear, Members and supporters of these clubs insist that illegal activities may occur but the Club is not responsible for individuals activities and that these are in fact isolated occurrences and that they, as a whole, are not criminal organisations. Contrary to other criminal organisations, OMGs operate differently to for example criminal organisations, operating on an individual basis instead of top-down, which is how supporters can claim that only some members are committing crimes. Belonging guarantees to each member the option

of running criminal activity, using other members as support - the main characteristic of OMGs being "amoral individualism" in contrast to the hierarchical orders and bonds of "amoral familism" of other criminal organisations such as the Mafia.

ATF agent William Queen, who infiltrated the Mongols, wrote that what makes a group like them different from the Mafia is that crime and violence are not used as expedients in pursuit of profit, but that the priorities are reversed. Mayhem and lawlessness are inherent in living "The Life" and the money they obtain by illegal means is only wanted as a way to perpetuate that lifestyle.

Hell's Angels - US

The Hells Angels Motorcycle Club (HAMC) is a worldwide motorcycle gang whose members typically ride Harley-Davidson motorcycles. In the US and Canada, the Hells Angels are incorporated as the Hells Angels Motorcycle Corporation. Their primary motto is "When we do right, nobody remembers. When we do wrong, nobody forgets". Members of the organisation have continuously asserted that they are only a group of motorcycle enthusiasts who have joined to ride motorcycles together, to organise social events such as group road trips, fundraisers, parties and motorcycle rallies. The Hells Angels were originally formed in 1948 in Fontana, California through an amalgamation of former members from different motorcycle clubs such as The Pissed Off Bastards of Bloomington. The name "Hells Angels" was believed to have been inspired by the common historical use, in both World War I and World War II, to name squadrons or other fighting groups by a fierce, death defying name. The Flying Tigers (American Volunteer Group) in Burma and China fielded three squadrons of P-40s; the Third Squadron was named "Hell's Angels". The 1930 Howard Hughes film Hell's Angels displayed extraordinary and dangerous feats of aviation and it is believed that the World War II groups who used that name based it on the film. The Hells Angels official website attributes the official "death's head" insignia design to Frank Sadilek, past president of the San Francisco Chapter.

The colour and shape of the early style jacket emblem (prior to 1953) were copied from the insignias of the 85th Fighter Squadron and the 552nd Medium Bomber Squadron. The Hells Angels utilise a system of patches, similar to military medals. Although the specific meaning of each patch is not publicly known, the patches identify specific or significant actions or beliefs of each biker. The official colours of the Hells Angels are red lettering displayed on a white background - hence the clubs nickname "The Red and White". These

patches are worn on leather or denim jackets and vests. Red and white are also used to display the number 81 on many patches as in "Support 81, Route 81". The 8 and 1 stand for the respective positions in the alphabet of H and A. These are used by friends and supporters of the club as only full members can wear any Hells Angels imagery.

The full requirements to become a Hells Angel are the following: candidates must be male, have a valid driver's licence, have a working motorcycle and cannot be a child molester or have applied to become a police officer or prison guard. After a lengthy, phased process, a prospective member is first deemed to be a "Hang-around", indicating that the individual is invited to some club events or to meet club members at known gathering places. If the Hang-around is interested, he may be asked to become an 'Associate', a status that usually lasts a year or two. At the end of that stage, he is reclassified as 'Prospect', participating in some club activities, but not having voting privileges, while he is evaluated for suitability as a full member. The last phase, and highest membership status is 'Full Membership' or 'Full-Patch'. The term Full-Patch refers to the complete four-piece crest, including the 'Death Head' logo, two rockers (top rocker: Hells Angels; bottom rocker: State or Territory claimed) and the rectangular 'MC' patch below the wing of the Death's Head.

Prospects are allowed to wear only a bottom rocker with the State or Territory name along with the rectangular 'MC' patch. To become a full member, the Prospect must be voted on by the rest of the full club members. Prior to votes being cast, a Prospect usually travels to every chapter in the sponsoring chapter's geographic jurisdiction (state/province/territory) and introduces himself to every Full-Patch. This process allows each voting member to become familiar with the subject and ask questions of concern before the vote. Successful admission usually requires more than a simple majority, and some clubs may reject a Prospect for a single dissenting vote. Formal induction follows, where the Prospect affirms his loyalty to the club and its members. The final logo patch (Hells Angels rocker) is awarded at this initiation ceremony. The step of attaining full membership can be referred to as "being patched". Even after a member is patched-in, the patches themselves remain the property of HAMC rather than the member. On leaving the Hells Angels, or being ejected, they must be returned to the club. The HAMC acknowledges more than one hundred chapters spread over 29 countries. The first official chapter outside of the US was formed in New Zealand in 1961. Europe did not become home to the Hells Angels until 1969. To compensate, the group purchased military surplus

motorcycles and shared weekends riding the roads and venting their frustrations about suburbia by partying hard. This is how the gang, The Hell's Angles came to stand for individualism and rebellion against authority.

The Bandidos - US

The club was formed in 1966 in Texas by Donald Chambers, an ex Vietnam Vet and Marine he modeled the clubs colors after the crimson and gold motif of the US Marine Corps and using an obese machete- and pistol-wielding Mexican Bandido as the centre patch for the club's colors. The Bandidos, also called the "Bandido Nation", is the fastest-growing outlaw motorcycle club in the world with over 90 chapters in the US, 90 chapters in Europe, and another 17 in Australia and Southeast Asia. In the US, the club is concentrated in Texas, and other parts of the South, north West and Rocky Mountain areas. In recent years the club has also expanded heavily into Northern Europe and Scandinavia in particular. Additionally, it is looking into setting up clubs in Russia and Eastern Europe and also in Singapore, Malaysia and Thailand. The Bandidos also have a large number of "support clubs." These groups usually wear reverse colors (gold border with red background rather than the Bandidos' red-border-and-gold background). They also commonly wear a "support patch" consisting of a round patch in Bandidos colors on the front upper left of the colors (vest), as worn by the member. Most of these clubs are regional.

The Outlaws - US

The McCook Outlaws Motorcycle Club was established in Matilda's Bar on old Route 66 in McCook, Illinois, near Chicago, making the Outlaws the oldest of the OMGs. Following the second World War, with new members coming from all over the Chicago area, the Club moved out of McCook re-establishing itself in Chicago, and changing its name to the "Chicago Outlaws". The club logo also underwent a change; a small skull replaced the winged motorcycle and old English style letters. The design was embroidered on black shirts and hand painted on leather jackets. A set of Crossed Pistons were added to the small skull, aping those on the jacket of Marlon Brando in the movie, "the Wild One" released in 1953 about a fictional Biker in a fictional Black Rebel Motorcycle Club. In the 1960s the Outlaws grew and new clubs also joined with in addition to Chicago, Outlaw clubs being established in New York, Kentucky and Milwaukee formed the start of the "Outlaw Nation." On January 1, 1965, the American Outlaws Association (A.O.A.) was founded. The insignia of the club, a skull and crossed pistons, is named "Charlie". In July 1967, the Outlaws National President and a number of other members travelled south from Chicago and sanctioned the club's first

chapter in Florida. "God Forgives Outlaws Don't" ("G.F.O.D.") became the club's motto in 1969.

The Pagans - US

The Pagan's Motorcycle Club, or simply The Pagans, was formed by Lou Dobkin in 1959 in Maryland. The club rapidly expanded and by 1965, the Pagans, originally clad in blue denim jackets and riding Triumphs, began to evolve along the lines of the stereotypical one percenter motorcycle club. Originally they were a comradeship of 13 motorcyclists. In the 1960s they adopted a formal constitution and formed a governing structure choosing a national president. They were a fairly non-violent group until 1965, when the Pagans evolved into a true outlaw biker gang with ties to other organised crime groups such as the American Mafia. The Pagans MC patch depicts the Norse fire-giant Surtr sitting on the sun, wielding a sword, plus the word Pagan's in red, white and blue. They can be identified by the black number 13 emblazoned on the back of their leather jackets. The Pagans boast about 350-400 members in chapters mostly on the East Coast between New York and Miami, including in New Jersey, Pennsylvania, Delaware, Maryland, West Virginia, Kentucky, Ohio, Virginia, North Carolina and South Carolina. The Pagans headquarters is currently in Delaware County, Pennsylvania. They rank as one of the fiercest outlaw biker gangs in the US.

The Mongols - US

The Mongols formed by Hispanic Vietnam vets who were denied membership to the Hells Angels, is headquartered in southern California but has a presence in 14 states and runs international chapters in Australia, Germany, Italy, Mexico and parts of Scandinavia. Allies are the Bandidos, Outlaws and the Sons of Silence.

The Vagos Motorcycle Club - US

Originally known as "The Psychos", the Vagos Motorcycle Club is active throughout southern California. Vagos, many military trained, are notoriously ruthless with their enemies and have declared war on law enforcement. They are rivals of the Hells Angels. The gang is known for producing and selling drugs, backed by violence, extortion, thievery and money laundering. They have also been accused of witness intimidation and insurance fraud.

Wheels of Soul - US

The Wheels of Soul is a predominantly black, national biker gang headquartered in Philadelphia. It is believed that the group is criminally active in at least six other states. It is believed that the Wheels of Soul also orchestrates robberies and kidnappings and is involved in the production and sale of drugs.

Canada

A North American country consisting of ten provinces and three territories Canada sits north of the continental US. It, as its motto says, extends "from Sea to Sea" i.e. Atlantic to Pacific. The world's second largest country by area it has a population of nearly 34 million. With the 11th largest economy it is one of the world's wealthiest nations.

Canadian organised crime is often remembered for its role in the US prohibition era of the early Twentieth Century. Of all the alcohol that was consumed in the US during Prohibition, 75% was smuggled across the Detroit River separating Windsor and Detroit. An estimated 25% of Windsor's citizens were involved in smuggling and during the 1920s many made fortunes. Windsor residents took every advantage and many became millionaires, building some of the most prestigious mansions in Windsor. Needless to say the sheer logistics, infrastructure and equipment of 'bootlegging' led to wholesale corruption of public officials. The repeal of prohibition in the US eventually brought a return to 'normalcy'.

In 2012, the Canadian Parliamentary Standing Committee on Justice and Human Rights produced a report entitled "The State of Organised Crime". The Report observed that 'gangs and organised crime have been with us for at least 150 years. Alienated and disenfranchised young men long ago forged a common bond of lawlessness, using crime as a means of generating wealth.'

Today the extent of organised crime in Canada is affected by many factors, not least the nearly 4000 miles border with the US (not including the 1500 miles of border with Alaska) and within its borders, an extraordinarily diverse population. It has an aboriginal population as well as the product of successive generations of immigration from all corners of the globe over the past since the 16th Century. Initially French then British immigration widened to include the rest of Europe but by 2006 Canada received nearly 237,000 immigrants from all over the world. The top 5 sending countries (in order) were China; India; Philippines; Pakistan and the US.

In 2008, over 900 organised crime groups were identified in Canada, including approximately 300 street gangs. In 2011, Criminal Intelligence Service Canada (CISC) identified 729 crime groups and categorised organised Canadian crime groups into four threat levels. Category one groups are the most significant level of threat and are those who operate between provinces or internationally. Twenty-four criminal organisations are currently in this group. Category two groups operate the same as Category one groups, but have been deemed to be at a lower threat level. There are 262 category two groups in Canada today. Category three groups are those who operate within a single province, but they can cover more than one city or region. There are 120 Category three groups operating in Canada. Finally, category four groups are confined to a single area, such as a town or a city and 210 criminal organisations belong to this category.

In 2010, of the 56 gang-related homicides committed in Canada's ten largest cities, 82% were committed in Toronto, Montréal, and Vancouver a figure one might expect, as organised crime is predominantly located in urban areas. It does however occur however in less densely populated areas such as the Prairie cities and First Nation areas.

In 2009 a Situation Report breakdown for organised crime in Quebec fell into the following categories: Asian-origin organised crime; Aboriginal-origin organised crime; Italian-origin traditional organised crime; Quebec-origin traditional organised crime; street gangs; Latin-American-origin organised crime; East European-origin organised crime; Near- and Middle-East-origin organised crime; and criminal bikers. This again reflects the makeup of various immigrant groups although some, increasingly, are becoming more heterogeneous and willing to cooperate with other groups.

Mafia groups have been in Canada since the prohibition era and often had cross border links with US Groups. In Quebec the Rizzuto crime family is the main group whilst in Ontario the Ndrangheta operates under the auspices of the Siderno Group and the Musitano family both originating from Calabria. The Rizzutto were once part of the Corleone group who in turn were regarded by the FBI as "part of" the Bonanno family in the US. Some called the Sixth Family in reference to the Five families of New York.

Other Canadian crime group types include Street gangs, Motorcycle Gangs and Mafia type organised crime groups including aboriginal groups and drug cartels. Aboriginal street gangs are not as highly organised as

other criminal organisations in Canada, but are some of the most violent. In Saskatchewan aboriginal gangs exist in Saskatoon and Regina. Saskatchewan had the highest concentration of gang membership in Canada. Winnipeg's gang activity also involves mainly First Nation gangs. The Canadian Criminal Intelligence Service (CISC), say that established, well-financed and connected Hong Kong Triad groups and crime syndicates are still, in their view, "the biggest long-term threat to Canadian law enforcement and society." In addition to Triad Societies, other Asian criminal groups, such as The Big Circle Gang, have also established national networks based in the major cities of Canada.

Among street gangs the 'Crips' and 'Bloods' both have adherents in several Montreal districts and are to be found also in Ottawa. The Greater Toronto Area has a very diverse range of gangs and in the mid 2000s police raids led to many gang members being deported back to Jamaica, Trinidad, Liberia, Sri Lanka, Colombia, Portugal, Somalia and others countries. Known crime groups in Vancouver include Indo-Canadian street gangs amongst many others and have a growing Mafia presence.

Various eastern European gangs known as 'bratvas' are also known to be active.

In Ontario, the R. v. Lindsay case in 2005 determined that the Hells Angels were a "criminal organisation" and that the Hells Angels were declared as a group, as opposed to individuals, to be a "criminal organisation". The Hells Angels are problematic because although they have been found by the courts to be a criminal organisation there is no official 'list' of such a finding. In other words, the existence of a particular group as a criminal organisation must be re-decided and proven in every new case. The Canadian Parliamentary Standing Committee on Justice and Human Rights was told by the police that, whilst they did not take issue with the criteria established for designating a group as a criminal organisation, they did take issue with the fact that once designated, it carries no weight in subsequent court cases. They gave the specific example of the Manitoba Chapter of the Hells Angels Motorcycle Club. This had been found by the Manitoba Court of Queen's Bench to be a criminal organisation, and yet in upcoming trials of Hells Angels members, this fact will have to be proved once again.

Illicit drugs continue to be the largest criminal market in Canada with 57% of the criminal marketplace being taken up by the drugs trade. The majority (83%) of organised crime groups are involved in the illicit drug trade, with other areas being human trafficking,

counterfeit products, illegal gambling, money laundering, and vehicle theft.

The predominant drug is cocaine, followed by cannabis, and then followed by synthetic drugs. One indication of the size of the drugs trade is that, in the Atlantic region, since 2008, the Canada Border Services Agency (CBSA) has seized more than C\$176 million in drugs arriving at Atlantic ports in sea containers. The majority of these drug seizures consist of hashish coming from Asia and Africa and cocaine arriving from South America. British Columbia has become the top destination for smuggling ketamine into Canada, much of it coming from Hong Kong and China. Ketamine hydrochloride, also known as "Special K", is a dissociative anaesthetic used in medicine and as a recreational drug. In March 2013 the CBSA said it had seized over C\$128 million worth of ketamine at B.C.'s border points over the past six years, a dollar value more than double that of ketamine seizures in Ontario and Quebec combined. Canada has also become a source country for synthetic drugs (like ecstasy and crystal meth) with groups smuggling in the precursor chemicals from source countries such as China and India. It also exports significant quantities of ecstasy and methamphetamine.

In 2011, the CISC reported that financial crime was about 11% of criminal market activity with Payment card fraud involving card thefts, fraudulent card applications, fake deposits, and skimming or counterfeiting.

Other criminal activity includes theft, contraband, alcohol and tobacco and human trafficking.

A recent example of the growing adaptability and co-operation is a case involving the Montreal Mafia, Hells Angels, aboriginal groups, New York Mafia and the Sinaloa Cartel. Jimmy Cournoyer from Quebec was the king pin of a massive international drug trafficking enterprise with ties to La Cosa Nostra, the Hells Angels and the Sinaloa Cartel in Mexico and was found guilty on April 3, 2013 to being the leader of a continuing criminal enterprise, conspiracies to manufacture, import and distribute marijuana, conspiracies to export and distribute cocaine, substantive and a conspiracy to launder money. Cournoyer was the principal leader of a Montreal-based drug distribution organisation affiliated with the Rizutto (Montreal Mafia) and Bonanno (New York Mafia) crime families, the Hells Angels and the Sinaloa Cartel. He had trafficked more than US\$1billion worth of marijuana, cocaine and ecstasy into the US between 1998 and 2012. His organisation transported tens of thousands of kilos of marijuana from outdoor growers in British Columbia to Montreal, Canada.

From there the drugs were smuggled into the US using transportation networks run by the Hells Angels. The drugs were smuggled through the Akwesasne Mohawk Reservation which straddles both sides of the U.S./Canadian border. Once the drugs were sold in the US, the organisation used the millions of dollars in drug proceeds to purchase cocaine from the Sinaloa Cartel in Mexico which was then distributed in Canada by the Rizzuto family. Cournoyer was also charged with witness tampering as he had also set up a C\$2mio "hit fund" set aside to murder any individuals who cooperated with the government. The agencies involved included various Regional and National and International Police forces from 3 countries, Border Patrols and the Akwesasne Mohawk Police Service and Akwesasne Tribal Police. The extent of corruption is still unknown but as an example several electricity linemen in British Columbia have been found guilty of providing 'alternative' electricity supplies for power hungry illegal hydroponic farms. Utility bills are not an issue for the criminals but they know that power consumption is monitored by the authorities.

Terrorism goes back a long way in Canadian history. Examples include the Sons of Freedom, a splinter group of the Doukhabor religious sect called the Freedomites who waged a sporadic 40 year campaign of bombing and burning against the State. Later on came the Front de Liberation du Quebec (FLQ) who tried to promote its objective of an independent Quebec. They executed a series of bombings against a range of targets, including the federal government, the post office, the armed forces, the RCMP, Canadian Broadcasting Corporation, Canadian National Railways and the Montreal Stock Exchange. Although the intent was usually to destroy property, at least six people died as a result of FLQ operations, and many others were severely injured. Canada's most deadly terrorist attack was the Air India attack when on June 23, 1985; a bomb exploded on Air India Flight 182 which was en route from Toronto to the UK. It killed all the 329 people aboard, most of whom were Canadians. The Air India bombing is still the worst terrorist attack in Canadian history. Today according to the Government of Canada in its 'Building Resilience Against Terrorism: Canada's Counter-terrorism strategy'(2011) 'Violent Islamist extremism is the leading threat to Canada's national security.' They say that several Islamist extremist groups have identified Canada as a legitimate target. In addition the document points out, 'violent "home-grown" Sunni Islamist extremists are posing a threat of violence. A recent example of home grown terrorism was early in 2013 when a couple John Nuttall and Amanda Korody, who are alleged to have placed a pressure cooker bomb to coincide with Canada Day (July 1ST) celebrations

at Victoria B.C. The bombs had been made safe by undercover officers prior to being planted Nuttall, a methadone addict had become a Muslim as had Korody. The term "Al-Qaeda inspired" was used to describe them but in fact it seems they are part of a growing group of marginalised inadequates whose motivation is not wholly ideological or religious. This makes them harder to discover.

As well as the threat of attacks on Canadian territory, groups and individuals have been identified within Canada who seek to carry out attacks on other states. Armenians, Tamil Tigers, Sikh separatists to name a few Yoav Lorbert Security Manager of El Al Israel Airlines in Toronto in 2012 said terror groups "don't want to cause a problem here""these groups attack for a reason and Canada is not an attractive target"they didn't attack Canada because it was a place to raise money and a safe haven for their families" and cell members send their families to live or attend school in Canada and don't want to cause problems.

Canada Designated Terrorist Organisations

Canada has listed the following Organisations as terrorist organisations.²⁸ These are: Abu Nidal Organisation; Abu Sayyaf Group; Al-Qaeda; Al-Qaeda in Iraq (AQI); Al-Qaeda in the Arabian Peninsula (AQAP); Al-Qaeda in the Islamic Maghreb (AQIM); Al-Shabaab; Al-Aqsa Martyrs' Brigade; Al-Gama'a al-Islamiyya; Al-Ittihad Al-Islam; Ansar al-Islam; Armed Islamic Group (GIA); Asbat Al-Ansar (AAA); Aum Shinrikyo; Autodefensas Unidas de Colombia (AUC); Babbar Khalsa International (BKI); Ejército de Liberación Nacional (ELN); Euskadi Ta Askatasuna (ETA); Fuerzas Armadas Revolucionarias de Colombia (FARC); Hamas; Haqqani Network; Harakat ul-Mujahidin (HuM); Hezb-e Islami Gulbuddin (HIG); Hezbollah; International Sikh Youth Federation; Islamic Army of Aden (IAA); Islamic Movement of Uzbekistan (IMU); Islamic Revolutionary Guard Corps' Qods Force; Jaish-e-Mohammed (JeM); Jemaah Islamiyah (JI); Kahane Chai; Kurdistan Workers Party (PKK); Lashkar-e-Jhangvi (LJ); Lashkar-e-Tayyiba (LeT); Liberation Tigers of Tamil Eelam (LTTE); Palestine Liberation Front (PLF); Palestinian Islamic Jihad (PIJ); Popular Front for the Liberation of Palestine - General Command (PFLP-GC); Popular Front for the Liberation of Palestine (PFLP); Sendero Luminoso (SL); Taliban; Tehrik-e-Taliban Pakistan (TTP); Egyptian Islamic Jihad; World Tamil Movement (WTM).

Mexico

Mexico is the site of several advanced Amerindian civilizations, including the Maya, and Aztec. Mexico was conquered and colonized by Spain in the early 16th century and achieved its independence in 1821. The country is named after its main city itself

the centre of the Aztec empire, or Mexihco named after the god of war and patron of the Aztecs. The history of Mexico, a country situated in the southern portion of North America, is at once a record of great cultural achievement and a catalogue of violent military and political struggle.

During the Mexican-American War, from 1846 to 1848, the US annexed Texas, which Mexico considered part of its territory, then conquered New Mexico and California. The Mexican Revolution in 1910, culminated with the promulgation of the 1917 Constitution and the emergence of the country's current political system, which was dominated by the Institutional Revolutionary Party (PRI) until 2000 when, for the first time an opposition party (The National Action Party) won the presidency, though recent elections held in 2012, resulted in the PRI returning the power, via President Pena Nieto.

Over a century ago, the Mexican dictator Porfirio Díaz famously exclaimed: 'Pobre Mexico! tan lejos de Dios, tan cerca de los Estados Unidos' Poor Mexico! So far from God, so close to the US. The quote today epitomises the challenges for México with the murderous criminal violence that is intertwined with the trafficking of drugs mainly to its Northern neighbour due to the insatiable demand for the drugs which in turn fuels that violence.

Mexico's geographical position set between the world's largest cocaine producers and one of the world's biggest consumers of cocaine making it a logical transit route for the product. Mexican Drug Trafficking Organisations (DTOs) are essentially transport and logistics organisations who are competing for the business of supplying the US with marijuana and cocaine supplied by indigenous, Central American and South American producers, and, in the case of Ephedra based products; China.

This trafficking generates vast amounts of money with estimates of up to US\$25-US\$30bio worth of illegal drugs coming through Mexico into the US. Earlier US efforts to interdict Colombian Caribbean drugs routes that went directly to the US had a degree of success, but led to unintended consequence. The creation of Mexico as a transhipment point for cocaine destined for the US allowed the Mexican cartels to evolve into the powerful DTOs they are today.

The DTOs are located in specific geographic areas within Mexico and many have set up logistics and distribution networks in US cities. Some, such as Los Zetas have 'backwardly integrated' by becoming established in Guatemala. The Cartels are located in those areas along Mexico's border with the US and in its Gulf, Caribbean and Pacific ports. Some are also located on the connecting highway routes between these points. These location and structures are predicated on the notion of who controls the trade routes into Mexico, through it, and on to the US.

In effect the groups have divided large tracts of Mexico into "fiefdoms" This can be illustrated by using examples of just two of the cartels. The Gulf Cartel, located in the city of Reynosa controls Tamaulipas state, parts of Nuevo Leon state and similarly Veracruz state. It also borders with the US. More importantly it controls the ports of Tampico and Veracruz. The Sinaloa federation's capital city is Culiacan and also shares a border with the US. Its territory consists of Sinaloa and Sonora states and controls the port cities of Puerto Vallarta, Manzanillo and Mazatlan. Cartels close to the borders also seek to have relationships back down the supply chain with cartels in (for example) the Guerrero-Michoacán (Pacific) "fiefdoms" and the Yucatan (Caribbean /Gulf of Mexico) "fiefdoms".

Mexican cartels are also increasing their relationships with prison and street gangs in the US in order to push market distribution. A US Congressional report noted that gangs such as the Latin Kings and Mara Salvatrucha (MS-13) buy bulk methamphetamine from Mexican drug cartels for resale. Again, according to the FBI, Mexican cartels focus only on wholesale distribution, leaving retail sales of drugs to the street gangs. The cartels will sell to all and any gangs but do not take sides in US gang turf wars.

The routes used to ship drugs from South America to the US are also used for Human Smuggling and Trafficking. They are also used in the reverse direction to supply producers with precursor chemicals, arms and counterfeit goods from China.

The DTOs compete to protect or increase market share and sometimes in resisting governmental interdiction efforts and this often turns into bloodshed. According to Mexico's 'Reforma'²⁹ newspaper, there were 11,583 drug-related murders in Mexico in 2010, compared with 6,587 in 2009. DTOs increasingly employ military tactics and use heavy weaponry such as sniper rifles, grenades, and rocket-propelled grenades in attacks on government security personnel as well as IEDs against local officials.

The Mexican DTOs have also moved into piracy, prostitution and the theft of oil and minerals. The theft of minerals in the western state of Michoacan has increased with the cartel known as La Familia Michoacana which was found to have sold 1.1 million tons of illegally extracted iron ore in China for US\$42mio. Some authorities suggest that the DTOs are buying up small and medium sized mines to launder money.

The oil industry has also been affected with one example being the State energy company Petroleos Mexicanos (PEMEX) which had US\$300mio worth of natural gas condensate stolen by Los Zetas members. On 1 June 2011, Pemex filed a lawsuit accusing nine US companies of colluding with criminals linked to the drug trade to sell an estimated US\$300mio worth of stolen oil since 2006. That almost equals the cocaine market in Mexico. Clearly if all narcotics vanished tomorrow the DTOs would have no problem finding new revenue streams.

According to the Institute for the Protection of Intellectual Property Mexico is the fourth largest producer and consumer of counterfeited and pirated products worth US\$12.5bio a year. In Mexico, shoppers can buy Arizona Cardinals jerseys for US\$25, less than a third of what an NFL original costs. There are fake Sony televisions, counterfeit Nike shoes and proprietary whiskey brands. Adobe Photoshop, which costs US\$650 in the US, can be bought outside Computer Plaza in Mexico City for 40 pesos, or US\$. Two of every three pairs of tennis shoes sold are counterfeit, whilst about 65% of DVDs and CDs are pirated. According to the Washington based International Intellectual Property Alliance. Mexican buyers account for 9% of all pirated US goods sold worldwide. Again according to the US National Public Radio Network, Mexico's multibillion-dollar pirated goods market is worth more than its oil exports and illicit narcotics trade combined.

Attempts to prosecute are politically contentious in Mexico because many street vendors who sell counterfeit goods are people who cannot find regular jobs. In all, about 1.9 million of Mexico's 42.3 million workers are

street vendors, part of the "informal" economy.

Much of the data about piracy is reporting the views of trade groups and business interests and much of that is anecdotal or 'guesimates'. However, one piece of hard research was produced by the Social Science Research Council (US University body) entitled 'Media Piracy in Emerging Economies'. This poured water on the claims of the industry bodies with regard to the piracy of electronic media and in particular the claim that the counterfeiters were linked to the Drug Cartels.

Money laundering by the DTOs is carried out through a vast range of business entities such as construction and real estate companies. With regard to laundering drug proceeds the preferred methods of smuggling US currency into Mexico (and the repatriation of funds into the US) is by bulk shipments via couriers, use of armoured vehicles, and wire transfers. Bulk Cash shipments and couriers across all borders extend the laundering into Central America where the process of laundering is even easier.

Remittance systems have also been shown to be vulnerable. Mexico has a sophisticated financial sector, a large cash-based informal sector, and inadequately enforced regulatory controls. According to US authorities, drug trafficking organisations send between US\$19 and US\$29bio annually to Mexico from the US. The Mexican government has seized over US\$457.5mio in bulk currency shipments since 2002. Again, bulk-cash seizures in 2010 totalled US\$32.4mio.

Wachovia Bank (now part of Wells Fargo), was fined US\$160mio in March 2010 for failing to monitor money flows from Casa de Cambios in particular and HSBC was soon to follow being fined US\$1.96bio for numerous money laundering and sanctions failures including failing to control payment flows from Casa de Cambio's in Mexico. The Casa de Cambio that hit the headlines and links both the Wachovia case and that of HSBC is the Casa de Cambio Puebla. For more details on each see Part 2, Section 7, Criminal Cases and Section 8, Enforcement Cases below.

Following these high profile cases and penalties imposed, the number of casa de cambios has declined but there are over 4000 centros cambiarios, which are largely unregulated, and approximately 1200 registered money transmitters. Commercial banks, foreign exchange companies, and general commercial establishments in Mexico also offer money exchange services. For more details see Part 1, Section 2, Sub-section 2, Money Services Businesses above.

Special Focus 15

Mexican Drug Trafficking Organisations (DTOs)

Mexican criminal gangs, known as cartels, the best known, still enduring and most successful of which are the **Sinaloa Cartel**, **Los Zetas**, **Gulf Cartel**, **Tijuana Cartel**, **Beltrán Leyva Cartel**, **Juárez Cartel** and the **Knights Templar Cartel**, each control large swaths of

Mexican territory and dozens of municipalities. The cartels are currently waging violent turf battles over control of key smuggling corridors through Mexico and defending themselves from government action. The **Sinaloa Cartel** is considered the largest and most powerful drug trafficking organisation in the world and fugitive Joaquín Archivaldo Guzmán Loera is its leader. Known as "El Chapo Guzmán" ("Shorty Guzmán") for his 1.68 m (5 ft 6 in) stature, he became Mexico's top drug kingpin in 2003 and is now considered, "the most powerful drug trafficker in the world," by the US Department of the Treasury.³⁰ **Los Zetas** is considered the most violent.

The US Drug Enforcement Administration reports that the Mexican drug cartels operating today are far more sophisticated and dangerous than any other organised criminal group in US law enforcement history. The cartels use grenade launchers, automatic weapons, body armour, and sometimes Kevlar helmets. Casualty numbers have escalated significantly over time. According to a Stratfor report, the number of drug-related deaths in 2006 and 2007 (2,119 and 2,275) more than doubled to 5,207 in 2008. The number further increased substantially over the next two years, from 6,598 in 2009 to over 11,000 in 2010.

There were no cartels in the 1980s in Mexico, as the entire business was controlled by one man, **Félix Gallardo** who was known as the "Godfather". He oversaw all operations and he bought protection by bribing the police and politicians. Miguel Angel Félix Gallardo was a former Mexican Judicial Federal Police agent, who started off by smuggling marijuana and opium into the US, and was the first Mexican to link up with Colombia's cocaine cartels in the 1980s. This was easily accomplished because Félix Gallardo had

already established an infrastructure that stood ready to serve the Colombia-based traffickers. By the 1980s he controlled all illegal drug trade in Mexico and the corridors across the Mexico-USA border. "The Godfather" then decided to divide up the trade he controlled as it would be more efficient and less likely to be brought down in one law enforcement swoop. In a way, he was privatizing the Mexican drug business while sending it back underground, to be run by others who were less well known or not yet known by the US DEA. Félix Gallardo convened the nation's top drug traffickers at a house in Acapulco where he allocated either territories or routes, for example, the **Tijuana route** would go to the **Arellano Felix brothers**, the Ciudad Juárez route would go to the **Carrillo Fuentes family**. Miguel Caro Quintero would run the **Sonora corridor**. The control of the Matamoros, Tamaulipas corridor - which would become the **Gulf Cartel** - would be controlled by Juan García Abrego. Meanwhile, Joaquín Guzmán Loera and Ismael Zambada García would take over Pacific coast operations, becoming the **Sinaloa Cartel**. Guzmán and Zambada brought veteran Héctor Luis Palma Salazar back into the fold. Félix Gallardo still planned to oversee national operations, as he maintained important connections, but he would no longer control all details of the business. Félix Gallardo was finally arrested on 8 April 1989.

Mexico is still the main foreign supplier of cannabis and a major supplier of methamphetamine to the US. Almost half the cartels revenue comes from cannabis. Although Mexico accounts for only a small share of worldwide heroin production, it supplies a large share of the heroin distributed in the US. Drug cartels in Mexico control approximately 70% of the foreign narcotics that flow into the US. The US State Department estimates that 90% of cocaine entering the US transits through Mexico, with Colombia being the main cocaine producer, followed by Bolivia and Peru.

The drug trade is supplemented with many other lucrative criminal activities, including human trafficking and people smuggling, that has made the Mexican gangs so successful and induced them to fight each other for control of territory and with the State government.

In 2006, former Mexican president Felipe Calderón launched a massive crackdown against drug trafficking organisations, in conjunction with the US. Since then, more than 40,000 people have been killed in drug-related violence. While the US has supplied funding and labour to increase Mexico's institutional capacity to address drug trafficking, its primary focus has been on cross-border policing and targeting US drug users. Enrique Peña Nieto, who succeeded Calderón as

President in December 2012, has announced intentions to shift Mexico's drug war strategy to quell violence against civilians rather than targeting cartel leaders.

Following the establishment of the Mexican cartels by Félix Gallardo and with his arrest, the balance of power between the various Mexican cartels shifted as new ones emerged and older ones weakened and collapsed. A disruption in the system, such as the arrests or deaths of cartel leaders, generates bloodshed as rivals move in to exploit the power vacuum. Leadership vacuums sometimes are created by law enforcement successes against a particular cartel, thus cartels often will attempt to use law enforcement against one another, either by bribing Mexican officials to take action against a rival or by leaking intelligence about a rival's operations to the Mexican government or the US Drug Enforcement Administration.

The reasons for the escalating violence involving the Mexican Cartels are complex but have their roots in the unravelling of a long-time implicit arrangement between narcotics traffickers and governments controlled by the Institutional Revolutionary Party (PRI), which began to lose its grip on political power starting in the late 1980s including during the infamous Presidency of Carlos Salinas (see Part 2, Section 7, Criminal Cases for the case of **Raúl Salinas**) and ending with the election of the independent Presidency of Vincent Fox in 2000 and culminating in the Presidency and action taken by President Calderón from 2006. Whilst fighting between rival drug cartels began in earnest after the 1989 arrest of Miguel Ángel Félix Gallardo, there was then a lull in the fighting during the late 1990s but the violence steadily worsened since 2000. The then President Vicente Fox sent small numbers of troops to the US-Mexico border to fight the cartels with little success.

President Calderón was more aggressive, and he sent for example 6,500 federal troops to the state of Michoacán to end drug violence there. As time progressed, Calderón continued to escalate his anti-drug campaign, in which there were now about 45,000 troops involved in addition to state and federal police forces. In 2010 Calderón said that the cartels seek "to replace the government" and "are trying to impose a monopoly by force of arms, and are even trying to impose their own laws."³¹ The challenges faced by the government remain formidable however. For example in 2008, General Sergio Aponte, the man in charge of the anti-drug campaign in the state of Baja California, made a number of allegations of corruption against the police forces in the region. Among his allegations, Aponte stated that he believed Baja California's anti-kidnapping squad was actually a kidnapping team working in

conjunction with organised crime, and that bribed police units were being used as bodyguards for drug traffickers. These accusations of corruption suggested that the progress against drug cartels in Mexico has been hindered by bribery, intimidation, and corruption.

On April 26, 2008, a major battle took place between members of the **Tijuana** and **Sinaloa Cartels** in the city of Tijuana, Baja California, which left 17 people dead. The battle also caused concern about the violence spilling into the US, as Tijuana and a number of other border cities became hotspots for violence in the war. In September 2008, grenade attacks in Morelia by suspected cartel members killed eight civilians and injured more than 100. In March 2009, President Calderón called in an additional 5,000 Mexican Army troops to Ciudad Juárez. The US Department of Homeland Security has also said that it considered using the National Guard to counter the threat of drug violence in Mexico from spilling over the border into the US. The governors of Arizona and Texas asked the federal government to send additional National Guard troops to help those already there supporting local law enforcement efforts against drug trafficking.

The Mexican attorney general's office says that 9 of 10 victims are members of organised crime groups, and deaths among military and police personnel are an estimated 7% of the total. The states that suffer from the conflict most are Baja California, Guerrero, Chihuahua, Michoacán, Tamaulipas, Nuevo León and Sinaloa. Whilst the Calderón administration has been successful in damaging the Cartels, the country's security situation continued to seriously deteriorate with the total number of drug-related homicides continuing to climb steeply. Violence escalated with intimidation and fear. The discovery of hit lists with the names of police officers had become increasingly common in many Mexican cities along the US border. It also is common for the officers named on those lists to be gunned down one by one. In addition, drug trafficking organisations began displaying large banners over highways in cities around the country. Many of the banners make threats against rivals, or accuse a particular criminal group of being supported by local and federal government officials. In several cases, purported recruiting banners appeared in northern Mexico offering higher pay and better equipment to soldiers and police officers who defect to **Los Zetas**.

One escalation in this conflict is the traffickers' use of new means to claim their territory and spread fear. Cartel members have broadcast executions on YouTube, tossed body parts into crowded nightclubs and hung banners on streets. In 2008 Morelia grenade attacks

took place, when two hand grenades were thrown onto a crowded plaza, killing ten people and injuring more than 100. Some see these efforts as intended to sap the morale of government agents assigned to crack down on the cartels; others see them as an effort to let citizens know who is winning the war. The extreme violence attacks foreign investment in Mexico, and the Finance Minister, Agustín Carstens, said that the deteriorating security alone is reducing gross domestic product annually by 1% in Mexico, Latin America's second-largest economy.

Improved cooperation of Mexico with the US led to the recent arrests of 755 Sinaloa Cartel suspects in US cities and towns, but the US market is being eclipsed by booming demand for cocaine in Europe, where users now pay twice the going US rate.

In December 2010 the government of Spain remarked that Mexican cartels have multiplied their operations in that country, becoming the main entry point of cocaine into Europe.

The Mexican Army crackdown has driven some cartels to seek a safer location for their operations across the border in Guatemala, attracted by corruption, weak policing and its position on the overland smuggling route. The smugglers pick up drugs from small planes that land at private airstrips hidden in the Guatemalan jungle. The cargo is then moved up through Mexico to the US border. Guatemala has also arrested dozens of drug suspects and torched huge cannabis and poppy fields, but is struggling.

In February 2009, Los Zetas Cartel threatened to kill the President of Guatemala, Álvaro Colom. On March 1, 2010, Guatemala's chief of national police and the country's top anti-drugs official have been arrested over alleged links to drug trafficking. A report from the Brookings Institution warns that, without proactive, timely efforts, the violence will spread throughout the Central American region.

At least nine Mexican and Colombian drug cartels have established bases in West African nations. They are reportedly working closely with local criminal gangs to carve out a staging area for access to the lucrative European market.

The Colombian and Mexican cartels have discovered that it is much easier to smuggle large loads into West Africa and then break that up into smaller shipments to Europe, mostly Spain, the UK and France. Higher demand for cocaine in Western Europe in addition to North American interdiction campaigns has led to

dramatically increased trafficking in the region: nearly 50% of all non-US bound cocaine, or about 13% of all global flows, is now smuggled through West Africa.

The US Justice Department considers the Mexican drug cartels as the greatest organised crime threat to the US. During the first 18 months of Calderón's presidency, the Mexican government has spent about US\$7bio in the war against drugs. In seeking partnership from the US, Mexican officials point out that the illicit drug trade is a shared problem in need of a shared solution, and remark that most of the financing for the Mexican traffickers comes from American drug consumers.

On 25 March 2009, former US Secretary of State Hillary Clinton, stated that "Our [America's] insatiable demand for illegal drugs fuels the drug trade", and that "the US bears shared responsibility for the drug-fuelled violence sweeping Mexico."³² US State Department officials are aware that Mexican President Felipe Calderón's willingness to work with the US is unprecedented on issues of security, crime and drugs, so the US Congress passed legislation in late June 2008 to provide Mexico and Central American countries with US\$1.6bio for the Mérida Initiative, a three-year international assistance plan.

The Mérida Initiative provided Mexico and Central American countries with law enforcement training and equipment, as well as technical advice to strengthen the national justice systems. The Mérida Initiative did not include cash or weapons. In January 2009, a US military assessment expressed some concern that if the war is extended 25 years, it could cause a collapse of the Mexican government due to the military strength of organised crime, and that the conflict could possibly spread to border states.

Currently, the Mexican drug cartels already have a presence in most major US cities. In 2009, the Justice Department has reported that Mexican drug cartels have infiltrated nearly 200 cities across the US, including Los Angeles, Chicago and Atlanta.

In March 2009, the Obama administration outlined plans to redeploy more than 500 federal agents to border posts and redirect US\$200mio to combat smuggling of illegal drugs, money and weapons.

In May 2010 President Obama authorized deployment of 1,200 National Guard troops to the US border with Mexico to assist with border protection and enforcement activities, as well as help train additional Customs and Border Protection agents. The deployment drew criticism primarily from the border state governments which argued that an additional 1,800

men to control over 2,000 miles of border is not nearly enough and is more a political show than a serious attempt to stop incursions at the border.

Despite the fact that Mexican drug cartels and their Colombian suppliers generate, launder and remove US\$18bio to US\$39bio from the US each year, the US and Mexican governments have been criticized for their response to confront the various cartels' financial operations, including money laundering.

The US Drug Enforcement Administration (DEA) has identified the need to increase financial investigations relating to the movement of illegal drug funds to Mexico. The DEA states that attacking the financial infrastructure of drug cartels has to play a key role in any viable drug enforcement strategy. However, the US DEA has noted that the US and Mexican financial services industry continues to be abused for drug money movement (see Part 2, Section 8, Wachovia, American Express and HSBC cases where drug money flowed through these institutions and each was subsequently fined by US authorities for having lax money laundering controls).

In 2010 President Felipe Calderón proposed sweeping new measures to crack down on the cash smuggling and money laundering. Calderón limited foreign exchange cash transactions to US\$1,500 per person per month and cash bank deposits to US\$4,000 per month and, taking effect in 2013, banned cash, purchases of real estate and of certain luxury goods that cost more than 500,000 pesos (about US\$38,750). His package also required businesses to report large transactions, such as real estate, jewellery and purchases of armour plating above these limits.

Finally FIs are required to report monthly credit card balances over 50,000 pesos (US\$3,875). Mexico appears to be following Spain and Italy in this regard who already ban large cash transactions above €1,000 respectively.

Following the election in 2012 of President Enrique Pena Nieto, some commentators claimed the new President would attempt a much less aggressive attitude towards the cartels, some even suggesting the possibility of seeking an arrangement of sorts in order to reduce the level of violence. There has to date been little evidence of any such approach though it is thought that the new President will seek to frame the problem as a more traditional law enforcement problem and reduce the involvement of the army which may in fact reduce the violence.

The Leading Mexican Cartels

Whilst the 5 original Mexican cartels created by Felix Gallardo in the 1980s remain, two have merged, one has split, and some new ones have emerged and been disbanded. This as a result of the wars between them and between them and the Federal government which will continue to change the Mexican criminal landscape. The original cartels were established around 5 existing routes and corridors so: (i) the Tijuana Cartel would go to the Arellano Felix brothers; (ii) the Ciudad Juárez route would go to the Carrillo Fuentes family; (iii) the Sonora corridor would go to Miguel Caro Quintero; (iv) the Matamoros, Tamaulipas corridor, then becoming the Gulf Cartel would go to Juan García Abrego and (v) the Sinaloa Cartel on the pacific coast would go to Joaquín Guzmán Loera and Ismael Zambada García.

Since then the Sonora Cartel has merged into the Gulf Cartel split creating La Familia (The Michoacan Family) which has since disbanded and been replaced with the Knights Templar Cartel but more importantly the Gulf Cartel's military wing also split and is now a major rival and is known as Los Zetas. The Beltrán Leyva brothers were able to establish themselves exploiting the crises around the Gulf Cartel.

Since February 2010, the major cartels have aligned together into two factions, one integrated by the Juárez Cartel, Tijuana Cartel, Los Zetas Cartel and the remnants of the Beltrán-Leyva Cartel, with Los Zetas being the most powerful and the other faction integrated by the Gulf Cartel, Sinaloa Cartel and Knights Templar Cartel with the Sinaloa Cartel of these the most powerful.

Gulf Cartel - Mexico

The Gulf Cartel (Cartel del Golfo), based in Matamoros, Tamaulipas, has been one of Mexico's two dominant cartels in recent years. In the late 1990s, it hired a private mercenary army (an enforcer group now called Los Zetas), which in 2006 stepped up as a partner but, in February 2010, their partnership was dissolved and both groups engaged in widespread violence across several border cities of Tamaulipas state, turning several border towns into "ghost towns".

The Gulf Cartel (CDG) was strong at the beginning of 2011, holding off several Los Zetas incursions into its territory. However, as the year progressed, internal divisions led to intra-cartel battles in Matamoros and Reynosa, Tamaulipas state. The infighting resulted in several arrests and deaths in Mexico and in the US. The CDG has since broken apart, and it appears that one faction, known as Los Metros, has overpowered its rival Los Rojos faction and is now asserting its control

over CDG operations. The infighting has weakened the CDG, but the group seems to have maintained control of its primary smuggling corridors, into the US.

Juárez Cartel - Mexico

The Juárez Cartel controls one of the primary transportation routes for billions of dollars worth of illegal drug shipments annually entering the US from Mexico. Since 2007, the Juárez Cartel has been locked in a vicious battle with its former partner, the Sinaloa Cartel, for control of Ciudad Juárez.

La Línea is a group of Mexican drug traffickers and corrupt Juárez and Chihuahua state police officers who work as the armed wing of the Juárez Cartel. Vicente Carrillo Fuentes headed the Juárez Cartel but was captured in 2009. Following his capture, the Juárez Cartel continued to weaken, however, it still controls the three main points of entry into El Paso, Texas. The Juárez Cartel is only a shadow of the organisation it was a decade ago, and its weakness and inability to effectively fight against Sinaloa's advances in Juárez contributed to the lower death toll in Juárez in 2011.

Sinaloa Cartel - Mexico

The Sinaloa Cartel sometimes known as the "Pacific Cartel", and headed by Joaquín "El Chapo" Guzmán, began to contest the Gulf Cartel's domination of the coveted southwest Texas corridor following the arrest of Gulf Cartel leader Osiel Cárdenas in March 2003.

The Sinaloa cartel used to be known as La Alianza de Sangre ("Blood Alliance") and grew as a result of a 2006 accord between several groups located in the Pacific state of Sinaloa. In February 2010, new alliances were formed against Los Zetas and Beltrán Leyva Cartel. As of May 2010, numerous reports by Mexican and US media claimed that Sinaloa had infiltrated the Mexican federal government and military, and colluded with it to destroy the other cartels. The Colima, Sonora and Milenio Cartels are now branches of the Sinaloa Cartel.

The cartel is considered the largest and most powerful drug trafficking organisation in the world and fugitive Joaquín Archivaldo Guzmán Loera is its leader. Known as "El Chapo Guzmán" ("Shorty Guzmán") for his 1.68m (5ft 6in) stature, he became Mexico's top drug kingpin in 2003 after the arrest of his rival Osiel Cárdenas of the Gulf Cartel and is now considered "The most powerful drug trafficker in the world," by the US Department of the Treasury. Guzmán Loera has been ranked by Forbes magazine as one of the most powerful people in the world every year since 2009; ranking 41st, 60th and 55th respectively. He was also listed by Forbes as the 10th richest man in Mexico (1,140th in the

world) in 2011, with a net worth of roughly US\$1bio. Forbes also calls him the "biggest druglord of all time", and the DEA strongly believes he has surpassed the influence and reach of Pablo Escobar, and now considers him "the godfather of the drug world." Guzman Loera's Sinaloa Cartel smuggles multi-ton cocaine shipments from Colombia through Mexico to the US, and has distribution cells throughout the US. The organisation has also been involved in the production, smuggling and distribution of Mexican methamphetamine, marijuana, and heroin.

The US offers a US\$5mio reward for information leading to his capture. The Mexican government offers a reward of 30mio pesos for such information. Guzmán was captured in Guatemala in 1993 and extradited to Mexico, where he was jailed in a maximum security prison, but in 2001, Guzmán escaped in a laundry basket and resumed his command of the Sinaloa Cartel. Guzmán has one close associate, Ismael Zambrano García who is also a fugitive. It is thought that Guzman is hiding in the towering Sierra Madre mountains.

Tijuana Cartel - Mexico

The Tijuana Cartel, also known as the Arellano Felix Organisation, was once among Mexico's most powerful. It is based in Tijuana, one of the most strategically important border towns in Mexico, and continues to export drugs even after being weakened by an internal war in 2009. Due to infighting, arrests and the deaths of some of its top members, the Tijuana Cartel is a fraction of what it was in the 1990s and early 2000s. After the arrest or assassination of various members, the cartel is currently headed by Luis Fernando Sánchez Arellano, a nephew of the Arellano Felix brothers.

La Familia Michoacana (Disbanded) - Mexico

The Michoacana Family or LFM was a Mexican drug cartel and an organised crime syndicate based in the Mexican state of Michoacana. Formerly allied to the Gulf Cartel, as part of Los Zetas it split off in 2006. The cartel's first leader, Nazario Moreno González, was known as El Más Loco (The Craziest One). Since 2009 under pressure from the Federal Government, LFM offered to disband their cartel provided the government ended their military involvement in Michoacana state. This was rejected and ended with first the killing of its founder and leader Nazario Moreno González, which contributed significantly to the Mexican Federal Police declaring in 2011, that LFM cartel had been disbanded.

Knights Templar - Mexico

The Knights Templar drug cartel (Spanish: Caballeros Templarios) was created in Michoacana in March 2011 after the death of the charismatic leader of La

Familia Michoacana Cartel, Nazario Moreno González. The Cartel is headed by Enrique Plancarte Solís and Servando Gómez Martínez who formed the Knights Templar due to differences with José de Jesús Méndez Vargas, who had assumed leadership of La Familia Michoacana. After the emergence of the Knights Templar, sizable battles flared up during the spring and summer months between the Knights Templar and La Familia. The organisation has grown from a splinter group to a dominant force over La Familia, and it appears to be taking over the bulk of their original operations in Mexico. At present, the Knights Templar appear to have aligned with the Sinaloa Cartel in an effort to root out the remnants of La Familia and to prevent Los Zetas from gaining in the region.

Beltrán Leyva Cartel (Disbanded) - Mexico

The Beltrán Leyva Cartel was a Mexican drug cartel and organised crime syndicate founded by the four Beltrán Leyva brothers: Marcos Arturo, Carlos, Alfredo and Héctor. In 2004 and 2005, Arturo Beltrán Leyva led powerful groups of assassins to fight for trade routes in northeastern Mexico for the Sinaloa Cartel. Through the use of corruption and intimidation, the Beltrán Leyva Cartel was able to infiltrate Mexico's political, judicial and police institutions to feed classified information about anti-drug operations, and even infiltrated the Interpol office in Mexico.

The Mexican Federal Police considers the cartel to have been disbanded, and the last cartel leader, Héctor Beltrán Leyva, apparently has been inactive and remains a fugitive, with a US\$5mio bounty from the US and US\$2.1mio bounty from Mexico on his head.

Los Zetas Cartel - Mexico

Los Zetas were led until recently by Heriberto "El Lazca" Lazcano and are considered by the US DEA as the most violent paramilitary enforcement group in Mexico. The Zetas is a criminal organisation dedicated mostly to the international illegal drug trade, assassinations, extortion, kidnapping and other organised crime activities.

This drug cartel was founded by a group of former Mexican Army Special Forces deserters and now it includes corrupt former federal, state, and local police officers, as well as ex-Kaibiles from Guatemala. This group of highly trained gunmen was first hired as a private mercenary army and bodyguard troupe for Mexico's Gulf Cartel. After the arrest of the Gulf Cartel's leader, Osiel Cárdenas Guillen, as well as other events, the two entities became a combined trafficking force, with Los Zetas taking a more active leadership role in drug trafficking.

Since February 2010 Los Zetas have gone independent and became enemies of its former employer/partner, the Gulf Cartel. In response to such aggressive efforts on the part of the Zetas to defend and control its smuggling corridors to the US, the rival Sinaloa Cartel established its own heavily armed enforcer gang, Los Negros. The group operates in a similar fashion to Los Zetas, but with less complexity. Los Zetas have set up camps to train recruits as well as corrupt ex-federal, state, and local police officers.

In September 2005 testimony to the Mexican Congress, then-Defence Secretary Clemente Vega indicated that the Zetas had also hired at least 30 former Kaibiles from Guatemala to train new recruits because the number of former Mexican special forces men in their ranks had shrunk. Los Zetas' training locations have been identified as containing the same items and setup as special forces training facilities.

Los Zetas are primarily based in the border region of Nuevo Laredo, with hundreds more throughout the country. In Nuevo Laredo it is believed they have carved the city into territories, placing lookouts at arrival destinations such as airports, bus stations and main roads.

In addition to conducting activities along the border, they are visible throughout the Gulf Coast region, in the Southern states of Tabasco, Yucatan, Quintana Roo, and Chiapas, and in the Pacific Coast states of Guerrero, Oaxaca and Michoacana, as well as in Mexico City. Evidence also indicates that they may be active in Texas, other US states and in Italy with the Ndrangheta.

Former leader Heriberto Lazcano was killed by Mexican marines in a shootout in 2012 in a small town in northern Mexico, 130 miles from the Texas border. In a twist, a group of armed men later stole Lazcano's body from a funeral home. His successor Miguel Trevino Morales was arrested in July 2013 dealing another significant blow to Los Zetas. It remains unknown as to both who now leads the organisation and whether the senior decapitations will materially affect the success of this criminal organisation.

Caribbean

The Caribbean islands are strewn across an arc of more than 2,000 miles with over 7,000 islands and are made up of 13 sovereign states and 17 dependent territories the area is a microcosm of the colonial history of Europe and more recent US history. Whilst the Caribbean countries are

all islands many are for all practical purposes linked to the South American mainland States, the Central American mainland and that of North America.

In effect the Caribbean is a series of stepping stones geographically placed along the world's major drug and cash highway between the world's major source of cocaine and the world's largest markets of consumers. In many cases this colonial past has fostered a diaspora of people with links to European markets who can move in both directions. Marijuana is also a major exported crop but market forces have created competition in the form of European and US home grown sinsemilla with estimates that up to 50% of high strength cannabis could be 'home grown'.

In 2009 a Ministerial conference was held consisting of the Heads of State of: Antigua and Barbuda, Bahamas, Belize, Cuba, Dominican Republic, Grenada, Haiti, Jamaica, St Vincent and the Grenadines, St Kitts and Nevis, Saint Lucia, Suriname and Trinidad and Tobago. At the conference they affirmed a Declaration on Combating Drug Trafficking, Organised Crime and Terrorism which they declared were challenges for Security and Development in the Caribbean. In particular they identified a list of pressing problems including light weapons and drugs trafficking with related criminality, terrorism financing and transnational organised crime. Financial crime particularly money laundering were seen also to be major problems.

Corruption in the Caribbean varies from country to country but is in general pervasive and high. Each country has linguistic, historical commercial and sometimes even legal ties to some of the major European consumers strengthened by daily air flights and sea container traffic.

There are also many people originating from Caribbean countries who play a part in drug distribution in Europe and the US.

The flows of drugs create many return flows of drug revenues that need laundering and throughout the area remittances from expatriates along with many financial

services industries create the conditions and cover for some money laundering.

In spite of decades of combatting drugs by these countries along with the US the production and trafficking of cocaine, marijuana, heroin, and methamphetamine still unabatedly generate a multi-billion dollar black market in which Drug Trafficking Organisations (DTOs) have thrived.

The very authority of some Caribbean states is being challenged in those transit countries where the governments are too often fragile and corruptible. The Caribbean Basin Security initiative along with others in the region (Plan Colombia; Merida Initiative; CARSI) are all ostensibly working to support the rule of law and anti-corruptions measures. Whilst the US /Mexican land border now predominates as the main route for Andean cocaine the growing European markets still use routes via the Caribbean and Jamaica is a major exporter of cannabis to the US.

The Caribbean - South Florida route into the US had seen some decline recently as alternatives open up but some experts are suggesting that this route will start to see rapid growth again. Indeed Dominican and Puerto Rican groups are competing on price asking Colombian traffickers for a little as half that normally charged by the Mexicans.

Of the 16 countries in the Caribbean area four have been identified by President Obama as major drug producing or transit countries. These are Haiti and the Dominican Republic; Jamaica and the Bahamas.

The President annually issues a Presidential determination identifying which countries are regarded as drug majors. Of the 20 countries in the world identified five of them have been Caribbean countries and have been on that list for the past ten years. Pointing this up a former DEA Chief of Operations described the Dominican Republic as a "command control and communications centre "for Caribbean drug operations. Despite their diversity, one thing all Caribbean countries have in common is that they suffer greatly from the supply of drugs from the south and the demand to the north.

Historically, the Caribbean has also been susceptible to money laundering for several reasons. Many small Caribbean nations (some very small) began providing offshore financial services for the western world's much bigger economies as a way to gain economic benefits for their own resource poor countries. Due to their small state institutional capacity and often coupled with political corruption they did not have the ability to carry out proper oversight of these services whilst finally tourism created many cash-based enterprises through which dirty money can move.

Bahamas

Following the arrival of Christopher Columbus, thought to have sighted and landed in San Salvador, meeting local Lucayan Indians, which is today one of the many islands of the Bahamas in 1492, the islands in and around surrounding San Salvador (or Christ the Saviour). The name Bahamas also comes from Columbus, from the Spanish word "baja mar" meaning shallow sea. The Bahamas was inhabited by a British settlement in 1647. The islands became a colony in 1783 and independent country in 1973. It has prospered through tourism and developed a successful offshore financial centre and has established a large free trade zone at Freeport harbour.

The Bahamas is not a significant drug producing country but remains a transit point for illegal drugs bound for the US and other international markets. The Bahamas' close proximity to the coast of Florida as well as Caribbean drug transshipment routes makes it a natural conduit for drug, cigarette and arms smuggling and bulk cash movements. Furthermore, the Bahamas's 700 islands and cays, the vast majority of which are uninhabited, provide near ideal conditions for illicit smuggling. Smugglers readily blend in among the armada of pleasure craft traveling throughout the Bahamas archipelago. Recent law enforcement information points to increased smuggling through air traffic, both by newly established commercial traffic from South and Central America and through private planes.

Cuba

The native Amerindian population of Cuba began to decline after the European discovery of the island by Christopher Columbus in 1492 and following its development as a Spanish colony during the next several centuries. Large numbers of African slaves were imported to work the coffee and sugar plantations, and Havana became the launching point for the annual treasure fleets bound for Spain from Mexico and Peru. US intervention during the Spanish-American War in 1898 assisted the Cubans in overthrowing Spanish rule, with full independence being obtained in 1902, after which the island experienced a string of governments mostly dominated by the military and corrupt politicians. Fidel Castro led a rebel army to victory in 1959 and he ruled for nearly five decades, despite extensive US Sanctions. For more details see Part 1 Section 3, Sanctions & Embargoes above. Fidel stepped down as President in February 2008 in favour of his younger brother Raúl Castro. Cuba's Communist revolution, with Soviet support, was exported throughout Latin America and Africa during the 1960s, 1970s, and 1980s. Cuba is criticised by many for close relationships with Venezuela, Iran and North Korea, co-ordinating policies and resources in a partnership aimed at counteracting and circumventing US Foreign policies.

Numerous serious allegations have been made against the Cuban regime, including: i) the development and testing of electromagnetic weapons that have the capacity to disrupt telecommunication networks, cut power supplies and damage sophisticated computers; ii) the export of biotechnology to Iran; iii) contacts with designated terrorist groups, including Hamas and Hezbollah, the Popular Front for the Liberation of Palestine, IRA and ETA; iv) providing a safe haven for fugitives particular from US justice and v) weapons supply deliveries to North Korea.

The latest case involved the detection of 2 Cuban MiG-21 jet fighters found aboard a seized North Korean cargo ship in the summer of 2013, intercepted by Panamanian authorities off the Atlantic entrance to the Panama Canal on a 508-foot North Korean freighter Chong Chon Gang. Officials searching the vessel found the MiG aircraft in sealed containers hidden under 100-pound bags of sugar – 10,000 tons worth – in the ship's hold. They also uncovered 15 jet engines and other weaponry. The UN has imposed an embargo on arms shipments to North Korea stemming from that country's 2006, 2009 and 2013 nuclear tests.

Cuban territorial waters and air space serve as a transhipment zone for US and European bound drugs. Cuba is a source country for adults and some children subjected to forced labour and sex trafficking. Prostitution of children reportedly occurs in Cuba as prostitution is not criminalised for anyone above 16 years old.

Dominican Republic

The Dominican Republic shares this Caribbean island with Haiti, and prior to its independence in 1844 was known as Santo Domingo and before that as part of Hispaniola, from which Haiti also emerged after being discovered by Christopher Columbus on his first voyage in 1492. Mostly non-representative rule followed, and in the last half of the twentieth century, Joaquín Balaguer maintained a tight grip on power for the next 30 years until 1996. Since then former President Leonel Fernández Reyna (first term 1996-2000) won election to a new term in 2004 following a constitutional amendment allowing presidents to serve more than one term, and was since reelected to a second consecutive term.

The Dominican Republic is a transhipment point for South American drugs destined for the US and Europe and has become a transhipment point for ecstasy from the Netherlands and Belgium destined for US and Canada. It is also a suspected of being used for money laundering in particular by Colombian narcotics traffickers. As far as Human Trafficking is concerned, Haitian migrants cross the porous border into the Dominican Republic to find work and illegal migrants from the Dominican Republic cross into Puerto Rico.

Jamaica

Jamaican organised crime is a powerful force in Jamaica and a significant part of the criminal world in the cities of the US, Canada and the UK and Canada. The major crime groups are deeply involved in the international drug trade and within Jamaican protection rackets and extortion. They have

penetrated the formal economy in both legitimate and illegitimate businesses. They have massive political influence with corruption endemic.

Yardies/Posses - Shower Posse - Jamaica

The posses or Yardies are loose groupings of gangs that first became involved in drugs and gun-running in the early 1980s and have been described by some as an example of organised disorganized criminals. Many authoritative studies have claimed that the Jamaican posses are closely linked to Jamaican political parties including the Jamaica Labour Party and the Peoples National Party. This political control extends to the ability to deliver votes and communities with JLP posses controlling the south and west of Kingston whilst the PNP posses control central and eastern. Few Posses claim to have no political allegiance. In the UK Jamaican criminal gang members are often referred to as Yardies. Hurricane Charlie devastated Jamaica in 1951 and the government set up the Hurricane Housing Organisation which created social housing projects with very basic amenities. In this poverty crime and violence flourished. The term Yardie stemmed from the slang name, originally used pejoratively, to occupants of "government yards", and was used affectionately by newly arrived Jamaican immigrants to Britain and then by extension to Jamaican gangs in London. As Jamaica entered the 1980s, the island found itself being exploited as a trans-shipment point for cocaine and the criminal gangs exploited this opportunity. In order to benefit further and follow the drugs, Jamaican criminals chose foreign city areas that already contained large populations of lawful Jamaicans to establish their foreign operations and gain more control over the drugs being trafficked, for example, London and New York, New Jersey, Florida, and Pennsylvania.

One of the first and most infamous of the Posses is the 'Shower Posse'. There are differing reports on the origin of the name. One theory is that it comes from the promises of its associated politicians to shower supporters with gifts. Another view is that it is a reference to the gang showering opponents with bullets. The Shower Posse's home is in Tivoli Gardens in Jamaica, which is also the district of ex-Jamaica Labour Party, PM Bruce Golding (2007-2011).

In the 1980s the Shower Posse were believed to have formed branches in sixteen major American cities including Miami and New York, and in Toronto, Australia and Italy. The leader of the Shower Posse at its height was Christopher Coke also known as Dudus took over his father's gang, becoming the leader of Kingston's Tivoli Gardens, distributing money to the area's poor, creating employment and setting up community centres while also exporting vast quantities of marijuana and cocaine. Coke had a privileged upbringing, being sent to school with children of the country's political elite. He is reputed to have made billions of US\$ before his arrest in Jamaica in 2010 after an extradition request from the US was received in 2009 and pressure was applied to enforce it.

In 1989, Shower Posse member Charles "Little Nut" Miller was arrested in the US, charged with drug trafficking and obtaining immunity identified Christopher Coke as the leader of the gang back in Jamaica and a man with close ties to the Jamaica Labour Party. At the time of his 2010 capture Jamaican police were unable to enter this neighborhood without community consent. In a run-up to Coke's arrest, more than 70 people—security forces and civilians died in a 2010 raid of the Kingston neighborhood he was associated with. He was picked up at a Jamaican checkpoint disguised in female clothing. He was eventually extradited to New York, where he would face charges and be convicted of smuggling drugs and weapons in June 2012.

Haiti

Formerly Hispaniola and discovered by Christopher Columbus in 1492, run by the Spanish then the French, Haiti became the first post-colonial black-led nation in the world, after a slave revolt, declaring its independence in 1804. Currently the poorest country in the Western Hemisphere, through corrupt leaders such as Papa doc Duvalier and then his son Bebe doc Duvalier and more recently President Aristide until his ejection in 2004, and still recovering from a 2010 devastating earthquake (the worst in 200 years in the region) which was estimated to have killed over 300,000 and left some 1.5 million homeless. Haiti is a source, transit, and destination country for men, women, and children subjected to forced labour and sex trafficking with many of Haiti's trafficking cases involving children recruited to live with families in other towns in the hope of going to school but who instead become forced domestic servants known as restaveks who are vulnerable to abuse and make up a large proportion of Haiti's population of street children, who are forced into prostitution, begging, and street crime by violent gangs; Haitians are exploited in forced labour in the Dominican Republic, elsewhere in the Caribbean, and the US. Haiti is also a Caribbean transhipment point for cocaine en route to the US and Europe.

Central America

Central America consists of the seven states of Belize, Honduras, Guatemala, Costa Rica, Nicaragua, and El Salvador with a combined area smaller than Texas.

The Central America Four Agreement between El Salvador, Guatemala, Honduras, and Nicaragua allows for free movement of the citizens of these countries across their respective borders without passing through immigration or customs inspection, although for all practical purposes the whole of Central America has unrestricted movement.

Costa Rica and Panama are much better off and better governed than their neighbours. Costa Rica is one of the world's oldest democracies; life expectancy there is on a par with the US. The others have suffered diffident economic growth in the past decade. Nicaragua is the poorest country in mainland Latin America. Almost half of Guatemala's children are chronically malnourished, a rate worse than Ethiopia's, and said by the World Bank to be the third-worst in the world. Political conflict compounded these problems. The civil wars that ravaged Central America in the 1970s and 1980s between dictators backed by the US and guerrillas backed by the Soviet Union and Cuba are over, but a crippling polarisation of right and left remains.

In 2010 the Inter American Commission on Human Rights reported that Latin America had had the highest levels of youth violence in the world being 36 times that of developed countries. Spain's population roughly equates to that of Central America yet in 2006 it had 336 murders whilst Central America had over 14000. For every murder there are approximately 40 crimes of non-fatal violence. Today organised drug crime has increased its already substantial presence and widened its activities. It is now the main cause of the bloodshed within Central America which is used as a bridge between Colombia and Mexico and from there onwards to the US.

These problems are even more acute in the so called Northern Triangle of Guatemala, El Salvador and Honduras.

Northern Triangle

Honduras, Guatemala and El Salvador make up the so-called Northern Triangle of Central America with each fighting for survival caught between the rise in

criminal violence domestically and the presence of the international drug trade. A bleak economic landscape has fostered youth gangs known as maras and domestic smugglers to build a relationship with the great drug syndicates of Mexico and South America with impunity permitted by a corrupt police and government.

In the past decade criminality has risen exponentially throughout Central America, but the crime wave has overwhelmingly been felt much more strongly in the Northern Triangle. Guatemala's rate of 46 murders per 100,000 people is more than twice as high as Mexico's, and nearly ten times greater than that of the US. Honduras and El Salvador are more violent still. Nicaragua, Costa Rica and Panama, the quietest members of the group, have also seen violence increase in recent years, as has Belize

Honduras, El Salvador and Guatemala's security forces are in a standoff with transnational drug cartels trying to control territory to use as transportation routes for drug trafficking. The drugs, mostly cocaine, are produced in South America and smuggled through the three countries to the US. The trade is managed by powerful Mexican cartels, especially the Sinaloa, and using local gangs as support and muscle. The three countries are also increasingly becoming drug producers and processing sites. They register some of the highest homicide rates in the world.

According to some commentators, including Douglas Farah, the countries of the Northern Triangle, particularly Honduras could be labeled "narco" or "failed" states.³³ In 2011, a Costa Rican non-governmental organisation (NGO) concluded that several Central American nations were at risk of becoming "failed states".³⁴ In 2011, a Costa Rican non-governmental organisation (NGO) concluded that several Central American nations were at risk of becoming "failed states" with Honduras labeled the most at risk, and with governments losing the ability to tackle their security problems leaving large sections of "ungoverned spaces" where criminal operations effectively control the territory. For example, the Petan, a sprawling, sparsely populated jungle region in northern Guatemala, has become a landing zone for clandestine flights from Colombia and Venezuela. In the Laguna del Tigre national park lies a "cemetery" of more than 30 crashed light aircraft which had been used to ferry cocaine. Locals are paid by narcos to keep the runways open.

The road to this state of affairs is at once complex and simple. Extreme poverty, massive inequality and virtually non-existent infrastructure in many areas coupled with state institutions that are riddled with corruption form a receptive breeding ground for the various groups involved in the movement of cocaine from the Andean states to Mexico and its ultimate destination the US. Added to this, individuals involved in the conflicts of the 70s and 80s have no employment and possess weapons superior to those held by the police.

Indigenous gangs have existed for decades moving

drugs, contraband, humans and arms but now the Mexican Cartels have moved in as drug flights from South America into Mexico become more difficult and seaborne interdiction more effective on the Caribbean and Pacific routes into Mexico and the US.

So called 'Go Fast' boats can land at myriad safe coastal areas and flights can land in territories that are controlled by the smugglers. Small aircraft are often crash landed as they are seen as 'disposable'. Most of the organisations that participate in drug-trafficking in the Northern Triangle are tasked primarily with the protection and transportation of Colombian or Mexican owned products. One example of this relationship is the Mexican Sinaloa Cartel's links with Los Perrones Orientales, an organised crime group that transports product by land from the Pacific Coast to Guatemala.

Somewhere between 250 and 350 tonnes of cocaine or almost the whole amount heading for the US now pass through Guatemala each year, according to American officials. Whereas a decade ago Central America seized less cocaine than either Mexico or the Caribbean, in 2008 it intercepted three times more than the other two combined. Mexico's Sinaloa, Gulf and Los Zetas Cartel's are now active through much of the isthmus, often with local allies. Unlike the Colombians, they pay their local help in drugs, not cash.

The impact has been lethal. Guatemala's murder rate has doubled in the past decade. In both Guatemala and El Salvador, the rate of killing is higher now than during their civil wars. Guatemala's government reckons that about two-fifths of murders are linked to the drugs business. Even Panama, much richer than many Central American countries and a favourite retirement spot for wealthy foreigners, has seen its murder rate almost double in the past three years. As well as using Central America as a corridor, the traffickers are moving more of their operations there.

Another part of the organised crime structures are youth gangs. There is evidence that the upper echelons of transnational youth gangs, such as the Mara Salvatrucha (MS13), provides security, or "muscle," for the Mexican cartels and frequently provide transport services for organisations like Los Perrones Orientales. These upper levels are often made up of former combatants from former conflicts in the region.

The other main Mexican cartel is Los Zetas and there is evidence that they have recruited senior Mara 18 members. They also recruit from the notorious disbanded Guatemalan Special Forces known as the Kabilas.

Mara 18 is the local name of the 18th Street Gang that originated in Los Angeles in the US and came to the region when gang members were deported from the US back to Central America. There are an estimated 70,000 maras in Central America. These youth gangs are a ready supply of willing teenagers who can ferry drugs, look

after kidnap victims and carry out other low-level crimes although they run large scale protection racket.

Mexico's cartels, which are the most powerful in Latin America were initially Transportistas for the Colombians but eventually wrested control from them. The maras of Central America, have close ties to inner-city gangs in the US and it is feared may well be seeking to emulate the Mexican's cartels experience.

Belize is similar in many respects with regard to drugs, whilst smuggling of persons is more developed with both human smuggling and trafficking taking place. Large Belizan communities exist in New York and Los Angeles and gangs such as the Bloods and the Crips from Los Angeles are to be found in Belize. Honduras recently had a coup and as a consequence organised crime has spread and escalated. Insofar as the Cartels and gangs are concerned for all practical purposes they operate in a transnational environment so nation states and national institutions are of little concern.

Costa Rica is a more stable democracy yet the effects and influence of the Mexican cartels is growing. Recent successes have seen the arrest of some of the Michoacana crime family, infamous for its use of torture by what they call Divine Justice.

Mara - MS13/MS18 - Central America

The smuggling clans of Central America (known as *transportistas*) and the larger transnational elements in Mexico and the Andean drug producer Countries hire Maras to perform smaller scale criminal such as drug running, targeted murders and extortion. Generally speaking, Maras are violent criminal organisations that began as turf gangs who originally engaged in local opportunistic criminal activities, but have now internationalized into networked and complex structures with a growing political consciousness. Maras are functionally different from the native criminal groups found elsewhere in the Americas and are now the quintessential Central American criminal link in the transnationalised Latin American drug trade network. The maras phenomenon finds its origin on the streets of the poor and racially segregated neighborhoods of 1960s Los Angeles. The first recognisable Mara to take shape was the 18th Street gang comprised of Mexican and Central American immigrants. The original Maras were formed by Latino workers who were shunned by the established American gangs that existed in the immigrant areas of the city (around the 18th street); namely the Chicano (or Mexican-Americans) and African-American gangs. At first in order to defend themselves from the dominant gangs, the migrants banded together but with time they ended up adopting the profile of an inner city American gang eventually growing to a powerful force in their own right and now known as the Mara Salvatrucha (or MS13), slang for Salvadoran mob. The MS13 benefited from experiences in El Salvador's brutal civil war which gave them an advantage and established the MS13 as a major force of violence. Though at one

point the Maras were all relegated to the slums of east LA, they were soon exported to other parts of the US once other illegal Central American immigrants joined the gangs in other diaspora communities throughout the country, most notably those of Chicago and New York City. The gangs' swelling ranks also coincided with the first waves of deportation initiated by US after ending of the Central American civil wars in the early 1990s. The criminally radicalized immigrants were returned in droves to their countries taking with them the Mara culture. In the case of the Northern Triangle states, no others have been as significant as the 18th Street and MS13. The continuous deportation of illegal immigrants essentially seeded gang members from the US to the Northern Triangle, thus bringing with them their vicious rivalries, unique marero ethos and the gangs' organisational makeup. The Maras' expansion in the past two decades is astonishing. It is estimated that nearly 70,000 mareros exist in Central America alone, with an equal high number living in the US. Honduras is accountable for over half at 36,000, while Guatemala has 14,000 and El Salvador has 10,400 mareros. The nearest count in any neighboring country is 2,660 in Costa Rica. Honduras has the dubious distinction of having the most number of different gangs in Central America with over 100 different maras vying for control, while El Salvador and Guatemala are almost neatly split between the feuding MS18 and MS13.

El Salvador

The archbishop of San Salvador, Óscar Romero, had been an outspoken critic of the ruling military junta attempting to quell a popular insurrection whose leaders were advocating social and economic reforms. Romero alleged that the junta was guilty of massacres and torture. The archbishop was assassinated on 24 March 1980. Rallies in support of Romero turned bloody when police opened fire on the crowds. This was the spark for the 12-year El Salvador civil war. The military, supported by the US, targeted union officials, clergy, academics and others; thousands died. A peace agreement was reached between the two groups in 1992.

People's Liberation Forces (El Salvador) - El Salvador
The People's Liberation Forces (FPL) was one of the first Salvadoran terrorist groups to emerge in the 1970s, formed by then secretary general of the Communist Party of El Salvador (PCES). It was hoped that a violent struggle led by FPL insurgents could bring about a popular revolution and thus led El Salvador into an era of Communism. The group also strongly opposed foreign investment, and as is to be expected of a left-wing political group, detested perceived US 'imperialism'.

During the 1970s the FPL represented the largest terrorist groups operating in El Salvador. In particular the tendency of grassroots political activists to work within the political system, rather than attempt to cripple it through military action, proved highly divisive. In

1980 the FPL merged with **Farabundo Martí National Liberation Front (FMLN)**, a similarly leftist terrorist group through which it continued its resistance to El Salvador's government.

Farabundo Martí National Liberation Front (FMLN) - El Salvador

The Farabundo Martí National Liberation Front (FMLN) was a Marxist-Leninist insurgency movement operationally active in El Salvador from 1980 to 1992. The organisation was founded in 1980 as the unification of five left-wing political groups in El Salvador and aimed to overthrow the contemporary government. In terms of structure the organisation was delineated between a political wing that focussed on the group's propaganda campaigns, and a military wing that conducted violent insurgency.

Considerable financial aid was provided by other Communist regimes and affiliated "solidarity" groups distributed throughout Latin America, Europe and North America. Revenue was also sourced from "taxes", typically levied from businesses located in contested areas of El Salvador, as well as kidnappings and bank robberies.

Military training was provided for many FMLN members by Nicaragua and Cuba. In 1982 the FMLN commenced two offensives against El Salvador's government, however both were defeated by the state's military. Despite these setbacks, by 1983 the FMLN is believed to have reached the height of its power and commanded as many as 12,000 insurgents. Supplied with American weapons purchased by Nicaragua and Cuba the FMLN launched its final conventional military campaign against El Salvador's government in 1983. However, having failed to secure a decisive victory by means of open warfare, in the latter half of the 1980s the FMLN moved away from open warfare in favour of urban guerrilla tactics. Rather than large units organised along tradition military lines the group restructured itself to operate in smaller cells and engaged in bombings, arson, and kidnappings. Most notable among these kidnappings was the FMLN's seizure of President Jose Napoleon Duarte's eldest daughter Inez in 1985.

As well as government facilities, American interests and citizens became high priority targets in reaction to the US's provision of aid to the government of El Salvador and its counterinsurgency operations. For instance in 1985 4 US Marine security guards were gunned down at a road side cafe, and in 1987 the driver of the US Navy Attache was kidnapped and killed. Such attacks continued until in 1991 a peace settlement was reached between the FMLN and the El Salvadorian government. Since then the FMLN has turned away from political violence, participating successfully in El Salvador's political arena.

Today the FMLN is one of the two largest political parties in El Salvador and in 2009 won the Presidential election with its candidate Mauricio Funes.

Honduras

Once part of Spain's vast empire in the New World, Honduras became an independent nation in 1821. When compared to other Central American countries, Honduras suffered fairly low levels of political violence and terrorism in the second half of the 20th century. Full-scale leftist insurrections did not materialize in Honduras as they did in Guatemala and El Salvador, and, consequently, neither did the rightist paramilitary groups that combated them. The 1980s, however, saw an increase in political violence in the country, though not to the levels of its neighbors. A few leftist groups did emerge, such as the Morazanist Patriotic Front, but their attacks remained few in number and small in scope.

Honduras is a transshipment point for drugs and narcotics, and suffers from corruption which is considered a major problem. Honduras is a source and transit country for men, women, and children subjected to sex trafficking and forced labour. Honduran women and girls, and, to a lesser extent, women and girls from neighboring countries, are forced into prostitution in urban and tourist centers; Honduran women and girls are also exploited in sex trafficking in other countries in the region, including Mexico, Guatemala, El Salvador, and the US.

Guatemala

Guatemala endured a long and bloody conflict between government and leftwing rebels. Its roots date back to the mid-40s when the US helped overthrow the October Revolutionaries, leftwing students and professionals advancing radical social and economic reforms. The CIA-backed a coup in 1954 and the military junta put an end to the left wing reforming agenda. In the 80s, the junta aimed to systematically eliminate leftwing activists throughout civil society, the universities, politics, law, peasants, etc. More than 200,000 people were killed over the course of the 36-year-long civil war that began in 1960 and ended with peace accords in 1996. About 83% of those killed were Mayan, according to a 1999 report written by the UN-backed Commission for Historical Clarification titled "Guatemala: Memory of Silence." The report also concluded that the vast majority, 93%, of human rights violations perpetrated during the conflict were carried out by state forces and military groups. US involvement in the country was also singled out by the commission as a key factor contributing to human rights violations, including training of officers in counterinsurgency techniques and assisting the national intelligence apparatus.

Peace accords ending the 36-year internal conflict were signed in December of 1996. Today Guatemala is led by President Álvaro Colom of the National Unity for Hope. Almost 15 years after the end of the civil war, violence and intimidation continue to be a major

problem in political and civilian life. Organised crime groups operate with relative impunity, an issue that appears likely to factor prominently in the country's next presidential election later this year.

Panama

In Central America, Panama is the most developed economically. Though it lies in Central America, the country's 3.6 million citizens are now richer than most Latin Americans. Whilst Panama's economy outclasses others in Central America, and many in South America, its government is in turmoil. Ricardo Martinelli, a supermarket tycoon who became president in 2009, is at war with his vice-president, Juan Carlos Varela, who comes from a different party and whom the constitution prevents the president from sacking. Mr Varela has accused the president of taking a US\$30mio bribe in return for awarding a contract for helicopter and radar services to an Italian firm. Mr Martinelli is suing Mr Varela for US\$30mio in damages. A leaked cable from the US embassy reveals that in 2009 Mr Martinelli requested help in the wiretapping of his political opponents, noting his "penchant for bullying and blackmail."

Panama was once part of Colombia until it seceded in 1903 with the backing of the US who then went on to start building the critically strategic (to the US) Panama Canal in 1904.

A cursory glance at a map shows how its geographic location along with its developed maritime and transportation infrastructure facilitates the trans-shipment of illegal drugs from the Andean producers to the US and Europe.

Traffickers exploit these advantages which include five containerised seaports, the Pan-American Highway and an international hub airport. Further there are many uncontrolled airfields, and a Pacific and Atlantic coastline which is virtually unguarded. Smuggling of weapons and drugs particularly between the isolated Darien region and Colombia has gone on for over a century but boats and planes form the main modes of transport.

In the hinterland hundreds of abandoned or unmonitored legal airstrips are used by traffickers for refuelling or deliveries. Panama was for a time considered by many a Narco-state, where drug cartels from Colombia in particular were given licence to operate transhipment of drugs north, particularly under the Presidency of [General Manuel Noriega](#) until his removal by US forces in 1989. Panama today is an important regional financial centre and has a sophisticated international banking sector. Its de facto currency is the US dollar. Panama also has the Colon Free Zone (CFZ) which is the world's second largest free zone after Hong Kong.³⁴

Nicaragua

In 1979, the Sandinista National Liberation Front overthrew Anastasio Somoza's dictatorship in July and established a socialist coalition government. The Somoza family had ruled Nicaragua from 1936 to 1979, allegedly embezzling funds on a massive scale, including monies sent to help rebuild the capital, Managua, after an earthquake in 1972. This led to the establishment of rightwing rebel groups formed in opposition to the Sandinistas, who would become known as the [Contras](#) and who received aid from the US government, for arms and training, until aid was outlawed by Congress.

The US administration of Ronald Reagan, which had come to power in 1981 committed to supporting rightwing regimes in Latin America and attempted to fund the groups covertly, with the Contras-Sandinista conflict seen by many as a proxy for the cold war. For more details also see [Arnoldo Aleman](#) in Part 2 Section 7 below.

Nicaraguan Democratic Force-(Contra's) - Nicaragua
The Nicaraguan Democratic Force (FDN) was established in 1981 from many members of the deposed Somoza government's National Guard and others. The Sandinista government had risen to power in 1979.

The US supplied the group with considerable support and provided a safe haven for the political wing of the organisation, which established its headquarters in Miami, Florida.

The FDN was the largest Contra Group (the label given to all rebel groups violently opposing the Sandinista government) operating in Nicaragua. A rare glimpse into the financial dealings of the rebel group was provided by the testimony of FDN leader Adolfo Calero before a Federal grand jury in 1987. In the documents revealed to the court it was clear that Saudi Arabian sources provided vast sums of money to support the FDN.

The group also used complex commercial organisations to act as dummy institutes and secret bank accounts to channel money to their cause. For instance a friend of Calero's employed in the legal profession granted the FDN leader access to a bank account in Miami that belonged to one of his family members. Into this account monthly instalments were paid by FDN patrons. Mr Calero's friend also helped to spin the web of commercial deceit still further by setting up three dummy companies based in Panama which held five bank accounts in Panama and the Cayman Islands. Through these bank accounts the FDN channelled further funds without attracting the attention of law enforcement agencies.

It also emerged that in 1986 the FDN had received

large sums of money from the US despite a Congressional ban on the provision of aid. Moreover that money had itself been raised by the secret and illegal sale of weapons to Iran in what came to be known as the Iran-Contra affair.

The contra campaign against the Sandinista government ended when the left wing party was voted out of office in 1990 national elections, a development that also spelt the end of FDN military action.

Belize

Belize was the site of several Mayan city states until their decline at the end of the first millennium A.D. The British and Spanish disputed the region in the 17th and 18th centuries. It formally became the colony of British Honduras in 1854. Territorial disputes between the UK and Guatemala delayed the independence of Belize until 1981.

Current concerns include, high crime rates, the country's growing involvement in the Mexican and South American drug trade, with Belize becoming a transshipment point for cocaine, a small-scale illicit producer of cannabis, primarily for local consumption and the presence of an offshore finance sector where concerns around money laundering activity related to narcotics trafficking and other crimes exist.

Costa Rica

Although explored by the Spanish early in the 16th century, it wasn't until 1563 that a permanent Spanish settlement was established and the area remained a colony for some two and a half centuries. In 1821, Costa Rica became one of several Central American provinces that jointly declared their independence from Spain. Two years later it joined the United Provinces of Central America, but this federation disintegrated in 1838, at which time Costa Rica proclaimed its sovereignty and independence. Since the late 19th century, only two brief periods of violence have marred the country's democratic development.

Costa Rica is a transshipment country for cocaine and heroin from South America, it produces cannabis in remote areas and has concerns over domestic cocaine consumption, particularly crack cocaine. Of particular note are seizures of smuggled cash in Costa Rica and at the main border crossing to enter Costa Rica from Nicaragua.

South America

The South American continent, vast and geographically diverse stretches from the Northern Hemisphere through Equatorial jungles and down to the sub-Antarctic polar climate of Tierra del Fuego. Thirteen countries share (predominantly) two similar languages,

Spanish and Portuguese; one principal religion and a common historical background. Historically South America has in one way or another lived under the political shadow of its northern neighbour (the US). Today however, whilst the US still has much influence several factors are changing the political landscape away from real or perceived US dominance.

It is 40 years since the death of Chilean President Salvador Allende, who died in the presidential palace on 11 September 1973 during a coup led by army chief Augusto Pinochet. Allende won the presidency in 1970 and became Latin America's first democratically elected leftwing leader. Pinochet instituted Operation Condor through the 1970s and 1980s which amounted to a campaign of political repression carried out by US-backed Latin American dictatorships that was designed to eliminate tens of thousands of leftwing activists. Whilst it was the idea of Pinochet, he enlisted Argentina, Bolivia, Paraguay, Uruguay and Brazil in a continent-wide campaign. Today South America looks very different with a BBC report in 2005 estimating that, of 350 million Latin Americans, three out of four lived under leftwing administrations. Hugo Chávez was among the first of the late 20th-century Latin American leaders who came to power with a leftwing agenda. Chávez looked to Simón Bolívar, godfather of South American independence, for inspiration for his Latin socialism. He was elected president of Venezuela in 1999 and served until his death earlier this year. Elected president of Brazil in 2002 and re-elected in 2006, the former union leader Luiz Inácio Lula da Silva promised major social reforms and oversaw the emergence of Brazil as an economic powerhouse, which did much to raise millions of people in the country out of poverty. Tabaré Vázquez, an oncologist, was elected president of Uruguay in October 2004. A member of the Socialist party, he became the country's first president from a leftwing party. One of his first actions was to announce a US\$000mio-a-year project to alleviate extreme poverty. Michelle Bachelet's election as president of Chile in 2006 was significant for a number of reasons. She was the first woman president, she was a social democrat, and her father, General Alberto Bachelet, who served under Allende, had been tortured by, and died during, the Pinochet dictatorship.

Evo Morales, elected President of Bolivia in 2006, is a champion of indigenous rights and a vocal critic of US foreign policy. He has committed himself to help the poorest peasant farmers and to ensuring that the wealth from the country's gas reserves is distributed more equally. Rafael Correa, elected in 2006 as President of Ecuador and re-elected for a second term. He is an economist who came to power on the back of his opposition to the International Monetary Fund's plans for remedying his country's economic ills. Instead, he rolled back the IMF plans and put an end to privatisation of national resources such as water, oil and gas.

The Tri-Border Region

The tri-border region, formed by the cities of Puerto Iguazu, Argentina, Foz do Iguaçu Brazil and Ciudad del Este, Paraguay, has a reputation for lawlessness and an historical presence of terrorist elements. For decades the region has been home to various smugglers, terrorists, drug traffickers, arms dealers, and organised crime figures from Russia, Japan, China, and Nigeria, among other countries. Terrorists from the Middle East have also been found in the area, particularly from Lebanon and Syria. Former FBI director Louis Freeh described the area as a "free zone for significant criminal activity, including people who are organised to commit acts of terrorism." Approximately 630,000 people live in the tri-border area, of which roughly 25,000 are Arabs or of Arab descent. The dynamics of the area, including political corruption and lax border security make it a haven for crime helping to fuel a huge underground economy and even, according to some commentators, links to terrorism and the financing of terrorism. In particular, US officials have voiced concerns about the tri-border area, arguing that its history of being a home to terrorists and fugitives, as well as rampant corruption, make it an ideal location in which subversive groups can operate, for example Islamist terrorists. The Islamist terrorist element in the tri-border region dates back to 1992, when a car bomb exploded at the Israeli Embassy in Buenos Aires, killing 29 people and injuring more than 200 and 2 years later, in July 1994, the Argentine-Israeli Mutual Association (AMIA) Jewish Center was bombed, killing 86 people. The investigations eventually implicated Hezbollah, Argentine authorities believe that the attacks were organised and planned in the tri-border area. Others claim Al-Qaeda are linked to the bombings as the two bombings have similarities to the US Embassy bombings in Kenya and Tanzania, which were carried out by Al-Qaeda. Francis X. Taylor, the US State Department's coordinator for counterterrorism, noted in testimony to the US Congress that the tri-border region had a "long-standing presence of Islamic extremist organisations." While he did not mention Al-Qaeda, he did name Hezbollah and al Gammaa al-Islamiya specifically as being involved in "fundraising activities and proselytising among the large expatriate population from the Middle East."

Brazil

South America's biggest country and of a similar size to the US with a population of over 190 million, is Brazil, which today boasts the world's seventh largest economy. Brazil was officially "discovered" in 1500, when a fleet commanded by Portuguese diplomat Pedro Álvares Cabral, on

its way to India, landed in Porto Seguro, between Salvador and Rio de Janeiro. Following three centuries under the rule of Portugal, Brazil became an independent nation in 1822 and a republic in 1889. By far the largest and most populous country in South America, and of a similar size to the US with a population of over 190 million, Brazil overcame more than half a century of military intervention in the governance of the country when in 1985 the military regime peacefully ceded power to civilian rulers. Brazil's first colonizers were met by Tupinamba Indians, one group in the vast array of the continent's native population. Lisbon's early goals were simple: monopolise the lucrative trade of pau-brasil, the red wood (valued for making dye) that gave the colony its name, and establish permanent settlements. Brazil has ten neighbouring countries giving about 10,000 miles of land borders and nearly 4,600 miles of Atlantic coastline. Half of the land borders are with Bolivia, Peru and Colombia, major cocaine-producers.

These geographical factors alone make it inevitable that Brazil is a transit country for narcotics traffic to Europe, Africa and to a lesser degree, the US. Brazil also has an increasing domestic consumption drug problem and is a likely probable source of precursor chemicals for cocaine processing. Cocaine enters Brazil via land, river and by small aircraft from Colombia, Peru and Bolivia on its way to mainly Africa and Europe. Brazil's international airports are commonly used as departure points for couriers carrying drugs on or in their person, in their baggage, or as hold cargo. The northeast coast of Brazil is the closest transatlantic shipping point to West Africa and well within the easy reach of a range of vessels enabling its seaports to ship drugs in containers and other ships. The same routes are used in reverse to bring Ecstasy and amphetamines back to Brazil. This is also a route for much precursor chemical products although many of the precursor chemicals are readily available within Brazil and it is known that traffickers are moving their labs across the border from Bolivia to obtain easier precursors. Increasing cocaine paste seizures in Brazil also suggest that raw Bolivian cocaine is increasingly being refined in Brazil. Internally Brazil has been increasing its attempts to control those 'favelas'

controlled by gangs that have for some time become untouchable centres for criminality. In a raid in the Vila Cruzeiro and Alemao favelas a special task force seized 300 kilograms of cocaine and 42 metric tonnes of marijuana. 350 stolen vehicles were recovered as well as 518 weapons, including grenades, machine-guns, and bazookas. Money laundering in Brazil is mainly linked to domestic crime, such as drug trafficking, public and private corruption, organised crime, gambling and a thriving smuggling trade in many types of contraband. Concern remains about significant illicit financial activity in the Tri-Border Area.

As the administration of President Dilma Rousseff struggles to follow the success of former President Luiz Inácio Lula da Silva, particularly in trying to reverse the trend of declining rates of economic growth, she had to face continued questions on corruption with the largest political corruption trial in the country's history, which recently concluded with guilty verdicts for 25 of the 37 people indicted and questions around the forthcoming 2014 World Cup and 2016 Olympics likely to increase as these events get closer. Known as the mensalão corruption scandal, this party financing corruption case has been at the centre of Brazilian politics for a decade and has shone a light to the heart of the political system leading to sentences for José Dirceu, the chief of staff and closest political adviser to former Brazilian president Luiz Inácio Lula da Silva during his first administration (2003–2006), to nearly 10 years in jail. At the same time, the court convicted 25 other co-conspirators in Dirceu's scheme, which involved bribing congressmen to vote in lockstep with the government, and also implicated banks, advertising agencies, and politicians. The court estimated that the scheme involved the embezzlement of at least US\$150m in public funds. At first, Lula tried to stay aloof from the trial, maintaining that he had been "betrayed" by the defendants and that he "knew nothing" about the scheme. When he was sentenced to more than 40 years in jail, Marcos Valério, an advertising executive and a principal in the scheme, told prosecutors that Lula had personally authorised him to borrow money from banks so that the funds could be used to buy off members of congress. In light of these revelations Brazil's chief public prosecutor announced that he had ordered a formal investigation of Lula's role in the scheme. Allegations of corruption against Brazil's top politicians is not unusual, for example see the case of Paulo Maluf in Part 2 Section 7 below.

Blue Command - Brazil

Calling themselves 'militias' they are also known as the Blue Command and are created mainly by retired police, some active police, prison officers and firemen. Until recently they occupied 92 favelas in Rio and levied charges on the inhabitants for 'protection' and restricted freedom of movement. Incredibly the Blue Command charged the inhabitants for gas, the use of TV channels and several other services.

Red Command - Brazil

Comando Vermelho or Red Command is a major Brazilian criminal organisation engaged primarily in arms and drug trafficking. The group was formed in 1979 when a collection of ordinary convicts and left-wing political prisoners were incarcerated together during the military dictatorship of 1964-1985 and formed Falange Vermelha (Red Phalanx). In the early 1980s the group changed its name to the Comando Vermelho and is said to have lost its political ideology. The Comando Vermelho controls parts of Rio de Janeiro and has fought several small-scale conflicts (in 2001 and 2004) with the rival gang Terceiro Comando which itself emerged out of a power struggle amongst the leaders of Comando Vermelho during the mid-1980s. The organisation is a collection of independent cells rather than having a strict hierarchy, however prominent bosses include Luiz Fernando da Costa, Isaías da Costa Rodrigues. In late June 2007, Rio de Janeiro police launched a large-scale assault on the area where up to 24 people were killed. According to a study by Rio de Janeiro University's Violence Research Center, in 2008 the group controlled 38.8% of the city's most violent areas, down from 53% in 2005. The Comando is particularly associated with a popular Brazilian musical style, called funk. Funk artists are also sponsored by the Comando Vermelho to record songs that promote the group and eulogize the group's dead members, which sell well via Radio and street vendors in Rio de Janeiro and in São Paulo.

First Capital Command (PCC) - Brazil

In São Paulo a group that dominates the massively overcrowded prisons but is also a significant threat outside is called The PCC,³⁵ with at least 6,000 senior leaders and over 140,000 members. (The First Command of the Capital: after its Portuguese initials). Also known as Primeiro Comando da Capital (PCC), the gang began in 1993 at a football match in Taubaté Penitentiary, São Paulo, amongst a group seeking to avenge the victims of 1992's Carandiru Massacre. This massacre, during which numerous atrocities were allegedly perpetrated, witnessed the death of more than a hundred prisoners by the São Paulo military police in a vicious backlash against prison riots. The PCC was founded on a sixteen point manifesto that outlines the organisation's ideology, as well as its code of conduct. Chief among the aims laid out in the manifesto is the goal to fight injustice and oppression in the Brazilian prison system, purportedly seeking "Liberty, Justice, and Peace" in its place. One might imagine these rather lofty ideals for an organised crime syndicate; however the PCC code of conduct contained in the manifesto also bears traces of an ethical orientation somewhat unusual for a prison gang. For instance members of the PCC are prohibited from mugging, rape, extortion, or the use of the gang's framework to settle personal conflicts. However the PCC is in truth far from a wholly law abiding body, maintaining close ties with the

drug trafficking organisation Red Command. Though part of the financial revenue generated from this illicit trade may be used to pay some gang members through law school, such criminal enterprise demonstrates the willingness of the group to transgress ethical and legal boundaries in the pursuit of expansion. Moreover the expansionist ambitions harboured by the PCC set their sights far beyond prison walls, perceiving itself as a potent political force with the ability to "revolutionize Brazil from within prisons". As an organisation the PCC is supported by a strict hierarchical structure, whereby members pay monthly subscriptions and fulfil designated roles as 'soldiers', 'towers' or 'pilots'. 'Soldiers' act as the organisation's rank and file 'muscle', while 'towers' fulfil leadership duties in their particular prison, and 'pilots' coordinate communications between groups. In 2001 the PCC demonstrated the strength of this network by coordinating rebellions in twenty-nine prisons across the state of São Paulo. Since 2002 the gang has been led by Marco Willians Herbas Camacho, a man also known by the title Marcola or 'Playboy'. Amongst prisoners Camacho is regarded as somewhat of an intellectual and has risen to iconic status in the eyes of many Brazilians.

Argentina

In 1816, the United Provinces of the Rio Plata declared their independence from Spain. After Bolivia, Paraguay, and Uruguay went their separate ways, the area that remained became Argentina and is the second largest country in South America. Argentina gets its name from the Spanish word 'argentino'. The word literally translates to silver. The country's population and culture were heavily shaped by immigrants from throughout Europe, with Italy and Spain providing the largest numbers. Up until about the mid-20th century, much of Argentina's history was dominated by periods of internal political conflict between Federalists and Unitarians and between civilian and military factions. After World War II, an era of Peronist populism and direct and indirect military interference in subsequent governments was followed by a military junta that took power in 1976. Democracy returned in 1983 after a failed bid to seize the Falkland Islands (Islas Malvinas) by force, and has persisted despite numerous challenges, the most formidable of which was a severe economic crisis in 2001-02 that led to violent public protests and the successive resignations of several presidents. Allegations against the current government of Argentina's President Cristina Fernández de Kirchner as well as against herself are increasing. In one case, an emissary from Hugo Chavez, then president of Venezuela, was discovered at Buenos Aires airport carrying a briefcase full with US\$800,000 in cash. Whilst Kirchner denied the allegation, there were claims made that the money was to support Kirchner's presidential bid. Within

Argentina, many question the huge fortune Kirchner and her late husband Nestor amassed since taking public office. Her declared personal wealth stands at US\$13.8mio, up from US\$500,000 when the couple first entered national politics. Kirchner cites income from real estate and hotels the couple had purchased to explain the 2,600% return on the couple's investments. In its foreign relations, Argentina, has antagonized traditional allies such as Brazil, Spain and the US, while growing ever closer to Iran, Venezuela and Cuba. Argentina has become a major transit route for Bolivian and Peruvian cocaine headed to West Africa and then onward to Europe. The President's son, Máximo Kirchner, leads a group of young presidential advisers and government officials known as "La Cámpora," who believe they are the vanguard of a transformational generation that will help Argentina regain its rightful place as a world leader. The Camporista take their name from Héctor José Cámpora, an ally of the late dictator Juan Perón and of the armed radical left wing of Peronist movement that became the Montonero guerrillas. Cámpora served as president for 49 days in 1973, just long enough to sign an amnesty to allow Perón, then living in exile, to return and run for President.

People's Revolutionary Army - Argentina

The People's Revolutionary Army of Argentina terrorized the Argentine government and foreign corporations from 1960 until 1977 when it was effectively eradicated by the Argentine Military. The People's Revolutionary Army, or ERP, was founded as the armed wing of the communist political organisation, the Workers Revolutionary Army Argentina. ERP's principal goal was to overthrow Argentina's military-ruled government. In large part due to its success the Argentine government granted the military expanded powers to eradicate terrorist elements, principally the ERP, thus beginning in 1975, the Argentine military's "dirty war," with mass disappearances and hit squads employed. The ERP had financed itself through bank robberies, kidnapping and extortion.

Anti-Communist Alliance - Argentina

The Argentine Anti-Communist Alliance was a right-wing, semi-official terrorist group active during the mid-1970s. The Peronist government, led by Isabel Perón, the wife of former dictator Juan Domingo Perón, secretly created the Triple A in 1974 to terrorize radical left-wing groups responsible for hundreds of assassinations of police and military officials. The group was famous for assassinations, bombings, and torture. From 1974-1976, the Triple A waged war on Argentina's political left under the leadership of José López Rega, the Minister of Social Welfare and a long-time advisor to the Perons. The war between leftist terrorists and the Triple A grew out of a split between supporters of Juan Domingo Perón. Perón had attracted rabid support from both the left and the right. Leftists saw him as a populist who would bring about socialist revolution, while the right-wing supported his economic and political nationalism. When Perón was restored to power

after a seventeen-year absence in 1973, he publicly cast aside his far-left built better relationship with the church and economic elites. The left-wing of the Peronist movement, referred to as the Montoneros, became outcasts and took up arms. The violence escalated until military leaders staged a coup on March 24th 1976 to restore order. The leaders of the coup dissolved the Triple A in mid-1976. The army then took over the group's "counter-terrorism" responsibilities. What followed was a massive campaign of state terror against suspected subversives that resulted in as many as 30,000 deaths. This period, which lasted until 1983, is referred to as "the dirty war." The new military leaders used many of the same techniques, personnel, and even cars used by the Triple A. Thus, the Triple A is often described as the precursor to the state terror of the dirty war.

Paraguay

Paraguay achieved independence from Spain in 1811. Paraguay lost and gained territory in numerous wars with its neighbours. Paraguay, despite an increase in political infighting, has held relatively free and regular presidential elections since its return to democracy in 1989. This following the 35-year military dictatorship of Alfredo Stroessner. The current President, elected in 2013, is also the leader of the Party that Stroessner led, the Colorado Party. Horacio Cartes, whose term runs through to 2018, built a family fortune with two dozen companies under Grupo Cartes that dominate industries from banking to tobacco to soft drinks to soccer. The corruption watchdog group Transparency International ranks Paraguay 150th worst out of 176 countries. Paraguay is a major illicit producer of cannabis and a transshipment country for Andean cocaine headed for Brazil, other South American markets, and Europe. Paraguay contributes through weak border controls to concerns in the Tri-Border Area.

Uruguay

Uruguay once claimed by Argentina declared its independence from Brazil in 1825 and secured its freedom in 1828 after a three-year struggle. Its capital, Montevideo was founded by the Spanish in 1726 as a military stronghold, but with a natural harbour it soon became an important commercial center. Whilst strong civilian governments ruled throughout much of the twentieth century a violent Marxist urban guerrilla movement named the Tupamaros, launched in the late 1960s, led Uruguay's then president to cede control of the government to the military in 1973. By year end, the rebels had been crushed, but the military continued to expand its hold over the government, with civilian rule civilian rule being restored only in 1985. In 2004, the left-of-center Frente Amplio Coalition won national elections that effectively ended 170 years of political control previously held by the Colorado and Blanco parties. Uruguay is a source country for women and children

subjected to sex trafficking and, to a lesser extent, a destination country for men, women, and children exploited in forced labour; most victims are women and girls exploited in sex trafficking. Uruguay is a small-scale transit country for drugs mainly bound for Europe, often through sea-borne containers; law enforcement corruption; money laundering because of strict banking secrecy laws; weak border control along Brazilian frontier; increasing consumption of cocaine base and synthetic drugs.

Tupamaros - Uruguay

The Tupamaros were a group of urban guerrillas who operated in Uruguay (primarily Montevideo) from early 1960s to the 1980s. At one time, there may have been as many as 5,000 Tupamaros operating in Uruguay. Although initially they saw bloodshed as a last resort to achieving their aim of improved social justice, their methods became increasingly violent as the military government cracked down on citizens. In the mid-1980s, democracy returned to Uruguay and the Tupamaro movement laid down their weapons in favour of joining the political process. They are also known as the MLN (Movimiento de Liberación Nacional, National Liberation Movement) and their current political party is known as the MPP (Movimiento de Participación Popular, or Popular Participation Movement). In early-1960s, the Tupamaros committed a series of low-level crimes such as robberies, often distributing part of the money to Uruguay's poor. The name Tupamaro is derived from Túpac Amaru, last of the ruling members of the royal Inca line, who was executed by the Spanish in 1572. It was first associated with the group in 1964.

Ecuador

The "Republic of the Equator" was one of three countries that emerged from the collapse of Gran Colombia in 1830 (the others are Colombia and Venezuela). Although Ecuador marked 25 years of civilian government in 2004, the period has been marred by political instability. Seven presidents have governed Ecuador since 1996. Ecuador's President Rafael Correa, a US-educated economics professor whose father spent time in an American jail for smuggling cocaine, has long cast himself as a US adversary, and last year put his anti-American rhetoric to the test by allowing WikiLeaks founder Julian Assange to take refuge at Ecuador's embassy in London and considered an asylum request by the former National Security Agency contractor and self-described whistleblower Edward Snowden who is evading charges under the US Espionage Act.

Ecuador is inevitably affected by neighboring organised illegal drugs operations in Colombia which penetrate across Ecuador's shared border and as a result Ecuador

is a significant transit country for cocaine originating in Colombia and Peru. It is an importer of precursor chemicals used in production of illicit narcotics as well as an attractive location for cash-placement by drug traffickers laundering money because of the dollarisation of the Ecuadorian economy and a relatively weak anti-money laundering regime. Allegations have been made that Ecuador have benefited from funds generated by the sale of cocaine from the Revolutionary Armed Forces of Colombia (FARC) and that senior members of the government have supported the FARC. Further negative allegations around corruption, particularly in the judiciary, and accusations against those close to the President as well as governmental attacks against the media cause significant concerns. After decades as a transit route for cocaine and a secondary money laundering center, Ecuador is emerging as a key meeting ground for multiple transnational criminal and terrorist organisations and an important part of a pipeline that moves not only cocaine but human cargo, weapons, precursor chemicals and hundreds of millions of dollars a year.

Bolivia

Bolivia is named after independence fighter Simon Bolivar who broke away from Spanish rule in 1825. Much of its subsequent history has consisted of a series of nearly 200 coups and countercoups. Democratic civilian rule was established in 1982, but leaders have faced difficult problems of deep-seated poverty, social unrest, and illegal drug production. In December 2005, Bolivians elected Movement Toward Socialism leader Evo Morales president, by the widest margin of any leader since the restoration of civilian rule in 1982, after he ran on a promise to change the country's traditional political class and empower the nation's poor, indigenous majority. However, since taking office, his controversial strategies have exacerbated racial and economic tensions between the Amerindian populations of the Andean west and the non-indigenous communities of the eastern lowlands. In December 2009, President Morales easily won reelection, and his party took control of the legislative branch of the government, which will allow him to continue his process of change. Bolivia is the world's third-largest cultivator of coca (after Colombia and Peru) and the third largest producer of cocaine, estimated at 195 metric tons potential pure cocaine in 2009, a 70% increase over 2006. Bolivia is a transit country for Peruvian and Colombian cocaine destined for Brazil, Argentina, Chile, Paraguay, and Europe. Whilst Bolivia has had numerous terrorist groups operating in the Country over the past 30 years, these are now inactive

or cease to exist. They included the National Liberation Army (Bolivia).

National Liberation Army - Bolivia

The National Liberation Army (ELN) was founded by Ernesto "Che" Guevara. Following his participation in Cuba's 1959 communist revolution, Guevara left for Bolivia in late 1966, where he spearheaded the National Liberation Army. Within a year, Guevara was captured by US-trained Bolivian security forces and in 1967, a day after his capture, Che Guevara was executed. NLA continued its insurgency into the early 1970s but it was not successful and the ELN was eliminated. Between 1990 and 1993, a new terrorist organisation, the Nestor Paz Zamora Commission emerged claiming to be a reconstituted NLA, however this has been disputed.

Chile

It is 40 years since the death of Chilean President Salvador Allende, who died in the presidential palace on 11 September 1973 during a coup led by army chief Augusto Pinochet. Allende won the presidency in 1970 and became Latin America's first democratically elected leftwing leader. The CIA, which played an active part in Chilean politics in the 1970s, sought Allende's overthrow before he took office in 1970, but the US disputes that it was involved in the military coup. Operation Condor though was put in place through the 1970s and 1980s amounting to a campaign of political repression carried out by US-backed Latin American dictatorships that was designed to eliminate tens of thousands of leftwing activists. It was the idea of Chilean dictator Augusto Pinochet, who enlisted Argentina, Bolivia, Paraguay, Uruguay and Brazil in a continent-wide campaign.

Movement of the Revolutionary Left (MIR) - Chile

The Movement of the Revolutionary Left (MIR) was a Chilean terrorist organisation active from the mid-1960s through the mid-1990s. The group was originally formed in 1965 by left leaning students at the University of Concepcion who had broken away from the Socialist Party. In 1967 the group began to undertake bank raids in order to finance itself and some members travelled to Cuba to receive military training. The MIR also pledged its alignment with the individual form of socialism espoused by Fidel Castro in Cuba, a move that resulted in the provision of financial aid by the Cuban state. During the Frei presidency, when the Chilean government was formed by the Christian Democratic Party, the MIR refused to participate in the electoral process, instead engaging in urban guerrilla warfare against the state. Even when a coalition of Chilean socialist and communist parties known as Unidad Popular (UP) came together and was elected to government in 1970,

the MIR persisted in remaining outside of the political process. Later the MIR offered what it described as 'critical support' to the UP party, arguing that while Allende's reforms certainly represented progress, they did not go far enough. During the overthrow of the Allende government the MIR engaged in military resistance and continued to do so throughout the Pinochet regime. At this time the MIR also cemented its links with other militant leftist groups operating in Latin America, forging an alliance with the Tupamaros, Peoples' Revolutionary Army in Argentina and the National Liberation Army operating in Bolivia. This unified group was known as the JCR or Junta Coordinadora Revolucionaria. Nevertheless, despite building up a sophisticated organisational network that included international links and significant military capabilities, the MIR's strength was considerably weakened by a crackdown from Pinochet's government that led to the arrest and death of many senior MIR leaders. Later, in the 1980s the MIR began to place greater onus on political action, though it continued to embark on intermittent spates of violent protest. Today the MIR exists solely as a political organisation, albeit a relatively small one, that peacefully contests votes within the Chilean political system.

Manuel Rodriguez Patriotic Front (FPMR) - Chile

In 1983, the Chilean Communist Party established an armed wing known as the Manuel Rodriguez Front or FPMR (Frente Patriotico Manuel Rodriguez) to violently oppose the Chilean government. The organisation intended to lead an armed struggle that would see the government of Augusto Pinochet deposed and bring about a revolution in Chilean society. In particular the group hoped it could spark a mass uprising through daring attacks that would publicise its movement, as well as demonstrate the vulnerability of the dictatorship to violent protest. One such attack was launched in September 1986 when the FPMR attacked a motorcade in which Pinochet was travelling. The assassination attempt was ultimately unsuccessful, however 5 of Pinochet's guards were killed, demonstrating just how close the militants came to achieving their goal. In truth such attacks did not in fact inspire popular rebellion, but rather isolated the Communist Party and the FPMR, and unified the more moderate opposition groups. At the height of its power the FPMR was estimated to have between 500 and 1,000 members and is known to have received financial support from Cuba. However, following the fall of the Pinochet regime the organisation experienced a period of fracture. With the return of democracy to Chile many FPMR members advocated returning their campaign for a Communist state to legal methods within the political system, while more radical militants preferred to continue the armed struggle. This latter faction was responsible in 1991 for the assassination of the right wing Chilean senator Jaime Guzman, as well as the kidnapping of Cristian Edwards del Rio, son of the owner of Chilean newspaper El Mercurio. After being held hostage for 145 days del Rio was released by the militant FPMR faction when his family handed over US\$1mio in ransom to his captors. In 1996 the

dissident FPMR faction also succeeded in an audacious operation to free four of its members from a high security prison in Chile. The plan involved hijacking a tourist helicopter, from which a rope was lowered into the prison for the captive members to ascend. Despite shots from prison officers all four members successfully escaped in the helicopter, which then landed in Santiago where cars waited to complete the getaway. Today the group is no longer active and therefore poses no terrorist threat.

Peru

Peru was the seat of several prominent Andean civilizations, most notably that of the Incas who were descended from one of the oldest civilizations in the world, known as the Norte Chico, whose empire was captured by Spanish conquistadors in 1533, who established a Viceroyalty, which included most of its South American Colonies. Peruvian independence was declared in 1821, and remaining Spanish forces were defeated in 1824. After a dozen years of military rule, Peru returned to democratic leadership in 1980, but experienced economic problems and the growth of a violent insurgency, with both the [Shining Path](#) and the [Tupac Amaru Revolutionary Movement \(MRTA\)](#). President [Alberto Fujimori](#)'s election in 1990 ushered in a decade that saw a dramatic turnaround in the economy and significant progress in curtailing guerrilla activity. Nevertheless, the president's increasing reliance on authoritarian measures, masterminded by his intelligence chief, [Vladimir Montesinos](#) and an economic slump in the late 1990s generated mounting dissatisfaction with his regime, which led to his ouster in 2000. A caretaker government oversaw new elections in the spring of 2001, which installed Alejandro Toledo as the new head of government, Peru's first democratically elected president of indigenous Quechuan ethnicity. The presidential election of 2006 saw the return of Alan Garcia who, after a disappointing presidential term from 1985 to 1990, oversaw a robust economic rebound. In June 2011, former army officer Ollanta Humala was elected president, defeating Keiko Fujimora Higuchi, the daughter of [Alberto Fujimori](#). Peru was until 1996 the world's largest coca leaf producer. Peru is now the world's second largest producer of coca leaf, though it lags far behind Colombia.³⁶ Cocaine is moved to Brazil, Chile, Argentina, and Bolivia for use in the South America and shipped out from Pacific ports to the international drug market.

Shining Path - Peru

In the 1960s, Sendero Luminoso, otherwise known as Shining Path, grew out of the Communist movement in Peru. Shining Path's Luminoso's radical Marxist

ideology was shaped by its founder and long-time leader, Abimael Guzman Reynoso. Abimael Guzman, a former university professor, was able to use his position within academia to gain credibility and entice students to his fledgling Communist movement. In fact, for a decade and a half, Shining Path primarily waged a war of militant Maoist ideas and propaganda. It was not until May 1980 that Shining Path turned to violence as a means of transforming a 'bourgeois democracy' into what Guzman described as 'New Democracy' (an idea derived from a Maoist principle stipulating that a society could move into socialism without first enduring a period of capitalist rule).

Once the Shining Path turned to violence, the group unleashed a brutal terrorist campaign within Peru, responsible for the deaths of many Peruvian citizens. The imagery with which Shining Path announced the initiation of its violent campaign against the government institutions of Peru and any perceived counter-revolutionaries is also worthy of note. In a gruesome spectacle members of Shining Path killed dogs in the Peruvian capital of Lima and suspended them from traffic lights and lampposts, affixed next to the slogan "Deng Xiaoping, Son of a Bitch" (Deng Xiaoping served as 'paramount leader' of the People's Republic of China 1978-1992, and was perceived to be a counter-revolutionary by Shining Path. Shining Path's stated goal is nothing short of an entire re-ordering of Peruvian society and institutions, a supposedly defunct structure that would be replaced by Communist institutions. At first the organisation was dismissed as marginal and at odds with the mainstream left in Peru, a political block that had returned to participation in electoral politics following the end of military rule and the return to democracy in 1980. The group also appeared out of sync with Peru's larger political trajectory, with many of Shining Path's socialist principles having already been realised some years prior to the organisation's inception. For instance the government redistributed 8.6 million hectares to more than 370,000 families between 1968 and 1975, rendering part of Shining Path's social revolution already complete. By the mid-1980s Shining Path was becoming increasingly hard to ignore, as was the organisation's embrace of violent tactics in its campaign. Violence was not, however, confined to Shining Path militants, but was also perpetrated on a large scale by the Peruvian military, which saw in the conflict an opportunity to quell both Shining Path terrorists and any other groups with the potential to subvert government authority. The leader of this crackdown, President Alberto Fujimori, is today serving a prison sentence for his part in government corruption and the administration of death squads. For more details see Part 2, Section 7, Criminal Cases for both [Alberto](#)

Fujimori and Vladimiro Montesinos.

Despite the rise of centre-leftist coalitions to power in 1983 and 1985 Shining Path maintained its commitment to a revolutionary war, seizing control of large swathes of the countryside and conducting deadly attacks across Peru. The most prominent of such attacks came in 1983 when 69 men, women, and children were brutally massacred in the town of Lucanamarca. Another notable attack occurred in 1992 when the detonation of two car bombs in the Miraflores district of the Lima resulted in the death of 20 people, along with the injury of 250 others. In 1992 Shining Path's leader Abimael Guzman was arrested and has remained in prison serving a life sentence. This development, alongside significant counter-insurgency operations by the Peruvian government, has led to the sharp decline of the organisation. Nonetheless, while undoubtedly a depleted force, Shining Path continues to operate and in 2012 killed more than a dozen Peruvian security personnel. The organisation's political wing, Movadef, also showed signs of revival in September 2012. It is believed that Shining Path and Movadef members have established themselves within some labour organisations, using these groups as both a political cover and a source of recruitment. The group is also believed to be closely involved with the drug trafficking industry, deriving much of its funding from this source.

Tupac Amaru Revolutionary Movement (MRTA) - Peru

The Tupac Amaru Revolutionary Movement (MRTA) is a Peruvian based group that sought to overthrow the national government during the 1890s. The organisation grounded its ideology in Marxist-Leninist revolutionary theory and intended to establish a democratic socialist state in place of the existing 'bourgeois' democracy. MRTA's second goal was to eradicate the commercial and diplomatic influences of the US and other foreign nations in Peru. Formed by Victor Polay Campos in 1984, the group derived its name from the 18th century rebel leader Tupac Amaru, who became a martyr after leading an unsuccessful rebellion against Spanish colonial rule. The name was also thought to appeal to Peru's rural population, a key group amongst whom the MRTA sought to garner appeal. The organisation also attempted to forge strong links with industrial workers (particularly those belonging to trade unions) and Peruvian students. In terms of military strength the MRTA could not challenge its rival Peruvian guerrilla organisation Shining Path, numbering at its height only 600 active militants. The enmity between these two groups was considerable, with Shining Path forcing the MRTA out of some of Peru's main drug producing region and hence depriving it of a valuable source of

revenue. Ideologically the two groups also stood apart, with MRTA's leadership perceiving Shining Path as excessively fundamentalist in its approach to socialism and levelled accusations of Stalinism at its left wing challenger. The MRTA's anti-state military campaign began in 1986, undertaking ambushes, kidnappings, bombings and assassinations. Among the most noteworthy of the MRTA's military accomplishments was the capture of the provincial capital of Juanji, which militants successfully held against state forces for several months in 1987. The organisation was dealt a considerable blow in 1992 however with the arrest of leader Polay Campos. Nevertheless operations continued in Campos' absence and in 1996 MRTA staged its most famous attack. On 17 December 1996 MRTA militants occupied the Japanese Ambassadorial residence in the Peruvian capital of Lima, seizing hostage hundreds of diplomats and government officials who were attending a function to celebrate the Emperor's 63rd birthday. Most of the hostages were released soon after the initial raid, however others were held captive for 126 days. Eventually all but one of these final hostages were freed by Peruvian military forces; the one hostage fatality occurring during the operation to free the prisoners. All 14 of the MRTA militants inside the Ambassadorial residence died, along with 2 Peruvian commandos. Since the infamous 1997 hostage taking the MRTA has not been implicated in any other significant terrorist attacks and the organisation has been deemed inactive.

Colombia

Colombia was one of the three countries that emerged from the collapse of Gran Colombia in 1830 (the others are Ecuador and Venezuela). Colombia was formerly known as New Granada, within Gran Colombia. To the west of Venezuela lies the Republic of

Colombia, named after the man who "discovered" the Americas. Today the name epitomises drug cartels and decades long terrorist/insurgent struggles.

Preconceptions aside it is the fourth largest country in South America with substantial oil reserves whilst being a major producer of coal, gold, silver, emeralds, platinum. Sadly, it has also been ravaged by a long violent conflict that has gone on for decades involving outlawed armed groups, drug cartels and gross violations of human rights. Things have improved since 2002 although there are still many deep rooted social problems. For nearly five-decades a long conflict between government forces and anti-government insurgent groups, principally the Revolutionary Armed Forces of Colombia (FARC) heavily funded by the drug trade, escalated during the 1990s. More than 31,000 former paramilitaries had demobilised by the end of 2006 and the United Self Defense Forces of Colombia (AUC) as a formal organisation had ceased to function. In the wake of the paramilitary demobilization, emerging criminal groups arose, whose members include some former paramilitaries. The insurgents lack the military or popular support necessary to overthrow the government, but continue attacks against civilians. Large areas of the countryside are under guerrilla influence or are contested by security forces.

In October 2012, the Colombian Government started formal peace negotiations with the FARC aimed at reaching a definitive bilateral ceasefire and incorporating demobilized FARC members into mainstream society and politics. The Colombian Government has stepped up efforts to reassert government control throughout the country, and now has a presence in every one of its administrative departments. Despite decades of internal conflict and drug related security challenges, Colombia maintains relatively strong democratic institutions characterized by peaceful, transparent elections and the protection of civil liberties.

Colombia is a massive illicit producer of coca, opium poppy and cannabis being the world's leading coca cultivator with 116,000 hectares in coca cultivation in 2009, producing a potential of 270 mt of pure cocaine; is the world's largest producer of coca derivatives; supplies cocaine to nearly all of the US market and the great majority of other international drug markets. Of course, Colombia is home to drug trafficking organisations that are successors to the famous Cali Cartel's and the operation of Pablo Escobar and perhaps not as well known they remain highly successful and profitable working with other groups, particular with Mexican Drug Trafficking Organisations and partners to supply and profit from drug production and supply. A significant portion of narcotics proceeds are either laundered or invested in Colombia through the black market peso exchange.

April 19 Movement (M-19) - Colombia

The April 19 Movement (M-19) emerged following the narrow defeat of Rojas Pinilla in the Colombian presidential election of 1970. Former dictator Pinilla ran as a member of the National Popular Alliance Party (ANAPO) and despite receiving substantial support from the urban working classes only managed to command enough votes to secure second place. While the majority of ANAPO purportedly accepted the outcome and condemned the use of violence, a splinter group seceded from the mainstream party and formed M-19. This group distinguished itself from the other main terrorist organisations operating in Colombia (namely FARC and ELN) in that it followed a more general left-wing ideology centred on helping the nation's poor, rather than a Marxist-Leninist or even Maoist ideology championing a complete socialist revolution. Irrespective of ideological motivations, M-19 began a campaign of violence that lasted for two decades. In 1990 this fighting finally came to a close with M-19 agreeing to a ceasefire and turning solely to politics under the new title of the Democratic Alliance M-19.

United Self-Defence Forces of Colombia (AUC)

The AUC was an umbrella organisation of death squads, some of them formed in the 1980s, focused on two goals: fighting leftist guerrillas and making money, most of it from drug trafficking. In 2003, the AUC agreed to enter negotiations with the government. In return for dismantling their forces and aiding criminal investigations, the top AUC leadership was promised a certain degree of amnesty. The demobilisation, however, proved to be a false peace. Most paramilitary blocs only handed in a small fraction of their weapons.

Special Focus 16 FARC / The Revolutionary Armed Forces of Colombia - Colombia

The FARC, represents one of Latin America's oldest, largest, and best-equipped insurgencies. It began in the early sixties as an outgrowth of Colombia's peasant self-defence leagues that later adopted Marxist-Leninist ideology. FARC's central aim is to overthrow Colombia's

government and enact socialist reforms, but central among the demands of the peasant orientated organisation is a redistribution of land. Estimates of land ownership currently concentrate 52% of Colombia's total arable land in the hands of 1.5% of the country's landowners, an imbalance that is perceived by many among the agricultural poor as a great social injustice.

In terms of organisation structure FARC is governed by a general secretariat led by co-founder Antonio Marin (a.k.a. Manuel Marulanda or "Tirofijo") and six others, including senior military commander Victor Suarez (a.k.a. Jorge Briceno or "Mono Jojoy"). The group is organised along military lines and includes some specialized urban fighting units. FARC has been responsible for bombings, murders, mortar attacks, kidnappings, extortion, and hijacking, as well as guerrilla and conventional military action against political, military, and economic targets associated with the Colombian government. Internationals have also fallen victim to FARC attacks, for instance in February of 2003, following the crash-landing of a US plane in a FARC-held area, the group murdered a US citizen and a Colombian, and continues to hold hostage the three other US citizens onboard. US citizens have been particularly targeted by FARC operations as a consequence of both the organisation's loathing of what it sees as American imperialism, and the provision of US aid for the counterrevolutionary operations of the Colombian government. This support came in the guise of an anti-drug smuggling policy, however in truth the Clinton administration provided funds to the Colombian government primarily for the purposes of fighting the FARC insurgency and the communist

threat that the US associated with the group. In a confidential memorandum discovered in 1996 US Ambassador Myle Frechette even admitted that FARC's initial reputation for drug trafficking "was put together by the Colombian military, who considered it a way to obtain US assistance in the counterinsurgency". Since then the original fiction has become a reality and FARC does indeed have considerable involvement in the Colombian drugs trade. Returning however to the US hostages taken by FARC in 2003, with 5 years having passed the Colombian government granted Venezuelan President Hugo Chavez permission to negotiate with FARC to secure the release of the three US citizens and 42 other so-called "political" hostages, some held as long as a decade. Colombia ended Chavez's role after he repeatedly disregarded Colombian positions; however, FARC did release two hostages. The kidnapping of foreign citizens has also continued, with FARC using the ransoms to fund its military campaigns.

Today FARC has well-documented ties to the full range of narcotics trafficking activities, including taxation, cultivation, and distribution, all of which it uses to finance continuing operations. As of January 2013 peace talks between the Colombian government and FARC continue, though reports have thus far been largely positive. Issues under discussion include land reforms, the illegal drugs trade, political participation, disarmament and reparation payments for victims of the conflict. Chief among the proposals offered by FARC is that 25 million hectares of land (approximately 25% of Colombian land) be given to the nation's poor. FARC has also requested that the Colombian government legalize the cultivation of some crops used in the production of illegal drugs, such as cocoa, poppies and marijuana.

ELN / National Liberation Army - Colombia

The ELN is a Cuban Revolution-inspired group, heavily influenced by the early actions and theories of Fidel Castro and Che Guevara. The ELN emerged following the overthrow of the Cuban government by Guevara and Castro in 1959. The National Liberation Army was founded by two distinct groups. The first group comprised of urban, left-wing intellectuals with strong ties to rural farmers. They co-founded the group with a radicalized group of oil sector unionists from Barrancabermeja's oil industry. Radical members of the Catholic clergy joined the group in late 1965. This was the first time that Christians and Marxists had joined together in a Colombian revolutionary movement. The ELN's unique founding philosophy strongly emphasized socialism, mixing Castro-ism with the liberation theology of the Catholic Church. More concretely, the ELN's self-appointed role was

to represent the rural poor and decrease the foreign presence in Colombia. The ELN's goal was to take power from the Colombian government and replace it with a more egalitarian "popular democracy" that would represent all Colombians equally under the law. The ELN strongly opposed foreign investment, in part due to its location in an oil-rich area and its connections to trade unionists in the energy sector. The Colombian Department of Administrative Security estimates that in 1998 alone, the ELN obtained US\$84mio from ransoms and US\$255mio from extortion. Employees of oil companies constitute a large percentage of the ELN's targets. The kidnapping and extortion of oil company employees is ELN's primary source of income. This is a natural legacy of ELN's formation in an area rich with oil wells and oil companies. A third, more recent source of income is the collection of a "property" tax from coca and poppy cultivators. It is not known whether the collection of property taxes is a centralized or decentralized activity. Throughout its history, the National Liberation Army steadily gravitated towards violence and armed struggle as a means to attain a socialist Colombia. At the ELN's 1996 national conference, the group decided to decrease emphasis on creating a purely socialist Colombia. Instead, the ELN has returned to its founding objective: popular democracy for all Colombians, propagated at the local level. The ELN has not given up the use of violence in its efforts. The ELN engages in kidnappings, hijackings, bombings, drug trafficking, and extortion activities. It has minimal conventional military capabilities. The group conducts kidnappings for ransom, often targeting foreign employees of large corporations, especially in the petroleum industry. Recently ELN leadership discussed the possibility of ending kidnapping as a means of financing insurgent operations as a government-proposed precondition for formal peace talks. However, the organisation has yet to renounce kidnapping. ELN derives some revenue from taxation of the illegal narcotics industry, and its involvement may be increasing. It attacks energy infrastructure and has inflicted major damage on oil and natural gas pipelines and the electrical distribution network, but has lost much of its capacity to carry out these types of attacks in recent years. Approximately 3,000 armed combatants and an unknown number of active supporters.

ERPAC - Colombia

The Popular Revolutionary Anti-Terrorist Army of Colombia (Ejercito Revolucionario Popular Antiterrorista Colombiano - ERPAC) began as a right-wing proxy of the Colombian government battling leftist guerrillas. Following a failed peace process, the group began doing business with the rebels and other former paramilitaries, controlling vast territory that it

used to process and store cocaine. The ERPAC officially surrendered to the government in 2011, under leader "Caracho," but fewer than half of its members handed in their weapons, leaving the rest to carry on fighting in Colombia's eastern plains. ERPAC's stronghold was in the Meta, Guaviare, Vichada and Casanare provinces of the eastern plains. It controlled production of base and processed cocaine, which it sold to middlemen or exported through networks in Venezuela and Brazil. Since the 2011 surrender, the remnants of the group are thought to have divided into two rival factions, the Libertadores del Vichada, led by Martin Farfan, alias "Pijarbey," who was Cuchillo's second-in-command; and the Meta Bloc, led by Rubber Antonio Navarro Caicedo, alias "Flaco Fredy." Flaco Fredy was captured in 2012, and it is considered possible that Pijarbey will reunite the two groups, perhaps under the command of powerful criminal network the Urabeños.

The Aguilas Negras, or Black Eagles - Colombia

The Aguilas Negras, or Black Eagles, emerged from the so called demobilisation of the United Self-Defence Forces of Colombia (AUC). At times, Aguilas Negras was the generic term used by the government to describe the many fragments of ex-paramilitaries without common leadership committing serious crimes across Colombia. Often, the paramilitary successors who have continued drug trafficking extortion and violence have done so using the Aguilas Negras name. This political bent, along with their lack of a central leadership, distinguishes them in part from the other criminal bands operating in Colombia. Groups using the Aguilas Negras name have since appeared in at least 20 of Colombia's 32 departments, including Nariño, Cauca, Casanare, Guajira, Magdalena, Bolívar, Northern Santander, Santander, Bolívar, Sucre and Córdoba. But the groups appear to operate independently from one another, answering to no central command. Instead, each Aguilas Negras cell concentrates on protecting their small fiefdom and vying with rivals like the Urabeños and Los Rastrojos. The Urabeños was itself at one time described as the "Aguilas Negras of Urabá." A 2006 study by Colombian think-tank Indepaz listed 62 paramilitary successor groups that had registered actions across the country, many adopting names derivative of the AUC blocs. It is possible that in some areas of Colombia, low-level street gangs simply adopt the name "Aguilas Negras" to better intimidate victims into paying extortion fees, or abandoning their property. There is little evidence that the Aguilas Negras operate as a systematic organisation. Instead, it appears to be the blanket name for the many successor groups willing to adapt the AUC's tactics and, in many cases, its political discourse.

Special Focus 17 Colombian Drug Cartels

The Colombian Drug Cartels are criminal organisations developed with the primary purpose of promoting and controlling drug trafficking operations. During the 1980s, as demand for cocaine increased, existing Colombian Cartels

expanded and organised into major criminal conglomerates usually headed by one or several kingpins as in the case of the Medellin Cartel led by Pablo Escobar and the North Coast Cartel, led by Alberto Orlandez-Gamboa "Caracol" (the snail) along with federation-style groups such as the Cali Cartel (founded by the Rodríguez Orejuela brothers, Gilberto and Miguel, as well as associate José Santacruz Londoño) and the Norte del Valle Cartel (Founded by Diego León Montoya Sánchez, Wilber Varela and Juan Carlos Ramírez Abadía).

The Colombian Cartels became notorious and the target of Colombian and US Law Enforcement. Leaders in Cali, Gilberto and Miguel Rodríguez Orejuela, and in Medellin, Pablo Escobar would be brought eventually to justice, the former being captured, extradited and imprisoned in the USA in 2006 and the latter through a bullet which would end his life in a shootout with Colombian Police in 1993. It would take longer to take down the "Caracol" but in 2000 he was arrested and later extradited to the USA leading to the collapse of the North Coast Cartel also.

With the collapse of these major Cartels, a new Organisation, Norte del Valle Cartel, became established and inherited much of the drug trafficking operations, though the establishment of a military wing and infighting have produced "Los Rastrojos" as one of the most important drug trafficking groups in Colombia and beyond. Other Cartels albeit not as powerful do exist including the Cartels in Bogota, Caquetá, and Llano, as well as more than 300 additional drug smuggling organisations or 'Cartelitas' (baby cartels).

Other organisations in Colombia are also involved in drug trafficking including paramilitary or terrorist groups which use the provides of drug trafficking to finance their activities. These include the AUC, Black

Eagles, ELN, FARC, ERPAC, Oficina de Envigado, Los Paisas and Los Urabeños. All the groups currently running the country's drug trade are known collectively by the government as "criminal bands," or BACRIMs.

The Cali and Medellin Cartels - Colombia

The Cali Cartel and the Medellin Cartel both became notorious and the target of Colombian and US Law Enforcement. Leaders in Cali, Gilberto and Miguel Rodríguez Orejuela, and in Medellin, Pablo Escobar would be brought eventually to justice (see above), but until then and for over 20 years, these individuals and the Cartels would become the world's biggest and most profitable criminal narcotic organisations. In 1989, for example, Forbes magazine declared Pablo Escobar as the seventh richest man in the world, with an estimated personal fortune of US \$25 billion.

The life and times of Pablo Escobar has been immortalized by both books and films. He started doing whatever he could to make money. He ran a small gang selling contraband cigarettes and fake lottery tickets. By the time he was 20, he was already an accomplished car thief. In the early 1970s, he was a thief and bodyguard, as well as having a side trade in kidnap before entering the drug trade, working for and then succeeding a successful Medellin contraband smuggler.

The idea of the Cartel was pioneered in Medellin and led to great success. A number of Medellin drug traffickers agreed to pool their shipments of drugs being sent abroad and thus avoid the chances of financial ruin if any individual's shipments were seized. This sensible precaution was also taken on elsewhere and led to the establishment of a federation of traffickers not only in Medellin but also in Cali.

In Cali for example, the Cartel was made up of five major but still independent drug trafficking organisations of whom the most well-known were the two brothers: Gilberto and Miguel Rodríguez Orejuela as well as associate José Santacruz Londoño. The Cali Cartel originally began as a ring of kidnappers known as Las Chamas. The profits of kidnapping helped finance the ring's move to drug trafficking, originally beginning in Marijuana and eventually spreading to cocaine. The cartel's estimated revenue would eventually reach an estimated \$7 billion a year.

In Cali, the organisation would though become increasingly integrated with common shared services including units focussing on: Political: responsible for establishing links with governmental and public officials; Military: handling security, internal discipline and the bribery of military or police officials; Narcotics

and trafficking; This had control over manufacture and shipping; Legal: representation for traffickers held by police, overseas representation, including political lobbyists and Financial: money laundering, front businesses and legitimate businesses. Due to the success of the Cali Cartel the financial unit would be required to establish and maintain complex but professional arrangements which required employing professional managers, accountants, lawyers and technical financial and company experts, both in Colombia and abroad.

The advantage it held over other competitors was really in its distribution network which could move hitherto undreamt of amounts of cocaine. The Cali and Medellin Cartels produced most of the Cocaine and they became the largest players in the multi-billion dollar worldwide cocaine industry. The economics were simple: virtually negligible production costs and soaring end use markets. They also realized and entered into joint agreements with Mexican transportation cartels, which gave them access initially to the North American market but also later into Europe and beyond. As the Colombians lost markets to the Mexicans they sought out European markets.

Given its geographic location, Mexico has long been used as a staging and transhipment point for drugs, illegal immigrants and contraband destined for US markets from Mexico, South America and elsewhere. During the 1980s and 1990s, Colombia's drug cartels in Medellin and in Cali joined with Mexican Gangs involved in trafficking heroin and cannabis, already established an infrastructure that stood ready to serve the Colombia-based traffickers. By the mid-1980s, the organisations from Mexico were well established and reliable transporters of Colombian cocaine. At first, the Mexican cartels were paid in cash for their transportation services, but in the late 1980s, the Mexican transport organisations and the Colombian drug traffickers settled on a payment-in-product arrangement. Transporters from Mexico usually were given 35 to 50 % of each cocaine shipment. This arrangement meant that organisations from Mexico became involved in the distribution, as well as the transportation of cocaine, and became formidable traffickers in their own right, transporting not only to the North American market, but also elsewhere around the world. The current escalation in violence in Mexico is probably a result of a number of factors. The priorities of the Mexican government to tackle the drug cartels has certainly increased, and as cartel leaders are arrested or meet their deaths the balance of power between the various Mexican cartels can shift which also generates bloodshed as rivals move in to exploit the power vacuum. Cocaine is the second most popular recreational drug,

behind Marijuana. Cocaine is commonly used in middle to upper class communities. It is also popular amongst college students, as a party drug. Its users span over different ages, races, and professions. In the 1970s and 1980s, the drug became particularly popular in the disco culture as cocaine usage was very common and popular in many discos. The development of "crack" cocaine introduced the substance to a generally poorer inner-city market. The estimated US cocaine market exceeded US\$70bio in street value for the year 2005, generating massive profits for the traffickers. In comparison this exceeds the annual revenues and profits from another coca inspired product, and No 1 global brand, Coca Cola. Coca-Cola once contained an estimated nine milligrams of cocaine per glass. It was initially formulated in 1886 and sold as a medicine at the time due to the belief that carbonated water was good for the health. It was claimed that Coca-Cola cured many diseases, including morphine addiction. In 1903 the final traces of Cocaine were removed.

World annual cocaine consumption stands at around 600 tonnes, with the US consuming around 50% of the total, Europe about 25% of the total, and the rest of the world the remaining 25%. The 2010 UN World Drug Report reported that the North American cocaine market was valued at US\$38 billion in 2008. According to a 2007 United Nations report, Spain is the country with the highest rate of cocaine usage (3.0% of adults in the previous year). Other countries where the usage rate meets or exceeds 1.5% are the US (2.8%), England and Wales (2.4%), Canada (2.3%), Italy (2.1%), Bolivia (1.9%), Chile (1.8%), and Scotland (1.5%).

Cocaine is moved from Colombia and other Andean countries (particularly Bolivia and Peru) and shipped in numerous ways. These include principally by land through Central America into and through Mexico or by air and transported to staging sites in northern Mexico. The cocaine is then broken down into smaller loads for smuggling across the US-Mexico border. The primary cocaine importation points in the US are in Arizona, southern California, southern Florida, and Texas; Typically, land vehicles are driven across the US-Mexico border. Sixty five percent of cocaine enters the US through Mexico, and the vast majority of the rest enters through South Florida, via smuggling routes throughout the Caribbean, in particular via the Bahamas Island chain. The Colombians now often hire traffickers from Mexico or the Dominican Republic to transport the drugs.

The traffickers use a variety of smuggling techniques to transfer their drugs to US markets. These include the commercial shipment of tonnes of cocaine through

the port of Miami as well as airdrops in the Bahamian Islands or off the coast of Puerto Rico, mid-ocean boat-to-boat transfers and then fast speed boats to the Miami area. Lately even submarines are thought now to be used. Unmanned subs are towed underwater so as to avoid any radar profile and if a towing boat is approached it can ditch instantly the sub so that no evidence exists if the towing boat is boarded. Transponders allow later recovery on some.

Cocaine is also carried in small, concealed quantities across the border by couriers known as "mules" (or "mulas"), who cross a border either legally, for example, through a port or airport, or illegally elsewhere. The drugs may be strapped to the waist or legs or hidden in bags, or hidden in the body. If the mule gets through without being caught, the gangs will reap most of the profits. If he or she is caught however, gangs will sever all links and the mule will usually stand trial for trafficking alone.

With massive profits being generated the Cartels faced the problem of how to launder and retain these profits. This was probably not so difficult initially during the 1970s as the Cartels along with other drug traffickers placed their money in offshore financial centres where few questions were asked about the origin of the monies. With growing profits however they needed to consider how to deal with the huge amounts of cash they were generating.

A book released by Pablo's brother, Roberto Escobar, called "The Accountant's Story" told of how at its height the Medellín drug cartel was smuggling 15 tons of cocaine a day, worth more than half a billion dollars, into the US. According to Roberto, his brother's operation spent US\$2,500 a month just purchasing rubber bands to wrap the stacks of cash, and since they had more illegal money than they could deposit in banks, they stored the bricks of cash in their warehouses, annually writing off 10% as "spoilage" when the rats crept in at night and nibbled on the hundred dollar bills.

The traffickers created a large complex network of front companies involved in all areas of business activity, for example: Hundreds of companies were set up in Construction, Retail, Agriculture, Manufacturing, Radio and Television stations, Hotels and Investment Companies. The drug monies would be laundered through these Companies and large profits made by these Companies would be used for further investment in the drugs trade and the rest banked offshore. In addition to front Companies, legitimate companies were also invested in, one for example being a pharmaceutical

chain in Colombia called Drogas la Rebaja which had 400 shops in 28 cities.

Whilst much could be channelled through a variety of front organisations the cartels also used a method known as the Black Market Peso Exchange which also dovertailed neatly into the activities of some of the front companies (see Part 1, Section 1, Smuggling, for details).

Another avenue used to launder funds was the establishment of a Bank, licensed in a jurisdiction with little supervision and either operating as a brass plate or Shell Bank or with a license to conduct only non-domestic business. For example, Gilberto Rodríguez Orejuela became Chairmen of the Board of the Banco de Trabajadores which enabled some amounts to be laundered and later on he founded the First Inter-Americanas Bank in Panama.

It took until 1989 for the G-7 to establish the Financial Action Task Force in Paris which would start to address this problem from a global perspective laying down 40 recommendations for action targeted at Countries in order to attack the proceeds of drug trafficking.

As mentioned in 1993 and following a prolonged manhunt Escobar was shot dead. In 1991 Escobar had given himself up to Colombian Police as the USA had made him public enemy number 1. Extradition was prohibited at this time under Colombian Law. Escobar though continued his criminal activities within Prison, until fearing worse conditions he fashioned an escape. In 1992 US and Colombia together trained and advised a special Colombian police task force, known as the Search Bloc, which had been created to locate Escobar. At the same time, a vigilante group financed by his rivals and former associates, including the Cali Cartel and right-wing paramilitaries would also target him and his Organisation and bring his reign to an end.

As for the Cali Cartel and the Rodriguez Brothers they would last much longer. In 1995 US President Clinton issued Executive Order 12978, "Blocking Assets and Prohibiting Transactions with Significant Narcotics Traffickers," under authority of the International Emergency Economic Powers Act and called upon the US Treasury to target Colombian drug cartels using financial sanctions. Under this authority, OFAC launched the Specially Designated Narcotics Traffickers ("SDNT") programme. The objectives of the SDNT programme were said "to isolate and incapacitate the businesses and agents of the Colombian drug cartels by publicly exposing them, freezing their assets, and denying them access to the financial system and to

the benefits of trade and transactions involving US businesses and individuals. The SDNT list referred to "527 companies and 815 individuals involved in the ownership or management of the 21 Colombian drug cartel leaders' business empires. The businesses named as SDNTs ranged across industries and included drugstore chains, a super- market chain, pharmaceutical laboratories, airlines, a medical clinic, hotels, restaurant service companies, radio stations, sports teams, communications companies, construction firms, real estate firms, investment and financial companies, consulting companies, offshore firms, horse breeding farms and other agricultural businesses, mining operations, maritime agencies, and a department store." In the same year highly placed informants helped the Colombian authorities arrest six heads of the Cali Cartel although they carried on running the organisation from prison and by 2006 Drug Enforcement Administration ("DEA") and US Customs Agents were able to extradite the Rodriguez brothers.

Oficina de Envigado - Colombia

Largely seen as the inheritors of Pablo Escobar's drug trafficking empire, the Oficina de Envigado is now a collection of organisations that seeks alliances to operate. The Oficina de Envigado first arose as a faction of assassins established by Pablo Escobar in Envigado, a small municipality adjacent to Medellín, in the 1980s. Since then, the Oficina has evolved into a sizeable, drug running and extortion network operating from Medellín to the northern coast of Colombia and the Panamanian border area. It draws many of its leaders from former paramilitary blocs. It also controls some gambling and money laundering businesses and has ties to local police and other security officials. Much of the unrest in and around Medellín can be attributed to the Oficina.

The Oficina de Envigado's "Godfather" is Diego Fernando Murillo, alias 'Don Berna,' who after operating as a guerrilla fighter began working in the criminal underworld as an assassin ultimately controlled by Pablo Escobar. After Escobar's death, Murillo, took control over Medellín and established La Terraza, the Country's most feared hitman network. Murillo was arrested and imprisoned in 2005, when authorities connected him to the assassination of a local politician. Nonetheless, in prison Murillo found a safe haven where he could continue running his operations at a safe distance from his enemies, until he was extradited to the US in 2008, following which Oficina quickly splintered. One splinter group is the Paises, an armed wing of the Oficina.

North Coast Cartel - Colombia

The North Coast Cartel was based in the Colombian

city of Barranquilla by the Caribbean coast and was headed by Alberto Orlandez-Gamboa "Caracol" (the snail) considered as ruthless as Pablo Escobar.

The organisation transshipped significant amounts of cocaine to the US and Europe via the smuggling routes it controlled from Colombia's North Coast through the Caribbean. As head of the organisation, Gamboa depended on his close associates to conduct the organisation's operations and to insulate himself. As is typical with many Colombia-based organisations, Gamboa compartmentalised his business dealings. In addition, the success of Caracol's Barranquilla-based drug trafficking organisation was attributed, in part, to the respect the drug organisation received from other traffickers operating on Colombia's North Coast.

US DEA Intelligence indicated that traffickers paid taxes to Gamboa's organisation in order to be allowed to ship drugs out of the North Coast. His influence in this region was so strong that traffickers even asked him for permission before conducting assassinations. On June 6, In 1998, Caracol was arrested in Barranquilla on murder, kidnapping, and terrorism charges. He was extradited to the US in 2000, pleading guilty in 2003. With the capture of Gamboa the North Coast Cartel structure was dismantled by the Colombian National Police.

Norte del Valle Cartel - Colombia

The Norte del Valle Cartel, or North Valley Cartel, is a drug cartel which operates principally in the north of the Valle del Cauca Department of Colombia.

It rose to prominence during the second half of the 1990s, after the Cali Cartel and the Medellín Cartels fragmented, and was known as one of the most powerful organisations in the illegal drugs trade. The original leaders of the Norte del Valle cartel included Diego León Montoya Sánchez, Wilber Varela and Juan Carlos Ramírez Abadía, all of whom were killed by 2008. The Norte del Valle cartel is estimated to have exported more than 1.2 million pounds, or 500 metric tons, of cocaine worth in excess of US\$10bio from Colombia to Mexico and ultimately to the US for resale.

Indictments filed in the US charge the Norte del Valle cartel with using violence and brutality to further its goals, including the murder of rivals, individuals who failed to pay for cocaine, and associates who were believed to be working as informants. Leaders of the Norte del Valle cartel were further alleged to have bribed and corrupted Colombian law enforcement and Colombian legislators to, among other things, attempt to block the extradition of Colombian

narcotics traffickers to the US for further prosecution. According to the indictments filed in the US, members of the Norte del Valle cartel even conducted their own wiretaps in Colombia to intercept the communications of rival drug traffickers and Colombian and US law enforcement officials. The cartel is believed to have employed the services of the United Self-Defence Forces of Colombia (AUC) to protect the cartel's drug routes, its drug laboratories, and its members and associates.

Los Rastrojos - Colombia

Los Rastrojos first emerged in 2002 as the armed wing for one of the leaders of the Norte del Valle Cartel, is now involved in the Colombian armed conflict and is considered to be the largest supplier of drugs in Columbia although recent arrests and the emergence of rival factions are having a detrimental effect on their operation.

The Groups two main leaders, Javier Calle Serna, alias "Comba," and Diego Perez Henao, alias "Diego Rastrojo," were both captured in 2012. The loss of these bosses has left the group without a clear leadership, and other groups could take advantage to move into their territory. The group is primarily engaged in exporting cocaine to international markets, as well as extortion, gold mining and kidnapping at the local level. The Rastrojos move cocaine via go-fast boats and semi-submersibles from the Pacific side of their operations, and airplanes via the Venezuelan side. There is some evidence that these semi-submersibles may be being replaced by fully submersibles. In July 2010, authorities in Ecuador found a 33-meter submarine capable of moving at least 10 tons of cocaine. On the Venezuelan side, the airplanes appear to fly due north over Venezuelan territory, to avoid Colombian radar, until they are close to the Dominican Republic, then head due west until they reach Honduras or Guatemala where they land, offload and continue their journey north. They also use Venezuela as a bridge for cocaine moving towards Europe. They collaborate with a wide range of Mexican syndicates, including the most powerful the Sinaloa Cartel.

Los Rastrojos have more than 1,200 soldiers. Their strongholds are still in the area where they formed: Valle del Cauca and Cauca provinces along the Pacific coast.

For several years, the Rastrojos have had an agreement with the National Liberation Army (Ejercito de Liberacion Nacional - ELN) and with the Revolutionary Armed Forces of Colombia (Fuerzas Armadas Revolucionarias de Colombia - FARC) in certain other parts of the country. Both these alliances give the Rastrojos direct access to coca base -- the raw material

for cocaine -- at very cheap prices. Los Rastrojos' other main ally, Daniel Barrera Barrera, alias "El Loco," has struck similar agreements with the FARC in some areas.

Urabeños - Colombia

The Urabeños, also known as the Autodefensas Gaitanistas de Colombia, are currently one of the more ambitious and ruthless of Colombia's drug trafficking organisations. The Urabeños take their name from Urabá, a northwestern region near the Panamanian border highly prized by drug traffickers as it offers access to the Caribbean and Pacific coast, from the departments of Antioquia and Chocó. The Urabeños were founded by Daniel Rendón Herrera, better known as 'Don Mario,' an ex paramilitary in one of the many factions of the United Self-Defence Forces of Colombian (AUC). By avoiding infighting and paying their recruits well, the group has at times been able to steal territory from Los Rastrojos, their most hated rival. In 2009 a team of 200 police commandos captured Rendón on a farm in rural Urabá. Since Rendón's capture, the remnants of his organisation have fallen under control of the Usuga brothers, Juan de Dios and Dario Antonio, two former mid-ranking paramilitaries believed to have worked with Rendón since the 1990s. The two started out with an estimated 250 men following Rendón's arrest, and have since managed to grow exponentially.

In 2012, Juan de Dios was killed in a police raid on a ranch in Choco department. In a surprising display of strength, the Urabeños organised a series of coordinated strikes protesting his death in northern Antioquia, handing out fliers which referred to the group's former name, the Gaitanista Self-Defence Forces. The Urabeños also signalled their intention to respond aggressively to their leader's death when they publicly offered a US\$1,000 reward for each police officer killed in Antioquia, a public relations strategy best associated with kingpin Pablo Escobar.

Venezuela

Venezuela was one of three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Ecuador and New Granada, which became Colombia). For most of the first half of the 20th century, Venezuela was ruled by military strongmen, who promoted the oil industry and allowed for some social reforms.

Whilst democratic governments have ruled Venezuela since 1959, it wasn't until Hugo Chavez was elected president from 1999 to 2013, that a new "21st Century Socialism," arose which purported to alleviate social ills while at the same time attacked the establishment

at home and western capitalism abroad in particular aggressively positioning Venezuela against the US and as a lightening rod for anti US sentiment in Latin America and beyond.

With the recent death of Chavez, it remains to be seen how this will affect the future of Venezuela albeit on the surface the regime has continued under successor Nicolas Maduro.

Current concerns include a weakening of democratic institutions, political polarization, a politicized military, rampant violent crime, over-dependence on the petroleum industry with its price fluctuations, and irresponsible mining operations that are endangering the rain forest and indigenous peoples.

Venezuela is a small-scale illicit producer of opium and coca for the processing of opiates and coca derivatives, however, large quantities of cocaine, heroin, and marijuana transit the country from Colombia bound for US and Europe. There is a significant narcotics-related money laundering operation in Venezuela, especially along the border with Colombia and on Margarita Island. Venezuela is also a source, transit, and destination country for men, women, and children subjected to sex trafficking and forced labour, with Venezuelan women and girls are trafficked within the country for sexual exploitation, lured from the nation's interior to urban and tourist areas; women from Colombia, Peru, Haiti, China, and South Africa are also reported to have been sexually exploited in Venezuela. Some Venezuelan women are transported to the Caribbean islands, particularly Aruba, Curacao, and Trinidad & Tobago, where they are subjected to forced prostitution; some Venezuelan children are forced to beg on the streets or work as domestic servants, while Ecuadorian children, who are often from indigenous communities, are subjected to forced labour.

Venezuela is subject to certain Sanctions and Embargoes. In 2008, US Office of Foreign Assets Control (OFAC) announced sanctions against 3 senior Venezuelan Military Commanders suspected by the USA as having contacts with the [FARC](#) exchanging arms for Drugs. The 3 Commanders are: Hugo Armando Carvajal Barrios, at the time the director of military intelligence; Henry de Jesus Rangel Silva, whom former President Chavez named general-in-chief and then defence minister in January 2012; Ramon Emilio Rodriguez Chacin, former Minister of Interior and Justice.

In September 2011, OFAC further sanctioned another four senior Venezuelan officials, following evidence retrieved from recovered FARC laptops acquired after a firefight in Colombia that suggested more involvement in arms for drugs. These are: Cliver Antonio Alcalá Cordon, later appointed as head of the army's Guiana Integral Strategic Defence Region (REDI Guayana); Congressman Freddy Alirio Bernal Rosales, a former Caracas mayor; Intelligence officer Ramon Isidro Madriz

Moreno; Amilcar Jesus Figueroa Salazar, a politician described as "a primary arms dealer for the [FARC](#), and ... a main conduit for FARC leaders based in Venezuela."³⁶ The most popular trafficking routes out of Venezuela are by air to the Dominican Republic and Honduras. Another route is to move the cocaine by land to Surinam, then by air or boat to West Africa and onwards to Europe. When moved by land, the cocaine is usually stored in local ranches and farms owned by civilian contacts. For more information on these and on the reasons these have been imposed see Part 1, Section 3, Sanctions & Embargoes above.

Cartel of the Suns - Venezuela

The term "Cartel of the Suns" (Cartel de los Soles) is used to describe groups inside Venezuela's military that traffic cocaine. The term "Cartel of the Sun" was reportedly first used in 1993 when two National Guard generals, were investigated for drug trafficking. As brigade commanders, each wore a single sun as insignia on their shoulders, giving rise to the name "Cartel of the Suns".

The elements of the military believed to be most deeply involved in Venezuela's drug trade are, unsurprisingly, concentrated along the western border with Colombia, especially the states of Apure, Zulia and Tachira. The power of these cells comes from their access to Venezuela's major airports, road checkpoints and ports, including Puerto Cabello in Carabobo state. These military organisations are thought to source some of their cocaine from Colombian guerrilla group the [FARC](#).

Walid Makled - Venezuela

It is suspected that the Cartel of the Suns also worked with civilian drug trafficker Walid Makled³⁷ in order to move their drug shipments out of Venezuela, before his arrest in Colombia in 2010. Walid was a member of one of Venezuela's most successful business families controlling supermarkets and appliance outlets to the ports and an airline. With many connections he would become for a time the most powerful civilian drug trafficker in Venezuela.

The beginning of Makled's decline came in 2008, with a political dispute with the Chavez camp. The political dispute is believed to have prompted the government's first serious effort to crack down on Makled's operations, trying to arrest him. Whilst he went into hiding he was found by Colombian forces and extradited back to Venezuela in 2010. After Walid's arrest, he went public with allegations about the Venezuelan establishment, stating, "All my business associates are generals." Since in custody he has chosen not to testify at his trial and is now silent.

The Bolivarian Liberation Forces (FBL) - Venezuela

The FBL are a guerrilla group based in western Venezuela, along the border with Colombia, that generally supported the government of former President Hugo Chavez, and has avoided confrontations with security

forces. The FBL first gained prominence in Venezuela in 1992, when it claimed responsibility for several attacks on public officials who were widely perceived as corrupt. According to the Venezuelan military, the FBL is led by an individual known as Jeronimo Paz, of whom little is known. The group is believed to have between 1,000 and 4,000 members, and is active mostly in the western border states of Apure, Tachira and Barinas although it also has a presence in the western states of Zulia, Merida, Portuguesa, Cojedes and Carabobo as well as in the capital city, Caracas. In Apure and Barinas, the FBL uses the densely forested San Camilo and Ticoporo nature reserves as its main hideouts.

The group funds itself mainly by kidnapping and extorting local landowners and businesses along the border with Colombia. In 2011, for instance, the FBL reportedly charged a group of oil workers in Apure a "protection fee" of 110,000 bolivars, or about US\$25,000.

Its financing activities have at times put the FBL in conflict with Colombia's [National Liberation Army \(ELN\)](#), which also operates on the border. It has had close relations with the larger [Revolutionary Armed Forces of Colombia \(FARC\)](#), which has provided the FBL with logistical support and training. The FBL does not currently pose anything like the same security threat in Venezuela as these Colombian rebel groups do in their country as it is largely pro-government.

Guyana/French Guyana & Suriname

The Guyana's were 5 colonies tied to major European powers, Spanish Guyana (now the Guayana Region in Venezuela), British Guyana (now Guyana), Dutch Guyana (now Suriname), French Guyana and Portuguese Guyana (now Amapá, a state in northern Brazil). French Guyana remains part of France whilst the two larger countries to the north and west, Guyana and Suriname, are independent.

Guyana, originally a Dutch colony in the 17th century, by 1815 Guyana had become a British possession. Guyana achieved independence from the UK in 1966, and since then it has been ruled mostly by socialist-oriented governments, with the current President Donald Ramotar Elected in 2011.

Guyana is a transshipment point for narcotics from South America - primarily Venezuela, to Europe and the US as well as being a producer of cannabis. Guyana is a source and destination country for men, women, and children subjected to sex trafficking and forced labour. Guyanese and foreign women and girls are forced into prostitution in Guyana and Guyanese children are

subjected to exploitative labour practices in the mining, agriculture, and forestry sectors as well as subjecting Indonesian workerfoot forced labour conditions on Guyanese-flagged fishing boats. Funds are increasingly laundered due to the drug trafficking and human smuggling.

Suriname was first explored by the Spaniards in the 16th century and then settled by the English in the mid-17th century, Suriname became a Dutch colony in 1667. Independence from the Netherlands was granted in 1975. Five years later the civilian government was replaced by a military regime that soon declared a socialist republic. A civilian administrations returned briefly in 1987, when international pressure finally forced a democratic election, but by 1990 the military overthrew the government and although a civilian coalition in today in power, it is a former military leader Desire Bouterse who has ruled since 2010.

Suriname is a source, destination, and transit country for women, men, and children who are subjected to sex trafficking and forced labour; women and girls from Suriname, Guyana, Brazil, and the Dominican Republic are subjected to sex trafficking in the country, sometimes around mining camps. Debt bondage and sex trafficking are reported to occur within the Chinese migrant community. Migrant workers in agriculture and on fishing boats and children working in informal urban sectors and gold mines are vulnerable to forced labour. As far as drugs are concerned, Suriname is an increasingly important transshipment point for South American drugs destined for Europe via the Netherlands and Brazil and a transshipment point for arms-for-drugs dealing.

First settled by the French in 1604, French Guyana is an overseas department and region of France. As an oversea region, it is officially inside the EU. French Guyana was the site of notorious penal settlements until 1951 which included the notorious Devil's Island. A large part of the department's economy derives from the presence of the Guyana Space Centre, established in 1964, French president Charles de Gaulle decided to construct a space-travel base to replace the Sahara base in Algeria and stimulate economic growth in French Guyana. It is now the European Space Agency's primary launch site near the equator.

French Guyana produces a small amount of marijuana grown for local consumption and is only considered a minor transshipment point to Europe.

Europe

Europe is the world's second-smallest continent by surface area, covering only about 2% of the Earth's surface and about 7% of its land area. Europe is the third-most populous continent after Asia and Africa, with a population of 733 million or about 11% of the world's population.

Europe, in particular Ancient Greece, is the birthplace of Western culture. In ancient Greek mythology, Europa was a Phoenician princess whom Zeus abducted after assuming the form of a dazzling white bull, taking her off to Crete. How it came to symbolise the geographic continent that it does today and has done since at least the 6th century BC is unclear. The term "Europe" then became used to designate not only a particular geography but a mechanism to distinguish the sphere of influence of the Western Church, as opposed to both the Eastern Orthodox churches and to the Islamic world. Europe is for our purposes divided into Eastern and Western Europe, with a focus on Russia and its close neighbours (for the "Stans" of Central Asia see Asia above) and the major core countries of the EU. Until the 20th century with significant immigration into Europe, the Europeans were mostly of white or pale skin and considered themselves Caucasians, after those that lived in the Caucasus of Southern Russia and North of Turkey. This because the term "Caucasian race," coined by the German philosopher Christoph Meiners in his *The Outline of History of Mankind* (1785), described those from the region as having the "whitest, most blooming and most delicate skin" and the concept of a Caucasian race linked to white skin was further developed by Johann Friedrich Blumenbach, a German professor of medicine. Basing his classification of the Caucasian race primarily on craniology, but also facial features, he defined five human races based on color, using popular racial terms of his day. He established caucasian as the "white race," as well as Mongoloid as the "yellow race," Malayan/"brown race," Ethiopian/"black race," American/"red race." Whilst there is no scholarly evidence of any such connection or race, many scientists maintained racial categorizations of color established by Meiners' and Blumenbach's works, well into the late 19th/20th centuries, increasingly used by Racists and in particular Nazi Germany as a justification for many of their abhorrent policies including the genocide of the Jews, world war and its aftermath.

Neo-Nazism - Europe and elsewhere

Neo-Nazism borrows elements from Nazi doctrine, including militant nationalism, racism, xenophobia, homophobia and anti-semitism. Holocaust denial is a

common feature, as is incorporation of Nazi symbols and admiration of Adolf Hitler. It is related to the white nationalist and white power skinhead movements in many countries. Neo-Nazi activity appears to be a global phenomenon, though many of the larger groups are European based. Some European and Latin American countries have laws prohibiting the expression of pro-Nazi, racist, anti-Semitic or anti-homosexual views. Many Nazi-related symbols are banned in European countries in an effort to curtail neo-Nazism. The main groups that espouse many or some of these neo-Nazi features include: the international network, Blood and Honour, including a splinter Belgium group called Blood, Soil, Honour and Loyalty; Combat 18 in the UK, Holland and elsewhere in Europe; the European Defence League (EDL) (being an offshoot of the English Defence League but since spawning Dutch Defence League, which is affiliated with the EFI, the European Freedom Initiative and the Norwegian Defence League as well as others. Of course in Norway the far right white supremacist Anders Behring Breivik killed 77 in the Oslo bombing/shooting massacre and was thought to be in favour of establishing the Norwegian Defence League. Elsewhere in Europe other far right groups include: the Bosnian Movement of National Pride; the Ustaše in Croatia; the MIÉP-Jobbik Third Way Alliance of Parties in Hungary; the Russian National Unity (RNE) and the Russian National Socialist Party; the Partei National Orientierter in Switzerland; the Nacionalni stroj (National Alignment) in Serbia; and the Swedish Resistance Movement. Whilst neo-Nazi organisations in France are outlawed, a significant number exist alongside far-right groups which include the Bloc identitaire, created by former members of the Unité Radicale group, close to National Bolshevism, Nouvelle Résistance (NR) and Troisième Voie (Third Way). Perhaps the most successful in political terms has been the Freedom Party of Austria (FPÖ), which won 33% of the vote in Carinthia and 22% in Vienna, also in 1994 in the Austrian election, the FPÖ won 22% of the vote. More recently the Greek far right political party Golden Dawn (Chrysi Ayi) is often labeled as neo-Nazi, although the group rejects this label. In the 2 elections in 2012, Golden Dawn received nearly 7% of the votes, entering the Greek parliament for the first time with around 20 representatives. Another Greek group which is considered as a neo-Nazi group is the Strasserite "Mavros Krinos" (Black Lily). Beyond Europe, the National Socialist Movement (NSM) is currently the largest neo-Nazi organisation in the US, which also is home to the Ku Klux Klan. The most significant attack carried out by a far right extremist is the Oklahoma bombing by Timothy McVeigh in 1995 killing 168. Elsewhere in North America, in Canada the Heritage Front and more recently the Nationalist Party of Canada are considered far right. In Asia, the National Socialist Japanese Workers Party and the Mongolian Tsagaan Khass are considered neo-Nazi groups as well. Even Israel has a far right movement called Patrol 36.

Eastern Europe

Whilst in modern times the political borders of Eastern Europe were largely defined and continue in popular perception by the Cold War, with the Iron Curtain separating the members of the Warsaw Pact from the European members of NATO and the polarization of Europe

as East-West. Famously, the iron curtain was popularized by Winston Churchill, who used it in his famous "Sinews of Peace" address in 1946 in Fulton, Missouri, who said, "From Stettin in the Baltic to Trieste in the Adriatic an iron curtain has descended across the Continent. Behind that line lie all the capitals of the ancient states of Central and Eastern Europe. Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucharest and Sofia."

Beyond the Cold War divide, the distinction is sometimes illustrated by the fact that Eastern Europe is that part of Europe where the Cyrillic alphabet is used, for example: Cyprus, Serbia, Macedonia, Bulgaria, Ukraine, Belarus, and of course Russia and so the East-West differences predate the cold war, and originate in the history and the break up of the Roman Republic. As the power of Rome expanded, a cultural and linguistic division appeared between two halves of the Roman Empire, between the Western Roman Empire and the Eastern Roman Empire. Whilst the Western Roman Empire collapsed, being replaced by first the Frankish Empire under Charlemagne and then leading to the States of Western Europe, much of which we know today, by contrast the Eastern Roman Empire, mostly known as the Byzantine Empire, managed to survive and even to thrive for another 1,000 years, despite early conquest by the Mongols, but finally by the Muslim Ottoman Empire in the 15th century, which itself would be ruptured by the events of the First World War and the rise of the Soviet Union at the end of the Second World War.

The Iron Curtain that separated East and West was pulled apart in 1989, following the fall of the Berlin wall, as Eastern European countries which as so called satellite nations of Soviet Russia became independent. This was the final cataclysmic act for the Soviet Union which started in 1985 when Mikhail Gorbachev was elected general secretary of the Central Committee of the Communist Party and later President of the Soviet Union. His policy of Glasnost ("opening") and Perestroika ("change") would lead to the dissolution of the former Soviet Empire. Gorbachev's reforms accelerated and inevitably quickly resulted in the collapse of the supporting three pillars of the Soviet Empire, the

concentration of the constitutional powers with the Communist Party, Marxism-Leninism as the only permitted ideology and the centrally planned economy as the base of all economic activity. On 7 December 1991, in the forest of Belovezh in Belarus, the presidents of Russia, Ukraine and Belarus met. The meeting had not been prepared in advance, there was no agenda. Russian President Boris Yeltsin proposed to Stanislav Shushkevich, President of Belarus and President Leonid Kravchuk from the Ukraine to dissolve the Soviet Union. The three agreed and the Soviet Union was replaced by the Commonwealth of Independent States (CIS), a regional organisation composed of former Soviet Republics, but now importantly independent countries. Prior to this the Baltic States had declared their independence.

Baltic States

The three Baltic States; Latvia, Estonia and Lithuania; declared their independence in 1991 as the former Soviet Union crumbled, and for a time they prospered being nicknamed the "Baltic Tigers". Whist their economies have largely prospered, the financial crisis of 2008/2009 has taken its toll. They are also coming to terms with significant corruption, drug and organised crime problems. Estonia has one of the biggest drug problems in Europe. The moor landscape and vast forests host illegal drug laboratories which dedicate their activities over all to the production of synthetic drugs. Amphetamines and similar pills of doping effects are exported to much of Scandinavia. Experts estimate that 90% of the production of amphetamines goes through Finland to the rest of Northern Europe. From Russia Fentanyl is imported, a synthetic heroin. On the other hand the number of drug addicts in the country is high. According to the US State Dept Trafficking in Persons Report 2011; Estonia is also a 'source, transit, and destination country for women subjected to forced prostitution (in particular to Tallinn and the Northern European hemisphere), and for men and women subjected to conditions of forced labour' In Lithuania, corruption concerns are prevalent. According to the Heritage Foundation, over 50 government agencies are involved in the regulation of business and commerce, leading to businesses paying bribes to get permits and licences. In such an environment the black market is likely to also be a significant concern. According to the «Lithuanian Free Market Institute» 28 % of Lithuanian GDP came from the informal sector. Two fifths of the companies are involved in illegal activities, and or by not paying taxes. These tax related concerns are also mentioned by the US State Department Money Laundering Report 2012: "Most financial crimes, including VAT embezzlement, smuggling, illegal production and sale of alcohol, capital flight, and profit concealment, are tied to tax evasion by Lithuanians."

In Latvia surveys disclose that corruption is also an important concern for the citizens. A further area of concern relates to financial services in Latvia. Whilst the

US authorities had raised concern about Latvian Banks and their possible use by the [Russian Mafia](#) to transmit Russian funds via Latvia often through to Cyprus, the country had responded to tighten controls. Still during the so-called Euro crises and the collapse and part bail out of the Cypriot Banking sector, concerns have been raised once more, both in being a conduit in and out for Russian money, and operating a banking business model similar to that in Cyprus. The NGO Global Witness has criticized Latvia's KYC standards, claiming that they are not at a high enough standard, bearing the risk that the increased inflows into the banking system include funds from doubtful sources and reinforcing concern that the Russian mafia develops activities in the country. Latvia has four free trade zones.

Poland

Poland's history is one of conquest and counter conquest with the state of Poland establishing itself in the middle of the 10th century. By the mid-16th century, the Polish-Lithuanian Commonwealth ruled a vast tract of land in central and eastern Europe. During the 18th century, regional powers, Russia, Prussia and Austria partitioned Poland among themselves. Poland regained its independence in 1918 only to be overrun by Germany and the Soviet Union in World War II. It became a Soviet satellite state following the war, but its government was comparatively tolerant and progressive. Labour turmoil in 1980 led to the formation of the independent trade union "Solidarity" that over time became a political force with over ten million members. Free elections in 1989 and 1990 won Solidarity control of the parliament and the presidency, bringing the communist era to a close. Poland joined NATO in 1999 and the EU in 2004. With its transformation to a democratic, market-oriented country largely completed, Poland is an increasingly active member of Euro-Atlantic organisations. Whilst Poland is a minor transshipment point for Southwest Asian heroin and Latin American cocaine to Western Europe it is a major illicit producer of synthetic drugs for the international market.

Pruszkow Mafia - Poland

The Polish drugs trade is believed to be controlled by three main organised crime syndicates based in Gdansk and Warsaw. Most prominent amongst these three organisations is the Pruszkow Mafia, a group known to derive revenue from art and automobile theft, extortion, drug trafficking and prostitution. Human trafficking for the purposes of sexual exploitation, an industry flourishing in Poland, is another illegal activity in which the Pruszkow Mafia may be involved. Perhaps the most famous member of the Pruszkow Mafia is its former leader Andrzej Kolikowski, a figure who became in the 1990s Poland's most famous gangster. Kolikowski began his criminal career smuggling dollars, cars and other sought after goods from West Germany into communist Poland. Later, following the collapse of communist rule in Poland, Kolikowski formed a group of around

100 people to support his business operations. In 1992 this group amalgamated with the Pruszkow Mafia and Kolikowski became one of its leaders, investing in legal business avenues such as record labels, restaurants and nightclubs. Such legal commercial holdings were undoubtedly used to launder the proceeds of the group's criminal enterprise. In 2003 leaders of the Pruszkow Mafia were brought to trial in Warsaw. The prosecution succeeded only in securing relatively minor charges, ultimately failing in their endeavour to convict the group's leaders of murder, extortion, robbery and drug trafficking. During the trial connections emerged between the Pruszkow Mafia and politicians, such as Senator Aleksander Gawronik, dubbed the "treasurer of the Pruszkow".

Bulgaria

Bulgaria entered the EU on 1 January 2007 and soon after received lucrative EU subsidies. In July 2008 the surveillance report of the EU commission concluded that these subsidies are distributed by corrupt Bulgarian institutions which are riddled with members from organised crime. These criminal networks, were protected and connected inexorably with the political elite. In 2007 a parliamentary commission found that from the end of the communist period, whilst the rulers at the time had left office 139 former communist state intelligent agents were elected Members of Parliament, and that approximately 10% of the staff in public offices were connected to the former secret service with positions held in high positions of government and of State. It is no surprise that institutionalised corruption is a main issue of concern in Bulgaria.

The US State Department Money Laundering Report states in its 2012 edition that "corruption remains a serious problem and many still associate public tenders with kickbacks and money laundering. Financial crimes enforcement capacity is limited. The authorities opt for easy-to-prove, low-level corruption and related money laundering cases. As a result, progress on cases of high public interest, involving alleged siphoning of millions of taxpayer money, such as the public procurement of big energy infrastructure projects, have not generally been pursued. In 2011, casinos, night clubs, car dealerships and, to a lesser extent, wholesale traders, were the most common businesses associated with money laundering in Bulgaria. The tourism and gaming industries are considered important venues for money laundering activities among organised crime groups." According to the NGO Center for the Study of Democracy, alone the smuggling of cigarettes created an illicit income stream in excess of US\$400mio. in 2010-2011. In addition the US State Dept Narcotics Report 2012 observes that in Bulgaria as a transit country for heroin "Organised crime groups operating in Bulgaria have increased their influence and involvement in the international narcotics trade. These groups are sophisticated, well-financed, and entrenched within Bulgarian society. Bulgaria's Black

Sea ports continue to be exploited by drug traffickers to smuggle cocaine from South America to Europe and heroin from Turkey and Iran to Europe."

Balkans & Former Yugoslavia

The central Balkans, and what was the former Yugoslavia, were part of the Roman and Byzantine Empires before ethnic Serbs migrated to the territories of modern Serbia and Kosovo in the 7th century. During the medieval period, Kosovo became the center of a Serbian Empire and saw the construction of many important Serb religious sites, including many architecturally significant Serbian Orthodox monasteries. The defeat of Serbian forces at the Battle of Kosovo in 1389 led to five centuries of Ottoman rule during which large numbers of Turks and Albanians moved to Kosovo. By the end of the 19th century, Albanians replaced the Serbs as the dominant ethnic group in Kosovo. Serbia reacquired control over Kosovo from the Ottoman Empire during the First Balkan War of 1912. The Kingdom of Serbs, Croats, and Slovenes was formed in 1918; its name was changed to Yugoslavia in 1929. Various paramilitary bands resisted Nazi Germany's occupation and division of Yugoslavia from 1941 to 1945, but fought each other and ethnic opponents as much as the invaders. The military and political movement headed by Josip "TITO" Broz (Partisans) took full control of Yugoslavia when German and Croatian separatist forces were defeated in 1945. After World War II, Kosovo became an autonomous province of Serbia in the Socialist Federal Republic of Yugoslavia. Although communist, TITO's new government and his successors (he died in 1980) managed to steer their own path between the Warsaw Pact nations and the West for the next four and a half decades. In 1989, [Slobodan Milosevic](#) became President of the Republic of Serbia and his ultranationalist calls for Serbian domination led to the violent breakup of Yugoslavia along ethnic lines. In 1991, Croatia, Slovenia, and Macedonia declared independence, followed by Bosnia in 1992. See Bosnia below for more details. The remaining republics of Serbia and Montenegro declared a new Federal Republic of Yugoslavia in 1992 and under Milosevic's leadership, Serbia led various military campaigns to unite ethnic Serbs in neighboring republics into a "Greater Serbia." These actions were ultimately unsuccessful and led to the signing of the Dayton Peace Accords in 1995. In 1998, an ethnic Albanian insurgency in the formerly autonomous Serbian province of Kosovo provoked a Serbian counterinsurgency campaign that resulted in massacres and massive expulsions of ethnic Albanians living in Kosovo. The Milosevic government's rejection of a proposed international settlement led to NATO's bombing of Serbia in the spring of 1999, to the withdrawal of Serbian military and police forces from Kosovo in June 1999, and to the stationing of a NATO-led force in Kosovo to provide

a safe and secure environment for the region's ethnic communities. Elections in late 2000 led to the ouster of Milosevic and the installation of democratic government. In 2003, the FRY became Serbia and Montenegro, a loose federation of the two republics. See Kosovo below for more details.

Serbia

According to the US State Department Money Laundering Report for 2012 "corruption and organised crime continue to be significant problems in Serbia." The US State Dept Narcotics Report 2012 adds that "Serbia's Ministry of Interior believes Serbian organised crime groups primarily smuggle cocaine directly from South America to Western Europe. Serbia's predicament, can be traced to the dissolution of the former Yugoslavia, and its Countries leadership under [Slobodan Milosevic](#) and involvement in the Balkan wars that followed. Milosevic was accused by the International Criminal Tribunal for the former Yugoslavia in the Hague of committing crimes against humanity, but died in his cell before a verdict could be issued. During his time as President he fostered criminal networks to further Serbian expansionist aims in the region and the legacy of state sponsored criminality remains today. For more details see the case of [Slobodan Milosevic](#) in Part 2 Section 7 below.

Serbian Mafia - Serbia

The Serbian Mafia emerged under President [Slobodan Milosevic](#), who offered protection in return for political favours from members of the criminal underworld. The Serbian Mafia grew rapidly, generating large revenues from the smuggling of cigarettes, alcohol and oil in particular including sanctions busting. Despite the overthrow of Milosevic in 2000 and a period of bloody infighting between mafia bosses vying for power, the Serbian Mafia endured. According to the Serbian Interior Minister Mihajlovic in the early 2000s the Serbian Mafia was better armed and financed than both the Serbian Army and the Serbian Police. Connections between organised crime groups and the Serbian state also ran on into the early years of the 21st century, with Prime Minister Zoran Dindic assassinated by the Serbian Mafia in response. The government launched Operation Sabre in an attempt to purge criminal influence from state machinery; it led to more than 10,000 arrests, testifying to the size of the Serbian Mafia. Amongst the high profile figures arrested was Milan Sarajlic, Serbia's Deputy State Prosecutor, who confessed to being paid by the Zemun clan (a Belgrade sect within the Serbian Mafia). Today, five major clans are today thought to dominate the Serbian Mafia. Main Paramilitary Serbian Groups. Involved in the War

in Bosnia and in Kosovo and accused of ethnic cleansing include the Serbian Guard; the White Eagles; the Serb Volunteer Guard, also known as Arkan's Tigers; the Scorpions; the Yellow Wasps and the Wolves of Vučjak.

Bosnia & Herzegovina

Bosnia and Herzegovina declared independence from the former Yugoslavia in 1992, though ethnic Bosnian Serbs, responded, and supported by neighboring Serbia and Montenegro, with armed resistance aimed at partitioning the republic along ethnic lines and joining Serb-held areas to form a "Greater Serbia." In 1995 after (insert Sarajevo and Islam connections), the warring parties agreed a peace deal which retained Bosnia and Herzegovina's international boundaries and created a multi-ethnic and democratic government charged with conducting foreign, diplomatic, and fiscal policy.

In March 2002, Bosnian authorities raided the offices of Benevolence International Foundation (BIF) due to suspected funding of Al-Qaeda in Sarajevo, and they uncovered a handwritten list containing the name of twenty wealthy donors sympathetic to Al-Qaeda. The list, referred to as "The Golden Chain," contained both the names of the donors including many wealthy Saudi businessmen and the names of the recipients (but does not mention amounts given). It is thought the letter was written in 1988 or 1989. Seven of the payments are made to bin Laden. Al-Qaeda was formed in late-1988. The Wall Street Journal later commented that, "The list doesn't show any continuing support for Al-Qaeda after the organisation began targeting Americans, but a number of the Saudis on it have been under scrutiny by US officials as to whether they have supported terrorism in recent years."

Bosnia is considered a transit point for heroin being trafficked to Western Europe and a minor transit point for marijuana. Bosnia remains highly vulnerable to money laundering activity given a primarily cash-based and unregulated economy, weak law enforcement, and instances of corruption.

Bosnian Mujahideen - Bosnia

Bosnian Mujahideen were foreign Muslim volunteers who fought in Bosnia with the aim of fighting for Islam and on behalf of Muslims under attack from Serbs during the 1992–95 Bosnian War. The number of volunteers throughout the war is still disputed, from around 300 to 6,000. These foreign Muslim Jihad or "Islamic holy warriors" were assembled in a special Bosnian Army unit called the "El Mujahed unit". This unit committed some of the worst war crimes and crimes against humanity against Bosnian Serb and Bosnian Croat civilians and POWs. According to the US 9/11 Commission Report, the commander of the Bosnian Muslim unit "El Mujahed" was Abu Abdel Aziz "Barbaros", described as a "senior Al-Qaeda recruiter" was born in Saudi Arabia in 1942. He was a veteran of the Mujahideen in Afghani-

stan. He was an early member of the Al-Qaeda movement established by bin Laden and Abdullah Azzam. He was made the amir, or military commander of the Saudi Arabian and Afghani Mujahideen in Bosnia. The foreign Mujahideen arrived in central Bosnia in the second half of 1992 mostly coming from North Africa, the Near East and the Middle East.

Former US Balkans peace negotiator Richard Holbrooke said in an interview that he thought "the Muslims wouldn't have survived without this" help, as at the time a U.N. arms embargo diminished the Bosnian government's fighting capabilities. In 2001, Holbrooke called the arrival of the Mujahideen "a pact with the devil" from which Bosnia still is recovering.

Kosovo

Albanian nationalism within Kosovo as part of the former Yugoslavia increased in the 1980s, which led to riots and calls for Kosovo's independence. At the same time, Serb nationalist leaders, such as Slobodan Milošević, exploited Kosovo Serb claims of maltreatment to secure votes from supporters, many of whom viewed Kosovo as their cultural heartland. Under Milošević's leadership, Serbia revoked Kosovo's status as an autonomous province of Serbia and carried out repressive measures against the Kosovar Albanians. Albanians created the Kosovo Liberation Army and launched an insurgency and paramilitary forces under Milošević conducted a brutal counterinsurgency.

The Milošević government's rejection of a proposed international settlement led to NATO's bombing of Serbia in the spring of 1999, to the withdrawal of Serbian military and police forces from Kosovo in June 1999, and to the stationing of a NATO-led force in Kosovo to provide a safe and secure environment for the region's ethnic communities. In 2004 the international community opened negotiations on the future status of Kosovo and in 2008, after years of inconclusive negotiations, the UN-administered province of Kosovo declared itself independent of Serbia.

Kosovo has porous borders which facilitate an active black market for smuggled consumer goods, especially fuels, cigarettes and pirated products, largely along the Kosovo-Serbian border. Kosovo is a largely a transit point for illicit drugs and not a destination point. Illegal proceeds from domestic and foreign criminal activity are generated from official corruption, tax evasion, customs fraud, organised crime, contraband, and other types of financial crimes. Corruption is a significant problem. Most of the proceeds from smuggling activity are believed to be laundered directly into the economy in areas such as construction and real estate, retail and commercial stores, banks, financial services, casinos and trading companies, with smaller amounts laundered through the financial system.

Kosovo Liberation Army - Kosovo

The Kosovo Liberation Army (KLA) formed in Macedonia in 1992 with the goal of uniting the ethnic Albanian populations of Albania, Kosovo and Macedonia into a "Greater Albania." Their name recognised that the province of Kosovo, officially part of the new nation of Serbia, was their most important and difficult target. The KLA remained basically unknown until 1995, when it began carrying out small arms and sabotage attacks against Serbian Police outposts in Kosovo. The KLA also conducted vicious reprisal attacks against Kosovars accused of co-operating with the Serbians. The escalating violence forced the Serbian government to respond, but their response was, by almost any standard, far too aggressive; many innocent men, women and children died as a result.

As the Serbian crackdown against the KLA grew increasingly brutal, the group's ranks swelled. An organisation that began in 1998 with no more than 500 members was estimated to be 12,000 to 20,000 strong by the beginning of 1999. Funding came from Kosovar Albanians in Kosovo and Albanians abroad as well as from the proceeds from Some drug-trafficking and organised crime. When the US-led coalition attacked Serbia in defense of the Kosovars in January 1999, the appearance of imminent victory drew even more ethnic Albanians to the KLA flag. The KLA militias played a critical role in the coalition victory, forcing Serbian forces out into the open where American and allied airpower could punish them. Since the end of the war in Kosovo, the KLA has become largely inactive though there remains a small core of hard liners still dreaming of a greater Albania.

Albania

Albania declared its independence from the Ottoman Empire in 1912, but was conquered by Italy in 1939 and by Communists in 1944. Albania allied itself first with the USSR (until 1960), and then with China (to 1978). In the early 1990s, Albania ended 46 years of communist rule and established a multiparty democracy. The transition has proven challenging due to widespread corruption and powerful organised crime networks. Slow progress is being made with elections resulted in a coalition government in 2009, the first such in the country's history. Albania joined NATO the same year and is a potential candidate for EU accession. Although Albania's economy continues to grow, the country is still one of the poorest in Europe, hampered by a large informal economy. Albania also has a large cash economy and significant money flows from abroad in the form of remittances. Albania has a significant black market for certain smuggled goods, mainly tobacco, jewelry, stolen cars, and mobile phones, due to its high level of consumer imports and weak customs controls. Albania is a transit country for Afghan heroin smuggled to Western Europe and serves as a key gateway for heroin distribution throughout Europe. Local

production of marijuana is also on the rise for domestic and European use. Albania serves as a base of operations for regional organised crime organisations as illicit proceeds are easily laundered, with real estate and business development projects being the most popular methods. Terrorist financing also remains a threat in Albania.

Albanian Mafia - Albania

In Albania there are over 15 mafia clans that control organised crime. The Albanian Mafia have constructed an enormous crime syndicate that is primarily based around drugs and arms trafficking. However, the syndicate participates in a diverse range of criminal enterprises, including car theft. Similar to other organised crime groups, the typical structure of the Albanian Mafia is hierarchical. They hold a deep reliance on loyalty, honor, and blood relationships. Albanian Mafia clans are usually made up of groups of fewer than 500 members. They are secretive and little information is known about the current Albanian Mafia bosses, though it is believed that Daut Kadriovski is one of the leaders. He is the reputed boss (godfather) of one of the 15 Mafia clans and whilst he remains at large he is wanted by the authorities in many Countries.

In the 1980s, the Albanian Mafia moved into New York and began to fight with the Italians. Today, the Albanian presence is highly evident and the organisation has come to an agreement with other criminal syndicates, who have agreed to stay out of their way. In Italy, Albanian organised crime gangs appear to control the car theft and trafficking market. Albanian gangs are believed to be largely responsible for sex trafficking, immigrants smuggling, and the heroin trade in the UK. They hold a heavy presence in France, Switzerland, Canada, Belgium, Germany, Australia, and Honduras. Whilst Albanian criminal gangs had long existed they were a scattered and disorganised band of gangs, largely working for others. This changed though through a number of important developments which transformed them from local criminal gangs into international major operators to rival those in Russia, Italy and elsewhere. Firstly the campaign against the Italian Mafia by for example US Law Enforcement provided an opportunity for others, including the Albanians to take up part of the drug trade previously controlled by the Italians. Secondly, the civil war in Yugoslavia and in particular the fight for Kosovo with its large ethnic Albanian population provided a unique opportunity to profit from the chaos and engage in illegal activities, including, large scale arms trading, goods and refugee smuggling and fund raising through increased and or diverted drug trafficking. Approximately 60% of Western Europe's heroin trade was disrupted as a result.

A great source of recruitment and local knowledge and support comes from the émigré communities located throughout Western Europe. Whether in Italy, Austria, Germany, or Switzerland, ethnics from Kosovo, Macedonia, and Albania, have been sought out by organised crime groups for criminal activity. Those from

the former Yugoslavia, especially, having fled during the outbreak of civil war, were taken into the capitals of Western Europe as political refugees. As their numbers swelled, these unemployed refugees, unable to obtain government assistance, found that there was money to be made in organised crime. Many were taken on as cheap labour in restaurants, cafes, and the like. Once there, they were given places to stay, false papers, and paid in cash. Beholden to the Albanian Mafia already many were recruited for organised crime groups operating in the region. Their familiarity with Kosovo, Macedonia, and Albania made them naturals for ferrying contraband back and forth.

Nano Aldo Bare - Albania

The Nano Aldo Bare are Albania's most notorious crime gang led by Alfred Shkurti with main operations in Albania, Turkey, Bulgaria, Macedonia and Romania, trafficking drugs into Western Europe. The gang is reputed to be extremely dangerous and violent and have close connections with the Turkish Mafia, particularly, the Ulkuculer.

Belarus

Once part of the early Russian empire, known as the Kyivan Rus, Belarus was gradually taken over by Lithuania in the 14th century and became part of the Polish-Lithuanian Grand Duchy. Belarus means white Russians. The Scandinavians who moved in the east were called Rus and from them came the word Russia, see Russia below. During the Mongol era, the Russians were classified into three different groups: Belarusians (white Russians), little Russians, and great Russians. The name Belarus and the country evolved from Belarusians. It was to be 400 years before Belarus came under Russian control again but notwithstanding Belarus formal independence from the USSR in 1991 it has retained closer political and economic ties to Russia than any of the other former Soviet republics, though recently these ties have become strained as once cheap Russian gas prices have given way to market pricing, and Belarus under the autocratic and authoritarian President Alexander Lukashenko, in power since 2004, a former collective-farm director, unable to pay, with an unreformed economy and a political system stuck in Soviet thinking. Belarus is home to nearly 10 million people, with the largest city Minsk also its capital. The country was proclaimed as an 'outpost of tyranny' by former US Secretary of State Condoleezza Rice and since then sanctions have been imposed on the President and those to him by both the US and the EU for political corruption, restrictions on freedoms and human rights abuses. For more details on Sanctions and Embargoes see Part 1, Section 3 above.

Belarus is considered as one of the most corrupt countries in the world by Transparency International being rated 123 out of 175. Belarus is both a source and a transit country for trafficked persons, primarily women. Information from the Netherlands, Lithuania,

and Bosnia, refer to Belarus as a country of origin for women being trafficked to or through their countries. Women from Russia, Ukraine and Lithuania are trafficked through Belarus to countries in Europe, primarily Germany and Poland. Other anecdotal evidence suggests that the Russian Mafia is active in trafficking young women to Cyprus, Greece, Israel, and Western Europe. The Ministry of Internal Affairs acknowledges that Russian criminal organisations actively may try to recruit and lure women into serving as prostitutes in Western Europe and the Middle East. Traffickers, who are associated with organised crime and drug trafficking, entice their victims through advertisements for lucrative jobs in newspapers and on the Internet. Belarus' location between Russia and the West combined with its good rail and road transportation systems and a customs union with Russia that eliminates internal borders between the two countries adds to Belarus' attractiveness as a drug transit corridor, into or via Russia, and to the Baltics and Western Europe. Belarus also faces many organised crime problems that plague other countries of the former Soviet Union.

Ukraine

Ukraine, a country of almost 48 million people, was the centre of the first eastern Slavic state, Kyivan Rus, which during the 10th and 11th centuries was the largest and most powerful state in Europe. After being incorporated into the Grand Duchy of Lithuania and eventually into the Polish-Lithuanian Commonwealth, Ukraine would come under the Protectorate of Russian rule, in 1654, where the then Cossack Hetmanate was established. This would last through tsarist Russian rule and throughout the time of the Soviet Union until Ukraine truly gained its independence in 1991. Still from independence until today, Ukraine remains split in its loyalties, with the Russian speaking industrial east remaining largely loyal to Kremlin backed political candidates, and the more Ukrainian speaking west supporting independent candidates looking more towards the EU and the US for its future. As a consequence Ukrainian politics has swung between the two which, together with the prevalence of organised crime, has led to a deterioration in the reputation of the Ukraine.

In the Presidential campaign of 2004, the eventual winner, Viktor Yushchenko, was poisoned with dioxin, leaving him disfigured. Subsequent internal squabbles in the Yushchenko camp allowed his rival Viktor Yanukovych to stage a comeback in parliamentary elections and become prime minister in 2006. An early legislative election, brought on by a political crisis in the spring of 2007, saw Yuliya Tymoshenko, as head of an "Orange" coalition, installed as a new prime minister

in 2007. Viktor Yanukovych was elected President in a February 2010 run-off election that observers assessed as meeting most international standards. The following month, Ukraine's parliament, the Rada, approved a vote of no-confidence prompting Yuliya Tymoshenko to resign, from her post as prime minister and thereafter she would be imprisoned on abuse of office charges in connection with gas contracts, widely considered trumped up by many commentators, particularly in the EU and the US. There had been running a serious dispute between Russia and Ukraine on the supply and distribution of gas, with Yulia Tymoshenko openly accusing the two States' joint venture, RosUkrEnergo, of being partly owned by Semyon Mogilevich; with the inference being that the former President Leonid Kuchma, a political supporter of Viktor Yanukovych allegedly therefore complicit in providing the Ukrainian holding to the Russian mafia leader.

As similar to the development of the Russian economy after the collapse of the USSR in 1991, much of the Ukrainian extractive industries, now concentrated on Ukrainian business leaders and so called Ukrainian oligarchs have been afflicted by varying levels of corruption and involvement by organised crime throughout the 1990s. As a result of its geographic position, the Ukraine is used as a transshipment point for opiates and other illicit drugs from Africa, Latin America, and Turkey to Europe, Russia and other parts of the former USSR. Ukraine is a source, transit and increasingly, destination country for men, women, and children subjected to forced labour and sex trafficking. Ukrainian victims are sex trafficked within Ukraine as well as in Russia, Europe and the Middle East. An Internal Organisation for Migration survey released in 2006 concluded that since 1991, approximately 117,000 Ukrainians had been forced into exploitative situations in Europe, the Middle East, and Russia.

Moldova

One of the poorest nations in Europe, Moldova was incorporated into Romania during the interwar period, and then incorporated into the Soviet Union at the close of World War II. Whilst gaining independence in 1991, Moldova remained heavily influenced by Russia, even electing a communist, Vladimir Voronin, as its president in 2001, who served until 2009, being replaced by four Moldovan opposition parties, namely the Alliance for European Integration (AEI). Moldova is a transshipment point for illicit drugs from Southwest Asia via Central Asia to Russia, Western Europe, and possibly the US. In Moldova crime is widespread and their is a large underground economy.

Hungary

Hungary became a Christian kingdom in A.D. 1000 and for many centuries served as a bulwark against Ottoman Turkish expansion in Europe and formed part of the Austro-Hungarian Empire, which collapsed during World War I. The country fell under communist rule following World War II. In 1956, a revolt and an announced withdrawal from the Warsaw Pact were met with a massive military intervention by Moscow. Hungary achieved its independence with the demise of the Soviet Union holding multiparty elections in 1990, joining NATO in 1999 and the EU five years later in 2006. Hungary is a transhipment point for Southwest Asian heroin and cannabis and for South American cocaine destined for Western Europe. Hungary is a limited producer of precursor chemicals, particularly for amphetamine and methamphetamine and a significant consumer of ecstasy. Hungary remains vulnerable to money laundering, related to organised crime and drug trafficking.

Romania

Romania as a State was formed and gained recognition after uniting a number of principalities in 1878 securing autonomy outside the Ottoman empire. It was on the winning side in World War I and gained territory, most notably Transylvania and the losing side in World War 2 being overrun by the Soviets. The post-war Soviet Republic would be ruled by long term dictator Nicolae Ceausescu who took power in 1965 and ruled through oppressive and draconian measures until he was overthrown and executed in late 1989. Former communists dominated the government until 1996 when they were swept from power. Romania joined NATO in 2004 and the EU in 2007. Romania is a major transshipment point for Southwest Asian heroin transiting the Balkan route and small amounts of Latin American cocaine bound for Western Europe.

Transcaucasus Region

The Transcaucasus is bordered on the north by Russia, on the west by the Black Sea and Turkey, on the east by the Caspian Sea, and on the south by Iran. It includes part of the Caucasus Mountain, Armenia, Azerbaijan and Georgia, and borders the northern portion of the Caucasus which is known as the Ciscaucasus and is part of Southwestern Russian. The Ciscaucasus includes the autonomous republics of Adygea, Karachay-Cherkessia, Kabardino-

Balkaria, North Ossetia, Ingushetia, Chechnya, and Dagestan. Three territories in the region claim independence but are recognised as such by only a handful or by no independent states, namely; Abkhazia, Nagorno-Karabakh and South Ossetia. Together the Transcaucasus and the Ciscaucasus make up the region known as the Caucasus. In Greek mythology the Caucasus, was one of the pillars supporting the world. After presenting man with the gift of fire, Prometheus was chained there by Zeus, to have his liver eaten daily by an eagle as punishment for defying Zeus' wish of not giving the "secret of fire" to humans. Located on the peripheries of Turkey, Iran, and Russia, the region has been an arena for political, military, religious, and cultural rivalries and expansionism for centuries. Throughout its history, the Caucasus was usually incorporated into the Persian world. The region would though be conquered by the Ottomans, the Mongols, local kingdoms and khanates, as well as, once again, Persia, until its subsequent conquest by Russia.

Armenia

Armenia prides itself on being the first nation to formally adopt Christianity (early 4th century). Due to its location it has enjoyed periods of autonomy and endured rule by powerful neighboring empires. As part of the Ottoman empire, the Armenians were provided with a large degree of autonomy and relative religious freedom. During World War I with Ottoman Turk rule unravelling, Greece, Bulgaria and Serbia left the empire and with the Armenians assisting opposing Allied Russian forces, the Ottoman Turks reacted with brutal force that resulted in 1.5 million Armenian deaths from a total of 2.5 million. The actions by the Ottoman Turks predate the genocide committed against the Jews by Nazi German decades later. Whilst most of the world have acknowledged these acts as genocide, a few still do not, including most importantly Turkey. Armenia was conquered soon after by the Soviet Red Army and remained part of the Soviet Union until its break up, achieving independence in 1991. The major issue in the region is the dispute with Azerbaijan over the disputed region Nagorno-Karabakh, a primarily Armenian-populated region, within Azerbaijan, where a short war was fought between the two in 1988. By 1994, when a cease-fire took hold, ethnic Armenian forces held not only Nagorno-Karabakh but also a significant portion of Azerbaijan proper. Armenia grows a small amount of cannabis for domestic consumption, is a minor transit point for illicit drugs, mostly opium and hashish moving from Southwest Asia to Russia and to a lesser extent the rest of Europe.

Azerbaijan

Azerbaijan is a nation with a majority-Turkic and majority-Shia Muslim population with a similar history to that of Armenia and the wider region, joining the Soviet Union after World War I and achieving independence after the fall of the Soviet Union in 1991. Its conflict with Armenia (see above) is not fully resolved. Corruption in the country is widespread, and the government, which eliminated presidential term limits in a 2009 referendum, has been accused of authoritarianism. Azerbaijan grows cannabis and opium poppy, mostly for CIS consumption and is a transit point for Southwest Asian opiates bound for Russia and to a lesser extent the rest of Europe.

Georgia

Like Armenia and Azerbaijan, Georgia has a similar history and joined the Soviet Union after World War I, achieving independence after the fall of the Soviet Union in 1991. Mounting public discontent over rampant corruption and ineffective government services, followed by an attempt by the incumbent Georgian Government to manipulate national legislative elections in November 2003 led to widespread protests that led to the resignation of Eduard Shevardnadze, President since 1995 and former Foreign Secretary of the Soviet Union.

In the aftermath of that popular movement, which became known as the "Rose Revolution," new elections in early 2004 swept reformist Mikheil Saakashvili into power. With tensions strained with Russia and with Russian assistance and support to the separatist regions of Abkhazia and South Ossetia, periodic flare-ups in tension and violence culminated in a five-day conflict in August 2008 between Russia and Georgia, including the invasion of large portions of undisputed Georgian territory. Russian troops pledged to pull back from most occupied Georgian territory, but in late August 2008 Russia unilaterally recognised the independence of Abkhazia and South Ossetia, and Russian military forces remain in those regions. Today a political fight between billionaire philanthropist Bidzina Ivanishvili and the President continues with each vying for overall control. Georgia grows cannabis and opium poppy, mostly for CIS consumption and is a transit point for Southwest Asian opiates bound for Russia and to a lesser extent the rest of Europe.

Russia

Russia is the largest country in the world, covering more than one-eighth of the Earth's inhabited land area. Russia is also the world's most populous nation with 143 million people as of 2012. Extending across the entirety of northern Asia and much

of Eastern Europe, Russia spans nine time zones and incorporates a wide range of environments and landforms. The nation's history began with four tribes, the Chuds, Slavs, Merians and Krivichs who lived in the region emerging as recognisable group's in Europe between the 3rd and 8th centuries AD but who were first conquered by a Finnic warrior elite tribe called the Varangians or the Rus, derived from an old Norse term for "the men who row" as rowing was the main method of navigating the rivers of Eastern Europe. The tribes freed themselves by working together but then fought amongst themselves. The result allowed the Varangians, or the Rus, to return, largely welcomed by the tribes to bring peace and stability to the region. As a result the medieval state of Rus arose in the 9th century. In 988 the Rus adopted Orthodox Christianity from the Byzantine Empire, beginning the synthesis of Byzantine and Slavic cultures that defined Russian culture for the next millennium. Rus' ultimately disintegrated into a number of smaller states and became easy prey for the Mongols. One of the leading successor Rus' states, known as the Grand Duchy of Moscow emerged in the 12th Century and gradually reunified the surrounding Rus principalities, achieving independence from the Mongols after 200 years of Mongol domination (13th-15th centuries), gradually conquering and absorbing surrounding principalities. By the 15th century, the ruler of the Grand Duchy of Moscow, Ivan III of Moscow was the first local ruler to become universally recognised under the title Grand Duke of all Rus'. In the early 17th century, a new Romanov Dynasty continued to expand across Siberia to the Pacific. Under Peter I (1682-1725), further lands were conquered extending to the Baltic Sea and the country was renamed the Russian Empire, which was the third largest empire in history, stretching from Poland in Europe to Alaska in North America.

During the 19th century, more territorial acquisitions were made in Europe and Asia. Defeat first in the Russo-Japanese War of 1904-05 followed by repeated

devastating defeats of the Russian army in World War I led to widespread rioting in the major cities of the Russian Empire and to the overthrow in 1917 of the imperial household. The communists under Vladimir Lenin seized power soon after and formed the USSR. Lenin was succeeded by Josef Stalin (1928-53) who strengthened communist rule, helped defeat Nazi Germany and consolidated Russian authority and dominance within the Soviet Union at a cost of tens of millions of lives.

The Soviet economy and society stagnated in the following decades until leader Mikhail Gorbachev (1985-91) introduced glasnost (openness) and perestroika (restructuring) in an attempt to modernize communism, but his initiatives inadvertently released forces that by December 1991 splintered the USSR into Russia and 14 other independent republics. Since then, Russia has attempted to modernize, experiencing democratic reforms under President Yeltsin but under his successor President Putin, Russia is considered by many very much a centralized semi-authoritarian state, albeit one which has achieved significant economic growth and severely disabled a Chechen rebel movement, although violence still occurs throughout the North Caucasus and Chechnya. The radical transformation to a post Soviet existence saw the rise of the Russian Oligarchs;³⁸ as well as the rise of organised crime and corruption much of which continues to this day and remains a significant threat to the proper functioning of the Russian State. The Russian Mafia, particularly the Solntsevskaya Bratva and Tambov Syndicate and thousands more smaller outfits are prevalent and engage in a broad range of illegal activities, particularly extortion, drug trafficking, oil and gas smuggling and human trafficking, political corruption and the smuggling of weapons and even nuclear material. Particularly successful is the Chechen Mafia.

Russia remains concerned about the smuggling of poppy derivatives from Afghanistan through Central Asian countries with Russia used as a trans-shipment and destination point for Asian opiates, cannabis, and Latin American cocaine bound for growing domestic markets, and to a lesser extent Western and Central Europe, and occasionally to the US; Russia is also a major source of heroin precursor chemicals corruption and organised crime are key concerns. There is also a limited cultivation of illicit cannabis and opium poppy within Russia itself as well as production of methamphetamine, mostly for domestic consumption. Russia is a source, transit, and destination country for men, women, and children who are subjected to forced labour and sex trafficking.

There has been a sustained series of terrorist attacks with a considerable number of casualties since the outbreak of the First Chechen war which include: [1973 - Aeroflot Tu-104 \(100\)](#), [1996 - hostage taking in Budennovsk, Russia, by Chechen Rebels \(143\)](#) [1999 - apartment bombings in Moscow Russia \(301\)](#) [2002 - Theater Hostage Crisis, Moscow, Russia by Chechen Rebels \(168\)](#) [2003 - Red Square bombing in Moscow \(6\)](#) [2004 - School Hostage Crisis, Beslan Russia by Chechen Rebels \(366\)](#) [2004 - Akhmad Kadyrov \(President of Chechnya\) assassinated](#) [2004 - Volga-Avia Express Flight 1303 \(89\)](#) [2010 - Metro bombings in Moscow Russia by Islamist Chechen terrorists \(40\)](#).

Russian Designated Terrorist Organisations

Russia have designated a number of organisations as terrorist organisations, focussing on those that pose a threat in some way to the Russian State with a real focus on Chechnya and the North Caucasus, in particular the umbrella group called the [Caucuses Emirate](#). For more details of terrorist groups operating in or from this area see North Caucasus/Ciscaucasus below. Russia has also designated organisations involved in either financing or advocating the insurgency in the North Caucasus. These groups include [Jamaat-e-Islami](#), [Hizb-ut-Tahrir](#), the [Muslim Brotherhood](#) and Islamic charities such as [Jamiat al-Islah al-Ijtimal \(the Society of Social Reforms\)](#), [Jamiat Ihya al-Turaz al-Islami \(the Society for the Revival of the Islamic Heritage\)](#), both based in Kuwait and [Al-Haramain Islamic Foundation](#). Beyond, but still linked to, the North Caucasus, external Islamic groups have been designated including the [Islamic Party of Turkestan](#), formerly known as the [Islamic Movement of Uzbekistan \(IMU\)](#) and its breakaway faction the [Islamic Jihad Group \(IJG\)](#). These groups are reportedly seeking to establish an Islamic caliphate in Central Asia. They are also alleged to have insurgent ties in Chechnya and the other parts of the North Caucasus.

[Al-Qaeda](#) and the [Taliban](#) also appear on the Russian list, both said to have trained fighters for Chechnya as well as the [Egyptian Islamic Jihad](#) and [al-Gama'a al Islamiyya](#). The Egyptian groups are featured on the list, because they formed the core of recruits of the original Al-Qaeda in the 1990s. Also included are [Asbar al-Ansar](#) and [Jund Ash Sham](#), [AQ](#) affiliates operating in Lebanon and Syria. The Pakistani-based [Laskhar-e-Toiba](#) is also on the list. The group has been fighting for Kashmiri independence from India or a merger with Pakistan in a long and bloody conflict. Its propaganda material includes one pamphlet entitled "Why are we waging Jihad," which identifies Chechnya as a key area of international interest. The group has maintained active collaboration with fighters in Chechnya.

Special Focus 18 Russian Mafia - Russia

The Russian Mafia engages in a broad range of illegal activities, particularly extortion but also drug trafficking, oil and gas smuggling and human trafficking, political corruption and smuggling of weapons and nuclear material.

The Russian Mafia has its origins in the vory-v-zakone (thieves with a code of honor), a society of thieves that evolved during the era of Imperial Russia. This society was fully formed by the time of Stalin's era at the gulags where the criminals were sent as a punishment. The criminal groups operated a black economy during the 1970s avoiding and bypassing the Communist State. Whilst the criminal groups had refused to cooperate with the state, this began to change as the new criminal class teamed up with corrupt officials, army officers and politicians to steal State assets, particularly after 1991 and the collapse of the Soviet Union.

As the Soviet Union collapsed, so too did the economy, directly affecting most of the government workers. Desperate for money, many former government workers turned to crime, others joined the former Soviet citizens who moved overseas, and the Russian Mafia became a natural extension of this trend. Former KGB agents, military men and veterans of the Afghan and First and Second Chechen Wars, now finding themselves out-of-work but with experience in areas which could prove useful in crime, joined the increasing crime wave. Widespread corruption, poverty and distrust of authorities only contributed to the rise of organised crime. Contract killings, bombings and kidnappings reached an all-time high with many gangland murders taking place, a substantial number remaining unsolved.

By 1993 many banks in Russia were owned by the mafia, and most businesses were paying protection money. In that year, 1400 people were murdered in Moscow, crime members killed businessmen who would not pay money to them, also reporters, politicians, bank owners and other opposed to them. The new criminal class of Russia took on a more Westernized and businesslike approach to organised crime as the more code-of-honor based Vory faded into extinction.

By 1994 Russia's then interior minister, Mikhail Yegorov, stated that the number of organised crime groups in the former Soviet Union had grown from 785 during Gorbachev's reign to 5,500. By 1996 this estimate had grown to 8,000 groups, each with memberships of between 50 and 1,000. The government in Moscow estimated that the Russian mafia controlled 40% of private business and 60% of state-owned companies. Since then, the groups have only increased their influence and power and have expanded across Russia, throughout the former Soviet Union and across the world, operating in over 60 countries, including the US.

Today it is estimated that there are around 6,000 mafia groups in Russia, employing directly or indirectly an estimated three million people. These groups form a state within a state with politicians, army officers, businessmen and policemen on their payroll. Around 200 of the groups are global conglomerates, with estimates of criminal proceeds generated in excess of US\$10bio. The basic business of these groups in Russia is extortion. It has been estimated that nearly 80% of business in Russia pay off the Mafia and sometimes up to 30% of those businesses income goes to the mafia. A prime example, comes from Canadian entrepreneur Doug Steele who owns a well known Moscow nightclub called The Hungry Duck who estimated that he had paid out over US\$1mio in pay-offs to police, officials and the mafia. Mr Steele, who has already survived one kidnapping attempt, said "You have to grease the palm or you won't be in business. "If it was not for the mafia there would not be an economy. They are a major driving force behind what goes on here." The Russian Mafia is also involved in illegal smuggling, particularly Oil and Gas, human trafficking, drug trafficking, smuggling of weapons and nuclear material.

The Russian Mafia is very active internationally and co-operates extensively with other non-Russian organised criminal gangs. According to a Stratfor Global Intelligence report published on 14 November 2007, the US law enforcement has established links between Russian organised crime in the US and La Cosa Nostra. The two groups appear to be cooperating in such ventures as gambling, prostitution, fraud and extortion. The Russian Mafia is responsible for vice operations from Miami to Tokyo to the Persian Gulf, and it is also deeply tied with [Turkish Mafia](#) and Israeli organised crime, most of which came from Russia. Additionally, Russian organised crime groups reportedly have been involved in such enterprises as drug trafficking, money laundering and counterfeiting with several other international organised crime groups, including the [Sicilian Mafia](#), the [Camorra](#), the Japanese

[Yakuza](#), Chinese [Triads](#) and [Colombian Drug Cartels](#). Connections with Latin American Drug Cartels allowed the Russian Mafia to import cocaine into the country.

Russian Mafia gangs are typically called "bratvas", "bratva" meaning "brotherhood" in Russian. While there may be thousands of mafia groups in Russia only a handful are large enough to maintain a serious threat. The biggest and most well known and feared gangs are the Dolgoruadnanskaya Izmaylovskaya; Orekhovskaya Gang and the Solntsevskaya in Moscow the Tambov Syndicate in St Petersburg and Obshina from Chechen.

Solntsevskaya Bratva - Moscow, Russia

This Gang is named after the south west Moscow suburb of Solntsevo from which it originated and has around 5,000 members. Its leader is believed to be Sergei Mikhailov, known as Mikhas, who learned his criminal trade in the Siberian labour camps and who was for a time held by the authorities in Switzerland, but he was let go after several witnesses were shot or blown up and the evidence could not be brought forward. The gang is made up of smaller clans, two of which, the Ostankino and Lubertsy clans are significant players in Moscow. From its base in Moscow, they run rackets in extortion, drug trafficking, car theft, stolen art, money laundering, contract killings, arms dealing, trading nuclear material, prostitution and oil deals.

Tambov Syndicate - St Petersburg, Russia

The Tambov Syndicate is believed to have been formed in 1988 by Vladimir Kumarin and Valery Ledovskikh, both of whom came from Tambov Oblast. In the gang's early period members were recruited almost exclusively from the area of Tambov and formed a protection racket. The group has been involved in various inter gang conflicts, and has suffered in-fighting between its own subdivisions. In the course of such violence Kumarin was subjected to an assassination attempt, loosing an arm but escaping with his life in 1994. The Tambov syndicate is thought to wield significant political power, with members allegedly having gained seats in the State Duma and Saint Petersburg Legislative Assembly. The Tambov syndicate is now led by Vladimir Gavrilenkov.

Semion Mogilevich - Russia

By the mid-1990s it was believed that the Jewish born "Don" Semion Mogilevich had become the "boss of all bosses" of most Russian Mafia Bratvas and described by the FBI as "one of the most dangerous men in the world. Simon Mogilevich is widely seen as the most important figure in the Russian Mafia, most closely associated with the Solntsevskaya Bratva.

Ciscaucasus / North Caucasus

Ciscaucasus/the North Caucasus is the northern part of the Caucasus region between the Black and Caspian Seas and within European Russia, together with the Southern Caucasus also known as Transcaucasus, making up the Caucasus Region.

The North Caucasus, unlike their Southern neighbors are part of the Russian Federation, made up of Russian Republics, consisting of Krasnodar Krai, Stavropol Krai, and the constituent republics, approximately from west to east: Republic of Adygea, Karachay-Cherkessia, Kabardino-Balkaria, North Ossetia-Alania, Ingushetia, Dagestan and Chechnya, also known by separatists as the Chechen Republic of Ichkeria and the region that has been the focus of most trouble and where two wars have been fought.

Whilst Chechnya and these other regions boast a primarily Muslim population, the populace has demonstrated little allegiance to radical Islam, though there is much support for separatist movements many of which have been lead by those with Radical Islamic intent.

These separatist groups were very active during the wars in the Chechen republic from 1994-96 and 1999-09, with some still active today, with acts of reprisals for government actions in the territory, as well as separate acts of terrorism, particularly in Russia, in Moscow and in other large Russian cities and with particular concerns ahead of the Winter Olympics in Sochi in Russia to be held in February 2014

The current threat comes from the Caucasus Emirate, a radical Islamist nationalist organisation formed in 2007 by Doku Umarov after he resigned from his position as President of the Republic of Ichkeria (the self-proclaimed secessionist government of Chechnya) and acting as an umbrella group for radical Islamic secessionist groups in the region.

The group aims to have an independent Caucasus Emirate ruled under Sharia and to aid in waging global jihad. The Caucasus Emirate openly declared their assistance to the global jihadi movement in 2009 at a meeting in Chechnya with the group's top leaders

The Republic of Chechnya

The First Chechen War broke out in 1994. As the Soviet Union disintegrated Chechen separatists declared independence in 1991, forming the Chechen Republic of Ichkeria under President Dudayev. From 1994 Russian forces sought to re-establish control but after 2 years of fighting they withdrew from the region and a ceasefire was agreed. Dudayev was succeeded by Maskhadov, the former Army Chief, who was credited by many with the Chechen victory. Still, with the economy destroyed, and nearly 40% of Chechens displaced and with Chechen warlords still in charge of their own militia's, this time of so called peace and independence became notorious for organised crime, and mayhem. One of the main warlords was Shamil Basayev, who during the First Chechen War made a name for himself and the units under his control. Basayev promoted a much more fundamentalist form of Islam which created a split in the Chechen separatist movement, but which lead President Maskhadov to introduce Islamic Sharia Law and Sharia Courts in 1999.

In 1998 Shamil Basayev, together with Saudi born commander Ibn al-Khattab established the Islamic International Peacekeeping Brigade with members comprised of nationalistic, ethnic Chechen fighters as well as a contingent of Arabs and other foreign fighters dedicated to the creation of an independent Islamic republic in the Russian Republic of Chechnya. Around the same time Arbi Barayev formed the Special Purpose Islamic Regiment with the same goals, forging links between these and other like minded groups. Both groups were later to merge or come together under the umbrella of the Riyad us-Saliheyn Martyrs' Brigade.

Both Basayev and Al-Khattab had visited Afghanistan previously, before 1995, touring and then undergoing training in Afghan fighter training camps, developing close ties to Al-Qaeda. In 1999, new emissaries of Basayev and Al-Khattab traveled to bin Laden's home base in the Afghan province of Kandahar, where bin Laden agreed to provide substantial military assistance and financial aid, including by making arrangements to send to Chechnya several hundred fighters to fight against Russian troops and perpetrate acts of terrorism. Later that year, bin Laden sent substantial amounts of money to Basayev, Al-Khattab and Barayev, which was to be used exclusively for training gunmen, recruiting mercenaries and buying ammunition.

It was also at this time that the first Islamic militants began entering Chechnya to take up the 'cause' for the establishment of an Islamic State in the North Caucasus. These 'Mujahideen' offered connections to terrorist groups and financiers beyond Russia's borders.

In the summer of 1999, Basayev and Ibn Al-Khattab and their Islamic International Peacekeeping Brigade attempted to spread war to the neighboring republic of Dagestan. They also in 1999 attacked at the heart of Russia by killing 130 and injuring 150 in a series of Moscow apartment bombings. Both actions were condemned by President Maskhadov. In response on 1st October, 1999, then Russian Prime Minister, Vladimir Putin, sent Russian forces back into Chechnya, declaring the Chechen leadership as illegitimate and setting off the bloodthirsty Second Chechen War. The actions of Putin, who promised a quick and decisive victory in Chechnya would see him propelled to the Russian Presidency soon afterwards, though a decisive victory was elusive and the war would take 10 years.

President Maskhadov returned to his role as a main commander of Chechen forces along with Shamil Basayev, Ibn Al-Khattab and others, fighting a rearguard action and forming an insurgency following Russian capture of the capital Grozny in 2000.

Whilst there have been many separatist insurgent groups involved in the second Chechen War the following are probably the most important and responsible for most of the most infamous terrorist attacks. These are the Islamic International Peacekeeping Brigade and the Special Purpose Islamic Regiment which later merged to form the Riyad us-Saliheyn Martyrs' Brigade, which has since been succeeded by the Caucuses Emirate.

Following the end of the Second Chechen War in 2009 the Russian government has sought to invest in the Northern Caucasus in an attempt to stem the violence through increasing prosperity in what is one of the poorer regions of Russia. It should be noted that this process had been attempted in Chechnya by politically and economically supporting the 'puppet regime' of President Ramzan Kadyrov. Kadyrov, a former member of a separatist militia himself, is the son of the former President, Akhmad Kadyrov who was assassinated in 2004 by members of the Islamic International Peacekeeping Brigade. He became President in 2007 at the age of 31. Chechnya has been provided with significant funding to bolster his regime, though there have been concerns about the level of corruption and human rights abuses carried out under his regime.

The Islamic International Peacekeeping Brigade

The Islamic International Peacekeeping Brigade (IIPB) was founded by Chechen Separatist Commander Shamil Basayev and Saudi born commander Ibn al-Khattab in 1998. Distinct from some other Chechen resistance groups, the IIPB main objective was not only the creation of an independent Chechen state, but one that would be governed by Islamic fundamentalist Sharia law. In addition to local fighters, the IIPB was bolstered by Arab Mujahideen, brought in from nearby Ingushetia, Ossetia, Georgia, and Azerbaijan, but also from further afield including from Afghanistan, where the IIPB had links with bin Laden and his Al-Qaeda network, which furnished financial, operational, and military support and elsewhere in the Middle East.

The IIPB has been credited with effectively starting the second Chechen War in 1999, with the 1999 apartment bombings in Moscow killing 130 and injuring 150. Explosives had been placed in a rented room in the building. The explosion was one of four similar attacks on apartment bombings in a period of 12 days: the others killed an additional 62, 92 and 17 bringing a total of 301 fatalities for the four attacks. The most infamous attacks would come later with involvement in the 2002 seizure of the Dubrovka Theater in Moscow, alongside other groups the Special Purpose Islamic Regiment and the Riyad us-Saliheyn Martyrs' Brigade. The groups took more than 900 hostages, whom they threatened to kill if the Russian Government did not meet their demands of a complete withdrawal of Russian security forces from Chechnya and the recognition of an independent Chechen state. The standoff ended three days later, when Russian Special Forces troops raided the building, killing all the terrorists involved, but also over 150 civilian hostages were also killed as a result of the operation.

Whilst Ibn al-Khattab was eventually killed in 2002, when a Dagestani messenger hired by the Russian FSB, delivered a poisoned letter to him, he was succeeded by his deputy-commander, Abu al-Walid, however he too was killed in action in 2004, just two years after assuming command of the group. Undeterred by the loss of its two most influential leaders, the Islamic International Peacekeeping Brigade merging into and being succeeded by the Riyad us-Saliheyn Martyrs' Brigade are still regarded as a significant security threat in the region by Moscow.

Special Purpose Islamic Regiment - Chechnya

The Special Purpose Islamic Regiment (SPIR) was formed by Arbi Barayev on or around 1998, with the objective of the formation of an independent Chechen state, forging alliances with other prominent Chechen

resistance organisations as well as foreign Islamic groups. Barayev's was killed in 2001, but was succeeded by his nephew, Movsar Suleimanov, who changed his last name to Barayev in emulation of his uncle, and who played a role in SPIR's most infamous attack which came in 2002, being one of three terrorist groups affiliated with the Chechen insurgency that furnished personnel to carry out the seizure of the Dubrovka Theatre in Moscow, together with the IIPB and the Riyad us-Saliheyn Martyrs' Brigade. Following Barayev (the nephew's) death, in the raid by Russian forces in the Moscow Theatre, the group has been lead by many short lived commanders. It is thought that the group eventually merged with the IIPB to form a larger Riyad us-Saliheyn Martyrs' Brigade.

Riyad us-Saliheyn Martyrs' Brigade - Chechnya

The Riyad us-Saliheyn Martyrs Brigade (RSMB) is a terrorist organisation, dedicated to the creation of an independent Islamic republic in Chechnya (and other primarily Muslim parts of Russia such as Dagestan, Kabardino-Balkaria, Ingushetia, Ossetia and Tataria). The group, whose name translates to "requirements for getting into paradise," espouses a radical Islamic doctrine (Wahabbism) and is believed to have strong ties to Al-Qaeda.

Before his death in 2006, Riyad was led by the rebel commander, Shamil Basayev, who together with Ibn al-Khattab established the IIPB and has been responsible for, or involved in, many of the worst terrorist atrocities claimed by Chechen rebel groups. Riyad is believed to be descended from two other Chechen terrorist organisations, the Special Purpose Islamic Regiment (SPIR) and the International Islamic Peacekeeping Brigade (IIPB). It has even been suggested that Riyad is simply the result of the marriage of these two groups. Riyad terrorists have intensified their attacks in recent years, claiming responsibility for some of the worst terrorist incidents in Russia's history.

Whilst they joined their comrades from the IIPB and SPIR in the Moscow 2002 theatre raid, their first major solo attack took place in December 2002, when they attacked and destroyed the headquarters of the pro-Russian Chechen government, killing 72 and injuring 280 people. In August 2003, an attack was carried out on a Russian hospital housing both civilian and military patients. The attack resulted in the deaths of 52, with 72 injured. Further successful attacks, included the assassination of Akhmad Kadyrov, the President of Chechnya, widely considered a puppet of Moscow, who fell victim to a bomb blast that hit the VIP section of the Dynamo football stadium during a World War II memorial victory parade in May 2004. It is also

responsible for the downing of 2 Passenger airlines, a Volga-Avia Express Flight 1303, killing 43 and a Siberia Airlines Flight 1047, killing 46, with both airlines crashing in Russia within minutes of each other flying different routes. The following investigation found that the planes were downed by bombs triggered by two so called "black widow" female Chechen suicide bombers. Shamil Basayev as overall leader of the Chechen terrorist movement and of RSMB claimed the credit, claiming the cost of the aircraft bombings coming to US\$4,000 in total. Also later in September 2004 Chechen terrorists carried out, perhaps their most horrific act, storming the Comintern Street school in Beslan Russia, taking 1,100 hostages into the school gymnasium, killing the male teachers and fathers of pupils instantly. The hostage siege lasted 3 days when Russian security forces stormed the school, leading in all to 366 killed, including 186 children and 783 injured. Still, these major attacks were to be Basayev's last as he was killed in 2006.

The Caucasus Emirate - Chechnya

The Caucasus Emirate is a radical Islamist nationalist organisation formed in October 2007 by Doku Umarov after he resigned from his position as President of the Republic of Ichkeria (the self-proclaimed secessionist government of Chechnya). The group aims to have an independent Caucasus Emirate ruled under Sharia Law and to aid in waging global jihad. The Caucasus Emirate openly declared their assistance to the global jihadi movement in April 2009 at a meeting in Chechnya with the group's top leaders

Both the Russian Federation and the United States have designated the Caucasus Emirate as a terrorist organisation and the UN added the Caucasus Emirate to the list of entities associated with Al-Qaeda.

The Emirate consists of six provinces that report to their respective emirs who report to the Emir of the Caucasus Emirate, Doku Umarov. The six provinces are all located in the North Caucasus: i) Chechnya, ii) Ingushetia and North Ossetia, iii) Nogay Steppe (Northern Krasnodar Krai and Stavropol Krai), iv) Cherkess and Southern Krasnodar Krai, v) Dagestan, and vi) Kabardino-Balkaria and Karachay.

Upon its creation, the Caucasus Emirate also served as the umbrella for other terrorist organisations from the North Caucasus. These organisations include the Yarmuk (Kabardino-Balkaria) Jamaat, Shariat (Dagestan) Jamaat, and Ingush Jamaat, as well as Riyad us-Saliheyn Martyrs' Brigade from Chechnya.

Under Doku Umarov, the Caucasus Emirate and its

affiliates continued with major attacks in 2010 and in 2011. For example in 2010, two stations on the Moscow Metro were targeted, namely Lubyanka and Park Kultury, by two black widow suicide bombers, killing 40 people and injuring over 100 injured. In 2011, a male suicide bomber struck Moscow's Domodedovo Airport, killing 37 people and injuring more than 180. Doku Umarov ordered a halt to attacks on civilian targets during the mass street protests against President Vladimir Putin in the winter of 2011-12. He later reversed that order urging his comrades to "do their utmost to derail" the Sochi Olympics which he described as "satanic dancing on the bones of our ancestors."

Recent attacks have seen a series of terror attacks on buses, trains and airplanes, some carried out by suicide bombers, including an October 2013 black widow suicide bomber who blew herself up on a city bus in Volgograd, killing 6 people and injuring about 30 and another black widow suicide bomber who blew herself up at a railway station in Southern Russia, killing 14 and injuring scores more, heightening concern about terrorism ahead of February's Olympics in the Russian Black Sea resort of Sochi.

Chechen Mafia - Chechnya

The lines of differentiation between the Chechen and the Russian Mafia are often blurred, primarily as a result of the fact that most people of Chechen ethnicity speak Russian and emigrated from states within the Russian Federation. The Chechen Mafia should however be seen as a distinct entity, and one of the largest organised crime syndicates operating in the former Soviet Union. The organisation emerged in 1974, conceived by the Chechen student Khozh-Ahmed Noukhaev during his time in Moscow. By the late 1980s the Chechens had become the most influential of the Moscow gangs and are today believed to exert extensive international influence. The diverse array of criminal activity in which the Chechen Mafia engages is known to include car theft, drug and human trafficking, money laundering, as well as the illegal sale of plutonium. The Chechen Mafia has at times been separated in terms of its classification from other purely criminal enterprises by dint of its perceived political motivations and links to terrorist cells. During the Chechen Wars it was believed that the revenue from its organised crime network was used to arm Chechen terrorists including separatist fighters. However the end objectives motivating the connections between the Chechen Mafia and Chechen terrorists remain disputed. For instance some observers maintain that the Chechen Mafia did not in fact seek an independent Chechen State, but rather aimed to cultivate and maintain instability in the region as a

way of better propagating their drugs trade. The large Muslim population in Chechnya has led to allegations from Russia's government that the Chechen Mafia has strong links with Al-Qaeda, though such assertions may seek to score political points rather than an accurate portrayal of intelligence. Nevertheless similar allegations have been made by Argentinean authorities who are aware of Chechen links with the Arab Muslim population located in the tri-border area between Argentina, Brazil and Paraguay. The strong Chechen Mafia presence in the region is primarily due to the areas functionality as a shipping point for Andean cocaine to Europe. Claims by the London daily Arab paper al-Watan al-Arabi also support a link between the Chechen Mafia and Al-Qaeda, reporting that the Islamic terrorist organisation had succeeded in procuring twenty nuclear devices from Chechen contacts in return for arms, money and heroin

Obshina - Chechnya

The largest Chechen Mafia is the Obshina, who made much of their money from bank robberies, kidnapping and white collar crime as well as interests in cigarette smuggling. Their leader is Nikolay Suleimanov.

Western Europe

In modern times the political borders of Europe were largely defined and viewed through the prism of the cold war and marked through the existence of the Iron Curtain, with the major Western European States on one side and the Soviet block on the other.

Since the falling of the Berlin Wall Europe's borders and divisions have changed increasingly being divided by those within the EU and those outside and to the East.

Western Europe suffers from a number of different threats from organised criminals and from terrorists. Highly organised gangs such as the Italian Mafia operate mainly in Italy but also in Germany, France and, sporadically in the UK. Domestic gangs based in Netherlands, Sweden, France, UK and Spain also operate.

Europe is also a final destination point as well as a cross-roads for other transnational criminal groups. All of these types have been known to work independently of each other, engage in conflict or, co-operate with each other. Consequently classification is difficult. From the west Colombian cartels are still the main importers of cocaine helped by gangs such as the Italian Mafia and Galician groups in Spain who co-operate in distribution to the whole of Europe.

From the south, Nigerian Gangs are active in trafficking drugs as well as being active in fraud. From the east, Triad groups with communities in the UK, Italy, Austria, Belgium/Netherlands and Portugal are involved in drugs human trafficking illegal gambling and prostitution as well as Russian Mafia gangs involved in all manner of criminal activities across Europe.

The phrase is used loosely to describe gangs from all over Eastern and Central Europe. Gangs from Russia, Poland, Czechoslovakia, Rumania and former Yugoslavia are active in: Spain, Germany, France, Italy, Austria, UK the Netherlands and Sweden. Their main activities are drugs, human trafficking (including prostitution) and the export of stolen cars. For more details see Eastern Europe above. These are hugely profitable enterprises and are also money laundering machines. National organised crime gangs often provide the 'entre' for transnational or foreign groups.

As far as terrorism is concerned, many of the traditional threats within Europe's borders have receded, from anti capitalist and other red groups disappearing, to secessionist and nationalist groups largely giving up violence. The threat that causes most concern is that from Islamic terrorism and in particular from so called Al-Qaeda inspired groups, living in Europe itself.

European Union Designated Terrorist Organisations

The EU³⁹ has designated groups and entities in addition to incorporating the UN designated terrorist lists as follows: Abu Nidal Organisation, Al-Aqsa Martyrs' Brigade; Babbar Khalsa; Communist Party of the Philippines, including New People's Army (NPA), Gamma al-Islamiyya; Great Islamic Eastern Warriors Front; Hamas, including Hamas-Izz al-Din al-Qassam; Hezbollah External Security Organisation; Hofstad Network; Holy Land Foundation for Relief and Development; International Sikh Youth Federation; Khalistan Zindabad Force; Kurdistan Workers' Party (PKK); Liberation Tigers of Tamil Eelam (LTTE); National Liberation Army (ELN); Palestinian Islamic Jihad (PIJ); Popular Front for the Liberation of Palestine (PFLP); Popular Front for the Liberation of Palestine – General Command; (FARC) Revolutionary Armed Forces of Colombia; Revolutionary People's Liberation Army/Front/Party; Shining Path; Al Aqsa Foundation; Kurdish Freedom Falcons.

Abu Hafs al-Masri Brigade

The Abu Hafs al-Masri Brigade may be the name of an active Al-Qaeda cell in Europe or the organisation that oversees Al-Qaeda's European operations. Of course, the Brigade may exist in name only as well. Named for infamous Al-Qaeda terrorist Mohammed Atef aka Abu Hafs, the leader of the 9/11 Attacks on America, Abu Hafs al-Masri Brigade is known only through statements published through the London Arabic language daily al Quds al Arabi. Through this publication, the group has claimed responsibility for several large terrorist strikes, including the July London bombings, the 2004 Madrid train bombings, and the massive blackouts that occurred in North America in the summer of 2003. The attacks for which they claim responsibility are generally attributed to Al-Qaeda, or Al-Qaeda-linked groups. Ayman al-Zawahiri, Al-Qaeda's leader following the death of bin Laden, has claimed responsibility for the organisation on more than one occasion. The group appears to be recently formed (as Atef was only killed in late 2001), but it may reflect only a name-change in memory of Atef for a pre-existing off-shoot or operational division of Al-Qaeda. Doubts of the group's existence stem from the fact that several of their claims are clearly false. The 2003 blackouts, for example, were caused by technical errors. The Abu Hafs group, however, referred to the incident as one of its "operations" - "Operation Quick Lightning in the Land of the Tyrant of This Generation." The Abu Hafs al-Masri Brigade is most likely either a subset of Al-Qaeda or a copy-cat group that has

joined its jihad against the west. Its size and membership are unclear, as is its access to the Al-Qaeda leadership, resources, and network.

Baader-Meinhof Group / Red Army Faction - Germany

Founded in the late 1960s, the Baader-Meinhof Group, otherwise known as the Red Army Faction (RAF), was a violent leftist organisation responsible for several decades of urban terrorism in the Federal Republic of Germany. Originating in capitalist West Germany these communist revolutionaries attacked symbols of capitalist authority, including American targets, public buildings, and notable German industrialists, charging that West Germany's post-war government was as repressive as Hitler's Nazi regime.

Members embraced a blend of anti-capitalist and anarchist beliefs, protesting both the Vietnam War and the occupation of Palestine, whilst also demonstrating its solidarity with other contemporary high profile left-wing movements across the globe.

Though the group referred to itself as the Rote Armee Fraktion, or Red Army Faction (RAF), after the Japanese Red Army (JRA), in an attempt to delegitimise the organisation the media dubbed it the "Baader-Meinhoff Group". On its inception the group constituted a single small cell made up of Andreas Baader, his girlfriend Gudrun Ensslin and two others. This small cell was responsible for the bombing of two Frankfurt department stores in 1968. After being arrested, released, re-arrested and having finally escaped Baader and other prominent group members, including left-wing journalist Ulrike Meinhof, left Germany to train in Jordanian terrorist camps. These camps were run by the Popular Front for the Liberation of Palestine (PFLP) from whom the RAF received small arms training and lessons in terrorist tactics.

On their return to Germany the group perpetrated several bombings that were then described in heroic fashion by journalist Meinhof. Rather surprisingly, in its early years the RAF commanded considerable support and indeed admiration. This esteem arose predominantly as a result of the initial imagery attached to its most prominent founding members. Ulrike Meinhof was a well known figure in the German media, renowned for her radical politics, while Andreas Baader projected the image of a debonair rebel. At first glance therefore this group of urban guerrillas, emerging from a German youth struggling to forge for itself a stable identity in the post-war, post-Nazi era, was somewhat fashionable. Their moment in the sun was short-lived however, and with opinion quickly turning against them the RAF soon became described as an example of

protest taken "too far". By 1972 the groups leading trio: Baader, Ensslin and Meinhof had been captured, leaving a vacuum in which a "second generation" of RAF militants rose. These militants were more committed to the liberation of their idolised leaders than the initiation of the socialist revolution that had been previously sought. Under this new generation of insurgents the RAF focussed almost exclusively on assassinations and kidnappings. However in 1976 Meinhof died in her cell, a fatality recorded as suicide, but which provoked rumours of her execution by security forces. A year later in 1977, just days after the RAF hijacked a Lufthansa plane in an attempt to free their remaining leaders, both Baader and Ensslin were also discovered dead in their cells. Again the deaths were attributed to suicide once it became apparent that RAF exploits would be unable to secure their freedom. Unsurprisingly such explanations raised further suspicions of government authorised executions. The seizure of the Lufthansa plane in 1977 also proved to be the organisation's swan song in terms of daring raids, conducting only intermittent kidnappings and assassinations in the 1980s and early 1990s. After 5 years of almost complete inactivity the RAF formally announced that it had disbanded as an organisation.

Dutch Gangs - Netherlands

The Netherlands occupies a prime position to exploit the international drugs trade; centrally located in Europe it also stands alone as an island of cannabis toleration amidst a sea of law enforcement. Due to the localised nature of cannabis production in Holland, the trade is not controlled by any large organisation, thereby limiting the influence of organised crime groups in what the Dutch deem to be a 'soft drug'. The Dutch organised crime families are traditionally known as the Penose, and in general their groups are loosely organised around individual projects. This is not true of all Dutch crime groups however, and some do form longstanding networks. For instance, two such organised syndicates, Delta Organisation and the 'Octopus Syndicate', rose to prominence in the 1990s, and though little information is publicly available concerning their current status, it is widely believed that organised sections of the Dutch underworld continue to function today.

Bruinsma drug gang - Netherlands

The Bruinsma gang was headed by the infamous Klaas Bruinsma, a man who has in his death gone on to achieve iconic status amongst much of the Dutch population and is even now sported on t-shirts emblazoned with the words 'R.I.P. Bruinsma'. Klaas' work was primarily restricted to the trading and trafficking of drugs, however as is to be expected with underworld commerce, the organisation's work often

involved more violent outlets with assassinations commonly a factor in organisational restructuring and dispute settling. Perhaps the most eye-catching atrocity committed by the group was the grotesque retribution exacted against André Brillman, a body guard accused of stealing. Brillman was dismembered while still alive, to be later concealed in a concrete container and sent to the bottom of the Waal River. Klaas Brunisma did not only deal in drugs, but expanded his trade into the gambling industry, forcing almost every coffee shop in Amsterdam to stock his slot machines. Prostitution was also a string that Brunisma later added to his entrepreneurial bow, adding the famous luxury brothel Yab Yum to his portfolio. The criminal career of Brunisma came to a final end in June 1991 following a quarrel with Martin Hoogland at Amsterdam's Hilton Hotel. Hoogland was a former policeman turned mafia hit-man who it is believed had been contracted to kill Brunisma and so set out to quarrel with the Dutch mafia boss. Following the quarrel Brunisma was shot outside the hotel at 4am, and Hoogland himself perished in March 2004 after an attack by unidentified individuals.

Willem Holleeder gang - Netherlands

Holleeder is a Dutch criminal who rocketed into the public eye with the kidnapping of the Heineken heir Freddy Heineken. This attention grabbing stunt was carried out by Holleeder and his gang, who demanded and received a ransom of NLG35mio (€16mio) from the lager brewing dynasty. The gang did not however escape with the proceeds,

The Hofstad Network - Netherlands

The Hofstad Network is an Islamist terrorist organisation of mostly young Dutch Muslims of mainly North African ancestry. The name "Hofstad" was originally the codename the Dutch secret service used for the network and leaked to the media. The network is said to have links to networks in Spain and Belgium. The group is influenced by the ideology of Takfir wal-Hijra. Redouan al-Issar, also known as "The Syrian" is the suspected spiritual leader of the group. Most media attention is attracted by Mohammed Bouyeri, sentenced to life imprisonment for murdering Dutch film director Theo van Gogh and by Samir Azzouz, suspected of planning terrorist attacks on the Dutch parliament and several strategic targets such as the national airport and a nuclear reactor. The group is also suspected of planning to kill several members of government and parliament.

Communist Combatant Cells - Belgium

The Cellules Communistes Combattantes (CCC; Communist Combatant Cells) was a Belgian terrorist organisation committed to a Communist ideology. The cells were active for less than two years in the mid-

1980s; primarily engaged in bombings within Belgium's borders. While the group was based in Belgium, their targets and goals were predominantly international. CCC attacked perceived enemies of communism, specifically NATO, US and other international businesses and the Federation of Belgian Enterprises.

Original Gangsters - Sweden

The Original Gangsters is an organisation operating in Sweden, originally made up mainly of individuals of an Assyrian/Syriac ethnic background. Its organisational and operational base is in the Swedish city of Gothenburg, and the gang is led by Denho Acar. The group's name is said to have been taken from the lyrics of rapper Ice-T. In 2007 Acar claimed the organisation had 100 all male members, with 30 of those forming an inner circle. Membership is signified by a tattoo depicting the letters OG in the centre of the sun. The gang is known for its violent feuding with other organised crime groups such as the Naserligan, with whom the members of the Original Gangsters engaged in a gun fight outside an unlicensed casino in Gothenburg and various other frays. Conflict has also existed between the Original Gangsters and another gang, the X-Team.

Uppsala Mafia - Sweden

The Uppsala mafia was headed by Stefan Eriksson and operated from Uppsala, Sweden. The group worked behind the legal front of the company Cannon Debt Collectors, collecting debts through threats and violence. The group also attempted to defraud the Swedish bank Giro Central, an offence for which Eriksson and Peter Uf were tried and found guilty. Securing witnesses was however a difficult task for the prosecution as a result of intimidation by the Uppsala Mafia. The lead witness survived two bomb attacks during the course of the trial.

Black Cobra - Denmark

The gang came into existence in 2000 in Roskilde, Denmark, and now numbers approximately 100 individuals. The group operates in a loose network coordinated by strong leadership figures, and members are thought to be involved in drug trafficking, extortion and murder. Individuals associated with the group commonly sport a black and white shirt embossed with the icon of a raised cobra. The gang also exerts control over a distinct youth sub-set known as the Black Scorpions.

Special Focus 19 ETA / Euskadi Ta Askatasuna (ETA) - Spain

ETA or Euskadi Ta Askatasuna (meaning Basque Homeland and Freedom) is an armed Basque nationalist and separatist organisation. Founded in 1959 the movement evolved from a group promoting traditional Basque culture

to a paramilitary group with the goal of gaining independence for the Greater Basque Country. The group is proscribed as a terrorist organisation by the Spanish and French authorities, as well as the EU as a whole and the US. ETA declared ceasefires in 1989, 1996, 1998 and 2006, but subsequently restarted killing. However, in 2011, ETA declared a "permanent, general and verifiable" ceasefire with the expressed aim of ending its campaign.

ETA's motto is Bietan jarrai ("Keep up on both"), referring to the two figures in its motif; a snake (representing politics) wrapped around an axe (representing armed struggle). Since 1968, ETA has been blamed for killing 829 individuals, injuring thousands and conducting dozens of kidnappings. More than 700 members of the organisation are imprisoned in Spain, France, and other countries. ETA organised itself through establishing an overall committee representing numerous functions and responsibilities. These include: logistics, politics, international relations with fraternal organisations, military operations, reserves, prisoner support, expropriation, information, recruitment, negotiation and treasury. The political wing of ETA called Batasuna (formerly known as Euskal Herritarrok and "Herri Batasuna"), is banned in Spain. It pursues the same political goals as ETA and does not condemn ETA's use of violence. It generally receives 8 to 15% of the vote in the Basque Autonomous Community. New successor parties were formed in order to sidestep the prohibition of their participation in the political process, however these organisations were themselves soon outlawed for their failure to condemn violence.

On 5 September 2010, ETA declared a new ceasefire. A spokesperson announced the organisation wished to use "peaceful, democratic means" to achieve its aims, though it was not specified whether the ceasefire was

considered permanent by the group. The announcement was met with a mixed reaction; Basque nationalist politicians responded positively, and said that the Spanish and international governments should do the same, while the Spanish interior counselor of Basque, Rodolfo Ares, said that the commitment did not go far enough. He said that he considered ETA's statement "absolutely insufficient" because it did not commit to a complete termination of what Ares considered "terrorist activity" by the group. On 10 January 2011, ETA declared that their September 2010 ceasefire would be permanent and verifiable by international observers.

ETA was founded by young nationalists, beginning in 1952 as a student discussion group at the University of Deusto in Bilbao. This group broke away from the youth movement affiliated with the Basque Nationalist Party (PNV), disagreeing with the PNV's rejection of violent tactics and advocating a Basque resistance movement using direct action. In an era littered with national liberation movements the Basque movement represented another example of an area that had become conscious of itself as distinct and sought to establish its own nationhood. In their platform, ETA declared that Basque nationality is defined by the Basque language; this was in contrast to the PNV's definition of Basque nationality in terms of ethnicity. Also at odds with the explicit Catholicism of the PNV, ETA defined itself as "a confessional"—meaning ETA does not recognise a special state religion—although it used Catholic doctrine to elaborate its social programme. ETA called for socialism and for "independence for Euskadi, compatible with European federalism".

ETA's first confirmed killing occurred on 7 June 1968, when Guardia Civil, José Pardines Arcay was shot dead when he tried to halt ETA member Txabi Etxebarrieta during the course of a routine road check. Etxebarrieta was chased down and killed as he tried to flee. This led to retaliation in the form of the first planned ETA assassination, that of Melitón Manzanas, chief of the secret police in San Sebastián and associated with a long record of tortures inflicted on detainees in his custody.

The most significant assassination performed by ETA during General Franco's dictatorship was Operación Ogro, the December 1973 bomb assassination in Madrid of Admiral Luis Carrero Blanco, Franco's chosen successor and president of the government (a position roughly equivalent to being prime minister). The assassination had been planned for months and was executed by placing a bomb in the sewer below the street where Carrero Blanco's car passed every day. The bomb blew up beneath the politician's car and threw it three floors into the air and over the top of a nearby

building onto a balcony in a nearby courtyard. This assassination was not condemned by the opposition.

After Franco's death, during the Spanish transition to democracy, ETA split into two separate organisations: one faction became ETA political-military or ETA(pm), and another ETA military or ETA(m). Both ETA(m) and ETA(pm) refused offers of amnesty and instead continued to intensify their violent struggle. The years 1978, 79, and 80 were to prove ETA's most deadly, with 68, 76, and 98 fatalities respectively. In the 1980s, ETA (pm) accepted the Spanish government's offer of individual pardons to all ETA prisoners who publicly renounced the use of violence, even those who had committed violent crimes. However ETA (m) refused to relinquish their violent tactics and continued the armed struggle.

During the 1980s a "dirty war" ensued by means of the Grupos Antiterroristas de Liberación (GAL; "Antiterrorist Liberation Groups"), a paramilitary patriotic group which billed themselves as counter-terrorists. The GAL was active between 1983 and 1987, committing assassinations, kidnappings and torture, not only of ETA members but of civilians supposedly related to the group. Predictably some of these persecuted collaborators turned out to have no real connections to ETA. At least 27 people were murdered in GAL operations. The activities of GAL represented a continuation of similar dirty war actions by death squads, actively supported by members of Spanish security forces and secret services, using names such as Batallón Vasco Español that operated from 1976 to 1982. They were responsible for the killing of about 48 people and as a consequence, the group's attacks since have generally been dubbed state terrorism. ETA performed their first car bomb assassination in Madrid in September 1985. In 1995 an unsuccessful ETA car bombing was directed against José María Aznar, a conservative politician and leader of then-opposition party, Partido Popular (PP). Aznar later went on to win the general election and served for two terms. The group also attempted to assassinate King Juan Carlos of Spain in Bilbao, however the plot was foiled by Spanish police in 1997. On 10 July 1997 ETA kidnapped PP council member Miguel Ángel Blanco in the Basque town of Ermua, threatening to assassinate him unless the Spanish government met ETA's demand for all of its imprisoned members to be returned to prisons in the Basque Country within two days. This demand was rejected and after three days Blanco was found shot dead. In response more than six million people took to the streets to demand his liberation and to protest his murder once news emerged that Blanco had been shot. Massive demonstrations occurred as much in the Basque

regions as elsewhere in Spain, with crowds chanting cries of "Assassins" and "Basques yes, ETA no". This response came to be known as the "Spirit of Ermua".

While public outrage did not stop the lethal attacks, it did however result in a steady erosion of support for the ETA movement. The groups increasing radicalisation, along with Spain's growing familiarity with democracy (the transition from dictatorship to democracy in 1975 became an increasingly distant memory as time passed) also contributed to the decline in ETA support. In the 1998 220 221[TAD2], Basque parliament elections, Batasuna, polled 17.7% of the votes, a figure that by 2001 had fallen to 10%. Moreover by 1999, in the Basque Country, 64% rejected ETA totally, 13% identified themselves as former ETA sympathisers (mainly during the Franco dictatorship) who no longer supported the group. Another 10% agreed with ETA's ends, but not their means. 3% said that their attitude towards ETA was mainly one of fear, 3% expressed indifference and 3% were undecided or did not answer. About 3% gave ETA "justified, with criticism" support (supporting the group but criticising some of their actions) and only 1% gave ETA total support. Even within Batasuna voters, at least 48% rejected ETA's violence. The 11 September 2001 attacks also dealt a hard blow to ETA, owing to the toughening of "antiterrorist" measures, the increase in international police coordination, and the end of the toleration some countries had, up until then, extended to ETA.

ETA was initially blamed for the 2004 Madrid bombings by the outgoing government of José María Aznar, and large sections of the press. However, the group denied responsibility and Islamic fundamentalists were eventually identified as responsible. It was possibly the government's attempts to link ETA to these bombings that affected its popularity in the elections being held only days later. From 2006 onwards ETA has declared a "truce" on numerous occasions, however on 10 January 2011 ETA declared that the ceasefire would be permanent and verifiable by international observers.

In 2007 Spanish police estimated ETA's budget requirements and resources to be approximately €2mio annually. Although ETA used robbery as a means of financing its activities in its early days, it has since been accused both of arms trafficking and of benefiting economically from its political counterpart Batasuna. Extortion remains ETA's main source of funds and is dubbed a "revolutionary tax". Demands are made of business owners in the Basque Country in particular, as well as other areas of Spain, often accompanied by threats against them or their families. Occasionally some French Basques have also been threatened in this

manner, such as footballer Xabi Alonso from whom ETA demanded 'revolutionary tax' in 2000 for playing under the "colours of an enemy state". According to French judiciary sources, ETA takes in an estimated €900,000 a year in this manner.

Kidnapping provides another source of revenue, allowing ETA to leverage large sums of money from targets by way of ransom. These kidnappings are also often used as a punishment for failing to pay the "revolutionary tax", and to try to force the government to free ETA's prisoners under the threat of killing the kidnapped. A further ETA speciality is the art of robbery, commonly seizing weapons, explosives, machines used to manufacture license plates, and vehicles. Those unfortunate enough to be robbed of their vehicles are usually tied and abandoned in an isolated place to allow those who assaulted them to escape. Speculation surrounds ETA's international links, if indeed any do exist. Colombian Vice President Francisco Santos has claimed that FARC (an insurgency group native to Colombia) have attempted to forge connection with the Basque group. According to a report published by the Federal Research Division (Library of Congress) in 2002 ETA has been involved in both weapons and illegal narcotics trafficking in Europe. The Italian author and mafia specialist Roberto Saviano also points to a relationship between ETA and criminal groups, in particular the Italian Mafia. Saviano asserts that ETA traffics cocaine received from its FARC contacts, which it then trades for weapons from the mafia. Following a judicial investigation, it was reported that FARC and ETA held meetings in Colombia, exchanging information about combat tactics and methods of activating explosives through mobile phones. The two organisations were said to have met at least three times. One of the meetings at a FARC camp in 2003 involved two ETA representatives and two FARC leaders and lasted a week. FARC also offered to hide ETA fugitives while requesting anti-aircraft missiles, as well as asking for ETA to supply medical experts who could work at FARC prison camps for more than a year. In addition, and more controversially, FARC also asked ETA to stage attacks and kidnappings on its behalf.

A further international connection maintained by ETA is that with the Provisional Irish Republican Army (IRA); the two groups have both, at times, characterized their struggles as parallel. Links between the two groups go back to at least March 1974 when ETA purchased Strela 2 surface-to-air missiles from the IRA and in 2001 unsuccessfully attempted to shoot down a jet carrying the Spanish Prime Minister, Jose Maria Aznar. ETA has also had links with other militant left-wing movements

in Europe and in other places throughout the world. As a result some ex-militants have received political asylum in Latin American countries, such as Mexico and Venezuela.

France

France is one of the most modern countries in the world and is a leader among European nations as a founder member of the EU, as a permanent member of the UN Security Council, NATO, the G-8, and the G-20. France has suffered from terrorism, both Nationalist and religious in connection with asserting sovereignty over the Island of Corsica in the Mediterranean and due to its Colonial past in North and Central Africa. France's financial and commercial relations, especially with Francophone former colonies, make it an attractive venue for money laundering. Public corruption, drugs trafficking, human trafficking, smuggling, and other crimes associated with organised crime generate illicit proceeds. France continues to be a major destination and transhipment point for drugs trafficking. Most of the illicit drugs in France are produced in other areas of the world. The vast majority of cannabis products in France originates in Morocco, and cocaine available in France is produced in, and trafficked to France from South American countries. The majority of the heroin entering France is produced in Afghanistan and Pakistan.

Current threats against French interests include in particular Mali, and Mali's neighbours in the Sahel and in North Africa.

French Designated Terrorist Organisations

France has designated the following as terrorist organisations:⁴⁰ Accolta Nazionale Corsa; Action Committee of Winegrowers; Action Directe; Action Front for the Liberation of the Baltic Countries; Affiche Rouge; Al-Qaeda; Anti-Armenian Organisation; Anti-Terrorist Liberation Group; Arab Revolutionary Front; Armata Corsa; Armata di Liberazione Nazionale; Army of the Corsican People; Autonomous Intervention Collective Against the Zionist Presence in France; Breton Revolutionary Army (ARB); Charles Martel Group; Clandestini; Clandestini Corsi; Clandestini Ribelli; Committee for Liquidation of Computers (CLODO); Committee of Coordination; Committee of Solidarity with Arab and Middle East Political Prisoners (CSPPA); Corsican Patriotic Front (FPC); Corsican Revolutionary Armed Forces (FARC); de Fes; Francs Tireurs (Mavericks); Fronte di Liberazione Nazionale di Corsica (FLNC); Gazetirak; Gora Euskadi Askatuta; Gracchus Babeuf; Group Bakunin Gdansk

Paris Guatemala Salvador; International Revolutionary Action Group (GARI); Iparretarak (IK); Irrintzi; Masada, Action and Defense Movement; Meinhof-Puig-Antich Group; Moroccan Islamic Combatant Group; Mujahideen-e-Khalq (MeK); National Front for the Liberation of Kurdistan; New Armenian Resistance (NAR); Ninth of June Organisation; Orly Organisation; Palestinian Resistance; Raúl Sendic International Brigade; Resistenza Corsa; Spanish Basque Battalion; Spanish National Action; Takfir wa Hijra; Third of October Group; Totally Anti-War Group (ATAG); Vitalunismo; Youth Action Group

Corsican Mafia (see also National Liberation Front of Corsica) - Corsica, France

One of the most powerful organised crime groups operating in France, the Corsican Mafia hails from the French island of Corsica. Its theatres of operation are not however restricted to France, extending into numerous African and Latin American territories. Within what is known as the Corsican mafia are various distinct gangs such as the Brise de Mer, the Valinco gang, the Venzolasca gang and the Mob of Marseille. The international influence of Corsican mafia groups is argued to stem from the Corsican diaspora; a community of immigrants that spread across the globe and established itself in disparate host nations. This produced Corsican crime figures in Africa, Asia, and even two Venezuelan presidents. Financial sources are from drug trafficking, arms trafficking, human trafficking, prostitution, extortion, money laundering, contract killing, legal gambling establishments.

Corsican Patriotic Front (FPC) - Corsica, France

Founded in the summer of 1999, the Corsican Patriotic Front (FPC) was a nationalist terrorist organisation that sought to preserve the culture and language of the Corsican people and create an independent Corsica. The FPC emerged several days after a clandestine meeting was held by the Corsican National Liberation Front-Historical Wing (FLNC), in which the group rejected Paris' September 1999 call for Corsicans to renounce violence. FPC membership was a relatively loose affair and consisted of militants from other Corsican nationalist terrorist groups as well as Corsican terrorists that acted alone. In an attempt to achieve their objectives, the FPC engaged in small-scale bombings of various business, private, and government targets in Corsica. On the night of September 30th, 1999, the FPC claimed responsibility for six attacks and three other failed attempts. A post office, the holiday home of a 'mainlander,' a local bank branch, a Treasury building, and an electric company office were among the locations targeted by the FPC. The FPC claimed that the attacks were conducted as a result of French

Prime Minister Jospin's 'contempt' towards the Corsican people and culture. In December 1999, the Corsican National Liberation Front (FLNC) issued a general truce to the French government, and the FPC agreed to cease hostilities soon thereafter. However, in April, the FPC issued a statement declaring their frustration with what they perceived to be a lack of effort on the part of the French government to resolve the French-Corsican impasse. Though two attacks in the summer of 2000 were claimed by the FPC, a unilateral truce was issued in August of the same year by the group's leadership. Since then, there has been no mention of the group, and it appears that they are currently inactive. Still, anti-French violence committed by Corsican nationalist groups is expected to continue until a lasting agreement is accepted by both sides.

Traction Avant Gang/Gang des Traction Avant - France

This was a criminal gang based in the Pigalle quarter of Paris, originally made up of surviving members of the Carlingue militia. The Carlingue militia was a mixture of ex-police officers and criminals that had joined the French Resistance to German occupation during World War II. The group's name was derived from their favourite vehicle, the Citroën 11 Traction Avant, which they commonly used in hold ups. The now defunct gang boasted a relatively high profile in its day, counting among its ranks the likes of Pierre Loutrel, France's first "public enemy number one", and the successor to this illustrious title Emile Buisson. This notable public image also inspired the writings of such authors as Alphonse Boudard, Roger Borniche, as well as films by Jean-Luc Godard, Jacques Deray and Claude Lelouch.

Hornec Gang - France

Formed and led by three brothers from the Horne family, this group succeeded crime boss Claude Genova following his assassination in 1994 and is one of the most influential criminal organisations in the Parisian area. Members are most commonly recruited from the ghetto areas of Montreuil, and a large proportion of these young men are of gypsy or Maghrebian ethnic origin. In terms of criminal occupation, the group began with hold-ups, later investing the revenue in night clubs, prostitution bars and real estate. The gang's power is believed to have peaked in the 1990s and early 2000s, diminishing with the arrest of several key members in 2006.

Mad Jacky Gang - France

This criminal organisation is led by Jacques Imbert, also known as "Jacky Le Mat", which translates as Jacky the madman in Provencal. Imbert first rose to prominence in the 1960s, forging an iconic "Godfather" image.

Prior to this ascendancy in the criminal underworld, he had spent time in prison for assault, as well as serving in the French army. Imbert was discharged however on the grounds that his temperament was wholly incompatible with military regulation. In subsequent years Imbert spent time as a member of the Bande de Trois Canards, a group involved in hold-ups, racketeering, and burglaries. It was during this period that Imbert became noted for his self-control and determination, as well as forging relationships with other future gang leaders such as Tony Zampa. The Bande de Trois Canards disbanded in the mid-1960s following the assassination of its then leader, Antoine Guerini. It is likely that this deadly assault came from within the gang itself, with many suspecting Imbert. Imbert himself sustained an assassination attempt in 1977 at the hands of his former comrade Tony Zampa's gang. Receiving multiple bullet wounds (22 bullet fragments were removed from his body), Imbert suffered the paralysis of his right arm. In an act of retribution 11 of Zampa's men were gunned down. Police however failed to pin convincing evidence against Imbert demonstrating his involvement in the killings, and after six months he was released without charge. Police efforts to implicate Imbert in a Russian mafia scheme to establish an illegal cigarette factory in Marseille met with similar failure, Imbert having his 2004 conviction overturned on appeal a year later. Successful conviction of Imbert did however come in 2006 when Imbert was sentenced to 4 years imprisonment for his part in extorting money from Parisian businessmen in the 1990s. To gain a flavour of Imbert's criminal career one might watch the film 22 Bullets, in which Imbert is played by the actor Jean Reno.

Action Directe - France

Action directe was set up in 1977 by two other groups, GARI (Groupes d'Action Révolutionnaire Internationalistes, revolutionary internationalist action groups) and NAPAP (Noyaux Armés pour l'Autonomie Populaire, Armed Core Groups for Popular Autonomy), as the "military-political co-ordination of the autonomous movement". In 1979, it was transformed into an "urban guerrilla organisation" and carried out violent attacks under the banner of "anti-imperialism" and "proletarian defence." The group was banned by the French government in 1984. In August 1985, Action Directe allied itself with the German Red Army Faction. By 1987 however with the leaders arrested, and sentenced to life imprisonment the group's terrorist activities came to an end.

Revolutionary Organisation 17 November - Greece

The Revolutionary Organisation, "17 November" took its name from the date of a 1973 student protest

against the military dictatorship of Greece, though 17N's campaign started after the end of the military and during the succeeding democratic period. 17N believed the democratic government of Greece needed to be replaced espousing a Marxist-Leninist as well as anti-American, anti-Turkey, anti-NATO, anti-EU, anti-Greek establishment, anti-colonial, and anti-capitalist position. 17N was effectively combatted following mass arrests.

Revolutionary Struggle (RS) - Greece

Designated as a Foreign Terrorist Organisation on 18 May 2009, Revolutionary Struggle (RS) is a radical leftist group with Marxist ideology that has conducted attacks against both Greek and US targets in Greece. RS emerged in 2003 following the arrests of members of the Greek leftist groups 17 November.

RS first gained notoriety when it claimed responsibility for the 5 September 2003 bombings at the Athens Courthouse during the trials of 17 November members. From 2004 to 2006, RS claimed responsibility for a number of improvised explosive device (IED) attacks, including a March 2004 attack outside of a Citibank office in Athens. RS claimed responsibility for the 12 January 2007 rocket propelled grenade (RPG) attack on the US Embassy in Athens, which resulted in damage to the building. In 2009, RS increased the number and sophistication of its attacks on police, financial institutions, and other targets. RS bombed a Citibank branch in Athens in March 2009, but failed in its vehicle-borne IED attack in February 2009 against the Citibank headquarters building in Athens. In September 2009, RS claimed responsibility for a car bomb attack on the Athens Stock Exchange, which caused widespread damage and injured a passerby. In 2010, the Greek Government made significant strides in curtailing RS's terrorist activities.

On 10 April Greek police arrested six suspected RS members, including purported leadership figure Nikos Maziotis. In addition to the arrests, the Greek raid resulted in the seizure of a RPG launcher, possibly the one used against the US Embassy in Athens in January 2007. The six, plus two other suspected RS members, face charges for arms offenses, causing explosions, and multiple counts of attempted homicide. Their trial started in December 2011, and if found guilty, the suspects face up to 25 years in prison.

Conspiracy of Fire Nuclei - Greece

The group is a radical anarchist organisation based in Greece. The group emerged in 2008 with a wave of fire bombings against luxury car dealerships and banks and since continued its attacks including bombing.

Cyprus

A former British colony, Cyprus became independent in 1960 following years of resistance to British rule. Tensions between the Greek Cypriot majority and the Turkish Cypriot minority came to a head in December 1963, and by 1974 following intervention first from Greece and then Turkey, the island was split and remains divided. The island entered the EU in 2004. In 2008, the leaders of the two communities began discussions under UN auspices aimed at reuniting the divided island. The talks are ongoing.

Cyprus has attempted to develop itself as a regional financial center, but has suffered recently with a financial crises and a bailout from the EU rescuing the Island.

The biggest threats for money laundering in Cyprus are primarily from domestic and international financial crime. There are over 240,000 international business companies (IBCs) registered in Cyprus, many of which belong to non-residents, and many of which are believed to be owned by Russian and other Eastern European residents.

Holy See (Vatican City)

The Holy See is a unique Sovereign State, based in the Vatican City, in the centre of Rome, only 0.44 square kilometers in size, home and the supreme body of government of the Catholic Church. Whilst not a member of the EU, it nevertheless is a participating member of the Euro, with Vatican Euro's minted and available in the Vatican City. The population of Vatican City, around 800, consists almost entirely of priests (Holy See officials) and members of religious orders, led of course by the Pope of the day, currently Pope Francis.

The Institute for Works of Religion (IOR) whilst not a Bank, performs functions similar to that of a bank, but also of a State Treasury, and it is commonly referred to as the "Vatican Bank." Unlike a normal bank, the IOR does not loan money, and IOR accounts do not collect interest; nor does the IOR make a profit for shareholders or owners. Rather, the IOR acts as a clearinghouse for Vatican accounts, moving funds coming into the Catholic Church mainly from the 18 million visitors each year to the Vatican and from legacies gifted or bequeathed to the church to pay Catholic Church expenditures such as the clergy salaries and expenses as well as for grants and church projects.

There is no private enterprise permitted in the Vatican

City and so there is no market for illicit or smuggled goods in Vatican City, nor any form of illicit activity.

Whilst recognising the unique nature of the Holy See, but also recognising the need to shoulder appropriate responsibilities as a Sovereign State, and responding to concerns the Vatican has, since 2012, begun to accede to relevant international instruments such as the [1988 UN Drug Convention](#), the [UN International Convention for the Suppression of the Financing of Terrorism](#) and the [UN Convention against Transnational Organised Crime](#) and to implement money laundering laws and regulations and independent institutions to oversee and investigate crimes including financial crimes including corruption.

Italy

Home to the Romans and centre of the Holy Roman Empire, Italy, nevertheless became a nation-state only relatively speaking in modern times, in 1861 when the regional states were united together with Sardinia and Sicily. An era of parliamentary government came to a close in the early 1920s when Benito Mussolini established a Fascist dictatorship and fought alongside his ally Nazi Germany leading to Italy's defeat in World War II. A democratic republic replaced the monarchy in 1946, as well as later membership of NATO and the EU.

Italy's long coastline and developed economy entices tens of thousands of illegal immigrants from southeastern Europe and northern Africa, as well as offering ample opportunities for transshipment of Latin American cocaine and Southwest Asian heroin entering the European market. Italy is also home to the infamous Mafia. Earlier in the 1970s it was also struggling with domestic terrorism from Communist groups including the [Red Brigades](#).

Red Brigades - Italy

The Red Brigades was a Marxist/Leninist terrorist organisation based in Italy in the 1970s seeking to establish a revolutionary state through armed struggle, and to remove Italy from NATO. The Red Brigades conducted violent acts designed to destabilise the Italian state through acts of sabotage, bank robberies and kidnappings. In 1978 the group kidnapped then Prime Minister [Aldo Moro](#) killing both members of his entourage and later the Prime Minister himself. The group disbanded after splits and became ineffective by the end of the Cold War.

Special Focus 20 Italian Mafia - Italy

Whilst engaging in a broad range of illegal activities, such as drug trafficking, extortion, smuggling and human trafficking, illegal gambling, counterfeiting, political corruption, murder, weapons trafficking the Italian Mafia also get involved in a range of legal business activities, for example construction though they use Political Corruption to secure government funding and favorable opportunities. According to the FBI their worldwide criminal activity could be worth more than US\$100bio annually or equivalent to nearly 3% of Italy's GDP.

The Italian Mafia has evolved over many generations, first in Sicily, and then throughout particularly the Italian south and abroad, through initially emigration into the US. The Sicilian Mafia changed from a group of largely honorable Sicilian men to an organised criminal group in the 1920s.

Between 1925 and 1929, the Italian Fascists made a concerted effort to eliminate the Mafia and whilst this effort was successful in the short term, the Mafia reestablished itself when fascism fell and was given a further boost when the Allied occupation in 1943 turned to local powers for assistance in governing. The Mafia provided support to the Allied invaders working so closely and successfully with the Allies that it was given the responsibility for Sicily after the end of World War II.

Thereafter the Mafia grew across Italy and began to work as a national enterprise, often using the criminal practices established by La Cosa Nostra in the US, graduating from a quasi-feudal independent association to an international criminal syndicate. For more details see the [Italian American Mafia](#) above in this Section 5. The Mafia established deep relations with important Italian Institutions with bribery and kick-backs becoming commonplace. In response to civil opposition in 1982 Italian law enforcement pushed for new powers which culminated in the adoption of the Anti-Mafia Act and a more aggressive approach to tackling the Mafia which continues today which has managed somewhat to constrain the Mafia's activities.

Their criminal activities are though international with members and affiliates in Canada, South America, Australia, and parts of Europe. They are also known to collaborate with other international organised crime groups from all over the world, especially in drug trafficking.

Whilst the Italian Mafia is perhaps best known for its traditional criminal activities such as drug trafficking, extortion and running protection rackets, today's Mafia in Italy, has become much more sophisticated and has diversified its portfolio of criminal activities. Drug dealing, smuggling, kidnap, people trafficking, prostitution rackets, and the bribery of judges and politicians in Italy are all things that the Mafia deals with.

In recent years there have been reports of the younger generation of Mafia leaders in Italy trying to diversify into white collar crime to make more money. Often, the profits of criminal activities carried out by the Italian Mafia are re invested in legitimate business enterprises.

With the economic crisis affecting banks ability to lend, and the need for business to raise money or realise liquidity, the Mafia have profited as desperate businesses are forced to turn to loan sharks demanding crippling rates of interest, businesses sell ailing businesses, shops and restaurants, cheaply.

There are 4 main groups active in Italy as well as elsewhere, including the US, Canada, South America, Australia, and parts of Europe. These are [La Cosa Nostra](#) or the [Sicilian Mafia](#); the [Camorra](#) or [Neapolitan Mafia](#); the ['Ndrangheta](#) or [Calabrian Mafia](#); and the [Sacra Corona Unita](#) or [United Sacred Crown](#) from Puglia.

It is estimated that these four groups have approximately 25,000 members in total, with 250,000 affiliates worldwide. There are more than 3,000 members and affiliates in the US with the majority related to the Sicilian Mafia.

Le Cosa Nostra or Sicilian Mafia (based in Sicily)

The Italian Mafia emerged first in Sicily, as an underground secret society formed in the mid-1800s to unify Sicilian peasants to fight foreign invaders. In Sicily, the word Mafia tends to mean, Manly, particularly in the sense of a swaggering, fearless, courageous person. A member was known as a "Man Of Honor," respected and admired because he protected his family and friends and kept silent about the society even if faced with death.

The Sicilian Mafia changed from a group of largely

honorable Sicilian men to an organised criminal group in the 1920s. The term Mafia is not one that is actually used. The term cosa nostra or 'our thing' is preferred by Sicilian Mafia members. Like all mafia groups in Italy, the Sicilian Mafia operates a code of honour and has a strict hierarchical structure. Recruits to the Mafia are sworn in to the family through secret ceremonies, after which point they become mafia members and are expected to stay so for life.

The Sicilian Mafia specializes in heroin trafficking, political corruption, and military arms trafficking and is also known to engage in arson, frauds, counterfeiting, and other racketeering crimes. It has also been particularly involved in taking advantage of Government building and infrastructure contracts. The Sicilian Mafia is particularly known for its assassinations of high profile figures including police chiefs, judges and politicians.

Today, the Sicilian Mafia has evolved into an international organised crime group. Some experts estimate it is the second largest organisation in Italy. The Sicilian Mafia is most famous to the outside world because of its branch in America which arose out of mass migration from Sicily in the late 19th century, leading to La Cosa Nostra in the US which became a real problem in the 1920s onwards. With an estimated 2,500 Sicilian Mafia affiliates it is the most powerful and most active Italian organised crime group in the US. Following the arrest of the boss of the Sicilian Mafia, Bernardo Provenzano, in 2006, it is thought that Giovanni Matisi may have taken over this role. Today, the whereabouts of Matisi are unknown. According to some reports he is dead, while others maintain that he is hiding out in Agrigento, in the south of Sicily.

Camorra or Neapolitan Mafia (based in Naples)

The Camorra is a Mafia-type criminal organisation that originated in the region of Campania and its capital Naples in Italy. It is one of the most powerful criminal organisations in the world and dates back to the 16th century. The word "Camorra" was first used in 1735, when a royal decree authorized the establishment of eight gambling houses in Naples. The word is almost certainly a blend of "capo" (boss) and a Neapolitan street game, the "morra." The Camorra has more than 100 clans and approximately 7,000 members, making it the largest of the Italian organised crime groups.

The Camorra made a fortune in reconstruction after an earthquake ravaged the Campania region in 1980. Now it specializes in cigarette smuggling, drug trafficking, counterfeiting, but also extortion, alien smuggling, robbery, blackmail, kidnapping, political corruption, and counterfeiting. It is difficult for officials to fight the

problem because the society of Campania has come to tolerate and accept the mobsters. The area is governed by a code of silence or omertà that persists to this day.

The power of the Naples mafia was recently attested to when in 2004 police were literally surrounded and made hostage by a whole neighbourhood when they tried to capture a local leader. Pasquale Scotti is the head of the Camorra. He has been wanted in Italy since 1985 for murder and other crimes, but he has not been apprehended and is still in hiding. Scotti has been described as a smooth and ruthless personality. He is one of the most able of the lieutenants of the historic leader Raffaele Cutolo. In 1990, an international arrest warrant was issued against Pasquale Scotti, and he received in 2005 a life sentence for a series of 26 murders in his absence.

Ndrangheta or Calabrian Mafia (based in Calabria)

The word "Ndrangheta" comes from the Greek meaning courage or loyalty. The Ndrangheta formed in the 1860s when a group of Sicilians was banished from the island by the new unified Italian government. They settled in Calabria and formed small criminal groups.

There are about 160 Ndrangheta cells, which are loosely connected family groups based on blood relationships and marriages with roughly 6,000 members. They specialize in kidnapping and political corruption, but also engage in drug trafficking, murder, bombings, counterfeiting, gambling, frauds, thefts, labour racketeering, loansharking, and alien smuggling. In the US, there are an estimated 100-200 members and associates, primarily in New York and Florida.

Sacra Corona Unita or United Sacred Crown (based in the Puglia region)

The Sacra Corona Unita became known only in the late 1980s and like other groups started as a prison gang. As its members were released, they settled in the Puglia region in Italy and continued to grow and form links with other Mafia groups. The Sacra Corona Unita is headquartered in Brindisi, located in the southeastern region of Puglia. The Sacra Corona Unita consists of about 50 clans with approximately 2,000 members and specializes in smuggling cigarettes, drugs, arms, and people. It is also involved in money laundering, extortion, and political corruption. The organisation collects payoffs from other criminal groups for landing rights on the southeast coast of Italy, a natural gateway for smuggling to and from post-Communist countries like Croatia, Yugoslavia, and Albania.

United Kingdom-Ireland

The UK has played a leading global role in developing parliamentary democracy and in advancing literature and science. At its height in the 19th century, the British Empire stretched over one-fourth of the earth's surface. The first half of the 20th century saw the UK's strength seriously depleted in two world wars and the Irish Republic's withdrawal from the union. The second half witnessed the dismantling of the Empire and the UK rebuilding itself into a modern and prosperous European nation, but also the fallout from the partition of Ireland leading to decades of troubles over Northern Ireland. The UK is one of five permanent members of the UN Security Council and a founding member of NATO and the Commonwealth and a member of the EU.

The UK is a producer of limited amounts of synthetic drugs and a major consumer of Southwest Asian heroin, Latin American cocaine, and synthetic drugs. It is also a centre for money laundering due its large financial center. Ireland is a more a transshipment point for and consumer of hashish from North Africa to the UK and Netherlands and of European-produced synthetic drugs than a major consumer.

United Kingdom list of Terrorist Organisations

The UK lists the following as terrorist Organisations:⁴¹ [17 November Revolutionary Organisation](#); [Abu Nidal Organisation](#); [Abu Sayyaf](#); [Al-Gama'a al-Islamiya](#); [Al Gurabaat](#); [Al Ittihad Al Islamiya](#); [Al-Qaeda](#); [Ansar Al Islam](#); [Ansar Al Sunna](#); [Ansaru](#); [Armed Islamic Group](#); [Asbat Al-Ansar](#); [Babbar Khalsa](#); [Baluchistan Liberation Army](#); [Euskadi Ta Askatasuna](#); [Egyptian Islamic Jihad](#); [Moroccan Islamic Combatant Group](#); [Hamas Izz ad-Din al-Qassam Brigades](#); [Harkat-Ul-Jihad-Ul-Islami](#); [Harkat-ul-Jihad al-Islami](#); [Harakat-Ul-Mujahideen](#)/Alami; and [Jundallah](#); [Harkat-ul-Mujahideen](#); [Hezbollah](#); [Hezbollah External Security Organisation](#); [Indian Mujahideen](#); [International Sikh Youth Federation](#); [Islamic Army of Aden](#); [Islamic Jihad Union](#); [Islamic Movement of Uzbekistan](#); [Jaish e Mohammed](#); [Jammat-ul Mujahideen Bangladesh](#); [Jeemah Islamiyah](#); [Khuddam Ul-Islam](#) and splinter group [Jamaat Ul-Furquan](#); [Kurdistan Workers Party](#); [Lashkar e Tayyaba](#); [Liberation Tigers of Tamil Eelam](#); [Palestinian Islamic Jihad](#); [Shaqqaq](#); [Revolutionary Peoples' Liberation Party - Front Salafist Group for Preaching and Combat](#); [Sipah-E Sahaba Pakistan](#); [Lashkar-e-Jhangvi](#); [Libyan Islamic Fighting Group](#); [Saviour Sect](#); [Tehrik Nefaz-e Shari'at Muhammadi](#); [Kurdistan Freedom Falcons](#).

According to Wensley Clarkson, in his book the "Gangs of Britain" today's UK gangs are streets apart from the old style gang lords of recent history. Still the most notorious gang leaders and criminal gangsters of recent times include the Adams Family, the Arif brothers, Jimmy Moody, Curtis Warren, Luisa Bolivar, Roddy McClean, John "little legs" Lloyd, John "goldfinger" Palmer, Paul Ferris, Andrew Billimore and Josie Daly. The UK's Serious and Organised Crime Agency (SOCA) recently published a list of the UK's most "toxic" criminals, listing 145 so-called criminal bosses (already convicted) regarded as career criminals for involvement in all manner of serious crime, including drug trafficking, fraud, money laundering, involvement in counterfeit currency and property from the proceeds of crime. One of the first on the list is [Terry Adams](#), boss of the [Clerkenwell Syndicate A Team](#).

Saor Eire - Ireland

Saor Eire meaning Free Ireland was an armed, radical Irish Republican organisation composed of Trotskyists and ex-IRA members. Formed in 1967, its leaders came from the Left wing Irish political parties it was intended as an urban guerrilla group. Its leaders believed that the working class was key to the armed struggle. Its sole political statement was the Saor Éire Manifesto published in May 1971. Between 1967 and 1970, Saor Éire carried out a number of bank robberies, the proceeds being used to purchase arms. The group provided arms, training and funding to Nationalists in Northern Ireland after the outbreak of the Troubles in 1969. A raid on two banks in Newry in County Down in March 1969 netted £22,000, the biggest single haul from a robbery in the country at the time. In February 1970 the group took over the village of Rathdrum in County Wicklow, stopping traffic and cutting phone lines, and robbed the local bank. On 3 April 1970, in the course of a bank robbery in Dublin, a police officer, Garda Richard Fallon, was shot and killed. He was the first member of the Irish security forces to die in the Troubles. Saor Éire was officially disbanded in 1975.

The Kray Twins Firm - East London, UK

During the 1950s and 1960s twin brothers "Ronnie" Kray and "Reggie Kray" headed an organised crime syndicate known to many as the Firm. The Firm's power base was established by the Kray twins in London's East end where they extended their assets to include nightclubs. This line of work granted the twins access to London's social elite and in time the brothers themselves became somewhat iconic figures. For many years the Kray brothers functioned unhampered by law enforcement in their criminal enterprises, having bribed and intimidated their way out of many condemning circumstances. In particular being known

for violent retribution provided ample protection from prosecution, with witnesses unwilling to testify against the Firm for fear of condemning themselves to a brutal demise. The Krays apparent stranglehold on the British justice system was not however permanent, for in May of 1969 the infamous duo were arrested by Detective Superintendent 'Nipper' Read. Read led a squad of detectives specially selected for the investigation and prosecution of the Kray twins. With a case built by this specialist team and with the brothers behind bars the fear of reprisals subsided and some witnesses were prepared to provide their testimony. In this manner the Firm's leaders were finally held accountable for their actions, both being sentenced to life imprisonment. Ronnie spending the rest of his life behind bars, as did Reggie apart from 8 weeks compassionate release prior to his death from cancer.

The Clerkenwell Crime Syndicate / the A team - the Adams Family - North London, UK

This gang has repeatedly been linked to around 25 murders and attributed a collective holding of £200mio. Prior to the conviction of two brothers in 1998 and 2007, the belief had begun to circulate the influence of the group was so great as to make them untouchable by law enforcement, bribing and intimidating themselves beyond the reach of the UK's justice system. This criminal organisation was established on the basis of a familial unit in the 1980s by Terry Adams and his brothers Sean (a.k.a Tommy) and Patrick (a.k.a Patsy). A group of Irish Catholic descent, the A-team located its powerbase close to the family home in the Clerkenwell district of Islington, North London. It was here that the brothers first began their criminal careers, intimidating and extorting money from stall holders at local marketplaces. Their criminal activity evolved significantly from these comparatively humble origins, with members of the organisation believed to have a strong presence in drug trafficking, extortion, security fraud, and even the hijacking of gold bullion shipments.

In terms of organisational structure, it is believed that Terry led the outfit, Sean dealt with the groups, Curtis Warren the finances and Patrick provided the enforcement wing. In the 1970s and early 1980s the Adams family were linked to a number of robberies, using high powered motorbikes as getaway vehicles. The proceeds of these crimes were invested in a variety of local cash businesses, such as minicab firms and car washes, later followed by drinking establishments. In 1983, the family joined forces with others, playing a role in the £25mio Brinks Matt robbery at Heathrow Airport, and their share helped solidify their power and influence in North London and for investments in the burgeoning cocaine and cannabis boom, establishing

links with Columbian drug cartels and other trafficking enterprises such as Yardie groups. The revenue produced by this trade was laundered by corrupt specialists and so found its way into legitimate business and property holdings. While the gang had over several years been repeatedly linked to around murders and criminal activity becoming notorious to both the authorities and the media, it wasn't until 1998 and 2007 that following trials for two of the brothers, convictions would be secured. In 1998 Sean "Tommy" Adams was convicted for organising an illegal hashish smuggling operation estimated to be worth £8 million. As a result he received seven years imprisonment, however in order to avoid facing a further five years imprisonment Sean agreed to pay £1mio in fines; a sum provided by his wife who twice came to court carrying a briefcase containing £500, 000. In 2007 Terry Adams was sentenced to seven years imprisonment after pleading guilty to money laundering charges. These charges were brought against Terry Adams following an investigation conducted by the UK's Serious and Organised Crime Agency (SOCA) and as a reflection of the group's importance, SOCA was assisted by the UK's security service MI5. On arrest arts and antiques valued at £500,000 in total were seized, as well as £59,000 in cash concealed in a shoebox in the attic, and £48,000 worth of jewellery was seized from his North London home. No legitimate means of acquiring this money, or that used to purchase the family home could be established. Terry Adams served just over 3 years, around half of his sentence before being released.

The Noonan Gang - Manchester, UK

The Noonan Gang was a family based crime syndicate established by Desmond "Dessie" Noonan and Dominic Noonan in the Manchester area. The family is headed by Dominic Noonan, for whom his brother Desmond functioned as a fixer until his death in March 2005. The fatality occurred just days before the brothers featured as the subject of a tv documentary on national television. Desmond's personal path to crime began in the 1980s as a doorman, where his fighting skills and general appearance soon began to win him respect amongst Manchester's nightclub clientele as well as sections of its criminal underworld. In time Desmond began to place his own security men on club doors and by the late 1980s it was estimated that around 80% of the city's night time security industry was controlled by the Noonan family. Control of the greater part of Manchester's criminal enterprise fell to the Noonan brothers in 1991 with the murder of rival crime boss Anthony "White Tony" Johnson, leader of the Cheetham Hill Gang. Desmond Noonan was charged with this murder, later to be acquitted following a re-trial. As the 1990s came to a close the Noonans had

been connected to 25 murders, numerous robberies including raids on banks, and maintained control of the security industry in several of the UK's most prominent cities.

Thomas McGraw - East London, UK

McGraw's early criminal activity began in the 1980s, a period in which he began to buy his first pubs and nightclubs. Involvement in this industry offered McGraw the opportunity to expand into the suitably matched drugs trade, including the sale of heroin. According to the biography of fellow criminal Paul John Ferris, McGraw's heroin trade was forged from close connections with the police force. In covert trade operations McGraw would receive confiscated drugs from corrupt officers, which he and his associates would then sell to users and other dealers. It is believed by some that McGraw, while undoubtedly heavily involved in organised crime, was also an informant for the Serious Crime Squad and in this way provided himself with a measure of immunity from prosecution. For instance following his arrest for a failed robbery, during which he was apprehended after a short chase in vehicles and on foot, McGraw was released without charge the very next day. In similarly unusual circumstances McGraw was acquitted of a charge of attempted murder after his attack on a police officer in 1978, adding to speculation that he had bought immunity in exchange for information on his associates. In 2002 McGraw also made a miraculous escape from an attempt on his life near his home in the East End. Despite being stabbed several times McGraw's life was saved by a bullet proof jacket he had acquired and happened to be wearing at the time of the attack. Thomas McGraw died in 2007 of a suspected heart attack.

Curtis Warren - Liverpool, UK

Curtis Warren is among the UK's most notorious criminals, leading a drug trafficking and criminal operation from his native Liverpool. As a juvenile Warren had a colourful criminal history, spending two years under supervision at the age of 12 after stealing a car. At 13 he appeared in court for burglary, aged 15 he spent three months in a detention centre, and having reached the age of 18 he was sent to borstal after assaulting a police officer. Warren learnt his trade from his occupation as a nightclub doorman. It was this role that first introduced Warren to the drugs trade, discovering his ability to control the entry of drugs into the clubs for whom he provided security. Warren was therefore effectively able to control drug supply into some of its most profitable marketplaces, and soon made connections dealers.

In the course of his criminal career Warren has been involved in several noteworthy case investigations, where he has managed to avoid a successful prosecution. In 1993 Warren escaped prosecution for the smuggling of vast quantities of Venezuelan cocaine. The drugs were contained in steel boxes, themselves embedded in lead ingots. The first shipments passed successfully through HM Customs and Excise checks, even after officers cut one of the ingots open and came tantalizingly close to a discovery. Once the shipment had made its successful transit, Dutch law enforcement authorities informed HM Customs and Excise of the concealment by Warren, by which time all evidence was untraceable. Nevertheless, by the time a second shipment reached British shores HM Customs and Excise were well prepared, immediately seizing the shipment and arresting Warren, his co-conspirator Charrington and 26 others. During the course of proceedings however it emerged that Charrington was a police informant. While this was deemed to be of little significance by HM Customs who continued in their pursuit of a conviction, the leaning of Charrington's police "handlers" and Conservative MP Tim Devlin resulted in charges against Charrington being dropped, followed soon after by the entire case. Allegedly, on his release Warren is said to have walked past disgruntled HM Customs officers and remarked: "I'm off to spend my £87mio from the first shipment and you can't touch me." Moving to Holland, to escape threats in the UK and to be closer to the centre of his drug trafficking operation, the Dutch authorities were nevertheless watching, and following a raid by Dutch Police, they uncovered three guns, ammunition, hand grenades, crates with 960 CS gas canisters, 400kg (880lb) of cocaine, 1,500kg (3,300lb) of cannabis resin, 60kg (130lb) of heroin, 50kg (110lb) of ecstasy, and NLG400,000 plus US\$600,000 in cash. All told the haul was estimated to value £125mio, and led to Curtis Warren's imprisonment in Holland. Whilst he would still continue to operate his drug trafficking network his lengthy jail term, was further increased following the death of his cell mate during a prison fight.

Cahill Gang - Ireland

The Cahill gang was established by Martin Cahill and his brothers who embarked on a criminal enterprise together from their adolescence onwards. The brothers moved from household burglaries to armed robberies, picking up members as they progressed in the Irish underworld. The most famous heists carried out by the Cahill gang were the theft of IR£2mio in gold from O'Connor's jewellers. Cahill's notoriety as a criminal leader became so great as to earn him the title 'The General' amongst the media. The threat he and his gang posed to public safety and security was also deemed to

be sufficient to warrant the establishment of a dedicated police division tasked with monitoring their movements around the clock. The division was named Tango Squad, and Martin Cahill became Tango-1. Whilst the authorities continued to pursue him and his gang, it was from another direction that would lead to his downfall. In 1984 Cahill was assassinated, shot whilst stationary at a road junction in his car. The identity and affiliation of the murder remain unknown, though speculation was that it was the work of the IRA.

Gilligan Gang - Ireland

The Gilligan gang was formed by John Gilligan in 1993. The group began by illegally trafficking duty free cigarettes into Ireland, before progressing into illicit drugs. In 2001 John Gilligan was himself awarded a 30 year sentence (later reduced to 20 on appeal) for possession of commercial quantities of cannabis resin. In the eyes of the media John Gilligan and his gang are most renowned for their alleged connection to the death of investigative journalist Veronica Guerin. Guerin is thought to have been working on a piece investigating the involvement of John Gilligan in the illicit drugs trade at the time of her death, and her murder led to a large scale investigation involving more than 100 officers. John Gilligan was however acquitted of the murder in 2002, but remained in prison to serve other convictions (for possession of large quantities of cannabis and threatening to kill two police officers).

Foley Gang - Ireland

Martin Foley, commonly known as "the Viper", is one of Ireland's most well known contemporary crime figures, and occupies a prominent position in Dublin's McCormack-Foley crime family. His criminal career began as a drug dealer, later an associate of Martin Cahill, another infamous criminal of Dublin's gangland. Foley's criminal activity has not gone unnoticed by law enforcement and he has received 33 convictions as a result. In 2007 Foley set up a debt collection firm, "Viper Debt Recovery and Repossession Service" and has subsequently been investigated following allegations of intimidation. Foley has also endured many attempts on his life, being shot on five separate occasions, miraculously surviving them all.

Terrorist Groups

A number of armed paramilitary groups are also proscribed because of involvement in the Troubles in Northern Ireland as follows: Continuity Army Council (CAC); Cumann na mBan; Fianna na hÉireann, a name claimed by multiple groups; Irish National Liberation Army (INLA); Irish People's Liberation Organisation (IPLO); Irish Republican Army (IRA), a name claimed by multiple groups; Loyalist Volunteer Force (LVF);

Orange Volunteers; Red Hand Commando; Red Hand Defenders; Soare Éire; Ulster Defence Association (UDA); Ulster Freedom Fighters (UFF); and the Ulster Volunteer Force (UVF).

Irish National Liberation Army - Northern Ireland

In 1972, following a series of politically damaging attacks against civilians, the Official IRA declared a ceasefire and announced its intention to join the political process. The Official IRA, with its leftist ideology, emerged in 1969 following the split of the Irish Republican Army (IRA) into the Official and Provisional factions. Republican dissents, desiring a continuation of the armed struggle against the British presence in Northern Ireland, broke away from the organisation and formed the INLA in 1974. The INLA also known by a number of aliases such as the Catholic Reaction Force (CRF), People's Liberation Army (PLA) and the People's Republican Army (PRA). Members of the INLA have conducted attacks against British security forces, Northern Ireland's police forces, Protestants (civilians and paramilitaries), and rival republicans through the use of bombings, assassinations, and armed attacks. The group's most publicized attack occurred in May 1979 when it claimed responsible for the assassination of Airey Neave, a prominent member of the British Parliament and close political supporter of Margaret Thatcher. Airey Neave was killed by a car bomb shortly before the 1979 election that resulted in the selection of Margaret Thatcher as prime minister. In 1997, three imprisoned members of the INLA assassinated Billy "King Rat" Wright, the Loyalist Volunteer Force (LVF) leader in the Maze prison. The Irish People's Liberation Organisation (IPLO) emerged in 1986 from a split within the INLA from both disaffected and expelled INLA members. It developed a reputation for intra-republican violence and criminality, before being forcibly disbanded by the Provisional Irish Republican Army (IRA) in 1992. In 1998, the INLA declared a ceasefire although it remains opposed to the Good Friday Agreement. Its ceasefire was declared just days after the 1998 Omagh bombing in Northern Ireland. Although the attack was attributed to another republican terrorist group, the Real IRA, the INLA has been implicated as providing supplies for the bombing, including transportation vehicles.

Special Focus 21 Provisional Irish Republican Army - Ireland

The history of the IRA is both complex and fascinating. The movement and the name originated in the armed struggle for Irish independence from British Rule, which was successfully achieved, albeit in part, during the Irish War of

Independence 1919–1921. This conflict led to the signing of the Anglo-Irish Treaty in December 1921 and the creation of the Irish Free State, which held sovereignty over 26 of 32 Irish Counties. The remaining six Counties of Ulster (Donegal excepted) were retained by Britain under first Irish premier W. T. Cosgrave.

The Irish Republican Army (IRA) was at the vanguard of this all Ireland armed struggle for independence, however following a split between those in favour of the Treaty, (an opinion largely formulated on pragmatic grounds, believing that a full defeat of the British in Ulster was not possible) and those determined to continue the struggle for an all Ireland Independence. Those in favour of the Treaty, including many IRA units, formed the nucleus of a new Irish National Army under the new Irish Free State Government, while opponents of the Treaty remained outside the government and were nicknamed the "irregulars". Nevertheless these so called "irregulars" continued to call themselves the IRA. The reasons why some IRA volunteers became regulars and others irregulars were complex, but an important factor was an evaluation of the military situation where no consensus could be reached. Powerful personalities and their conclusions as to the success or failure of the Treaty also played an important role in the allegiances of larger IRA units. For example, whereas Michael Collins, the most celebrated of Irish Republican Soldiers, was in favour of the Treaty, others including Eamon de Valera would be imprisoned for their opposition, inciting others to do the same and eventually leading the cause for full Irish unity.

Public support however was reflected in the victory of the "regulars" in the general elections of 1922 and

1923, but still the country remained divided, with regulars holding most of the new Irish Free State but the irregulars holding much of the south and west of Ireland. Despite having started with a numerical advantage at the outset of the civil war, the irregulars were soon both outnumbered and outgunned; with massive aid from the British bolstering the regulars. The regulars best troops were the Dublin Guard - a unit composed of former IRA men, who became regulars primarily out of personal loyalty to Michael Collins. By 1923, the defeat of the irregulars in the civil war was assured. It controlled no territory and its guerrilla campaign had little public support. Eamon de Valera wrote "Further sacrifice of life would now be vain and continuance of the struggle in arms unwise in the national interest and prejudicial to the future of our cause. Military victory must be allowed to rest for the moment with those who have destroyed the Republic. Other means must be sought to safeguard the nation's right."

Significantly however, the civil war had not been brought to an end by any kind of agreement between the two sides. The IRA of the post-civil war era would never accept the Free State as a legitimate Irish government and would continue to oppose its existence and perpetuate the struggle against British rule in the 6 counties. In the elections of 1932 de Valera's Fianna Fail party won the election and despite fears the results would not be respected Cosgrave's party peacefully gave up power and instructed the police and armed forces to obey the new government. Initially, de Valera's Fianna Fail government was friendly towards the IRA, legalising the organisation and freeing all their prisoners who had been interned. However by 1935 this relationship had turned to enmity on both sides. The IRA accused Fianna Fail of "selling out" by not declaring "The Republic" and by tolerating the continued partition of Ireland. In 1936, de Valera banned the IRA. Despite this move, most of the IRA's republican constituency were reconciled to the Free State by De Valera's government, which introduced a republican constitution in 1937, abolishing the Oath of Allegiance to the British monarchy and introducing an elected President as head of state. The document also included a territorial claim to Northern Ireland. By the late 1930s at the latest, most Irish people disagreed with the residual Irish Republican Army's claims that it remained the legitimate 'army of the Republic'. In Northern Ireland, the IRA's main role was to try to defend the Catholic community during periodic outbreaks of sectarian rioting.

During the Second World War, the IRA leadership hoped for support from Germany to strike against

Britain during the war, and IRA leadership travelled to Germany in 1940 to canvass for arms and to support an invasion plan for Northern Ireland. Up until the 1960s the IRA operated the border campaign which involved various IRA units carrying out a range of military operations, from direct attacks on security installations to disruptive actions against infrastructure. The campaign initially received significant support from the south, however internment without trial, introduced first in Northern Ireland and then in the Republic of Ireland, curtailed IRA operations and ultimately broke the group's morale. The campaign was on the whole a failure. It petered out in the late 1950s, and was officially ended in February 1962.

In the 1960s the IRA split on ideological grounds with its then leadership espousing left wing marxist ideas of class that precluded the defence of republican catholic working class groups in northern island from the predations of nationalist and protestant working class communities. This led to a break away by the "Provisional IRA," from the now "Official IRA" who retained a traditional republican view and saw themselves as defenders of the Republican Catholic minority in Northern Ireland. The Provisional IRA then embarked on a thirty year armed campaign known as "the Troubles" against the British presence in Northern Ireland, which claimed 1707 lives. In 1997 it announced a ceasefire that effectively marked the end of its campaign. In 2005 it formally announced the end of the campaign and destroyed much of its weaponry under international supervision. The movement's political wing, Provisional Sinn Fein, is now a growing electoral force in both Northern Ireland and the Republic. The Official IRA mounted their own armed campaign up to 1972, when they called a ceasefire, though some activities continued until 1979.

IRA Financial Needs

The IRA were in many ways as much like an organised criminal gang as a terrorist organisation, with involvement in many forms of lucrative criminal activity, including, kidnapping for ransom, armed robbery, extortion and drug trafficking, in addition to donations or contributions from either states, organisations or individuals. Whilst the level of finance available to a terrorist organisation will fluctuate and whilst a group can be sustained on low budgets, a well financed terrorist organisation will have access to more sophisticated weapons, enough funding to carry out planned operations. Perhaps most importantly insufficient finances can lead to the curtailing of political ambitions, precluding the proper function of a political wing such as Sinn Fein. Conducting a terrorist campaign requires human resources (in terms

of individuals prepared to take the risk of planting a bomb or aiming and firing a weapon) but it also requires material resources: bombs, rifles or other forms of weaponry. The IRA have at times, employed significant weaponry despite the difficulty of obtaining such hardware on the open market. Surface-to-air missiles, Russian-made rocket-propelled grenade ('RPG') launchers, assault rifles and machine-guns from the US, Libya and Russia, as well as many smaller arms including shotguns and pistols have all been used by the IRA. The IRA is also believed to have procured many heavy machine-guns, a number of which are believed to have been supplied by Libya. Far cheaper, but sometimes just as effective, are the homemade munitions which the IRA has increasingly manufactured. IRA 'engineers' have demonstrated their ability to make homemade mortar bombing equipment and homemade bombs. These bombs have been made from commercial and home-made explosives, employing their own radio-controlled detonation devices, or 'sleeper' devices, enabling bomb detonation after a long period. The IRA has also used 'vehicle' bombs with cars, trucks, buses, or vans. The attack of course makes the news but financing the operation itself is usually much less than the cost of planning and preparation, including, training and procuring weapons, transport and other equipment. Transport costs for example are incurred in many ways: this includes everything from petrol for the car used in a robbery or for transportation of weapons to an operational area - to some of the more sophisticated operations which include the incursion of PIRA terrorists into another country. Therefore transport costs may well involve the purchase of a train, bus, or even airplane ticket, as well as the food and accommodation costs necessary to sustain members in the operational area for perhaps up to a week or sometimes longer. Radio equipment is another commodity of vital importance in allowing the PIRA to monitor security force movements, and has evolved considerably since the early 1970s.

Terrorist campaigns need of course weapons, but of far greater importance are the personnel to use these destructive tools. If these individuals are already known to security forces organisational support is required for them to exist within clandestine lives, and a permanent cadre of volunteers needs to be maintained for operational needs. Various types of safe houses have to be maintained, both to secure men on the run, but also to offer active terrorists opportunities to relax and unwind away from the threat of the security services. Cost in this respect can involve payment of money to some safe house owners who provide meals or lodgings to IRA members, or who provide a temporary resting place for periods ranging literally from minutes to

weeks. Other safe house owners who perhaps stored weaponry, or parts of weaponry for the PIRA would be paid not only to ensure their discretion, but also as recompense for the considerable risk they ran in aiding the organisation. As a result a large proportion of those who provided safe houses for the PIRA were widows or unmarried mothers in need of additional income. A further major concern for the PIRA leadership is the welfare of prisoners' relatives, the support of men 'on the run' and their families, as well as men released after serving prison sentences and who consequently had minimal employment prospects. An issue of some debate is the extent to which IRA Volunteers are salaried. With informed estimates of 400-500 IRA members, weekly payouts could certainly add up. In one case a senior figure was said to receive a sum close to £6,000 at one Christmas during the 1994-96 ceasefire. The costs incurred by the IRA's political wing, Sinn Fein, are equally extensive. For the IRA legitimate political representation by Sinn Fein has become an increasingly important aspect of the overall Republican movement in recent years. Financial sustenance is needed for everything from the maintenance of premises (from the Sinn Fein Headquarters in 44. Parnell Square, Dublin, and in Belfast, to the Regional offices around the 32 counties, to public meetings in hotels or pubs even in rural areas) and costs incurred during elections.

IRA Financing

Generally speaking, individuals do not join political terrorist organisations for money. In the case of the PIRA, we know that individual members do not live lavish lifestyles. The income generating activities of the IRA remain to this day no different from other terrorist organisations except in scale, although the PIRA probably shows more sophistication and specialization than most. Security sources in Northern Ireland and in the Republic both gather intelligence on the Provisional IRA's 'incidental' activities the purpose of which is to raise funds for the organisation. Source descriptions demonstrate the IRA's involvement in a variety of revenue generating activities, from at least one clear example of 'riding shotgun' (providing an armed escort for payment) on an international drugs shipment, to money laundering schemes in the US, Northern Ireland, and the Republic. The latter involves the purchase of legitimate businesses with illegally obtained funds. Such businesses may then be run as commercial enterprises, yielding 'legitimate' profit which finds its way back to the terrorist organisation. Alternatively the businesses may be exploited using fraudulent or other means to maximize returns and avoid tax, later to be abandoned or sold on once their usefulness has expired. An examination of one such business located in the Republic of Ireland is the focus of one of our case

studies. Legitimately owned businesses have included private security firms, the 'black' taxi cabs in Belfast (one co-operative of over 300 taxis located on the Falls Road is estimated to have had an annual income of about US\$1.32mio - income which is legally reported to the British taxation authorities). They also include at least two known hackney cab services in Dublin, construction firms, shops, restaurants, courier services, guest houses, cars and machinery, pubs which at one time or another have included at least one in Boston in the US, two small pubs in Finglas, several in Dublin, two in Coolock, three in Letterkenny, Co. Donegal, three in Cork (including one Cork hotel), and more small pubs scattered about the country. The 'mini empire' also includes social clubs (with some illegally installed slot machines to augment income from the legal ones), illegal drinking clubs or 'shebeens' and antiques (sometimes having been stolen in the Irish Republic and resold at various markets in Britain). Social welfare fraud is reported as particularly common, and protection rackets and extortion (from pubs and clubs, shops, and business people) are nothing less than a fact of many people's lives in certain areas.

Support groups, such as NORAI (the Northern Aid Committee) and FOSF (Friends of Sinn Fein), the Irish-American fundraising bodies, local collections in pubs and clubs in Ireland and voluntary private donations (including cheques of £100-£150 having been frequently given by businessmen across the 32 counties) are further sources of funds - this last source is one not to be underestimated or obscured by suspicions of more sophisticated forms of raising money such as money laundering. Other activities include income tax frauds involving the use of false tax exemption certificates (on Northern Ireland building sites), the smuggling of grain, livestock (even the smuggling of bovine antibiotics and livestock growth promoters), the pirating of video and audio media, the pirating of computer games, and the theft of cars (along with anything else required for operational duties). Fundraising has even included the sale of contraband cigarette lighters in Belfast, and in the past kidnapping for ransom purposes. One of the best known and certainly widely-reported sources of funds have come from armed robbery (see the Northern Bank Robbery in Part 2, Section 7, Criminal Cases).

This wide array of activities leads to some specialisation of function within the organisation and the need for a Finance Department, with its Director and support staff presently drawing on the experiences of experienced bank managers and at least two accountants. Although estimated, the annual income for the IRA in 1990 was £5mio and in 1996, £10mio. The following specific areas of criminal conduct provide much of the finance required by the IRA; including kidnapping for ransom,

robbery, extortion, drugs and money laundering.

Kidnapping for Ransom

As with robbery, kidnapping for ransom is a traditional method of raising funds for many terrorist organisations around the world. Some groups are more successful than others; the Basque Separatist group ETA (Euzkadi Ta Askatasuna - Basque Homeland and Freedom); has relied considerably on this practice to raise funds. A popular avenue has been the kidnapping of wealthy businessmen or executives of large companies as these targets present the prospect of large ransoms. However, unlike the IRA's successes through other fundraising avenues, the organisation's experiences at kidnapping for ransom did not have such a thoroughly auspicious life-cycle. In October 1979, the IRA kidnapped Ben Dunne from his home in Dublin. A member of the Dunne family, owners of an extensive chain of retail stores in Ireland, he was released five days later in south Armagh, amid 'considerable controversy as to whether or not a ransom was actually paid by the Dunnes to the IRA. It is suspected that the sum of £750,000 may have been paid. The Dunne kidnapping was the first of several such operations undertaken by the IRA, with the kidnapping of Margaret Fennelley, the wife of a Cork bank manager, two months later in December 1979. Then, after a series of abductions in Dublin and Wicklow targeting the families of bank managers, ransom payments were delivered to the IRA before the Gardai could become involved. In the case of Margaret Fennelley and her £60,000 ransom, however, the Gardai actually succeeded in rescuing the woman before the payment could be made.

This was not the case for all kidnappings however as demonstrated when the daughters of two bank managers, were abducted, from Dundalk and Ardee, in Co. Louth just across the border from Co. Armagh in the north, when two ransoms of £50,000 each were delivered before the police could act. One of the most celebrated kidnappings to occur took place on 8 February 1981 when Shergar, the thoroughbred horse and Derby Winner, was taken from stables at the Curragh (near the Irish Army headquarters). Although 'the Shergar affair' (or perhaps more accurately, 'mystery') has never fully been resolved, the horse was apparently put down by his kidnappers when the owning syndicate led by Aga Khan, failed to pay the demanded ransom. There was also some speculation that Shergar's kidnappers could not handle the animal and consequently killed him. Shergar's body has not been found, but interest in the case continues. In April 1996, it was announced that the investigation was to reopen with an examination of forensic evidence to establish a DNA link between the suspected carcass of Shergar and

hair samples from the horse. Thus far, this seems to have proved inconclusive.

In 1983, five IRA members were charged and convicted of the attempted kidnapping of Galen Weston, a multi-millionaire from Canada. Gardai, acting on information supplied to them, simply laid in wait until the PIRA gang arrived at Weston's house in Co. Wicklow. Also, in October 1983, Alma Manima was kidnapped from Greystones, Co. Wicklow. Although Manima was released and a number of local PIRA members were arrested, Coogan noted 'it is not clear what happened to the £60,000 ransom'. Furthermore in 1983, a tragic event was to contribute to the eventual long-term decline of kidnapping for ransom by PIRA active service units. Following the kidnapping of Associated British Foods executive Don Tidey, an Irish soldier and a Garda were both killed as police and army personnel surrounded the PIRA unit and their hostage in Ballinamore, Co. Leitrim, engaging in a fierce shootout. However, if kidnapping was to decrease, the PIRA's involvement in robbery certainly would not.

Robbery

Although it is difficult to quantify the number of PIRA-related robberies in Northern Ireland and the Republic, robbery certainly appears to be one of the PIRA's main 'outwardly' sources of funding, if not the single main source. Such incidents illustrate part of a consistent series of well executed robberies, but it is probably impossible to gauge the total number of robberies for which the PIRA have been responsible over the years, both North and South. For an example of a particularly prominent case see the Northern Bank Robbery in Part 2, Section 7, Criminal Cases below. After a robbery has been committed, the haul can be collected by a person (not necessarily a member of the ASU who committed the robbery) and is sometimes stored locally, for use against local costs. The loot is often passed along a chain to designated individuals, sometimes to be stored in office safes, invested in other operations, or concealed as a result of money laundering techniques.

Extortion

Some of the earliest examples of extortion date back to the PIRA's first attempts at fundraising. The PIRA began in the early 1970s to demand 'protection' money from publicans, local businessmen, shopkeepers and so on in Northern Ireland, through intimidation and in some cases, quite overt threats. Protection would be demanded in a quite straightforward manner. The gang, typically three or four strong, would march into the premises, brandish a weapon and demand money; if the owner did not pay up they might break a few windows or beat him up. This rather heavy-handed practice

appears to have subsided somewhat. The 'greening' of the PIRA with the birth of more covert fundraising activities, including money laundering which appear to have overshadowed overt extortion.

In the North, the establishment of PIRA-controlled security companies has emphasised that to survive any local 'security threats', hiring the right company to control security could be a wise choice. Today, the whole operation has become more sophisticated and gentlemanly. Any contractor or business new to an area controlled by one of the paramilitary organisations was previously approached by representatives of the group concerned, but now the approach is generally made by an apparently legitimate security company. This security company has in fact been established by a terrorist group in order to provide a veneer of legitimacy to what in truth remains a simple protection racket. These new and apparently legitimate sources of funds have been increasingly popular among terrorists in recent years. Another clear example of attempted extortion became evident in 1988, when the Bank of Ireland in the Republic issued the following statement to all of its branches:

"SECURITY ALERT - STAFF BRIEF" The Bank has received a demand for £2mio from a paramilitary group which has identified itself as the Provisional IRA. The demand was accompanied by an unspecified threat against the Bank. We are satisfied that this threat should be taken seriously. The Bank's priority in the face of any threat is the safety of our staff and the public. This priority can only be effectively served by not acceding to demands of this nature. We believe that if we ever acceded to such a demand, we would be placing our staff at greater ultimate risk. The best advice available to us strongly supports this policy. While it is not easy to gauge precisely the substance of any threat received, it would be prudent for all of us to exercise extra vigilance in the weeks ahead and to adhere fully to security procedures in the interests of both staff and public.⁷

Drug Trafficking

Discussion of profiting from drugs by the PIRA raises controversial issues, as do any allegations of PIRA influence on the behaviour of anti-drugs community movements in the south of Ireland. One major form of PIRA community activity has been its involvement in anti-drug activities in inner city areas, and there is no doubt that Sinn Fein has gained political benefit from such involvement in regions including Dublin. PIRA militants were also renowned for keeping Catholic areas of Ulster drug free, regularly kneecapping and intimidating drug dealers. On the other hand, there are enormous financial profits to be made from the

drug trade, and any involvement in the control and distribution of illegal drugs would clearly net the PIRA considerable financial gain. This proved an allure too great for some PIRA members who are reputed to have involved themselves in the international drugs trade, forging links with American criminal organisations. For instance in 1988 a plot to smuggle Bolivian cocaine into the UK by a combined group of IRA and Detroit Mafia was exposed by police after a tip-off. Nevertheless such isolated incidents should be viewed critically, and not taken as representative for the larger organisation as a whole. While a few members more than likely succumbed to the temptation of the drug trade and its profits, the organisation largely eschewed and actively restrained the drugs trade in Ireland. Moreover the IRA emblem was worn falsely by numerous unconnected criminals in order to cultivate credibility, making it equally plausible that the Boston drug traffickers apprehended in 1988 shared with the IRA nothing more than an Irish accent.

Perhaps the most famous of all Robberies in the UK was the heist now known as the Great Train Robbery which took place in 1963, where £2.6mio was stolen from a post office delivery train. While the robbery has commonly been seen as the work of one gang, in truth the group contained two distinct gangs; that of Bruce Reynolds and the South Coast Raiders. In total 16 men are believed to have gathered on the tracks, with leaders Bruce Reynolds and since famed Buster Edwards and Ronnie Biggs members of the gang. Previous criminal exploits undertaken by the men in the gang had focussed on banks and other places known to house large amounts of cash. However as banks became increasingly secure the group began to look elsewhere for high value hauls, focusing on cash in transit as a vulnerable target to exploit. Whilst the robbery was initially a success all known gang members were arrested and imprisoned.⁷

Money Laundering

The IRA is believed to have operated a large scale system of money laundering in order to finance its campaigns. For instance the Daily Telegraph reported in 1992 that investigators had discovered a complicated and advanced system by which IRA members channelled money from Northern Ireland to the London Stock market, and back once more into Northern Ireland where it could be easily accessed by IRA members without detection. In 2005 police also foiled an alleged attempt by the IRA to buy a Bulgarian bank as a front through which it could launder vast amounts of money. The capital required to even contemplate such a purchase demonstrates the financial resources that the IRA network could access. The most prominent case of IRA money laundering

emerged in the 2009 trial of Ted Cunningham, the financial adviser accused of laundering vast sums of money for the group following the [2004 robbery of Northern Bank](#) in Belfast. While Cunningham was found guilty of all 10 counts levelled against him in the original trial, since then the search warrant used by the police to enter Cunningham's house has been found insufficient for the purposes to which it was put, and Cunningham has been released on bail with a re-trial ordered to reconsider the remaining 9 counts against him. Money laundering, with its complex transactions and minimal personal attachment, is by nature a difficult crime to prosecute. Nevertheless the sophistication and size of the IRA and its financial mechanisms has led to its nicknaming as the Rafia.

Continuity IRA - Northern Ireland

The Continuity IRA (CIRA) was designated as a US Foreign Terrorist Organisation on 13 July 2004, the Continuity Irish Republican Army is a terrorist splinter group formed in 1994 as the clandestine armed wing of Republican Sinn Fein; it split from Sinn Fein in 1986. "Continuity" refers to the group's belief that it is carrying on the original Irish Republican Army's (IRA) goal of forcing the British out of Northern Ireland. CIRA cooperates with the larger [Real IRA \(RIRA\)](#).

CIRA has been active in Belfast and the border areas of NI, where it has carried out bombings, assassinations, kidnappings, hijackings, extortion, and robberies. On occasion, it provided advance warning to police of its attacks. Targets have included the British military, NI security forces, and Loyalist paramilitary groups. CIRA did not join the Provisional IRA in the September 2005 decommissioning and remained capable of effective, if sporadic, terrorist attacks. On 21 April 2011, authorities defused an explosive device planted by CIRA near a statue of the Duke of Wellington in Trim, Meath, Ireland. CIRA supported its activities through criminal activities, including smuggling. CIRA may have acquired arms and materiel from the Balkans, in co-operation with the [RIRA](#).

Cumann na Mban - Ireland

The Irish Women's Council is an Irish republican women's paramilitary organisation formed in Dublin, Ireland in 1914 being bound into the struggle for Irish Independence and allied with the IRA. The group has opposed the peace process and has since aligned itself with the [Continuity IRA](#).

Real Irish Republican Army - Northern Ireland

Designated as a US Foreign Terrorist Organisation on 16 May 2001, the Real IRA (RIRA) was formed in 1997 as the clandestine armed wing of the 32 County Sovereignty Movement, a "political pressure group"

dedicated to removing British forces from NI and unifying Ireland. The RIRA has historically sought to disrupt the NI peace process and did not participate in the September 2005 weapons decommissioning. In September 1997, the [32 County Sovereignty Movement](#) opposed Sinn Fein's adoption of the Mitchell principles of democracy and non-violence. Despite internal rifts and calls by some jailed members, including the group's founder Michael "Mickey" McKeitt, for a cease-fire and disbandment, the RIRA has pledged additional violence and continued to conduct attacks. Many RIRA members are former [Provisional Irish Republican Army](#) members who left the organisation after that group renewed its cease-fire in 1997. These members brought a wealth of experience in terrorist tactics and bomb making to the RIRA. Targets have included civilians (most notoriously in the Omagh bombing in August 1998), British security forces, and police in NI. The Independent Monitoring Commission, which was established to oversee the peace process, assessed that RIRA members were likely responsible for the majority of the shootings and assaults that occurred in NI. In October 2011, Lithuanian authorities convicted a RIRA member for attempting to arrange a shipment of weapons to NI in 2008. In 2011, the group was responsible for seven attacks on NI businesses and the Police Service of NI (PSNI) and was suspected of other incidents. In January, May, and October 2011, the RIRA damaged office buildings, government facilities, and banks in improvised explosive device (IED) attacks, and in February authorities defused another IED before it could explode. RIRA attacked PSNI officers investigating a car theft, and officials blamed RIRA for a bomb placed under a police car that killed a Catholic police officer. RIRA conducted two separate attacks. The RIRA is suspected of receiving funds from sympathizers in the US and of attempting to buy weapons from US gun dealers. The RIRA was also reported to have purchased sophisticated weapons from the Balkans and to have occasionally collaborated with the [CIRA](#).

The 32 County Sovereignty Movement - Northern Ireland

The 32 County Sovereignty Movement often abbreviated to 32CSM or 32csm, is an Irish republican political organisation based in Derry. It is not a political party that stands in elections, rather a community pressure group. The 32CSM's objectives are the restoration of Irish national sovereignty via achieving unity among the Irish people, promoting the revolutionary ideals of republicanism and bringing to an end all forms of colonialism and imperialism. The name refers to the 32 counties of Ireland which were created by the Kingdom of Ireland and claimed by the Irish people, the original inhabitants of the island,

through the Irish Republic declared in 1916 and voted overwhelmingly in by a fully franchised electorate in 1919. Due to the partition of Ireland in 1920–22, twenty-six of these counties formed the Irish Free State which became the Republic of Ireland, and the other six in what became Northern Ireland remain part of the United Kingdom. Many of the 32 County Sovereignty Movement's founding members had previously been members of Sinn Féin and they were also involved with a sub-group within Sinn Féin called the "32 County Sovereignty Committee". The 32CSM are often referred to as the 'political wing' of the [Real IRA](#). The organisation was founded in 1997 at a meeting in Dublin by republican activists who were opposed to the direction taken by Sinn Féin and other mainstream republican politicians in the peace process, which would lead to the Belfast Agreement (also known as the Good Friday Agreement) the following year. The same division in the republican movement led to the paramilitary group now known as the [Real IRA](#) breaking away from the [Provisional Irish Republican Army](#) at around the same time. This group is currently considered a foreign terrorist organisation in the United States as the group is considered to be inseparable from the [Real IRA](#), who are designated as a terrorist organisation. In 2001 the US Department of State stated that "evidence provided by both the British and Irish governments and open source materials demonstrate clearly that the individuals who created the [Real IRA](#) also established... [32CSM] to serve as the public face of the [Real IRA](#).... with.... [32CSM] engaging in propaganda and fundraising on behalf of and in collaboration with the [Real IRA](#)".

Ulster Defence Association / Ulster Volunteer Force - Northern Ireland

Numerous groups have formed to counter both the threat from Irish republican terrorist groups as well as seeking to maintain the status of Northern Ireland as part of the UK. These include the two main groups also closely linked being the UDA and the UVF and related and associate groups, the Red Hand Defenders, Red Hand Commandos, the Orange Volunteers and the Loyalist Volunteer Force all of which have been designated as terrorist organisations by the UK government. The UDA is the largest loyalist paramilitary followed by the UVF in Northern Ireland. It was formed in September 1971 and undertook a campaign of almost twenty-four years during "The Troubles". It also used the name Ulster Freedom Fighters (UFF) when it wished to claim responsibility for attacks and, because the two claimed to be separate organisations, the UDA was able to remain legal for over twenty years. The UK outlawed the "UFF" in November 1973 and the UDA itself was classified as a terrorist group on 10 August 1992. The UVF was formed in late 1965 or

early 1966 and named after the Ulster Volunteer Force of 1913. The group's volunteers undertook an armed campaign of almost thirty years during The Troubles. It declared a ceasefire in 1994, although sporadic attacks continued until it officially ended its armed campaign in May 2007. For both the UDA and the UVF and/or their affiliates, robbery has been described as the preferred source of funds, though legitimate business have also provided funds for example, like the [IRA](#), the UVF also operated black taxi services, a scheme believed to have generated £100,000 annually for the organisation, to have been involved in the extortion of legitimate businesses, to a degree involved in organised crime and in some cases implicating in drug dealing. In 2002 the House of Commons Northern Ireland Affairs Committee estimated the UVF's annual running costs at £1–2mio per year, against an annual fundraising capability of £1.5mio. In contrast to the [IRA](#), overseas support for loyalist paramilitaries has been limited, with benefactors mostly in the UK and particularly in Scotland. The UDA and UVF are made up of a number of satellite or affiliate organisations including the Red Hand Commandos, the Red Hand Defenders and the Orange Volunteers and the Loyalist Volunteer Force. The Red Hand Commandos were formed in 1972 and became quickly affiliated with the UVF and was declared illegal in 1973. The RHC waged a paramilitary campaign from 1972 until the loyalist ceasefires of 1994. The Red Hand Commandos should not be confused with the Red Hand Defenders which first emerged in 1998 at the same time as another loyalist paramilitary group, the Orange Volunteers and who are believed to share the same members and are believed to be used by larger loyalist groups like the UDA and UVF to enable members to continue to conduct attacks while their organisations observe ceasefires. The Loyalist Volunteer Force was formed in 1996 as a splinter group from the UVF. The UDA/UVF and many of the affiliate groups declared a ceasefire in 1994 on behalf of all loyalist paramilitary groups. The UDA/ UVF supported the signing of the 1998 Good Friday Agreement and maintained a ceasefire from 1994 until full and final decommissioning in or around 2009. The UVF has killed more people than any other loyalist paramilitary group. According to the University of Ulster's Sutton database, the UVF and RHC was responsible for 481 killings, whilst the UDA/UFF was responsible for 259 killings.

Fianna Eireann - Ireland

The Warriors of Ireland were somewhat akin to the boy scouts movement of Ireland, being established in 1909 but also joining the struggle for Irish Independence. Whilst the group has been disbanded it has essentially been replaced with Sinn Féin Republican Youth.

Section 6 - Terrorist Attacks

Introduction, 509

- Chronology .of the World's Worst Terrorist Attacks over the last 100 Years, 511
- Special Focus 1 - 2001: Attacks on America (9/11), 518
- Special Focus 2 - 2004: Train bombings in Madrid, Spain (3/11), 521
- Special Focus 3 - 2005: London trains & bus bombings (7/7), 524
- Chronology .of the World's Worst Airline attacks by Terrorists, 531
- Special Focus 4 - 1988: Pan Am Flight 103, 534
- Special Focus 5 - 2010: UPS Flight 232 & FedEx Cargo Planes, 537

Introduction

When we think of countries most at risk of terrorist attacks, we usually think of Iraq, Pakistan or Afghanistan. Whilst these countries remain in the top 5 countries at risk, according to a 2011 report from Maplecroft, Somalia is now more at risk than any other country in the world and with the fledgling state of South Sudan also making the top five at number 5. The Top 4 countries are believed to sustain over 75% of world's fatalities from terrorism with terrorist attacks are on the increase globally.

Top 5 at Risk Countries for terrorist attacks		
1	Somalia	Extreme: 1,385
2	Pakistan	Extreme: 2,163
3	Iraq	Extreme: 3,456
4	Afghanistan	Extreme: 3,423
5	South Sudan	Extreme: 211

Source: Maplecroft 2011¹

The latest Terrorism Risk Index (TRI), released by risk analysis and mapping firm Maplecroft, rates 20 countries and territories as 'extreme risk,' with Somalia (1), Pakistan (2), Iraq (3), Afghanistan (4) once again topping the ranking. The 'extreme risk' category also includes: South Sudan (5), Yemen (6), Palestinian Occupied Territories (7), DR Congo (8) Central African Republic (9), Colombia (10), Algeria (11), Thailand (12), Philippines (13), Russia (14), Sudan (15), Iran (16), Burundi (17), India (18), Nigeria (19) and Israel (20).

Looking at the year on year data, Maplecroft's research also reveals that the number of terrorist attacks rose by approximately 15% globally, with 11,954 incidents between April 2010 and March 2011, compared to 10,394 from April 2009 to March 31st 2010. However, there was a decrease in fatalities falling to 13,492 from 14,478.

Significantly the TRI also reveals that the number of terrorist incidents in Afghanistan increased by over 50% over the same period, rising from 2,246 attacks in 2009/10 to 3,470 in 2010/11.

According to the Global Terrorism Database (GTD), an open source event database (insert reference and link) that includes 82,000 domestic and international terrorist attacks since 1970. The GTD shows that Terrorist attacks reached their twentieth century peak in 1992 (with over 5,100 attacks worldwide), but had substantially declined in the years leading up to the 9/11 attacks. In fact, total attacks in 2000 (1,351) were at about the same level as total attacks in 1977 (1,307) and worldwide terrorist attacks through the mid-1970s were

relatively infrequent, with fewer than 1,000 incidents each year. From 1976 to 1979 the frequency of events nearly tripled. The number of terrorist attacks continued to increase until the 1992 peak, with smaller peaks in 1984, at almost 3,500 incidents, and 1989, with over 4,300 events. After the first major peak in 1992, the number of terrorist attacks declined until the end of the twentieth century, before rising steeply to a 10-year high of nearly 3,300 in 2007 – four years after the start of the Iraq war. Still, total attacks in 2007 were 36% lower than total attacks for the 1992 peak. Fatal attacks also declined in the years prior to the 9/11 attacks. In fact, fatal attacks in 2000 (580) were considerably lower than they had been more than two decades earlier, in 1979 (832). In general, the number of fatal attacks clearly followed the pattern of total attacks. Fatal attacks rose above 1,000 per year for the first time in 1980. After hovering close to 1,000 attacks annually for most of the 1980s, they more than doubled between 1985 and 1992. Like total attacks, fatal attacks declined somewhat after 1992, bottoming out in 1998 with 426 attacks and then rising again to a global peak of more than 2,100 fatal attacks in 2007. The peak in 2007 (2,111) was similar to the peak in 1992 (2,178).

Most Frequently attacked Countries by Terrorist attacks		
1	Colombia	6767
2	Peru	6038
3	El Salvador	5330
4	India	4318
5	UK / NI	3762
6	Spain	3165
7	Iraq	3161
8	Turkey	2691
9	Sri Lanka	2611
10	Pakistan	2536
11	Philippines	2490
12	Chile	2287
13	Israel	2140
14	Guatemala	2023
15	Nicaragua	1986
16	South Africa	1921
17	Lebanon	1913
18	Algeria	1650
19	Italy	1487
20	US	1362

Source: Global Terrorism Database since 1970

In short, in the 4 years prior to 9/11 worldwide terrorist attacks and fatal attacks were at their lowest level in 20 years. However, both total and fatal attacks have increased considerably since then so that in 2007 attacks were back to levels they had been at in the mid-1990s and fatal attacks were approaching the peak year of 1992.

The US has long been perceived as being the target of an inordinate number if not a majority of terrorist attacks, though this is in fact not the case, with Colombia taking top spot with the most attacks and Iraq with the most fatalities.

Latin America had the largest number of terrorist attacks of any region of the world throughout the 1980s and the first half of the 1990s. Four Middle Eastern or Persian Gulf countries are in the top 20 (Iraq, Turkey, Israel and Lebanon) and four are in South Asia or Southeast Asia (India, Pakistan, Sri Lanka, Philippines). Western Europe contains three countries in the top 20 (UK/Northern Ireland, Spain and Italy). South Africa and Algeria are the sole countries from Africa in the top 20 most frequently targeted countries.

Most Fatalities by Country from Terrorist Attacks	
Iraq	17,754
Sri Lanka	14,272
India	14,434
Colombia	13,009
Peru	12,496
El Salvador	12,496
Nicaragua	11,324
Algeria	8,545
Philippines	6,304
Pakistan	5,540
Guatemala	5,135
Turkey	4,674
Burundi	4,084
Afghanistan	3,764
US	3,394
Rwanda	3,200
Lebanon	3,093
Russia	3,057
Angola	2,861
UK/NI	2,842

Worlds Worst Top 15 attacks by Terrorists (excluding assassinations and pure Airline Attacks, excluding attacks in war zones, for example Afghanistan and Iraq)

Major Fatalities / Terrorist Attacks	
191	2004: Attack on Madrid Trains in Spain by AQ inspired
192	2004: Attack on refugee camp in Uganda by Lord's Resistance Army
202	2002: Bali Bombings in Indonesia by Jemaah Islamiyah
233	1987: Bus attacks in Sri Lanka by Tamil Tigers
238	1997: Attacks in Algeria at Sidi Moussa by GIA
300	1990: Attack at mosques in Sri Lanka by Tamil Tigers
301	1983: Truck bombings of US at French barracks, Beirut, Lebanon by Hezbollah
301	1999: Bombings of apartment buildings in Moscow Russia by Chechen Rebels over 12 days
303	1998: Truck bombings of US embassies in Nairobi, Kenya & Dar es Salaam, Tanzania by Egyptian Islamic Group & Al-Qaeda
317	1993: 15 bombings in Mumbai, India by D-Company
366	2004: School Hostage Crisis, Beslan Russia by Chechen Rebels
477	1978: Cinema Rex Arson Abadan, Iran by Iranian Revolutionaries
780	2009: Attack on city in Nigeria by Boko Haram
865	2008: Christmas attacks in Northern DR Congo by Lord's Resistance Army
2997	2001: Attack on America on 9/11 by Al-Qaeda

Source: Author (excluding attacks in war zones, for example Iraq and Afghanistan and Airline Bombings (see later))

Chronology of the Worlds Worst Terrorist Attacks over the last 100 Years

Over the years Countries at risk have changed though the continuing long standing political and religious conflicts in the Middle East have provided many of the most shocking terrorist attacks. The following is a chronology of perhaps the Worlds worst terrorist attacks causing mass casualties or proving to be important to understand trends and effects. The list includes some major political assassinations and is supplemented by a chronology of Airline Bombings below.

1914: Archduke Franz Ferdinand assassination in Sarajevo by Serbian Nationalist

The assassination of the Archduke and his wife in a car in Sarajevo (the capital of modern day Bosnia-Herzegovina but at the time part of greater Serbia and occupied by the Austro-Hungarians) had terrible repercussions, leading to World War 1. The assassin a Serbian national, with ties to the Serbian Military, was seen by the Austro-Hungarians as a terrorist. In response, Austro-Hungary held the Serbian government complicit in the murder and set in motion the wheels of war which would, in turn, start a chain of events that would, over the course of a just a few weeks, bring the two to conflict, but see Germany support the Austro-Hungarians and in response the French, Russian and British support the Serbians. Over the next four years, the Great War as it would be later called would grow to involve Italy, Japan, the Middle East and the US, among other countries. More than 20 million soldiers died and 21 million more were wounded, while millions of other people fell victim to the influenza epidemic that the war helped to spread. The war left in its wake three ruined imperial dynasties (Germany, Austria-Hungary and Turkey) and through the Communist revolution in Russia led to the downfall of the Tsar.

1920: Wall Street Bombing: US by Galleanists (Italian anarchists) (38)

In the Financial District of New York City, a horse-drawn wagon loaded with dynamite exploded. The blast killed 38 and seriously injured 143, mostly messengers, stenographers, clerks and brokers as its victims. Although the bombing was never entirely solved, investigators and historians think it likely the Wall Street bombing was carried out by Galleanists (Italian anarchists), a group responsible for a series of bombings the previous year. The attack was related to postwar social unrest, labour struggles and anti-capitalist agitation in the US. At that time it was the deadliest act of terrorism on US soil up to that point.

1921: bombing of Bolgارد palace in Bessarabia (modern Moldova) (100)

A bomb was thrown at the Bolgارد palace in Bessarabia (modern day Moldova), killing 100, mostly police and soldiers.

1925: bombing of cathedral in Sophia, Bulgaria by Communist Revolutionaries (160)

A crowded cathedral was bombed in Sophia, Bulgaria, during a funeral for a government official. The bombing, at the Sveta Nedelya Cathedral, was apparently intended to kill the Bulgarian king who nonetheless survived. The premier and war minister were among those killed. Bulgarian authorities concluded that the bombing was conducted by Communists supported by the Soviet Union, and many Communists were arrested and executed (reportedly at least 6,000 and 400, respectively) for the bombing.

1933: First 2 Airline Attacks (15) and (7)

It wasn't until 1933 that the first 2 Aeroplanes were destroyed intentionally first by fire and then by a bomb and is thought to be the first proven acts of air terror in the history of commercial aviation. Imperial Airways flight over Belgium crashing probably after a fire started by a passenger attempting to commit suicide, killing all 15 aboard. This is thought to be the first act of sabotage on a commercial airliner. This was followed by United Airlines Boeing 247 which was destroyed by a bomb, crashing near Indiana, USA, killing 7, thought to be the first case of airline sabotage by a bomb with nitroglycerine as the probable explosive. A Chicago gangland murder was suspected. Passenger airliners as well as cargo aircraft have been the subject of plots or attacks ever since. For more details see Airline Attacks by Terrorists below.

1946: King David Hotel Bombing: Israel (91): Irgun, Jewish Terrorists

The King David Hotel bombing was carried out on the headquarters of the British authorities in then Palestine in Jerusalem killing 91 people and injuring 47. This terrorist attack was carried out by the Irgun, a militant Zionist group, intent on establishing a Jewish state. Menachem Begin a leading figure in Irgun at the time became a future Israeli Prime Minister and the Irgun is a predecessor of today's Israeli Likud party.

1948: Ben Yehuda Street bombing: Mandatory Palestine, Jerusalem by Palestinian Terrorists (58)

The Ben Yehuda Street bombings refer to a series of attacks by the Holy War Army forces, Palestinian irregulars, carried out on a major thoroughfare, named after the founder of modern Hebrew, Eliezer Ben Yehuda. Three stolen British Army trucks and an armoured car, exploded killing 58 Jewish civilians and injuring 140. A statement issued by the Arab High Command the following day claimed full responsibility and said the explosions were in retaliation for a Jewish Irgun bomb attack in Ramala.

1948: Mahatma Gandhi assassination by Hindu Nationalist Extremists

Indian political and spiritual leader Mohandas Karamchand (Mahatma' (Great Teacher)) Gandhi was murdered by a Hindu nationalist, Nathuram Godse, who fired three shots at close range as the 78-year-old Gandhi entered a prayer meeting. Gandhi had long been a leader of India's independence movement, preaching non-violent civil disobedience. He protested British rule and sought to improve the lives of Indians through frequent fasting and peaceful protesting. At the end of the second world war, Britain began to move toward granting independence, developing a plan for India to be partitioned into two countries, India and Pakistan, which would become independent in August 1947. The partition, which Gandhi opposed, caused the displacement of millions of Hindus and Muslims and widespread violence between the two communities. Gandhi continued to preach non-violence, which angered many Hindu nationalists who felt that Hindus needed to protect themselves from Muslim attacks. As Gopal Godse, brother and co-conspirator of assassin Nathuram Godse, explained before his death in 2005, Hindu extremists believed Gandhi's calls for non-violence were "part of a plot to allow Hindus to be slaughtered by Muslims." The Godse brothers and a team of conspirators carried out a failed bombing attack against Gandhi on 20 January 1948. Ten days later, their second assassination attempt succeeded. Nathuram Godse and Narayan Datatraya Apte were sentenced to death, while the other conspirators received prison sentences.

1963: US President John F Kennedy assassination by Lee Harvey Oswald

The 35th President of the US was assassinated while travelling through Dallas in an open-topped vehicle. Lee Harvey Oswald allegedly fired three shots from a rifle on the sixth floor of the Texas School Book Depository Building at 12.30pm. Kennedy was hit in the head and the throat, while one of Oswald's bullets also hit Texas Governor John Connally in the back. Oswald was himself later assassinated, provoking conspiracy theories that have endured to the present day.

1968: US Senator Robert F. Kennedy assassination by Sirhan Sirhan

Having just declared his victory in the California Democratic primary, moments later Robert Kennedy was attacked by Sirhan Sirhan as he was escorted through a kitchen pantry of the Ambassador Hotel. Kennedy was wounded by multiple shots from a pistol and died the following day. The attack, much like that suffered by his brother, has been surrounded by speculations of conspiracy. For instance a girl wearing a polka-dotted dress and a male companion were seen by multiple witnesses fleeing the scene shortly after the shooting. In April of 2012 CNN reported Nina Rhodes-Hughes's statement that Sirhan was not a lone gunman, but was accompanied by another shooter. Rhodes-Hughes, who stood feet away from Kennedy when he was murdered asserts

that "there was another shooter to my right".

1972: Israel's Lod airport attack by Japanese Red Army supported by the General Command of the Popular Front for the Liberation of Palestine (26)

Three Japanese Red Army (JRA) members arrived at Lod Airport (now Ben Gurion Airport) in Tel Aviv, Israel, via Air France Flight 132. They were dressed in business suits and carried what appeared to be violin cases. As the three men passed the ticket counter area, they opened their cases and took out automatic weapons and began to strafe the crowds. They also used hand grenades. One of the terrorists, Yasuyuki Yasuda, ran out of ammunition and was cut down by his companions. A second terrorist, Tsuyoshi Okudaira, committed suicide by pulling the pin on a grenade and detonating it against his body. The third terrorist, Kozo Okamoto, was captured while attempting to escape. In all 26 people were killed and 78 were injured. Whilst the target was Israelis or Jews, 16 of the dead were Puerto Ricans in Israel on a pilgrimage. Okamoto is the younger brother of Takeda Okamoto, one of the JRA terrorists who hijacked a Japan Airlines flight to North Korea in 1970. As the sole survivor of the Lod assassin team, Okamoto was sentenced to life imprisonment in Israel. He was released, however, as part of a 1983 prisoner exchange with Palestinian militant factions. He reportedly dropped from sight in Beirut, supposedly to reunite with his former comrades in the JRA. Investigations have shown that the JRA received considerable training and/or funds from Iran, Libya, Syria and the General Command of the Popular Front for the Liberation of Palestine. JRA was founded by Fusako Shigenobu, a Japanese woman who travelled to Lebanon in 1971 and founded the JRA, which then linked up with Palestinian extremists to become an enemy of Israel. She was best known for having masterminded the Lod Airport massacre. After the incident she made the following statement: "It is time to show the imperialists that armed struggle is the only humanistic way to advance the cause of oppressed people." In November 2000, Shigenobu was arrested in Osaka after being wanted by international law enforcement agencies for 26 years.

1972: Munich Olympics, Germany by Black September (19)

During the 1972 Summer Olympics in Munich in then West Germany, members of the Israeli Olympic team were taken hostage and eventually killed by the Palestinian terrorist group Black September. The Palestinian terrorists demanded the release of 234 prisoners held in Israeli jails. The terrorists eventually killed eleven Israeli athletes and coaches and a West German police officer. Five of the eight members of Black September were killed by police officers during a failed rescue attempt. The three surviving assassins were captured, but later released by West Germany following the hijacking by Black September of a Lufthansa airliner.

1973: Spanish Prime Minister Luis Carrero Blanco by ETA

Luis Carrero Blanco had only been prime minister by General Franco for about six months when he was assassinated. The 70-year-old, his bodyguard and a driver died instantly and four other people were injured after a remote-controlled bomb was detonated as he passed. The massive explosion sent the car hurtling into the air and over the roof of the San Francisco de Borga Church where Mr Blanco had just been attending mass. The vehicle landed on the second floor terrace of a building on the other side of the church causing also a great deal of damage to the area. Mr Blanco was opposed by many for propping up Franco's hardline regime, stifling opposition and for opposing mainstream European political life despite the country's progress in tourism and trade. Apparently the killers had dug a tunnel under the street the Prime Minister used regularly on his return from mass, with the killers triggering the bomb from an opposite basement in a well-planned assassination. Basque nationalists ETA, were blamed for the murder in retaliation for the execution of Basque militants in Spain, but the explosions also coincided with the start of a trial involving 10 of Spain's leading opponents of the Franco regime, one of them a Roman Catholic priest.

1974: The Birmingham pub bombings in UK by IRA (21)

The Birmingham pub bombings killed 21 people and injured 182, being placed in two central Birmingham pubs – the "Mulberry Bush" and the "Tavern in the Town" (now renamed the "Yard of Ale")². Although warnings were sent the pubs were not evacuated in time. The Provisional Irish Republican Army (IRA) was widely blamed for the bombings, although it denied responsibility. The bombings yielded a wave of anti-Irish sentiment and attacks on the Irish community in parts of Great Britain. A few days after, the Prevention of Terrorism Act was swiftly introduced by the British Government.

1978: Cinema Rex Arson in Abadan, Iran by Iranian Revolutionaries (477)

The Cinema Rex in Abadan, Iran was set ablaze, killing over 400 individuals by a group of Islamic extremists the moviegoers were violating Islamist beliefs by watching movies during the Islamic month of Ramadan. The single exit to the theater was locked with the assistance of a theater employee while the building was set ablaze with incendiary bombs. A small number of occupants were able to escape; most, however, were stampeded or died of smoke inhalation or flames.

1979: Hostage taking at Grand Mosque in Mecca, Saudi Arabia (includes 87 Islamic terrorists killed) (240)

200 Islamic terrorists seized the Grand Mosque in Mecca, Saudi Arabia, taking hundreds of pilgrims hostage. Saudi and French security forces retook the shrine after an intense battle in which some 250 people were killed

and 600 wounded. Hostage casualties included 26 killed and 109 injured; among Saudi soldiers, 127 were killed and 451 injured. At least 87 of the gunmen were killed and at least 40 injured; of those taken into custody, 67 were later simultaneously executed.

1979: Lord Mountbatten (Cousin of the Queen of England) in Ireland assassinated by IRA

Lord Mountbatten, a former decorated War Hero, last Viceroy of India, ex Chairman of NATO and a cousin of the Queen of England was assassinated by the Provisional Irish Republican Army (IRA), who planted a bomb in his yacht, the *Shadow V*, which had been left unguarded at Mullaghmore harbour, in the Republic of Ireland, just 12 miles from the border with Northern Ireland.³ One of the earl's twin grandsons, Nicholas, 14, and Paul Maxwell, 15, a local employed as a boat boy, also died in the explosion as did another passenger on the boat, the Dowager Lady Brabourne, 82, who died the day after the attack. Lord Mountbatten, aged 79, and his family had traditionally spent their summer holiday at their castle in County Sligo, north west of Ireland, but this was also an area of refuge for IRA operatives close to the border. The attack was followed only hours later by the massacre of 18 soldiers, killed in two booby-trap bomb explosions near Warrenpoint close to the border with the Irish Republic. A statement from the IRA said: "This operation is one of the discriminate ways we can bring to the attention of the English people the continuing occupation of our country." Thomas McMahon, was convicted of the three murders. McMahon was set free in 1998 under the Peace Accords, the Good Friday Agreement.

1978: Italian Prime Minister Aldo Moro kidnapped and assassinated by Red Brigade

In Italy in 1978, a former Prime Minister and Presidential prospect Aldo Moro was on his way with 5 bodyguards to see the then Italian Prime Minister when his car was ambushed by the Red Brigades, an Italian Terrorist group. All 5 bodyguards were shot and Moro taken. The terrorists demanded the release of 14 Red Brigades members imprisoned in Italian Jails. The Italian government refused to negotiate on principle and Moro was found murdered. Eventually in 1983, 32 terrorists were convicted on various charges connected with the Kidnap and Murder.

1979: US Embassy Hostage Crises, Tehran, Iran.

After President Carter agreed to admit the Shah of Iran into the US, Iranian radicals seized the US Embassy in Tehran and took 66 American diplomats hostage. Thirteen hostages were soon released, but the remaining 53 were held until their release after Carter left office in 1981.

1980: The Iranian Embassy Siege, London, UK.

A six-man terrorist team held the building for six days until the hostages were rescued by a raid by the SAS which was broadcast live on TV.

1981: President Anwar Sadat of Egypt assassinated by Al Gamaa al-Islamiyya

President Sadat was marking Egypt's Armed Forces Day, so called in commemoration of the Egyptian Third Army's launching of a surprise attack on that day in 1973 against Israeli forces occupying the Sinai since 1967, when several soldiers riding in a truck that was part of the military parade jumped to the ground, one throwing a grenade while others opened fire at Sadat and his entourage, killing Sadat. The attackers would eventually come to be identified as Islamist nationalists associated with the Muslim Brotherhood under the name of Egyptian Islamic Jihad.

The group was subsequently found to have hatched the assassination plot with Al Gamaa al-Islamiyya, a Brotherhood offshoot that would, in the mid-1990s, develop ties with Al-Qaeda and be chiefly responsible for the 1997 terrorist attack in Luxor on 17 November 1997, when six men dressed in black attacked tourists visiting the famous site in Upper Egypt. Sixty-two men, women and children were killed. Among the group's leaders: Ayman al-Zawahiri, subsequently Al-Qaeda's number 2. Zawahiri was tried and imprisoned for three years for his role in the plot, then expelled from Egypt. Al Gamaa al-Islamiyya accused Sadat of apostasy and condemned him for the peace treaty he'd signed with Israel.

1982: First truck bombing attack in Tyre Lebanon by Hezbollah (102)

On 11 November 1982, a Peugeot car packed with explosives struck the seven-story building used by the Israeli military to govern Tyre. The explosion leveled the building, killing 75 Israeli soldiers, border policemen, and Shin Bet agents. Between 14 and 27 Lebanese and Palestinians being held prisoner within the Israeli headquarters were also killed in the blast. The Israeli government asserted that the explosion was an accident, caused by the ignition of gas cylinders. This explanation stands in contradiction to the evidence of three witnesses who saw the Peugeot speed to the building, the identification of the car's parts in the rubble of the building, and the existence of a Shin Bet report detailing the Hezbollah preparations for the bombing.

1983: Truck bombings of US Marine and French barracks, Beirut, Lebanon by Hezbollah (301)

Terrorists attacked US and French troops stationed in Beirut as part of a UN peacekeeping Mission, exploding 2 truck bombs by crashing into Barracks at 6:30 a.m. Killing and injuring mostly sleeping soldiers. Within seconds, the four-story building collapsed taking with it the dead bodies of over 300 marines. The blasts led to the withdrawal of the international peacekeeping force from Lebanon, where they had been stationed since the Israeli 1982 invasion of Lebanon. Whilst the Islamic Jihad took responsibility for the bombing, it is thought to have been a nom de guerre for Hezbollah receiving help from Iran.

1983: Harrods Department Store bombing in London, UK by IRA (6)

On 17 December 1983, 6 fatalities and 90 injuries were caused by a car bomb planted in a side street near Harrods store in Knightsbridge, London. The attack was carried out by the IRA who sent a coded warning at 1245 GMT. Despite the damage Harrods reopened three days later.

1984: Margaret Thatcher, British Prime Minister attempted assassination by IRA (5)

The attack took place on 12th October 1984 at the Grand Hotel in Brighton, England. A bomb, constructed and planted by the IRA, detonated at 2.54am. Despite damaging her bathroom, Margaret Thatcher's bedroom and sitting room were unscathed, and the Prime Minister escaped without injury. Five people were however killed by the blast, including Conservative MP Anthony Berry and Parliamentary Treasury Secretary John Wakeham's wife Roberta. The following day the IRA claimed responsibility for the attack and vowed to make future attempts on the Prime Minister's life.

1984: Golden Temple Seizure, Amritsar, India by Sikh Terrorists (100)

Sikh Terrorists seized the Golden Temple in Amritsar, India. One hundred people died when Indian security forces retook the Sikh holy shrine.

1984: Indira Gandhi, Indian Prime Minister assassinated by Sikh Terrorists

Indira Gandhi was assassinated by Sikh Terrorists in the form of two of her Sikh bodyguards, Satwant Singh and Beant Singh. The two assailants opened fire as Indira Gandhi walked through the garden of the Prime Minister's Residence in New Delhi. 30 of the 31 bullets fired by Singh and Singh at close quarters found their mark. The attack came in the wake of Indira's attempt to crush a militant Sikh secessionist movement focussed in Amritsar. In so doing, Indira gave her approval to an assault on the Sikh Golden Temple shrine in which 100 people died, thus provoking outrage from the Sikh religious community.

1985: Attack on crowds in Sri Lanka by Tamil Tigers (150)

Tamil Tigers attacked crowds in Anuradhapura, Sri Lanka, with automatic weapons. Those attacked were mostly Buddhist worshippers and monks at Sri Maha Bodhi. The terrorists were dressed in army uniforms and drove through the area firing into crowds.

1985: Attack on Rome and Vienna airports simultaneously by Abu Nidal Organisation (15)

Twin terrorist attacks at Rome and Vienna airports were carried out killing 16 and injuring more than 100. Gunmen opened fire on passengers queuing to check-in luggage at departure desks for Israel's national airline, El Al. The attacks were indiscriminate and started within minutes of each other at about 8.15 in the morning.

The Palestinian terrorist group the Abu Nidal Organisation claimed responsibility.

1987: Bus attacks in Sri Lanka by Tamil Tigers (233)

Tamil Tigers first ambushed and attacked local Sinhalese travellers on three buses, two trucks, and a private van on a road in Sri Lanka near Alut Oya, killing 127 and injuring 64, continuing their attacks a few days after the road ambush, detonating a bomb at a bus depot in Columbo, Sri Lanka, killing 106 and injuring 295.

1990: Attack at mosques in Sri Lanka by Tamil Tigers (300)

Tamil Tigers attacked two mosques in Kathankudiy, Sri Lanka as Muslims filled the two mosques for daily prayer. The Tigers surrounded both mosques, one occupied by about 300, the other by about 40. The attackers fired through the windows and used other weapons. About 109 were killed immediately with another 31 later reportedly dying of injuries; another 70 were injured. The attacks were part of a series of attacks on Muslims in the area over a period of about a week, killing a total of about 300.

1991: Rajiv Gandhi Indian Prime Minister, by Tamil Tigers (15)

Indian Prime Minister, Rajiv Gandhi, was assassinated by Thenmozhi Rajaratnam on the 21 May 1991. Rajaratnam was a member of the Tamil Tigers and the Tamil National Retrieval Troops and wore an explosive belt concealed beneath her clothes. The assailant gained close access to Rajiv Gandhi amongst a crowd of well wishers greeting the former Prime Minister just before he was due to deliver a speech in Sripurumbudur. As she bent to touch his feet Rajaratnam detonated her explosive belt, killing Rajiv Gandhi and 14 others in the blast.

1992: Gold Mohur Hotel, Aden, Yemen by Al-Qaeda (2)

The first attack by Al-Qaeda was carried out in Aden, Yemen when AQ set off a bomb at the Gold Mohur hotel, where US troops had been staying while en-route to Somalia, though the troops had already left when the bomb exploded. The bombers targeted a second hotel, the Aden Movenpick, where they believed American troops might also be staying. That bomb detonated prematurely in the hotel car park, around the same time as the other bomb explosion, killing two Australian tourists.

1992: Israeli Embassy in Buenos Aires, bombed by Hezbollah (29)

A car bomb exploded at the Israeli embassy in Buenos Aires, killing 29 people and injuring more than 200. Whilst the Islamic Jihad claimed responsibility for the bombing, stating that it is in response to Israel's slaying of Shiite leader Sheik Abbas al-Musawi in February 1992. The US State Department believes the Islamic Jihad claim was a cover for Hezbollah. These Islamist terrorists are believed to have had support from the

tri-border region formed by the cities of Puerto Igauzu, Argentina; Foz do Iguazu Brazil; and Ciudad del Este, Paraguay which has a reputation for lawlessness and an historical presence of terrorist elements.

1993: Ranasinghe Premadasa, Sri Lankan President assassinated by Tamil Tigers (15)

Ranasinghe Premadasa was assassinated on 1 May 1993, during a May day rally, by a Tamil Tiger suicide bomber. Though no one officially claimed responsibility the Tamil Tigers of Tamil Eelam have been widely held responsible for the attack. At least 14 other people, including the police commissioner, were killed in the huge explosion in the centre of Colombo, police said.

1993: World Trade Centre bombing, US, New York City by Al-Qaeda (6)

The 1993 World Trade Centre bombing occurred when AQ operative Ramzi Yousef parked a rented van full of explosives in the parking garage beneath the World Trade Centre. The explosion claimed six victims, and over one thousand people were wounded. Ramzi Yousef, the nephew of 9/11 planner Khalid Sheikh Mohammed, had trained in Afghanistan, although Khalid Sheikh Mohammed did not join Al-Qaeda until 1998. Yousef worked in cooperation with the blind sheikh Omar Abdul Rahman in Jersey City, at the time of the attack. The FBI later turned up evidence that Osama bin Laden, who was never indicted for having a role in the bombing, provided financial support to the blind sheikh. Omar Abdul-Rahman.

1993: 15 bombings in Bombay, India by D- Company (317)

The bombings were a series of thirteen bomb explosions that took place in Bombay (now Mumbai), India on the same day in 1993. The coordinated attacks were the most destructive bomb explosions in Indian history. The single-day attacks resulted in over 300 fatalities and 700 injuries. The attacks are believed to have been coordinated by Dawood Ibrahim, head of the organised crime syndicate named D-Company, which had operated as a terrorist organisation. It is believed that the attacks were against Hindus and were carried out in retaliation for widespread massacres of Muslims in Mumbai during December and January, and also the demolition of the Babri Masjid. The targets included the Mumbai Stock Exchange building, banks, government offices, a hospital, an airline office (Air-India Building), and a major shopping complex. Most were car bombs but a scooter was also used and also a bus full of passengers was blown up. 3 hotels were also struck by suitcase bombs left in rooms booked by the terrorists.

1994: Asociacion Mutual Israelita Argentina (AMIA), bombed in Buenos Aires, Argentina by Hezbollah (86)

Terrorists bombed a Jewish community center killing 86. The investigations eventually implicated Hezbollah, the Lebanon-based Shiite Muslim militant organisation.

The primary suspect in the bombings is Imad Mughnayyah, a Hezbollah operative who is reportedly living in Iran. Argentine authorities believe that the attacks were organised in the tri-border region formed by the cities of Puerto Igauzu, Argentina; Foz do Iguazu Brazil; and Ciudad del Este, Paraguay which has a reputation for lawlessness and an historical presence of terrorist elements.

1995: Paris Metro bombing in Paris, France by GIA (8)

The attacks, which consisted of multiple bombings, were carried out by the Armed Islamic Group (GIA). This group attempted to extend the Algerian Civil War to France, claiming 8 lives in total and injuring more than 100 people. The first bombing took place on the 25th of July, when a gas bottle exploded in Saint-Michel station, killing 8 and wounding 80. 17th of August 17 people were wounded by a bomb detonated at the Arc de Triomphe. 26 August a bomb was discovered on high speed railtracks near Lyon, and on 3rd of September a bomb malfunctioned in a Paris square wounding 4. On 7th of September the GIA detonated a car bomb at a Jewish school in Lyon, injuring 14 people, and on 6th of October a gas bottle exploded at the Maison Blanche station of the Paris Metro. The final attack came on the 17th of October when a gas bottle exploded on train lines between Musée d'Orsay and Saint-Michel: Notre-Dame, injuring 29 people.

1995: Truck bombing of federal building, in Oklahoma City, USA by Anti Government Terrorist (168)

The attack carried out by Timothy McVeigh on the Alfred P. Murrah Federal Building in Oklahoma City was a domestic terrorist attack that claimed 168 lives and left over 800 people injured. Timothy McVeigh was arrested on a traffic violation and later charged with the bombing. McVeigh held anti-government views and chose the target a federal government building on the second anniversary of the federal raid on the Branch Davidian compound in Waco, Texas. Until the 9/11 attacks, it was the deadliest act of terrorism on US soil.

1995: Sarin subway station Attack, Tokyo by Aum Shinri-Kyu (12)

Tokyo Subway Station Attack, 20 March 1995: Twelve persons were killed and 5,700 were injured in a Sarin nerve gas attack on a crowded subway station in the centre of Tokyo, Japan. A similar attack occurred nearly simultaneously in the Yokohama subway system. The Aum Shinri-kyu cult was blamed for the attacks.

1996: Hostage taking in Budennovsk, Russia, by Chechen Terrorists (143)

75 Chechen Terrorists entered Budennovsk, Russia and attacked a police station, killing 42. The guerrillas then seized a hospital and took about 1,600 hostages. The terrorists killed initially 5 hostages (including 2 police officers). While about 400 hostages were released, Russian troops surrounded the hospital and made two un-

successful assaults over the next few days. These assaults freed about 200 hostages but resulted in many civilian casualties, most from a resulting fire in the hospital. A deal was eventually negotiated with the guerrillas under which they were permitted to return to Chechnya with about 200 hostages, mostly women and children, who were released at the Chechen border. Those killed include 18 policemen, 17 Russian servicemen, 94 Russian civilians, and about 14 terrorists;

1996: Khobar Towers bombing in Khobar Saudi Arabia by Al-Qaeda (19)

The Kobar Towers bombing was a terrorist attack on part of a housing complex in Saudi Arabia where foreign military personnel were stationed. The explosive device was concealed in a truck, killing 19 US servicemen and 1 Saudi on detonation. A further 372 individuals of diverse nationalities were injured in the explosion. Disagreements exist as to the identity of the culprits; however in 1996 the US rested responsibility for the attack with a group known as Hezbollah Al-Hijaz (Party of God in the Hijaz). Others have suggested that Al-Qaeda is the most likely orchestrator of the bombing.

1997/1998: Attacks at Ben Talha, and elsewhere in Algeria by Armed Islamic Group (1000+)

At the height of the Algerian Civil War, following the military cancellation of elections in 1997, that would have brought the Islamic Salvation Front to power, the Armed Islamic Group terrorized villages and towns mainly around the Capital, Algiers, massacring more than 1000 people over a period of months. One massacre, claimed the lives of 238 mostly pregnant women, babies, and the elderly. They were slaughtered, dismembered, and burned. In addition, more than 40 girls and women were kidnapped and later raped, then murdered, all of them residents of Sidi Rais near Sidi Moussa on the outskirts of the capital. Another massacre this time in the village of Hai-el-Djilali killed more than 200 villages, with the terrorists starting with explosions, then methodically going from house to house and killing men, women and children.

1998: US Embassy bombings in Kenya and Tanzania by Egyptian Islamic Group and AQ (303)

The embassy bombings were a series of attacks that occurred on August 7, 1998, in which 303 people were killed and an estimated 4,000 injured in simultaneous truck bomb explosions at the US embassies in the East African capitals of Dar es Salaam, Tanzania, and Nairobi, Kenya. The date of the bombings marked the eighth anniversary of the arrival of American forces in Saudi Arabia. The attacks were linked to local members of the Egyptian Islamic Jihad and Al-Qaeda. These attacks brought Osama bin Laden and Ayman al-Zawahiri to the attention of the American public for the first time, and resulted in the U.S. FBI placing bin Laden on its Ten Most Wanted Fugitives list. Although the attacks were directed at American facilities, the vast majority of casualties were local citizens; 12 Americans

were killed, including two Central Intelligence Agency employees in the Nairobi embassy, and one Marine at the Nairobi embassy.

The costs to the terrorists to carry out this attack have been estimated at US\$50,000. Earlier that year a Statement of intent had been signed and released by many Islamic Jihad Leaders from many Muslim countries, but most importantly by bin Laden which read "...In compliance with God's order, we issue the following fatwa to all Muslims: The ruling to kill the Americans and their allies—civilians and military—is an individual duty for every Muslim who can, in any country in which it is possible... We — with Allah's help — call on every Muslim who believes in God and wishes to be rewarded, to comply with Allah's order to kill the Americans and plunder their money wherever and whenever they find it. Unless you go forth, Allah will punish you with a grievous penalty, and put others in your place."

1998: Colombian Army ambushed by FARC (62)

FARC's military activity increased throughout the 1990s as the group continued to grow in wealth from both kidnapping and drug-related activities, while drug crops rapidly spread throughout the countryside. The FARC had thus managed to recruit and train more fighters, beginning to use them in concentrated attacks. This led to a series of high profile and successful attacks against Colombian state bases and patrols, but none more successful than in March 1988 when more than 700 FARC fighters ambushed the 52nd counter-guerilla battalion of the Colombian Army's 3rd Mobile Brigade, stationed at El Billar. The battalion had entered the town of Peñas Coloradas with the objective of damaging the FARC's infrastructure in the region. Nevertheless due to the FARC's influence and connections among the local population, the FARC were able to confront the battalion attacking it and causing heavy casualties and effectively eliminating it as an effective fighting force. Out of the 154 in the battalion 62 were killed and 43 were taken prisoner.

1999: Apartment bombings in Moscow Russia by Chechen Terrorists (301)

A bomb exploded in an apartment building in Moscow, Russia, killing 130 and injuring 150. Explosive had been placed in a rented room in the building. The explosion was one of four similar attacks on apartment bombings in a period of 12 days: the others killed an additional 62, 92 and 17 bringing a total of 301 fatalities for the four attacks. The Russian prime minister attributed the attack to Chechen Terrorists.

2000: Rizal Day bombings in Philippines on the Metro Manila by Jemaah Islamiyah(22)

The Rizal Day bombings were a series of attacks that took place in quick succession around Metro Manilla in the Philippines. 22 fatalities were recorded as a result of the bombings, and around a hundred suffered injuries. Despite almost three years of unyielding investigations,

by the close of 2003 responsibility for the attacks could be rested squarely with the Jemaah Islamiyah.

2000: USS Cole bombing, Yemen, Aden by Al-Qaeda in the Arabian Peninsula (19)

Al-Qaeda had planned to attack a US naval ship, the USS The Sullivans on January 3, 2000, by loading explosives on a small boat and then driving it into the Warship. This attempt failed due to too much weight being put on the small boat, but the setback with the USS The Sullivans, for Al-Qaeda turned to success shortly after when this technique was perfected in October 2000 with the USS Cole bombing, in Aden Yemen, killing 19. The costs to the terrorists to carry out this attack have been estimated at US\$10,000.

The attack was attributed to Al-Qaeda/Al-Qaeda in the Arabian Peninsula and foreshadowed the attack on the US less than one year later on September 11, 2001. Still whilst there was evidence, the US government had only formed a "preliminary judgment" that Al-Qaeda was responsible, with the caveat that no evidence had yet been found that bin Laden himself ordered the attack. Either because of these findings or as was stated by National Security Adviser later to the 9/11 Commission Condoleezza Rice, the decision not to respond militarily to the Cole bombing was President Bush's. She said he "made clear to us that he did not want to respond to Al-Qaeda one attack at a time. He told me he was 'tired of swatting flies.' The administration instead began work on a new strategy to eliminate Al-Qaeda, a strategy that would not have any material effect until the events of September 11, 2001.

2000/2004: Second Intifada Killings by Palestinian Terrorists in Israel (622)

The Second Intifada constituted the second Palestinian uprising and witnessed a prolonged period of intensified Palestinian-Israeli violence. This began in late September 2000 and ended around end of 2004, with multiple bombings occurring every year.

The year 2000 saw 5 bombings carried out by Hamas and the Palestinian Islamic Jihad, claiming 6 lives. 2001 witnessed 40 bomb attacks by Hamas, the Palestinian Islamic Jihad, and the Popular Front for the Liberation of Palestine. These attacks resulted in 85 deaths. 2002 saw 47 bombings perpetrated by Hamas, the Palestinian Islamic Jihad, the Popular Front for the Liberation of Palestine, Fatah and Al-Aqsa Martyrs' Brigades, which in total caused 246 deaths. 2003 experienced 23 bombings by these organisations, killing 124 people, and 2004 saw 18 bombings resulting in 98 deaths. The three most significant attacks in terms of lives lost came in 2002 with the Passover Massacre carried out by Hamas and Palestinian Islamic Jihad claiming 30 lives, 2003 with the Tel-Aviv central bus station massacre claiming 23 lives, and the Schmuel HaNavi bus bombing also claiming 23 lives in 2003.

Special Focus 1 2001: Attacks on America (9/11) by Al-Qaeda (2,997)

Four jetliners on domestic flights from north-eastern US airports were hijacked and crashed, three into buildings. Four or five hijackers aboard each aircraft used utility knives to subdue the crew, with a hijacker with flight training taking control of each aircraft. American Flight 11 was flown into

floors 94 to 99 of the World Trade Centre's north tower in New York City. United Flight 175 was flown into floors 78 to 84 of the Centre's south tower. Both crashes resulted in fires which eventually weakened the towers' structural steel, causing the complete collapse of the south and north towers. Most people not trapped by the fires had been evacuated from the towers at that point; however, hundreds of police officers and firefighters were in the towers. The World Trade Centre collapse caused fires and/or collapses of several nearby buildings, particularly World Trade Centre 7. AM American Flight 77 was flown into the Pentagon in Alexandria, Virginia, causing a fire and partial collapse of a limited section killing 125 Pentagon personnel, and injuring 200, and killing all 64 aboard the aircraft, including 5 terrorists. Passengers on the fourth jetliner, United Flight 93, learned of these events via cellular phones and attacked the hijackers; this aircraft crashed into a field in Somerset county, south central Pennsylvania, killing all 45 aboard (including 4 terrorists). The hijackers of this plane are believed to have intended to strike a site in Washington, DC, most likely the Capitol Building.

Fatalities due to the Trade Centre strikes remain uncertain at 2,759 dead; another 43 missing could not be conclusively linked to the World Trade Centre site. These figures include 343 firefighters, 60 police officers, 158 aboard the two aircraft, and 2,235 workers and visitors at the Trade Centre. Fatalities aboard the aircraft include 88 passengers and crew on American Flight 11, 60 passengers and crew on United Flight 175, and 5 terrorists on each plane. Total fatalities at the Trade Centre site include several hundred citizens of foreign countries: 27 were foreign residents (11 of the UK); 568 were born abroad. Foreigners included individuals from the UK, India, Columbia, Pakistan, Israel, and Puerto Rico. Another 8,700 were injured, of whom 6,391 received treatment. The attacks were conducted by Al-Qaeda with the operation overseen by Osama bin Laden and

the mastermind was Khalid Sheikh Mohammed. Total Fatalities believed to be 2,997.

It is believed that planning for these attacks had started as early as 1996 and that the focus of Al-Qaeda activity had been turned towards the US partly as a result of their support for Israel and partly as a result of AQ's fundamentalist religious beliefs. Those who would finally be involved in the plot as hijackers were subject to a rigorous selection process and only those who provided with details of the plot and financial support which is believed to have been made available by bin Laden. The hijackers then arrived in the US at different times during 1999 and 2000 and were split into two main groups, the first would receive technical flight training and the others would be used as physical support to help ensure entry was gained to the cockpit and that the passengers remained under their control.

Several of them then took flight training in California with one of their trainers subsequently noting that it seemed unusual that one of them had seemed somewhat disinterested in take-off and landing procedures but, as with many people who had contact with the hijackers during the planning phase, did not consider this to be worth reporting to the authorities. During this time, there was little that would have made the bank accounts used by the hijackers stand out from the huge numbers of other retail accounts and products being used by millions of others in the US.

Immediately after the attack the hijackers in an attempt both to identify others who may have been involved in the planning phase without perishing in the operation and also the source of the funding that would have been required.

US law enforcement quickly identified the hijackers and sent requests around the world to seek cooperation from other jurisdictions in an attempt to gather information as quickly as possible. Governments in these jurisdictions then sent requests to their financial institutions and banking records were quickly searched with many potential matches being forwarded to the US. That such action was coordinated so quickly was not just an indication of the extent and impact of the incident but also a demonstration of the financial community desire to do all it could to help to ensure that those responsible were quickly identified.

The 9/11 plot cost Al-Qaeda approx US\$400,000: US\$500,000 of which approx US\$300,000 was deposited into US Bank accounts for the benefit of the 19 hijackers. AQ funded the Hijackers in the US by three primary and unexceptional means i) wire transfers from overseas to the US, ii) the provision of physical

cash including directly from KSM as the hijackers transited Pakistan before coming to the US and cash deliveries and travellers cheques into the US and iii) the accessing of funds held in foreign financial institutions by debit or credit cards. Once in the US all the hijackers used the US banking system to store their funds and to facilitate their transactions. Whilst in the US the hijackers spent money primarily on flight training, travel, and living expenses (such as housing food cars and auto insurance). The hijackers returned approx 26,000 to a facilitator in the UAE in the days prior to the attacks.

The existing mechanisms to prevent abuse of the financial system did not fail. They were never designed to detect or disrupt transactions of the type that financed 9/11. The plot monies were provided solely by AQ. There was no evidence of and US domestic funding nor foreign government involvement or assistance. No evidence has come to light that any person with advance knowledge of the 9/11 attacks profited from them through securities transactions.

The 9/11 attacks brought Financial Institutions directly into the spotlight with governments expecting much more from financial Institutions to aid the fight against terrorism. Governments needed to cut off financing and follow money trails and so they needed financial institutions to step up and provide unprecedented support. Existing vulnerabilities in the international financial system which had been largely tolerated were targeted and as such the attacks also proved a turning point in the fight against money laundering.

The US quickly passed legislation implementing know your customer standards that only months before congress had roundly condemned. The International standard setters at FATF agreed 8 special recommendations to combat the war on terror (financing: CTF) and later added a 9th. Existing ML regulations were therefore strengthened and expectations dramatically rose. Failure to adapt and to adhere was not an option. FIs money laundering programmes were subjected to increased scrutiny and heretofore low regulatory risks and penalties migrated into increased regulatory penalties, civil and criminal sanctions and most importantly significant reputation damage in a worse case.

International wire transfers made up the majority of the funding for the 9/11 attacks the balance coming from cash couriered into the US and the use of foreign credit and debit cards. The following wire transfer activity took place between June and September 2000. On 29 June 2000, 20 year old Marwan al-Shehhi (designated

pilot and one of the leaders along with Mohammed Atta) received US\$5,000 at a Western Union facility in New York. The remittance was sent from the UAE in Dubai by a man who identified himself as Isam Mansar. Less than a month later, al-Shehhi received a second remittance from Mansar. On 18 July Mansar sent US\$10,000 via another bank transfer from Dubai to al-Shehhi's account at Sun Trust Bank. Three weeks later, on 29 August 2000, Ali Abdul Aziz Ali transferred US\$20,000 to the account owned jointly by Al-Shehhi and Mohammad Atta, using a phone number which differed from the phone number used by Mansar in previous transactions by only one digit. On 17 September 2000, Hani Fawaz Trading transferred US\$70,000 to the Sun Trust account, using the same Dubai exchange centre and the same telephone number as Aziz Ali. In less than one month US\$100,000 was transferred via the Dubai exchange centre to the same recipient from 3 separate transferors with almost identical telephone numbers. The Sun Trust Bank of Florida received, over a period of 3 months, a total of US\$109,400 in the Al -Shahhi/Atta account.

In retrospect, and with the considerable benefit of hindsight, there may have been transactions and activity that might have aroused concern but largely these assessments are based on the fact that a number of the hijackers may have had similar deposit and withdrawal pattern of activity but ignores the fact that similar patterns were almost certainly present in thousands of other retail accounts. Soon after the incident, much was made of the fact that a number of the hijackers had entered a banking hall together and, according to some reports, seemed unwilling to approach a female cashier but once again, even if true, it is something that is probably replicated many times each day and may also be behaviour that can only be identified as having been unusual and potentially suspicious in retrospect.

There are considerable amounts of information available about how the attacks were planned and carried out. Still this is really only of limited value. Whilst attempts have been made it has not been possible to establish a pattern in the financial activities of the hijackers that could be regarded as a useful typology for the future and also, from historical evidence, it seems that terrorist very rarely follow the same pattern as previous attacks – a logical reaction to the inevitable security enhancements that follow such an incident. Their ability to keep changing how they do things is aided both by the fact that there are many vulnerable targets and secondly that the sums of money required to commit such an attack are relatively small (certainly small when compared to the overall value of transactions flowing around the globe).

2001: Attack on a train in Angola by UNITA (152)
The Angolan Civil War had been raging since 1975 and was a legacy of the cold war, with the National Union for the Total Independence of Angola (UNITA) rebels still fighting the government. UNITA forces derailed a train travelling between towns of Zenza and Dondo about 150kms (93 mi) south-east of the capital, Luanda. After its derailment, rebels attacked the passengers with gunfire, killing around at least 152 of the 500 who were on the train.

2002: Bali Bombings in Indonesia by Jemaah Islamiyah (202)

A suicide bomber and a car bomb detonated outside popular nightclubs in Bali, Indonesia, with another bomb being detonated close to the US Consulate. The bombs killed 202 people including 88 Australian tourists. Three members of the violent Islamic group, Jemaah Islamiyah, were convicted and sentenced to death for the attack. The costs to the terrorists to carry out this attack have been estimated at US\$50,000.

2002: Theatre Hostage Crisis, Moscow, Russia by Chechen Terrorists (168)

Armed Chechen Terrorists Raided a Moscow theatre taking 850 hostages, demanding that Russia end the war in Chechnya. After using an unknown chemical, in an attempted rescue, Russian forces killed 39 rebels and 129 hostages.

2003: Red Square bombing in Moscow, Russia by Chechen Terrorists (6)

Carried out by the widow of a Chechen rebel commander this Chechen Terrorist suicide bombing killed 6 and injured 44. The bomber, identified as Khadishat Mangerieva, set off her explosive belt on a busy street. Reported speculation suggests that her intended target may have been the Moscow City Hall or State.

2003: Compound bombings in Riyadh, Saudi Arabia by AQ (35)

Late on 12th of May, several vehicles containing heavily armed men arrived at the three Riyadh compounds where a mixture of Americans, Westerners and non-Saudi Arabs were housed. A combination of shootings and bombings claimed the lives 35 people in total, while more than 160 were wounded. The attack was later claimed by Al-Qaeda.

2003: Bombings at British Bank and Consulate in Istanbul Turkey by AQ affiliate (57)

Four trucks loaded with bombs targeted synagogues, and the Turkish headquarters of HSBC Bank and also the British Consulate. The bombings killed 57 people and injured more than 700. A Turkish group affiliated with Al-Qaeda was prosecuted for planning and executing the attack with Osama bin Laden's approval. The costs to the terrorists to carry out this attack have been estimated at US\$40,000.

2003: Car bombing outside mosque in Najaf, Iraq by AQ Iraq (125)

This attack saw the detonation of two car bombs outside the Shia Imam Ali Mosque in Najaf on 29 August 2003. The explosion killed 83 people, including the religious leader Ayatollah Mohammed Baqir al-Hakim. The attack dealt a severe blow to the Shia community, as a result of both the large human cost in lives, as well as the loss of one of its most prominent leaders in al-Hakim.

According to US and Iraqi officials, Abu Musab al-Zarqawi was responsible for the attack. Al-Zarqawi headed the organisation al-Tawhid wal-Jihad, which later became known as Al-Qaeda in Iraq after al-Zarqawi pledged his allegiance to bin Laden in 2004.

2004: Two suicide bombings of political party offices in Irbil, Iraq by Kurdish Terrorists (109)

This attack comprised two suicide bombings, claiming the lives of 56 people and injuring at least 256 more. The bombs were detonated as hundreds gathered together to celebrate Eid Al-Adha in Irbil. No immediate claim of responsibility was made; however, radical Kurdish group known as Ansar Al-Islam operates in the Kurdish region and has been linked by US officials to Al-Qaeda.

2004: In N Uganda LRA rebels attacked a refugee camp (192)

In February 2004, the Lords Resistance Army attacked a refugee camp home to about 5,000 people killing 192 of them Armed with assault rifles, artillery and rocket-propelled grenades, rebels of the Lord's Resistance Army attacked Barlonyo camp in Uganda's Lira district. The camp was guarded by members of a local defence force, but they were outnumbered and outgunned. Led by Joseph Kony, who claims to have spiritual powers, the Lords Resistance Army have wreaked havoc across northern and north-eastern Uganda, forcing an estimated one million people to flee their homes. The group replenishes its ranks with children it abducts to use as fighters, porters or concubines.

2004: Superferry 14 bombing near Manila, Philippines by Abu Sayyaf (116)

A television set containing an 8-pound (4 kgs) TNT bomb had been placed on board. 90 minutes out of port, the bomb exploded. 63 people were killed immediately and 53 were missing and presumed dead. Despite claims from various terrorist groups, the blast was initially thought to have been an accident, caused by a gas explosion. However, after divers righted the ferry five months after it sank, they found evidence of a bomb blast. Abu Sayyaf admitted responsibility for the said incident killing 116. This act of terrorism was regarded as the world's deadliest terrorist attack at sea to date.

Special Focus 2

2004: Train Bombings in Madrid, Spain (3/11) by Al-Qaeda inspired (191)

In Madrid, Spain on 11 March 2004 ten explosions, packed into 13 rucksacks and detonated by cell phones, occurred on four commuter trains at the height of rush hour killing 191 civilians and injuring over 1,800. Police also carried out a controlled demolition of 3 other explosive devices.

The first group suspected of involvement was the Basque ETA, however investigations later focused on the Islamic extremist Moroccan Islamic Combatant Group (GICM), and links to Al-Qaeda. It was the deadliest attack on European civilians since the Lockerbie bombing of 1988 and in Spain it was the worst terrorist attack in its history.

The bombings targeted one of Spain's busiest arterial suburban commuter rail lines, which lies south east of downtown Madrid. These commuter lines carry an estimated 250,000 people out of the one million passengers the entire Spanish national rail network (RENFE) carries per day during the week.

The leaders of the group Fakhet and Ahmidan together planned and implemented the Madrid attacks, without any direct command and control from Al-Qaeda leadership. The group were largely common thieves and blue-collar workers, young, legal or illegal aliens mainly from Morocco (and to a lesser degree Algeria). Still this does not mean that the group operated in a vacuum or without reference to Al-Qaeda.

Even though the Madrid bombings were local in origin and had a local target, the bombers almost certainly saw themselves as part of the broader global jihad movement. Although there were no formal command and control links to Al-Qaeda, the network that carried out the bombings was plugged into the global jihad and took at least some of its impetus, inspiration, and legitimacy from that connection. Together The train bombings required neither external guidance, nor external resources. The finances for the Madrid bombings were self-generated. The 3/11 plot was followed on 2 April by an unsuccessful attempt to bomb the Madrid-Seville high-speed train. On 3 April 2004 as Spain's special forces closed in, having traced them through cell phone traffic, seven of the bombers including Fakhet blew

themselves up in an apartment in the Madrid suburb of Leganes. Had they survived it is suspected that they were likely to stage future suicide attacks in the months after the Madrid bombings.

The driving force behind the plot hatched in July 2003 and the carrying out of the bombings on 11 March 2004 was the relationship between Fakhet the Tunisian angry muslim radical and a Moroccan drug trafficker named Jamal Ahmidan. This relationship was decisive in turning Fakhet's anger into action and in allowing what had been a group of vocal radicals to develop the capacity to carry out a well orchestrated and highly lethal terrorist attack.

Serhane ben Abdelmajid Fakhet, a 35 year old who had come to Spain in 1994 to study economics at the University of Madrid had been a successful real estate salesman before undergoing some kind of personal crisis and subsequent radicalization. As part of this process – and probably both contributing to it and resulting from it: Fakhet developed close relationships with other extremists and became linked into those espousing global jihad. For example his brother in law had been arrested as part of a Spanish Al-Qaeda cell along with others after 9/11 and later bombings in Casablanca in 2003. Fakhet to an extent filled a vacuum left following arrests in Spain of Al-Qaeda suspects and his anger increased with Spain's strong support of the US and its involvement in Afghanistan and in particular the war in Iraq. Fakhet was deeply affected by the war in Iraq and started trying to persuade people to go there to wage jihad. He also sought Moroccan militants to assist with an attack in Spain, and having been rebuffed he was encouraged instead to recruit locally.

In this instance, it is believed that the offenders raised money by committing plastic card fraud and possible involvement in drug trafficking both of which generate or involve significant amounts of cash a fact which further removed the offenders need for or dependence on the banking system. The subsequent police investigation revealed that the terrorists had been planning the 3/11 attacks since August 2003. The terrorists had conducted surveillance on additional targets; had rented a safe house in Grenada (a city of tremendous symbolism for the jihadists), and had €1.5m cash-in-hand.

On the domestic counterterrorism front, Spain now realises it must confront the threat of Islamist militancy. A Spanish national defence directive puts terrorism as the number one threat to Spain's national security. The Spanish intelligence apparatus has re-oriented to focus increasingly on Islamic militancy, as well as the more traditional threat from ETA. The security services are placing agents in Muslim communities and the new socialist Government has instituted an outreach programme to improve links with Muslim communities in Spain.

The EU agreed to appoint a European security co-

ordinator and agreed in principle to a 'clearing house' arrangement for the exchange of information between Europol, Eurojust and EU member states' intelligence services. In 2003, Fakhet to an extent filled a vacuum left following arrests in Spain of Al-Qaeda suspects and his anger increased with Spain's strong support of the US and its involvement in Afghanistan and in particular the war in Iraq. Fakhet was deeply affected by the war in Iraq and started trying to persuade people to go there to wage jihad. He also sought Moroccan militants to assist with an attack in Spain, and having been rebuffed he was encouraged instead to recruit locally.

Ahmidan has often been described as the military planner for the Madrid bombings. This does not do justice to his role. He was the single most important individual in the execution of the Madrid attacks and without him the bombings would not have taken place. Ahmidan was the successful leader of a small, but effective drug trafficking group, which smuggled hashish from Morocco and ecstasy from Holland to Spain. He had a reputation for violence and a flashy life style. Although he, along with other members of his drug trafficking group, had grown up in Tetuan (a Moroccan town known for its extremists) as a young man, Ahmidan was not particularly religious. Even after migrating illegally to Spain, he was far more interested in his criminal business than political and religious extremism.

This changed, in part, as a result of his experience in prison in Spain and then in Morocco. One witness described Ahmidan as "very radical" and observed that it "was in the jail in Morocco, where he made contacts, where he was transformed. Now, he came to Spain to roll." He arrived back in July 2003, and by September he wanted to move his son from Catholic School to the Madrasah at Madrid's M-30 mosque. He also began to spend more and more time on the Internet looking at jihad sites.

Fakhet also had a profound impact on Ahmidan, crystallizing the process of radicalization already underway. Indeed, the relationship between Fakhet and Ahmidan is critical to the Madrid bombings.

The interactions between Fakhet and Ahmidan created an outcome that neither one would have achieved without the other. Fakhet brought to the relationship an infectious zealotry and a commitment to violence that would have probably come to nothing without Ahmidan's capacity to organise and implement. Without Ahmidan, Fakhet would probably have remained a "wannabe" terrorist, full of anger and resentment, but lacking the ability to turn his aspirations into

reality. And without Fakhet, Ahmidan would probably have continued to channel his drive, energy and organisational skills into his drug business rather than the "trains of death" project.

As it was, Ahmidan had assets which were indispensable in moving from concept to reality. The first was his charisma and leadership which brought along the other members of his drug trafficking organisation. A second was his contacts, some obtained from prison, which enabled him to obtain access to the dynamite that was used in the train bombings. The third was an ability to operate under the radar of law enforcement which led, for example, to the use of the safe house. Ahmidan also brought logistical expertise and provided "money, weapons, phones, cars, safe houses and other infrastructure".

Finally, and perhaps most important, Ahmidan acted as the financier of the attacks, using money, a stolen car, money from stolen cell-phone cards fraud and hashish to pay for the explosives, and covering the rentals for both the safe house and the apartment in Leganes as well as the cell phones used to detonate the bombs. In effect, the Madrid network was self-sufficient only because of Ahmidan and the use of proceeds from drug trafficking. The overall estimated cost came to US\$10,000, which did not include any outside funding.

The Madrid bombings have been directly accredited with changing the political landscape of Spain. The bombings occurred three days before the Spanish general elections on 14 March 2004. The PP, under the leadership of Prime Minister José María Aznar, was quick to lay the blame for the atrocity at the feet of the ETA.

It continued with this public line of reasoning even when evidence was emerging that Islamist radicals were the prime suspects. The public believed that the government had instituted a deliberate policy of misinformation for the purposes of political expediency.

A large proportion of the Spanish electorate deeply resented the war in Iraq and Spain's support for the US-led Coalition. In pointing the finger at ETA, it was commonly felt that the PP wanted to negate the charge that it had brought the attack on the Spanish people by following the US and UK into Iraq against the will of the majority of the Spanish electorate. This factor seems to have been the catalyst for the vote against the PP.

2004: Khobar massacre, Khobar, Saudi Arabia by AQ affiliate (22)

17 terrorists of the Jerusalem Squadron attacked the Arab Petroleum Investments Corporation building, the Petroleum Centre, and the Oasis Compound (a foreign workers' housing complex) in the city of Khobar, Saudi Arabia. After a 25-hour siege, 41 hostages were freed, 25 were injured and 22 were killed. Among the fatalities were 19 foreigners from nine countries. The nationalities of those killed included eight people from India, three from the Philippines, two from Sri Lanka, one each from Sweden, Italy, UK, US, South Africa and Egypt. 14 of the terrorists were captured or killed, while 3 escaped. The attack is thought to have been religiously motivated, with the kidnappers asking their hostages whether they were Christian or Muslim. Muslim prisoners were consequently freed, while non-Muslims were detained. A previously unheard-of militant group calling itself "The Jerusalem Squadron", a local Saudi Arabia-based faction of Al-Qaeda, claimed responsibility and said it was attacking "Zionists and Crusaders" who are guilty of stealing oil from Saudi Arabia.

2004: Multiple suicide bombings at shrines in Kadhimiya and Karbala, Iraq by Sunni insurgents / AQ in Iraq (188)

The Ashura massacre of 2 March 2004 in Iraq was a series of planned terrorist explosions killing 188 and injuring at least 500 Iraqi Shi'a Muslims who were gathering to commemorate the Day of Ashura. The bombings brought one of the deadliest days in the Iraq occupation after the Iraq War to topple Saddam Hussein and was thought to be carried out by Al-Qaeda in Iraq.

2004: Multiple bombings and armed attacks in several cities in Iraq by Sunni Insurgents / AQ in Iraq (103)

23 May 2005, 3 fatalities and more than 70 injuries followed the detonation of a car bomb outside a restaurant in northern Baghdad around midday. Several other suicide bombings and attacks left at least 10 people dead across the country. One attack saw the Iraqi general Wael al-Rubaie killed by gunmen in the Mansour district of Baghdad. In Baghdad's southern Dora neighbourhood unknown gunmen killed a policeman as he was heading to work at a local court, police said. An attack in the town of Tuz Khormato, about 125 miles north of Baghdad, also caused 5 fatalities and 13 serious injuries when a suicide bomber blew up a truck after driving it into a crowd that was waiting for a council office to open. A further incident in Samara left two Iraqis dead when 3 suicide bombers launched an attack against a US military base. Insurgents escalated attacks following the announcement in late April of a new government, killing more than 500 people in suicide bombings, assassinations and ambushes. The attacks were thought to be carried out by Sunni Insurgents and Al-Qaeda in Iraq.

2004: School Hostage Crisis, Beslan Russia by Chechen Terrorists (334)

Chechen Terrorists stormed the Comintern Street SNO school in Beslan, North Ossetia, Russia on the first day of a new term on 1 September 2004, all heavily armed wearing green camouflage and black balaclava masks with some wearing explosive belts. The attackers took the 1,100 hostages into the school gymnasium. The attackers killed the male teachers and fathers of pupils instantly as they were identified as potential threats with many hostages remaining being the Children. The hostage siege lasted 3 days when Russian security forces stormed the school, leading in all to 334 killed, including 186 children and 783 injured.

2004: Akhmad Kadyrov (President of Chechnya) assassinated by Chechen Terrorists

9 May 2004, Akhmad Abdulkhamidovich Kadyrov fell victim to a bomb blast that hit the VIP section of the Dinamo football stadium during a World War II memorial victory parade. The bomb was planted by Chechen Terrorists continuing their insurgency campaign

2005: Rafik Hariri (Lebanese Prime Minister) assassinated by Hezbollah

In February, 2005, former Prime Minister of Lebanon was killed by an explosion equivalent to around 1,000 kg of TNT (2,200 pounds) hit his motorcade near to the St George Hotel in Beirut. The attack is widely believed to have been undertaken by Hezbollah and claimed 21 other lives besides that of Hariri.

2005: Amman bombing in Amman, Jordan by AQ affiliate (60)

The Amman bombings were a series of coordinated bomb attacks centred on three hotels in the city: The Grand Hyatt Hotel, The Radisson SAS Hotel, and the Days Inn. In total the attacks caused 60 fatalities and 115 injuries. The hotels were selected due to the high number of foreign diplomats, military contractors, journalists and business people that frequented them. The attacks were carried out by Al-Qaeda affiliated terrorists.

2005: New Dehli Bombings, India by Pakistan Kashmiri Separatists (62)

During the Hindu festival of Duvali, three bombs went off in New Dehli, India, killing 62 and wounding 210. The bombs were placed in a car, a motorcycle and on a bus. Indian officials believe the bombs came from Pakistan Kashmiri separatists.

2005: Car bombing outside medical clinic in Hilla, Iraq by AQ in Iraq (125)

In February, 2005, a car bomb detonated outside the Popular Clinic in Hilla claimed the lives of 125 people. The majority of those queuing outside the clinic were waiting for medical tests required to work in Iraq's health and education ministries, and its security forces. Al-Qaeda in Iraq claimed responsibility.

Special Focus 3

2005: London Trains & Bus Bombings, UK (7/7) by Al-Qaeda Inspired (52)

On 2 June 2005 the UK Intelligence authorities lowered the UK national alert state from "severe general" to "substantial" with the words "at present there is not a group with both the current intent and the capability to attack the UK"

Nevertheless, on Thursday 7 July four explosions took place in London within a very short space of time. Three had occurred on London Underground trains whilst the rush hour was just ending and the fourth tore the top of a double decker bus a few minutes later. The City of London ground to a halt as emergency services rushed to the scene. 56 people, including the four bombers, died with over 700 injured. The attacks, motivated by Al-Qaeda, were nevertheless carried out by four young British born men 3 with Pakistani and 1 with Jamaican and all with Islamic heritage none of whom had previously been involved in significant criminal activity or were actively known to intelligence agencies as likely terrorists.

The leader Mohammad Sidique Khan had been on the fringes of activity being monitored by the UK security services, but he had not been tracked or under surveillance at the time of and before the attacks. The men had been radicalised in the years after 9-11 claiming western involvement in Afghanistan and Iraq provided a basis for their actions. Each of the four terrorists had made trips to Pakistan – and it is believed also into Afghanistan. In the weeks leading up to the attack they had been constructing the bombs in a flat and people close to them had noted that they wondered whether they had been dying their hair as it had started to change colour. In reality, this was the effect of the chemicals being used to construct the explosive devices.

On the morning of 7 July they used a rental car to drive to Luton station and then boarded a train before separating and getting on different underground trains where three were subsequently successful in blowing

themselves up together with other passengers on the train. It is believed that the fourth member failed to detonate his bomb and so exited the tube where he is thought to have purchased a battery and tried to phone his associates but having got no response was able to tell that they had carried out their intentions. He then boarded a bus and exploded his bomb ripping off the top deck. Police almost immediately identified three of the offenders and a search of the flat revealed so much incriminating evidence that it was clear that the four had no intention of returning. According to then Chancellor Gordon Brown "enquiries following the attacks of 7 July have demonstrated the crucial role of terrorist finance investigation and high quality reporting by financial institutions pointed to strong private sector engagement with the UK counter terrorism effort."

Immediately after the explosions a massive police and intelligence effort was launched to identify those responsible and to prevent further attacks. In the first hours after the bombings a financial investigation exercise commenced and after contact had been made with financial institutions, personal items, cash and memberships cards, a credit card and a driving license were found in the names of those suspected as the bombers at the incident sites. From this information the names of the possible bombers were provided to Financial Institutions who then searched their client databases and provided authorities quickly with information to allow the investigators to establish a comprehensive financial footprint for each of the bombers. Every line in bank statements were analysed, links were quickly identified.

The leader of the group MSK had a reasonable credit rating, multiple bank accounts (each with a small sum deposited for protracted periods), multiple credit cards, including from HSBC (with £4,000 being withdrawn in Cash). MSK had taken a loan of £10,000 from Barclays Bank but had recently defaulted on repayments and was overdrawn on his accounts. He did though have two periods of intense activity in October 2004 and before the attacks. The cost of the bombings were largely self financed by MSK. The total cost for the bombings amounted to under £10,000. This was made up of £4,600 for construction and deployment of devices, with the actual bomb making materials amounting to £2,500, international travel £1,800 and weekends away for training £825. This operation required very little finance, was self funded from legitimate means, and was not capable of identification by financial institutions prior to the bombings. The loan was raised in the normal course and the hire car was arranged using a credit card for which the bill had not been issued prior to the explosions. Nevertheless the contribution

from the financial sector, the speed of response and the importance and accuracy of the information provided was a critical component in the post bombing investigation and led to further investigations and prosecutions beyond those directly involved. For example a financial institution provided information about an expenditure charged to a credit card in an outdoor clothing store which included a rucksack – and the investigators rang the store to establish whether or not CCTV footage existed. The store member didn't recall that transactions but did remember that he had sold almost the same items to another person and was able to trace the receipt through which process the police finally identified the fourth and final bomber.

The fact that the levels of finance were so low coupled with the fact that the offenders lifestyle did not change until very close to the event meant that no significant profiles in their financial accounts was likely to be detected. It has been debated whether in the case of domestic Islamic terrorism, a financial profile could be compiled which includes personal details similar to those of the bombers (for example age, islamic connections, foreign long stay travel to pakistan and or afghanistan.) A financial Institution may identify such long stay travel by use of credit or debit cards, for example regular use in the UK may be superseded by sporadic use in Pakistan over an extended period.

2005: Sharm el-Sheikh Resort Attacks, Egypt by Al-Qaeda affiliate (88)

Abdullah Azzam Brigades, an Al-Qaeda affiliate, attacked the Egyptian resort town of Sharm el-Sheikh setting off a series of explosions that killed 88 and injured over 200. A car bomb, a suitcase bomb and a truck bomb all detonated in the downtown area of Sharm el-Sheikh as well as a popular tourist hotel. Abdullah Azzam Brigades, a group tied to Al-Qaeda, took credit for the attack and cited the war in Iraq as their motivation.

2005: Multiple suicide bombings and shooting attacks in Baghdad, Iraq by AQ in Iraq (182)

On 15 September, Iraqi insurgents killed 182 and injured more than 500 by exploding at least 12 co-ordinate suicide attacks. The attacks appeared to be retaliation for the siege by government forces of the insurgent stronghold of Tal Afar and included a bombing in a Shi'ite neighborhood of Baghdad that used a new tactic: luring scores of day labourers to a minivan with promises of work, and then blowing it up. At least 112 died in that blast alone, the second highest death toll from any single terrorist bombing in Iraq since the invasion. The attacks coincided with the opening of the UN General Assembly in New York, attended by top Iraqi leaders and President Bush, who pressed for a resolution calling on all nations to take action against the incitement of terrorism. The explosions struck Shi'ite civilians,

Iraqi security forces and American troops, the favored targets of Iraq's Sunni Arab insurgency. The worst attack singled out workers in a Shi'ite neighborhood, Kadhimiyah, with an explosion that tore through a crowded intersection, leaving the facades of nearby shops shattered and puddles of blood on the streets. Hours after the first attack, Al-Qaeda in Iraq issued a statement claiming responsibility.

2006: Central Mindanao bombings in Philippines by the Moro Islamic Liberation Front (MILF) (8)

The Central Mindanao bombings constitute a series of three bombings and one failed bombing in Central Mindanao on October 10 and 11. Eight people were killed and 30-46 were injured. The Moro Islamic Liberation Front (MILF) were blamed whilst others suggest the Abu Sayyaf or Jemaah Islamiyah (JI) was behind the attacks, as the arrest of Istiada Binti Oemar Sovie, the wife of JI leader Dulmatin, in Sulu may have prompted the attacks. Dulmatin himself is reportedly hiding on Jolo Island.

2006: Bombings in Karbala, Ramadi, and Baghdad, Iraq by sectarian militants by AQ in Iraq (124)

Al-Qaeda in Iraq suicide bombers targeted Karbala shrine and a police recruiting station in Ramadi, killing 110 people. The attacks were intended to destabilize the political process, which was at the time working towards the formation of a common coalition government between Shia, Sunni and Kurdish parties.

2006: Multiple bombings on commuter trains in Mumbai, India By Lashkar-e-Tayyiba & Students Islamic Movement of India (SIMI)(200)

A series of seven bomb blasts took place over a period of 11 minutes on the Suburban Railway in Mumbai, the capital of the Indian state of Maharashtra and the nation's financial capital. The bombs were set off in pressure cookers on trains plying the Western line of the Suburban Railway network. Each pressure cooker contained a 2.5 kg mixture of RDX and ammonium nitrate. 209 people were killed and over 700 were injured. Mumbai Police reported that the bombings were carried out by Lashkar-e-Tayyiba and Students Islamic Movement of India (SIMI).

2006: Truck bombing of military convoy near Habarana, Sri Lanka by Tamil Tigers (103)

Also known as the Habarana massacre, the attack was a suicide truck bombing executed by the Tamil Tigers. The attack targeted a convoy of 15 military buses carrying more than 200 sailors from Trincomalee. The bombing resulted in 92-103 fatalities and wounded more than 150 people. Also caught up in the attack were a number of civilians, some of whom lost their lives.

2006: Sadr City bombings in Baghdad, Iraq, by Sunni Insurgents/AQ in Iraq (215)

In November, Suni Insurgents Al-Qaeda in Iraq placed

6 car bombs and used two mortar rounds in the attack on the Shia slum in Sadr City, killing at least 215 and injuring more than 250 people, making it at that time the second deadliest sectarian attack since the beginning of the Iraq Civil War in 2003.

2007: Multiple bombings in Baghdad area, Iraq by Sunni Insurgents/AQ in Iraq (101)

18 April, 2007: Around 140 people were killed in a car bombing in a food market in Sadr City district. The suicide attack, by Sunni Insurgents/AQ in Iraq taking place at 1600 (1200 GMT), killed at least 135 people and injured 339 others. About an hour before the attack on the market place in the Sadr City district a suicide car bomb attack on a police checkpoint in Sadr City also killed 35 people. A car bomb near a private hospital in the Karrada district claimed the lives of 11 more victims, and a minibus bomb in the Al-Shurja took a further 11 lives.

2007: Truck bombing in market place in Baghdad, Iraq by Sunni Insurgents/AQ in Iraq (137)

3 February, 2007: The detonation of a large truck bomb in a busy market in the Iraqi capital of Baghdad killed 137 people and injured 339 others. The bomb, estimated to be about one ton in weight, brought down at least 10 buildings and coffee shops and obliterated market stalls in a largely Shi'ite enclave less than a half mile from the Tigris River. The bombing was carried out by Sunni Insurgents/AQ in Iraq.

2007: Two bombings and other attacks on pilgrims, Hillah, Iraq by Sunni Insurgents/AQ in Iraq (115)

The 2007 Al Hillah bombings killed 115 people, mostly Shia Muslims on a pilgrimage, on 6 March 2007 in Al Hillah, Iraq. The bombing was carried out by Sunni Insurgents/AQ in Iraq.

2007: Two truck bombings in Tal Afar, Iraq by Sunni Insurgents/AQ in Iraq (152)

The 2007 Tal Afar bombings took place on March 27, 2007, when two truck bombs targeted Shia areas of the town of Tal Afar, Iraq, killing 152 and wounding 347 people. The bombing was carried out by Sunni Insurgents/AQ in Iraq.

2007: Bombings in Baghdad, Iraq by Sunni Insurgents/AQ in Iraq (193)

The 18 April 2007 Baghdad bombings were a series of attacks that occurred when five car bombs exploded across the capital, on 18 April 2007. The explosions killed nearly 200 people and targeted mainly Shia locations and civilians. The Sadr City market had already been struck by a large truck bombing on 3 February 2007 and was in the process of being rebuilt when the attack took place. The bombings were reminiscent of the level of violence before Operation Law and Order was implemented to secure the Iraqi capital in February 2007. The attacks came as Iraqi Prime Minister Nouri al-Maliki asserted that Iraqi forces would assume control of the

country's security by the end of the year. The attacks also coincided with the arrival of officials from more than 60 countries in Geneva to attend a UN conference on the plight of Iraqi refugees. The bombing was carried out by Sunni Insurgents/AQ in Iraq.

2007: Hostage taking by Sunni radicals and subsequent storming of mosque in Islamabad, Pakistan (102)

Sunni radicals and followers of the radical cleric Maulana Abdul Aziz held four policemen hostage in Islamabad's Red Mosque. The kidnappers sought the imposition of Sharia law and openly called for the overthrow of the Pakistani government. The complex was besieged from 3 July to 11 July 2007, while negotiations were attempted between the militants and the State. Once negotiations failed, the complex was stormed and captured. The conflict resulted in 154 deaths, and 50 militants were captured. A further consequence of the assault was the nullification of a 10-month-old peace agreement between the Pakistan Government and pro-Taliban rebels along the Afghanistan border. This event triggered the Third Waziristan War, which marked another surge in militancy and violence in Pakistan and has resulted in more than 3,000 casualties.

2007: Multiple truck bombings in Al-Qataniyah and Al-Adnaniyah, Iraq by Sunni Insurgents / AQ in Iraq (796)

The worst of all the attacks in Iraq caused a death toll close to 796 people injuring 1,562. Four coordinated suicide truck bomb attacks detonated in the Iraqi towns of Qahtaniya and Jazeera (Siba Sheikh Khidir), near Mosul. The bombings were targeted at Yazidi, a Kurdish religious minority in Iraq and were carried out by Sunni Insurgents/AQ in Iraq.

2007: Truck bombing in Armili, Iraq by Sunni Insurgents / AQ in Iraq (105)

A truck carrying 2 tons of explosives detonated in a northern Iraqi busy outdoor market in the village of Armili which is populated largely by Shi'ite Turkmen and Kurds, killing at least 105 and wounding another 250. The truck was disguised as a military vehicle. This attack followed a string of recent bombings that killed almost 50 Iraqis and 10 American soldiers in the previous days. The bombings were carried out by Sunni Insurgents/AQ in Iraq.

2007: Bombing of motorcade in Karachi, Pakistan in an attempted assassination of Benazir Bhutto by Pakistan Taliban (137)

The assassination attempt failed when a bomb exploded targeting the motorcade of the former Prime Minister Benazir Bhutto, killing many including 50 of her security guards but leaving Bhutto uninjured. As the convoy slowly approached a bridge in Karachi, a militant Islamic terrorist from the Pakistan Taliban first threw a grenade near the convoy, then he approached Bhutto's vehicle detonating explosives. This larger

explosion occurred a few meters from Bhutto's vehicle, setting a police escort van on fire, and breaking windows in Bhutto's truck. Two police vehicles were destroyed. The bombing occurred two months before she was assassinated. The bombing resulted in at least 139 deaths and 450 injuries. Most of the dead were members of the Pakistan Peoples Party.

2007: Assassination of Benazir Bhutto in Pakistan and others by Pakistan Taliban (24)

Benazir Bhutto, former Pakistani prime minister, was killed in a bombing at a campaign rally in Rawalpindi, Pakistan by a suicide bomber and a Pakistan Taliban leader with close ties to Al-Qaeda cited as the assassin.

2007: Algiers, Algeria bombings by AQ affiliate (33)

Al-Qaeda Organisation in the Islamic Maghreb claimed to have been responsible for bombings within a short time of each other, one at the prime ministers office and the other at a police station. The blasts killed 33 people. It was the first time a bombing had occurred in the capital in more than a decade.

2007: Algiers, Algeria bombings by AQ affiliate (60)

As many as 60 people were killed in two suicide attacks near UN offices and government buildings in Algiers, Algeria. The bombings occurred within minutes of each other. Al-Qaeda in the Islamic Maghreb, formerly called the Salafist Group for Preaching, claimed responsibility.

2008: Bombing at dog fighting festival in Kandahar, Afghanistan by the Taliban (105)

In 2008, at least 65 people lost their lives when a bomb exploded at a dog fighting festival in Kandahar. The primary target of the attack was reported to be Abdul Hakim Jan, an anti-Taliban militia leader and former police chief prior to the Taliban assumption of power. Abdul Hakim Jan died in the blast carried out by the Taliban.

2008: Mumbai Attacks, India by Lashkar-e-Tayyiba 26/11 (164)

The 2008 Mumbai attacks were twelve coordinated shooting and bombing attacks across Mumbai, India's largest city by members of Lashkar-e-Tayyiba, the Pakistan-based terrorist organisation. The attackers allegedly received reconnaissance assistance before the attacks. Ajmal Kasab, the only attacker who was captured alive, later confessed upon interrogation that the attacks were conducted with the support of Pakistan's Intelligence service (ISI). The attacks, began on Wednesday, 26 November and lasted until Saturday, 29 November 2008, killing 164 people and wounding at least 308. Eight of the attacks occurred in South Mumbai: at Chhatrapati Shivaji Terminus, the Oberoi Trident, the Taj Mahal Palace & Tower, Leopold Cafe, Cama Hospital (a women and children's hospital), the Nariman House Jewish community centre, the Metro Cinema, and a lane behind the Times of India building and St Xavier's College. There was also an explosion in

Mumbai's port area, and in a taxi. By the early morning of 28 November, all sites except for the Taj hotel had been secured by Mumbai Police and security forces. On 29 November, India's National Security Guards (NSG) conducted Operation Black Tornado to flush out the remaining attackers; it resulted in the deaths of the last remaining attackers at the Taj hotel and ending all fighting in the attacks.

2008: American Embassy attack in Sana'a Yemen by Islamic Jihad of Yemen (AQ affiliate) (19)

An attack on the American Embassy in Yemen resulted in 19 deaths and 16 injuries. The attack was the second in 2008, with a mortar attack in March narrowly missing the embassy and hitting a nearby girls' school. The Islamic Jihad of Yemen, an Al-Qaeda affiliate, claimed responsibility for the attacks. The group also threatened future attacks against other foreign embassies, including those of Saudi Arabia, the United Arab Emirates and the UK.

2008: Christmas Attacks in North DRC and South Sudan by Lords Resistance Army (865)

In late 2008 and early 2009 including attacks on Christmas day itself, the Lords Resistance Army (LRA) brutally killed more than 865 civilians and abducted at least 160 children in mostly Northern DRC, but also South Sudan. The LRA hacked their victims to death with Machetes or axes and crushed their skulls with clubs and heavy sticks. Over a 48 hour period around Christmas day in 3 locations only 160 miles apart, the LRA used the time to attack knowing that more families would be together and so make their attacks all the more devastating. Before shifting it focus to the DRC in 2006 the LRA was largely based in Uganda. The LRA attacked the villagers because some had helped LRA defectors escape.

2009: Uprising In Borno State Nigeria by Boko Haram (780)

In July 2009, police arrested several leaders of Boko Haram on suspicion they were preparing for violence, with intelligence indicating the group was planning to over-run Bauchi city, in Borno state. Protesting the arrests, and probably also trying to free their detained leaders, several hundred members attacked the police station in Bauchi but they were repelled and at least 50 of them killed. For the next four days, the group battled police, reinforced by the army, in Bauchi, Borno, Kano and Yobe states. The worst violence was in Maiduguri, where the group was based. It is estimated by the Red Cross that at least 780 people were killed buried in mass graves. The Police listed 28 of its officers as among those killed.

2009: Multiple bombings at government sites in Baghdad, by Sunni Insurgents and AQ in Iraq (102)

The 19 August 2009 Baghdad bombings were three coordinated car bomb attacks and a number of mortar strikes in the Iraqi capital, Baghdad. The explosives went

off simultaneously across the capital at approximately 10:45 in the morning, killing at least 101 and wounding at least 565. It was therefore the deadliest attack since the 14 August 2007 Yazidi bombings in northern Iraq which killed almost 800 people. The bombings were targeted at both government and privately-owned buildings. Organisational responsibility for the attacks was not established definitively, though the plots mastermind, Munaf Abdul Rahim al-Rawi, was arrested in 2010. Al-Rawi was integrated into the Al-Qaeda in Iraq network, however suggestions of involvement were also leveled at both Syria and Iran.

2009: Two car bombs explode at government buildings in Baghdad, Iraq carried out by Sunni Insurgents and AQ in Iraq (155)

In October a pair of suicide car bombings devastated the heart of Iraq's capital, killing 155 people in the country's deadliest attack in more than two years. The bombs targeted two government buildings killing 35 employees at the Ministry of Justice and at least 25 staff members of the Baghdad Provincial Council, with at least 721 people were wounded. The bombings were carried out by Sunni Insurgents/AQ in Iraq.

2009: Bombing at marketplace in Pakistan by Pakistan Taliban militants (118)

11th November 2009: The blast from the car bomb delivered by a Taliban suicide bomber occurred in Charsadda, about 25 miles northeast of Peshawar. 34 people were killed in the third terrorist attack striking the area in three days. The attacks were provoked by the conflict between Pakistan armed forces and Taliban militants in the South Waziristan tribal region along the Afghan border.

2009: Five car bombings in Baghdad, Iraq by Sunni Insurgents/AQ in Iraq (127)

The attack occurred on the morning of 8 December 2009, at approximately 10:30 am. Local residents reported one blast just after 10:00, followed about half an hour later by another four blasts in quick succession. By mid-afternoon, officials had reported five blasts in the area. At least four of the attacks are believed to have been coordinated. The first of the bombings targeted a police patrol in Dora; this attack also wounded several people at a nearby college. The next four bombings were believed to be targeted at government buildings, and were detonated by suicide bombers. Islamic State of Iraq has claimed responsibility for these four attacks; however it remains unclear whether the attack in Dora was of their making. Burnt out vehicles, believed to be the ones used for the bombings, were found outside the Finance, Foreign, and Justice Ministries. At least 121 people were killed in the combined attacks. The attacks were carried out by Sunni Insurgents/AQ in Iraq.

2010: Multiple bombings in Hilla, Basra, al-Suwayra, and other cities, Iraq by Sunni Insurgents and AQ in Iraq (102)

Shootings and suicide bombings occurred in several Iraqi cities on the 10th of May 2010, resulting in more than 100 fatalities and 350 injuries. The central city of Hilla saw the deadliest attack, when staff at a textiles factory were hit by three bomb attacks, killing at least 45 people. The violence began with a series of drive-by shootings targeting police and army officers in the capital Baghdad, carried out by Sunni Insurgents and AQ in Iraq.

2010: Metro bombings in Moscow Russia by Chechen Terrorists (40)

The 2010 Moscow Metro bombings were suicide bombings carried out by two women during the morning rush hour on the Moscow Metro system. The two stations targeted on 29 March 2010 were Lubyanka and Park Kultury, with roughly 40 minutes interval between the blasts. At least 40 people were killed, and over 100 injured. In the days following the attacks it emerged that the perpetrators were Chechen Terrorists.

2010: Attack in Dantewada India by Maoist Terrorists (76)

The explosion on 17 May 2010 was triggered when a bus hit a landmine 50km away from Dantewada, in Chhattisgarh's Dantewada district. Fatalities reports range from 31 to 44, including several Special Police Officers (SPOs) and civilians. It was the first attack by Maoist Terrorists (also known as Naxalite-Maoist insurgents) to target a civilian bus.

2010: Bombings in Zahedan, Iran by Jundullah (27)

A twin suicide bombing in Zahedan collectively killed 27 and wounded approximately 300. These attacks were launched by Jundullah, a Sunni Islamist and Baluchi ethnic group.

2010: Kampala, Uganda attacks groups watching Football by Al-Shabaab (75)

In July 2010 Al-Shabaab attacked crowds watching a screening of the 2010 FIFA World Cup Final match at two locations in Uganda. The attacks left 74 dead and 70 injured. Al-Shabaab, claimed responsibility for the attacks as retaliation for Ugandan involvement in Somalia. This was Al-Shabaab's first attack outside of Somalia. The first bombing was carried out at a restaurant called the Ethiopian Village, with many of the 15 victims foreigners. The second attack, consisting of two explosions in quick succession, occurred at Kyadondo Rugby Club, with an explosion near the 90th minute of the match, followed seconds later by a second explosion, in total killing an estimated 50 persons. This attack was also likely carried out by suicide bombers and targeting non Muslim expatriates, though most of the dead were in fact Ugandan.

2010: Bombings in Abuja, Nigeria by MEND (12)

The Movement for the Emancipation of the Niger Delta (MEND) launched attacks beyond the Delta, in the capital, Abuja when it exploded a car bomb in the

city that killed 12. These bombings took place during celebrations for the country's 50th anniversary of independence.

2011: Oslo Bombing/Shootings, Norway by Far Right Extremist (77)

Anders Behring Breivik, an anti-Muslim, far right wing Christian fundamentalist planted a bomb in Oslo near the Prime Minister's Office killing 8 people. He then went to an island retreat for young members of the ruling Labour Party and shot and killed 69 teenagers, to draw attention to his far right anti Islamic views.

2011: Attacks in Nigeria by Boko Haram (105)

On the 4th of November at least 65 people lost their lives to a series of coordinated gun and bombs attacks in the Nigerian city of Damaturu. The attacks were believed to have been perpetrated by an Islamist sect known as Boko Haram, which launched an insurgency campaign against the Nigerian government in 2009. The name Boko Haram, which denotes "Western education is forbidden", expresses the sect's desire to impose Sharia law across Nigeria. On the 25 December 2011 Boko Haram carried out further bombings that killed almost 40 people.

2011: Attacks in Mogadishu against the transitional govt by Al Shabaab (45)

Whilst Islamist militant group Al-Shabaab controls much of the central and southern areas of the country it struggles with Transitional Federal Government that controls the capital, Mogadishu. Amongst the worst incidents in the city were armed attacks by Al-Shabaab in February and March 2011, which killed 21 and 24 respectively.

2011: Attack in Jonglei province, South Sudan, by SPLA offshoot (111)

Following the country's formal secession from Sudan in July 2011, South Sudan, violence has continued with a splinter group from the mainstream Sudan People's Liberation Army, led by George Athor, was responsible for 111 deaths in an attack in Jonglei province.

2012: Multiple bombings in Kano, Nigeria by Boko Haram (178)

At least 25 bombings and armed attacks occurred in Kano, Nigeria, killing at least 178. The attacks were attributed to Boko Haram, an Islamic terrorist group in Nigeria who targeted government offices causing explosions and entering into gun battles with the Police.

2012: Bombing in Sana'a, Yemen by Ansar al-Sharia (Al-Qaeda AP affiliated) (120)

The Sana'a bombing constituted an attack against Yemen army soldiers practicing for the annual Unit Day military parade on the 21st of May 2012. The attack claimed more than 120 lives, and as such was the deadliest in Yemini history. Responsibility was claimed by Al-Qaeda in the Arabian Peninsula (AQAP) affiliated

Ansar al-Sharia.

2012: Southern Yemen suicide bombing by AQ AP (45)

The bomber, suspected of being a member of Al-Qaeda in the Arabian Peninsula (AQAP), struck during a funeral service attended by members of civilian militias that helped the Yemeni Army in a campaign to recapture the town of Jaar from AQAP militants in June 2012. The suicide bomber killed 45 and injured 40. The US now consider the Yemeni branch of AQAP to be the most dangerous in the terrorist network. American advisers have been helping Yemen's military in its campaign, and Yemenis say the US has been carrying out drone strikes against the militants.

2013: Syrian Government accused of rocket attacks in Aleppo, Syria (82)

One of the largest losses of life in the Syrian Civil War occurred in January 2013 when two large explosions struck an area between the Aleppo University halls of residence and the faculty of architecture, killing 82 and injuring 160 more as students were gathering for the first day of exams. Syrian opposition claim the attack came from government jets that had targeted and bombed the campus.

2013: Attack on Algerian Gas facility by Al-Qaeda in the Islamic Maghreb (AQIM) (40)

In Aména, Algeria Al-Qaeda in the Islamic Maghreb (AQIM) linked terrorists under the command of Mokhtar Belmokhtar took more than 800 people hostage at a remote gas facility in Algeria. After a tense 4-day standoff with the Algerian Army and at least 2 assaults, the crisis ended, with at least 40 hostages and 29 militants confirmed dead, while 685 Algerian workers and 107 foreigners were freed.

2013: Suspected Boko Haram shootings over 3 days (31)

Boko Haram murdered 31 people over the course of 3 days, including 18 hunters selling bushmeat, who were shot at market in Damboa on January 21. Five people were shot in Kano on the next day as they were playing board games, and at 8 civilians were killed in Maiduguri on January 23, as gunfire was reported from parts of the city.

2013: Lashkar-e-Jhangvi bombings in Quetta and elsewhere in Pakistan (126)

A string of bombings hit Pakistan, killing 126 and leaving more than 240 people injured. A bombing at a crowded market in Quetta killed 12 and injured 47 in an attack claimed by the Balochistan separatist group, Lashkar-e-Jhangvi and later, twin blasts took place in quick succession at a snooker hall where a total of 92 people were killed in these attacks, including 9 policemen, 25 rescue workers and 3 journalists. In addition, an explosion at a Tableeghi Jamaat seminary in the Swat Valley, killed 22 people and wounded 60.

2013: Attack on Christian Church in Peshawar, Pakistan by Pakistani Taliban - TTP Jandullah (81)

In one of the deadliest attacks ever on the Christian community in Pakistan, a splinter group from the Pakistani Taliban attacked the All Saints Church of Pakistan, in Peshawar, about 120 kilometers (75 miles) from the country's capital, Islamabad. A congregation of about 500 people was attending the church, when 2 suicide bombers entered the church compound from the main gate and blew themselves up in the middle of the people. The All Saints Church was built in 1883 inside the old walled city of Peshawar. It was built to resemble a mosque from the outside, not for security reasons but to symbolize unity. Christians make up less than 3% of the Pakistani population of 193 million. Militant groups have also targeted other minorities including Shiite Muslims, who are significantly outnumbered by Sunnis in Pakistan. A splinter group of the Pakistani Taliban claimed responsibility for the church attack, blaming the US programme of drone strikes in tribal areas of Pakistan. "Until and unless drone strikes are stopped, we will continue to strike wherever we will find an opportunity against non-Muslims," said Ahmed Marwat, a spokesman for TTP-Jandullah. The main Pakistani Taliban, known as Tehrik-e-Taliban Pakistan (TTP), distanced itself from the attack. "We refuse to take responsibility for the church blast. This is an attempt to sabotage peace talks between the TTP and the government," said a TTP spokesman. Earlier this month, Pakistani officials announced plans to pursue peace talks with Taliban militants and withdraw troops from parts of the volatile northwestern region, which borders Afghanistan. Pakistani Prime Minister, Nawaz Sharif's released a statement stating that terrorists have no religion and targeting innocent people is against the teachings of Islam and all religions.

2013: Kenyan Shopping Centre attack by Al-Shabaab (67)

The attack by Al-Shabaab terrorists at the Westgate Mall in Westlands, 3kms (1.8 miles) northwest of Nairobi's city center, started at about 12:30 p.m. On Saturday 22 September as the Mall filled up. Middle class Kenyans and expatriates frequent the shopping center, which has more than 80 shops including bank outlets, a movie theater, casino, restaurants and a children's play area. Two explosions were heard within about five minutes of each other when the attack started, forcing panicked shoppers to seek shelter including in the parking area on the roof of the four-story building. The attackers, who threw grenades, told Muslims they could go free and that non-Muslims were the target. The Al-Shabaab terrorists entered through the main door of the mall and went on a shooting rampage, moving from the ground level to upper floors, initially killing 59 and injuring at least 175. The death toll later rose to at least 67 confirmed killed in the assault by 12 to 15 Al-Shabaab militants including 61 civilians and 6 security force personnel. Five militants also were killed, but questions remained about the fate of the remaining attackers and

fears persist that some had managed to escape. The raid was the deadliest attack in Kenya since the 1998 bombing of the US Embassy in downtown Nairobi that killed 213 people. The Al-Shabaab Islamist militant group in neighboring Somalia threatened to carry out attacks in Kenya after the country deployed its army to southern Somalia in October 2011 to fight the group. In 2010, the militants killed 74 people in an attack at a restaurant and sports club in Uganda. The Kenyan President Kenyatta vowed to hunt down the perpetrators of the attack and said he lost a nephew and his nephew's fiancee in the assault. Al-Shabaab, meanwhile, threatened more attacks in Kenya, stating on its Twitter feed that the mall attack "was just the premiere of Act 1." "Make your choice today and withdraw all your forces," the group's leader, Ahmed Abdi Mohamed Godane, said in a statement posted on the Internet late Wednesday. "Otherwise be prepared for an abundance of blood that will be spilt in your country, economic downfall and displacement."

2013: Nigerian College attack by Boko Haram (50)

A Nigerian College was attacked, in September, 2013 by Boko Haram in the dead of night, killing as many as 50 students as they slept in dormitories and torching classrooms, the latest in a series of Boko Haram attacks in Northern Nigeria as they continue their Islamic uprising. Boko Haram leader Abubakar Shekau has said in video addresses that his group wants to end democracy in Nigeria and allow education only in Islamic schools. Boko Haram means "Western education is forbidden." According to one witness, the terrorists, rode into the college in two pickup all-terrain vehicles and on motorcycles, some dressed in Nigerian military uniforms, who appeared to know the layout of the college, attacking the four male hostels but avoiding the one hostel reserved for women. Most schools in the area closed after earlier similar attacks including one in July that killed 29 pupils and a teacher. More than 30,000 people have fled to neighbouring Cameroon and Chad. The attacks come as Nigeria prepares to celebrate 53 years of independence from Britain and amid political jockeying in the run up to presidential elections next year.

2013: Attacks in Russia by Chechen Terrorists (Caucasus Emirates) (20)

Recent attacks have seen a series of terror attacks on buses, trains and airplanes, some carried out by suicide bombers, including in October 2013 a black widow suicide bomber who blew herself up on a city bus in Volgograd, killing 6 and injuring about 30 and another black widow suicide bomber who blew herself up at a railway station in Southern Russia, killing 14 and injuring scores more, heightening concern about terrorism ahead of February 2014 Olympics in the Russian Black Sea Resort of Sochi. The attacks have been claimed by the Caucasus Emirates.

See also Breaking News at the end of this Book.

Chronology of the World's Worst Airline Attacks by Terrorists

Whilst flying remains one of the safest forms of travel, incidents when they occur are more likely to result in fatalities. The first fatal aviation accident occurred in 1908, when Orville Wright crashed his Wright Model A aircraft during testing killing his passenger. It wasn't until 1933 that the first 2 Aeroplanes were destroyed intentionally first by fire and then by a bomb and is thought to be the first proven acts of air terror in the history of commercial aviation.

Passenger airliners as well as cargo aircraft have been the subject of plots or attacks ever since.

Many early bombings though were suicides or schemes for insurance money, but in the latter part of the 20th century, political and religious militant terrorism became the dominant motive for attacking large jets, either by hijacking, to publicize a cause or to make demands or by bombing to cause mass casualties. Whilst the political and religious motives are varied, many of the worst incidents, involve so called Islamic or Middle East Terrorists, from Pakistani based groups targeting India and supporting secession from India of Kashmir and Jammu provinces, Palestinian Groups fighting for their State, State sponsored terror from Libya, Chechens for Independence and Al-Qaeda for an Islamic Caliphate.

Whilst dynamite was first used, plastic explosive is the preferred form of bomb as it is both harder to detect and has greater explosive power. Whilst the most common form of terrorist attack was carried out by smuggling explosives into baggage, detonating the bomb once the plane is in the air usually by timers, more recently with Al-Qaeda representing the most active threat the modus operandi has changed. Al-Qaeda have attempted numerous new ways of bringing down airplanes, including using suicide bombers to either directly crash the planes or to explode bombs concealed by them or to carry on board chemicals which when mixed on board can produce an explosion. Most recently Al-Qaeda have targeted cargo planes with bombs

The deadliest aviation-related disaster of any kind, considering fatalities on both the aircraft and the ground, was the attack on America on 9/11/2001, killing almost 3,000 people.

The deadliest pure Aircraft disasters were not terrorist events. The first occurred in Tenerife when two Boeing 747 aircraft collided when a KLM Boeing 747 attempted take-off without clearance, and collided with a taxiing Pan Am 747 killing 583 people. The second

the crash of Japan Airlines Flight 123 in 1985 was the single-aircraft disaster with the highest number of fatalities. In this crash, 520 died on board a Boeing 747. The aircraft suffered an explosive decompression from an incorrect repair.

Whilst there are more than 85 cases related to airline bombings, with more than 50 of them resulting in deaths there are 14 cases resulting in 100 or more fatalities.

Worlds Worst Airline attacks by Terrorists (causing 100 or more fatalities)	
Deaths	Details
100	1973 - Aeroflot TU-104 exploded over Siberia after hijackers demands not met
100	1977 - A hijacked Malaysian Boeing 737 airliner downed
106	1993 - Transair Georgian Airlines TU-154B downed by a missile in Georgia by Abkhazian rebels
110	1989 - Avianca Flight 203 exploded in Colombia, Pablo Escobar responsible
112	2002 - China Northern Flight 6136 crashed in China after passenger suicide insurance attack
112	1983 - Gulf Air 771 Boeing 737 from Pakistan exploded in UAE downed by Abu Nidal Organisation
115	1987 - Korean Air Flight 858 downed by North Koreans
127	1996 - Ethiopian Boeing 767 crashed following hijacking by Ethiopians
132	1990 - Chinese Boeing 737 hijacked & crashed in China due to Chinese hijackers
171	1989 - French UTA Flight 772 DC-10 destroyed over Niger by Libyans
213	1999 - Egypt Air Boeing 767 crashed off Massachusetts after pilot intentionally downed it
259	1988 - Pan Am Flight 103 downed over Lockerbie, Scotland by Libyans
331	1985 - Air India Flight 182 from Montreal downed by extremist Sikhs
2997	2001 - Attack on America - 9/11 by AQ

Source: Author

The first recorded aircraft hijack took place in 1931, in Peru, when a pilot was approached on the ground by armed revolutionaries. Hijackings increased between 1948 and 1957, to 15 and between 1958 and 1967, this climbed to 48. There was an explosive increase to 38

in 1968 and 82 in 1969, the largest number in a single year in the history of civil aviation. During the period between 1968 and 1977, there were 414 hijackings and between 1988 and 1997, there were 180 hijackings and then from 1998 to 2007, 98. Since 2001 to the present day the numbers have fallen considerably to 43 incidents.

As far as hijackings are concerned perhaps the most well known occurred in 1976 of Air France 139 but not for the hijacking itself but for the daring raid by Israeli special forces who landed at Entebbe Airport, Uganda, and rescued 105 persons, almost all Israeli hostages killing all Palestinian hijackers (Popular Front for the Liberation of Palestine). However three passengers and one commando were killed.

From the 85 cases, the following 34 cases are perhaps the most shocking mass casualty events and/or of greatest importance, indicating new threats and/or targets or methods. Whilst the last decade has proven to be one where fatalities have been one of the lowest on record, this is due more to foiled and failed attempts, rather any reduction in threat levels.

The list is in chronological order and includes a brief summary for each case.

1933: Imperial Airways flight by passenger (15)

Imperial Airways flight over Belgium crashed probably after a fire started by a Passenger attempting to commit suicide, killing all 15 aboard. This is thought to be the first act of sabotage on a commercial airliner.

1933: United Airlines Boeing 247 by Chicago gangs (7)

United Airlines Boeing 247 was destroyed by a bomb, crashing near Indiana, USA, killing 7, thought to be the first case of airline sabotage by a bomb with nitroglycerine as the probable explosive. A Chicago gangland murder was suspected, but the case remains officially unsolved.

1949: Canadian Pacific Air Lines DC-3 by a Jeweller (23)

Canadian Pacific Air Lines DC-3 was destroyed by a bomb made of dynamite, carried onto the plane by the wife of the bomber leading to the death of all 19 passengers and 4 crew. A dynamite bomb was planted in the baggage compartment by a Jeweller, in a plot to kill his wife who was a passenger on the plane in order to collect US\$10,000 on an insurance policy. The Jeweler assembled the bomb, and his accomplices, one a clockmaker helped make the timing mechanism. All three were hanged for their crimes.

1955: United Airlines Flight 629 (44)

United Airlines Flight 629 was destroyed by a bomb containing dynamite in a suitcase carried by the bombers innocent mother after taking off from Denver on a

flight to Seattle. The explosion killed all 39 passengers and all 5 crew members. The bomber was executed for the pre-meditated murder of his mother who carried out the attack in order to collect US\$37,500 in insurance.

1959: National Airlines Flight 967 (42)

National Airlines Flight 967, Douglas DC-7B, the first jet airline to be downed when a bomb destroyed the aircraft over the Gulf of Mexico, killing 42. The bombing was carried on by a convicted criminal who was befriended and tricked by another man into boarding with luggage containing a bomb so that his wife would be able to collect on his life insurance.

1962: Continental Airlines Flight 11

Continental Airlines Flight 11 was a Boeing 707 aircraft which exploded while en route from Chicago to Kansas City. The following investigation focussed on one of the passengers, a married man with a five-year-old daughter, who had purchased a life insurance policy for US \$150,000, the maximum available; his death would also bring in another \$150,000 in additional insurance (some purchased at the airport) and death benefits. The bomber had recently been arrested for armed robbery and Investigators determined that he had also purchased six sticks of dynamite for 29 cents each, shortly before the crash. This was the first in-flight bombing of a jet airliner.

1966: Aden Airways DC3 (30)

Aden Airways DC3 was destroyed by a bomb enroute to Aden from the hill town of Maifa'ah, the capital of the Federation State of Wahidi, when it crashed into the desert. Investigations revealed a bomb had been placed on the instructions of Ali, the son of Amir Mohammed bin Said, Prime Minister of Wahidi who wanted to prematurely succeed him as Amir, who was killed together with 29 others on board.

1967: Cyprus Airways Flight 284 (66)

Cyprus Airways Flight 284 de Havilland Comet flying between Athens, Greece and Nicosia, Cyprus was destroyed leading to the plane crashing and the deaths of all 66 on board. A Greek general in command of the Cyprus army was the target of Turkish Terrorists, but the General cancelled shortly before departure.

1970: Swissair Flight 330 (47)

Swissair Flight 330 Convair CV-990 Coronado jet with 38 passengers and 9 crew members onboard crashed after a bomb exploded killing all on the aircraft. A barometric triggered IED had been used. Terrorism was suspected because of sentencing of three Palestinians by Swiss court and the Popular Front for the Liberation of Palestine allegedly claimed responsibility.

1973: Aeroflot Tu-104 (100)

Aeroflot Tu-104 exploded over Siberia en route from Moscow to Chita. The hijacker set off a bomb in the passenger cabin after his demands were not met, when

the plane was about 150km short of Chita, killing 100.

1976: Cubana Airlines (73)

Cubana Airlines plane exploded after takeoff from Barbados bound for Cuba. 73 people were killed and Cuban exiles in Venezuela were held responsible.

1976: Middle East Airlines Flight 438 (81)

Middle East Airlines Flight 438 exploded due to a bomb in the cargo bay of a Boeing 720B en route from Beirut, Lebanon to Dubai. The bombers were never identified. Lebanon was however going through a civil war at the time.

1976: Air France 139 (4)

Air France 139 was hijacked by the Popular Front for the Liberation of Palestine and the Plane was flown to Entebbe Airport, Uganda. Israeli special forces landed in secret at the Airport in Uganda, and rescued 105 persons, almost all Israeli hostages and killing all the hijackers. However three passengers and one commando were killed

1977: Malaysian Boeing 737 (100)

A hijacked Malaysian Boeing 737 airliner crashed near the Straits of Johore. The aircraft was descending when hijackers shot both pilots after which the airliner crashed in a swamp, killing all 100 aboard.

1982: Pan Am Flight 830 (1)

A Pan Am Flight 830 Boeing 747 was the target of a bomb attack. The bomb placed under a seat killed one 16 yr old Japanese boy injuring 15 more. The bomb was believed placed by a palestinian terrorist organisation.

1983: A Gulf Air Boeing 737 (112)

A Gulf Air Boeing 737 en route from Karachi to Abu Dhabi crashed after a bomb exploded in the baggage compartment. After the explosion, the plane crashed, killing 112 in the desert near Mine Jebel Ali in the UAE during an attempted landing. All 5 crew members and 105 passengers died. Most of the dead were Pakistani nationals, many returning to jobs in Abu Dhabi and Bahrain after spending the Eid al Adha holiday with their families in Pakistan. A passenger who checked in baggage at Karachi but never boarded the plane was held responsible and was a member of the Abu Nidal Organisation. The motive was believed to be extortion in trying to convince Gulf governments to pay protection money to Nidal so as to avoid attacks on their soil, including Saudi Arabia, Kuwait and the UAE.

1985: Air India Flight 182 (331)

Air India's Boeing 747 'Kanishka,' named after Emperor Kanishka who ruled an Indian state in the second century, cruised over the Atlantic at 31,000ft as it flew towards London, Heathrow. The aircraft, Flight 182, was on the east bound journey on a trip between India and Canada, via London. A large expatriate Indian community had settled in Canada and Flight 182 was over

three quarters full with 307 passengers of Indian origin. The large crew onboard the aircraft brought the total onboard to 329 people. Six thousand miles away on the other side of the world, ground staff at Tokyo's Narita Airport unloaded baggage containers from Canadian Pacific Air Lines Flight 003 which had recently arrived from Vancouver. As bags were being unloaded from a container, one piece of luggage exploded, killing 2 and injuring 4. Flight 003 from Vancouver, had arrived with a total of 390 people onboard, and had the aircraft been just half an hour the explosion would have caused a terrible disaster. Over the Atlantic, Air India Flight 182 would soon explode without warning killing all on board over the Atlantic Ocean whilst in Irish airspace. Both in Canada and Japan, a full-scale investigation of the Air India crash and the blast at Narita was being instigated by RCMP and Japanese police. An examination of passenger lists and computer records indicated that a traveller by the name of L. Singh had checked in at Vancouver but had failed to board Flight 003 to Tokyo's Narita Airport. Another M. Singh, had also checked in at Vancouver for a connecting flight to Sir India's Flight 182 but he had failed to turn up as well. In both instances their bags had been loaded. The investigation pointed to Sikh terrorists. Internal strife in the northern State of Punjab, brought about by extremist demands for a separate nation of Khalistan, had created civil unrest in India. The trouble came to a head in June 1984 in Amritsar with the Indian Army's storming of the Golden Temple, the Sikhs' holiest of shrines. The result was a bloodbath. Sikhs throughout the world were horrified by such an act. In retaliation, the Indian prime minister, Indira Gandhi, was assassinated by her own Sikh bodyguards. Her death stunned the world and created a Hindu backlash, which resulted in Sikhs being massacred in the streets of New Delhi. This bombing was in retaliation.

1986: TWA Flight 840 (4)

TWA Flight 840 a Boeing 727-231 flying from Rome's Fiumicino Airport to Athens, exploded ejecting four American passengers (including a nine-month-old infant) to their deaths and injuring five others. The bomb contained one pound of plastic explosive and was placed under a passenger seat by the Palestinian terrorist Abu Nidal Organisation.

1987: Korean Air Flight 858 (115)

Korean Air Flight 858 was brought down by liquid explosives concealed as liquor bottles by North Korean agents, who boarded the plane in Iraq and left in Abu Dhabi. The plane exploded en route to Bangkok over the Andaman Sea, killing all 115 abroad. The North Korean Agents were arrested in Bahrain but consumed poison concealed in cigarettes. The male died, but the female survived and later implicated North Korea, saying the bomb was planted to discourage people from attending the 1988 Seoul Olympics. This was the first known example of liquid explosives being used which would be taken up again in 1994, see Operation Bojinka below.

Special Focus 4 1988 - Pan Am Flight 103 (259)

On 21 December 1988, Pan American flight 103, took off from London, bound for New York City. A Boeing 747-121, named Clipper Maid of the Seas, was destroyed by Libyan Agents as it was climbing on its northerly flight path, exploding over the town of Lockerbie in southwest Scotland. In all, 270 people from 21 countries were killed, including all 259 passengers and crew members plus 11 people on the ground in Lockerbie. Many of the passengers came from the states of New Jersey and New York. The captain, first officer, flight engineer, a flight attendant, and a number of first-class passengers were found still strapped to their seats inside the nose section when it crashed in a field by a tiny church in the village of Tundergarth. The inquest heard that a flight attendant was found alive by a farmer's wife, but died before her discoverer could summon help. Two other passengers remained alive briefly after impact; medical authorities later concluded that one of these passengers might have survived if he had been found soon enough. This widely regarded assault on a symbol of the US, with 189 of the victims being Americans, stood as the deadliest terrorist attack on American civilians until the attacks of 11 September 2001.

On 5 December 1988 (16 days prior to the attack), a man with an Arabic accent had telephoned the U.S. Embassy in Helsinki, Finland, and told them that a Pan Am flight from Frankfurt to the US would be blown up within the next two weeks by someone associated with the Abu Nidal Organisation. The anonymous warning was taken seriously by the US government, and the State Department quickly informed all US carriers, including Pan Am. Whilst Pan Am had charged each of the passengers a US\$5 security surcharge, promising a "programme that will screen passengers, employees, airport facilities, baggage and aircraft with unrelenting thoroughness", the security team in Frankfurt found the warning under a pile of papers on a desk the day after the bombing.

In 1992 a US federal court found Pan Am guilty of wilful misconduct due to lax security screening. Alert Management Inc. and Pan American World Services, two subsidiaries of Pan Am, were also found guilty; Alert handled Pan Am's security at foreign airports. Largely as a result of this incident and the judicial findings, Pan

Am entered bankruptcy.

The motive that is generally attributed to Libya can be traced back to a series of military confrontations between Libya and the US which took place first in the 1980s in contested waters. First, there was a Gulf of Sidra incident (1981) when two Libyan fighter aircraft were shot down, then, two Libyan radio ships were sunk in the Gulf of Sidra, followed by the sinking of a Libyan Navy patrol boat and another Libyan vessel on 25 March 1986. It is believed that Muammar Gaddafi retaliated for these sinkings by ordering the 5 April 1986 bombing of West Berlin nightclub, La Belle, that was frequented by US soldiers and which killed three and injured 230 and in turn led to US President Ronald Reagan to launch military strikes against Libyan cities, Tripoli and Benghazi. The Libyan government claimed the air strikes killed Hanna, a baby girl Gaddafi claimed he adopted and to avenge his daughter's death, Gaddafi is said to have sponsored the September 1986 hijacking of Pan Am Flight 73 in Karachi, Pakistan. The US in turn encouraged and aided the Chadian National Armed Forces (FANT) by supplying satellite intelligence during the Battle of Maaten al-Sarra. The attack resulted in a devastating defeat for Gaddafi's forces, following which he had to accede to a ceasefire ending the Chadian-Libyan conflict and his dreams of African dominance. Gaddafi blamed the defeat on French and US "aggression against Libya". The result was Gaddafi's motive which led to Libyan support for the bombings of Pan Am Flight 103.

Despite many alternative claims for responsibility, Muammar Gaddafi finally admitted Libya's responsibility for the Lockerbie bombing. Gaddafi's admission followed a determined investigation over more than 11 years following which accusations and sanctions were made against the Libyan regime, though he maintained that he never personally gave the order for the attack. The UN which had made "accepting responsibility for the actions of its officials" among the steps set by the UN for lifting Sanctions against Libya. Other requirements included a formal denunciation of terrorism by Libya and compensation for the families of the PA103 victims. Libya offered compensation of up to US\$2.7bio to settle claims by the families, representing US\$10mio per family, with conditions. The Libyan offer was that 40% of the money would be released when UN sanctions, suspended in 1999, were cancelled; another 40% when US trade sanctions were lifted; and the final 20% when the US State Department removed Libya from its list of states sponsoring terrorism. In the end each family received US\$8mio (from which legal fees of about US\$2.5mio were deducted) and, as a result, the UN cancelled the sanctions that had been suspended four years earlier, and US trade sanctions were lifted. A further US\$2mio would have gone to each family had the US State Department removed Libya from its list of states regarded as supporting international terrorism, but as this did not happen by the deadline set by Libya, though it would be later removed in 2006 when full

diplomatic relations with Libya were resumed. Further settlements would follow for other incidents, including the 1986 Berlin discotheque bombing and in 2008, a US-Libya compensation deal was signed which covered 26 outstanding lawsuits filed by American citizens against Libya, and three by Libyan citizens in respect of the US bombing of Libya in 1986. Libya paid \$1.5 billion into a fund to be used to compensate relatives of victims. As a result, President Bush signed Executive Order 13477 restoring the Libyan government's immunity from terror-related lawsuits and dismissing all of the pending compensation cases in the US.

1989: French UTA Flight 772 (171)

A French UTA Flight 772 DC-10 was destroyed in mid-air over Niger by the explosion of a luggage bomb killing all 156 passengers and 15 crew members. The bomber loaded the bomb in Brazzaville, leaving the plane in N'Djamena, Chad, with the plane then scheduled to fly on to Paris. France indicted six Libyan Agents, including Abdullah Senussi, brother-in-law of Muammar Gaddafi, and deputy head of Libyan intelligence. Libya refused to extradite the six, who were condemned in absentia, but subsequently recognised its responsibility by compensating the families of the victims. The deemed motive of the bomber was revenge against the French for supporting Chad against the expansionist projects of Libya toward Chad.

1989: A Colombian Avianca Flight 203 (110)

A Colombian Avianca Flight 203, Boeing 727 passenger jet departing Bogota, Colombia, en route to Cali, exploded 5 minutes after takeoff under a passenger seat, causing the plane to crash, killing all 107 aboard as well as 3 on the ground. The bomb was planted by members of the Medellin Drug Cartel, led by Pablo Escobar, as part of the escalating war between the drug traffickers and the proponents of extradition to the US in Colombia. The motive was an assassination attempt on presidential candidate César Gaviria Trujillo, and an enthusiastic proponent of extradition, but the target was not on the flight. Trujillo would go on to win the 1990 presidential election. Two Americans were among the people seated on the plane, giving US President George H.W. Bush cause to supply new assets to the Colombian fight against the traffickers. It signaled the beginning of the end for Escobar, who would 4 years later be gunned down by Colombian special forces.

1990: Chinese Boeing 737 (132)

A Chinese Boeing 737 was hijacked during a domestic Chinese flight from Xiamen to Guangzhou. The Chinese hijacker claimed to have explosives and demanded the pilot fly to Taiwan. The pilot tried to persuade the hijacker that the plane held insufficient fuel for the extended trip and attempted an emergency landing in Guangzhou when his fuel levels became critical. Upon touching down, and during a fight in the cockpit between the hijacker and the pilot, the 737 swerved into two other aircraft on the ground, a Boeing 707 and a

Boeing 757, both China Southwest Airlines. The 737 overturned, killing 132 in total, 84 of 104 aboard and another 48 were killed on the 757.

1993: Transair Georgian Airlines Tu-154B (106)

Transair Georgian Airlines Tu-154B was hit by a missile while on approach to Sukhumi, Georgia. The aircraft crashed on the runway, killing 106 of 132 aboard. The missile was fired by Abkhazian Rebels.

1994: Philippine Airlines Flight 434 / Operation Bojinka (1)

Philippine Airlines Flight 434 was bound for Tokyo from Manila, but made an emergency landing at Okinawa, US after a blast ripped a two-foot-square portion out of the fuselage, killing one passenger and injuring 10. The bomb was made out of liquid explosives (nitroglycerin) packed into contact lens solution bottles and was made by Ramzi Yousef an Iraqi National, who also built and detonated the WTC 1993 bomb. This attack was in fact one of a number of tests Ramzi Yousef undertook with fellow plotter and Uncle, Khalid Shaikh Mohammed in furtherance of an ambitious planned large-scale three phase Islamist attack, called Operation Bojinka. The planned attacks involved a plot to assassinate Pope John Paul II, an air bombing of 11 airliners and their approximately 4,000 passengers that would have flown from Asia to the US, and a proposal to crash plane into the CIA's headquarters in Virginia, scheduled for 1995. Despite careful planning and the skill of Ramzi Yousef, the Bojinka plot was disrupted after a chemical fire drew the Philippine National Police's attention to the bombers apartment just a few days before the Pope's visit, where masses of evidence was found.

1996: An Ethiopian Boeing 767 (127)

An Ethiopian Boeing 767 passenger jet flying from Addis Ababa, Ethiopia, to Nairobi, Kenya, crashed during a hijacking. Three Ethiopian hijackers instructed the pilot to fly to Australia but the plane did not have enough fuel and was denied permission to land to refuel. The pilot brought the plane down a few hundred meters off a resort beach at Moroni in the Comoros Islands off Africa. The hijackers may have fought for control of the aircraft during descent, contributing to the crash during ditching. People on the beach were able to rescue 48 of the 175 aboard the plane, though 127 including the hijackers were killed.

1997: Malaysian Boeing 737 Flight 653 (100)

Malaysian Airlines 653 crashed in Malaysia killing 93 passengers and 7 crew, after reports that the flight had been hijacked. The downing though remains unsolved though some have speculated involvement of the Japanese Red Army.

1999: An Egypt Air Boeing 767 (217)

An Egypt Air Boeing 767 crashed off the coast of Massachusetts after departing New York City bound for Cairo, killing 217. The crash occurred 33 minutes after

takeoff near Nantucket Island, when the Egyptian relief first officer intentional crashed the aircraft. Flight data suggests that he shut off the engines and put the aircraft into a steep dive; a second crew member unsuccessfully struggled for control of the aircraft, which broke apart from aerodynamic stresses and crashed.

2001: Attack on America 9/11 (2,997)

For more details see [Special Focus 1 - Attacks on America \(9/11\)](#) earlier in this Part 2, Section 6.

2001: American Airlines Flight 63 (0) - the Shoe Bomber

American Airlines Flight 63 was bound for Detroit from London in December of that year and was the target of a failed Al-Qaeda bombing attempt. As Flight 63 was flying over the Atlantic Ocean, Richard Reid, wearing shoes that were packed with plastic explosives (PETN and TATP) tried to set these off with a match to a fuse leading into the shoe but he was spotted by flight attendants and with the aid of passengers tackled and eventually restrained. This incident led to changes in security protocols in US airports where passengers shoes must now be removed and screened.

2002: China Northern Flight 6136 (112)

China Northern Flight 6136, an MD-82 jetliner on a domestic flight from Beijing to the coastal city of Dalian was brought shortly after the pilot reported "fire on board", killing all 103 passengers and 9 crew members. A Chinese passenger set fire to the passenger cabin with gasoline, causing the plane to lose control and crash. This passenger had purchased seven air insurance policies worth a total of about US\$170,000 prior to boarding the flight.

2004: Volga-Avia Express Flight 1303 (89)

Volga-Avia Express Flight 1303, a Tu-134 aircraft and a Siberia Airlines Flight 1047, a Tu-154 aircraft both crashed in Russia within minutes of each other flying different routes. The first killed all 34 passengers and 9 crew members on board the plane and the second all 38 passengers and 8 crew members on board the plane. The two almost simultaneous crashes immediately caused speculations about terrorism. The following investigation found that the planes were downed by bombs triggered by two female Chechen terrorist suicide bombers. Shamil Basayev militant leader of the Chechen terrorist movement, the Islamic International Peacekeeping Brigade, claimed the credit. In an open letter he claimed that the aircraft bombings cost him US\$4,000 in total.

2006: 10 Airliner Atlantic Plot (0)

Attempted Al-Qaeda terrorist plot to detonate liquid explosives carried on board at least 10 airliners traveling from the UK to the US and Canada. It followed the same general plan as the Bojinka plot (see above). Individuals arrested in the UK and Pakistan planned to carry household chemicals and liquids in their carry-on luggage, but then mix them aboard the plane to make

small bombs. The bombs would have been powerful enough to create an explosive decompression aboard an aircraft causing the plane to disintegrate while flying at high altitude over the ocean. Had the attack been successful the estimated death toll could have exceeded the 3,000 killed on 9/11/2001.

2009: Northwest Airlines Flight 253 (0) - Christmas Day bombing / Underpants Bomber

On Christmas Day 2009, Abdulmutallab travelled from Ghana to Amsterdam, where he boarded Northwest Airlines Flight 253 en route to Detroit. He had a Nigerian passport and a valid US tourist visa and purchased his ticket with cash in Ghana on 16 December. Abdulmutallab, the youngest of 16 children of a very wealthy Nigerian banker, grew up a pious muslim, travelling to Yemen and then to the UK where he attended University College London in 2005 and earned a degree in mechanical engineering in 2008.

He was on the radar of MI5, the UK's domestic counter-intelligence and security agency and the CIA, though the CIA added the suspect's name in November 2009 to the US's 550,000-name Terrorist Identities Datamart Environment, a database of the US National Counterterrorism Center (NCTC). It was not added to the FBI's 400,000-name Terrorist Screening Database, the terror watch list that feeds both the 14,000-name Secondary Screening Selectee list and the US's 4,000-name No Fly List, nor was an existing Abdulmutallab's US visa revoked. On the flight, Abdulmutallab spent about 20 minutes in the toilet as the flight approached Detroit, and then covered himself with a blanket after returning to his seat. Other passengers then heard popping noises, smelled a foul odor, and some saw Abdulmutallab's trouser leg and the wall of the plane on fire. A fellow passenger jumped on Abdulmutallab and subdued him as flight attendants used fire extinguishers to douse the flames. The device consisted of a six-inch (15-cm) packet which was sewn into his underwear containing the explosive powder PETN, which became a plastic explosive when mixed with the high explosive triacetone triperoxide (TATP) (the same two explosives that were used by Richard Reid, the shoe bomber, in 2001 and a syringe containing liquid acid).

President Barack Obama immediately ordered a review of detection and watch list procedures. Saying that "totally unacceptable" systemic and human failures had occurred

Abdulmutallab was arrested. He would be later tried, plead guilty and was sentenced to 4 life sentences. Abdulmutallab told authorities he had been directed by Al-Qaeda in the Arabian Peninsula, and that he had obtained the device in Yemen.

Special Focus 5

2010 - UPS Flight 232 & FedEx Cargo Planes

UPS Flight 232 a Boeing 767 cargo plane and a FedEx Express cargo plane were due to carry packages across the Atlantic to the USA that included a Hewlett-Packard HP LaserJet P2055 desktop laser printer. Inside each printer was a sophisticated, expertly constructed bomb in its toner cartridge, which was filled with explosives. The toner cartridges were filled with the odorless military grade plastic explosive (PETN), a white powder that is one of the most powerful explosives known.

Each bomb also consisted of cell phone circuitry with an alarm timer, a phone battery, a thin wire filament, and a syringe filled with lead azide. The bombs' detonators were the alarm timers on cell phone circuitry that was discovered in the two bombs. Each bomb had a cell phone alarm that had been set, which was constructed to trigger power from a phone battery. That would in turn send an electrical current through, and heat, a thin wire filament, similar to those in light bulbs. The wire filament, from a broken light-emitting diode, was in a plastic medical syringe that contained 5 grams of lead azide, a powerful chemical initiator. Once hot, the lead azide would ignite. That would then cause the PETN to detonate.

The packages were intercepted in the UK and in Dubai being shipped in cardboard boxes that also for example contained souvenirs, clothes, compact discs, and several books written in English. Al-Qaeda in the Arabian Peninsula (AQAP) took responsibility for the plot, which was uncovered by Saudi Intelligence, tipping off UK, Dubai and US authorities.

According to the US and the UK, the bombs were probably designed to detonate mid-air, with the intention of destroying both planes over Chicago or another city in the US. Each bomb had already been transported on both passenger and cargo planes. The packages had already flown on earlier passenger and cargo planes to reach their current destinations, evading security checks. Despite the tip offs an initial search by anti terrorist officers, for example in the UK on one of the Cargo planes with explosive detection equipment and sniffer dogs, they failed to find any explosives.

When US authorities provided the precise tracking number of the package, the printer was scanned, x-rayed, subjected to chemical swabs, and sniffed by bomb-sniffing dogs. Still, no explosives were detected but it was removed and subjected to further analysis. Scotland Yard explosive officers separated and removed the printer cartridge from the printer during their examination, only then identifying the bomb and deactivating it with only 3 hours before the bomb was due to explode.

AQAP later provided a detailed account of the plot (which it called "Operation Hemorrhage") in its English-language magazine Inspire, said that it cost only US\$4,200 to mount and was intended to disrupt global air cargo systems, and said it reflected a new strategy of low-cost attacks designed to inflict broad economic damage. The magazine included photos of the printers and bombs, as well as a copy of the novel Great Expectations by Charles Dickens that it said it had placed in one package, because AQAP was "very optimistic" about the operation's success.

The importance of this case cannot be overstated for the following reasons:

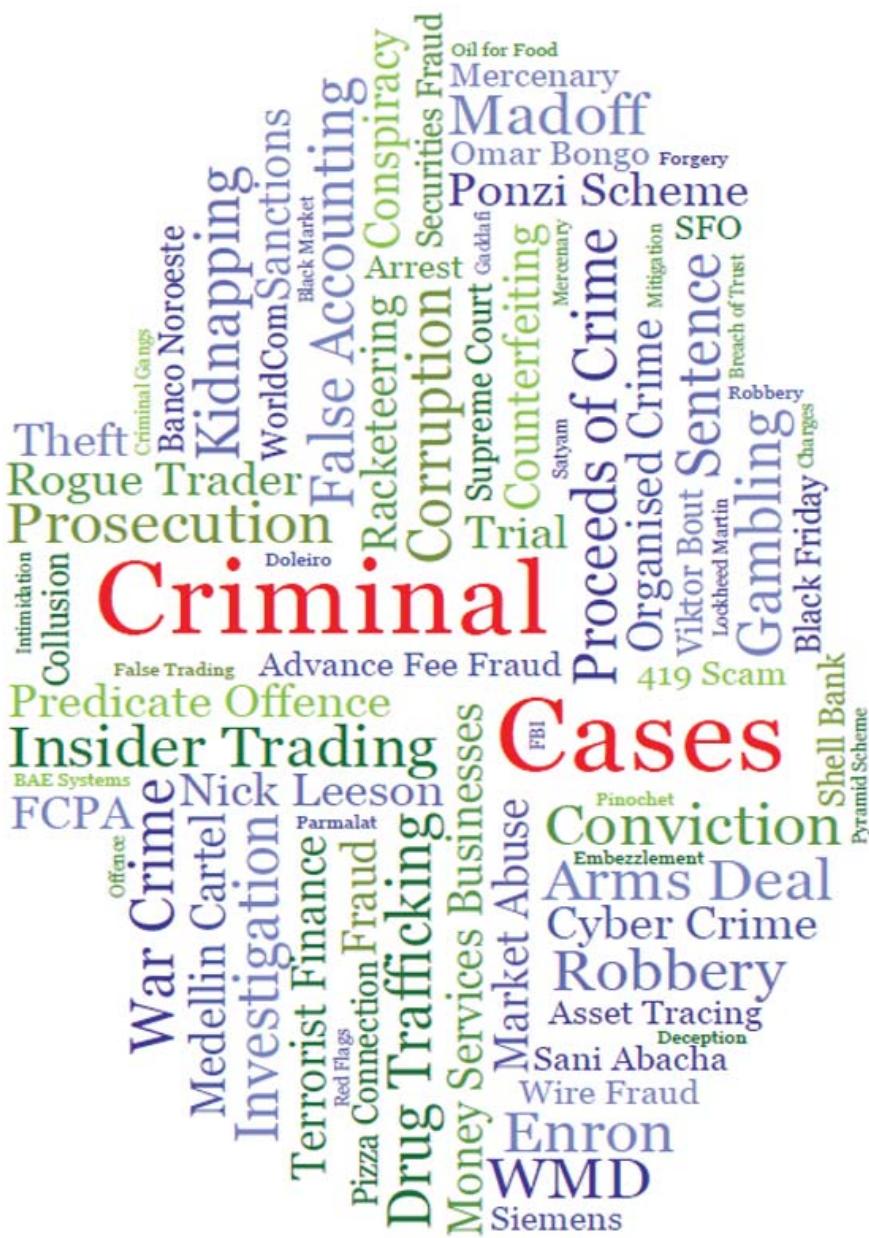

Both parcels in the 2010 cargo plane bomb plot were x-rayed without the bombs being spotted. Qatar Airways, that had unbeknown to it at the time had carried one of the bombs on board one of its passenger planes said the PETN bomb "could not be detected by x-ray screening or trained sniffer dogs".

The German authorities received copies of the Dubai x-rays, and an investigator said German staff would not have identified the bomb either.

Whilst many technologies can be used to detect PETN, a number of which have been implemented in public screening applications, primarily for air travel, this is much more difficult for Cargo. One technology, used for passenger flights, is where test swabs are wiped on passengers and their baggage for traces of explosives, though this is generally reserved for travellers who are thought to merit additional scrutiny.

A second type of machine, whole-body imaging scanners, use radio-frequency electromagnetic waves, low-intensity X-rays or T-rays of terahertz frequency to detect objects under clothing; but again these are used only on a limited basis and again only for passengers.

Introduction

The supposed response from former UK Prime Minister, Harold Macmillan when asked what a prime minister most feared; "Events, dear boy, events"¹ was meant to be a comment about "big and unexpected" things happening.

The remark could equally be applied to those dealing in the money laundering prevention area as new events often shape the future money laundering landscape, priorities and the nature of the debate and responses following the occurrence of such events, perhaps, particularly illustrated by the events of 9/11 and Al-Qaeda's attack on America.

Perhaps a further quote is also relevant being that made by US Secretary of Defence, Donald Rumsfeld in 2002 in the aftermath of 9/11, when he said "There are known knowns; there are things we know we know. We also know there are known unknowns; that is to say, we know there are some things we do not know. But there are also unknown unknowns the ones we don't know we don't know".²

In taking a closer look at more than 150 of the most infamous or if you prefer celebrated AML cases, the known knowns if you will, we can build a picture of many of the events that have shaped the money laundering landscape over the last decades and shaped the thinking, design and activity behind a Financial Institutions AML programme. We can also identify the criminal modus operandi in this instant. Whilst it is tempting to assume any particular case example can act as a proxy for a typology, it is both lazy and dangerous to do so. Nevertheless, in looking in detail across Cases, those that we have and where important connections can be made we can begin to see patterns and common elements that indicate risks which warrant greater focus, care and attention, if you will, that provide us with insight for future known unknowns.

These cases have been selected to showcase examples of the predicates, customer, products and services, channels and country risks and their respective interplays. Current money laundering programmes are designed to combat cases where history could be repeated, though no programme is infallible, is subject to human and other error, no two cases are ever the same and looking to the past will not enable us to predict the future.

The only sure certainty is that "Events dear boy events, will continue to ring true and these Cases will surely require supplementing with new Cases, no doubt some

falling into the category of known knowns, some known unknowns, becoming known knowns and as for the unknown unknowns that's life!

In this Part 2, Section 7, over 150 important cases are summarised with 30 given special attention with detailed profiles provided. Areas comprehensively covered and focussed upon include the most important predicate crimes, including corruption, for example, by Kleptocrats and PEPs, by companies paying bribes; by fraudsters ranging from those in the Corporate boardroom, rogue traders in investment banks, Ponzi schemers and other investment type fraudsters; by insider dealers, market abusers, kidnappers, extortioners and forgers, illicit arms traffickers, drug traffickers and organised criminals, goods and human traffickers, terrorist financiers, WMD proliferators and sanctions busters.

Corruption Individuals/PEPs

Ferdinand Marcos

Ferdinand Marcos was President of the Philippines from 1965 to 1986. President Marcos initially rose to power with widespread popular support and much was done to improve the economic situation faced by the Country though this became marred by high levels of corruption. As his health deteriorated his wife, Imelda, rose to prominence and assumed primary control over the country and its assets. By 1984, the US which had provided significant support to the Marcos regime began to distance itself from the regime and President Carter began an increasing campaign of public comment and criticism. In the light of this, Marcos decided to call an election but was defeated when the opposition parties combined to support the election of Corazon Aquino the widow of the prominent opposition leader that Marcos was alleged to have conspired to have murdered in September 1983. Marcos fled into exile in February 1986 and it was only then that the true extent of his corruption and abuse of power became evident.

US Customs Agents discovered 24 suitcases of gold bars as well as significant quantities of diamonds and currency and, as was widely publicised, it was discovered that his wife had over 2,500 pairs of shoes in the presidential mansion. Switzerland blocked assets in early 1986 upon the first signals that Marcos may try to siphon off money from Switzerland. Marcos died in Honolulu on 28 September 1989 and this was the catalyst for numerous actions to be started from individuals who sought restitution and return of funds stolen by the regime.

Imelda Marcos was subsequently tried in the US for embezzlement in 1990 but acquitted. In 1995 thousands of Filipinos won a class action against the Marcos estate in the US seeking damages for victims or relatives of victims of the regime but this action was dismissed.

Actions to trace and return the assets to the Philippines have been ongoing ever since and the nature and complexity of the structures and methods by which the funds were moved makes it extremely difficult for investigators to locate them with billions of dollars estimated taken from the Treasury and moved to accounts held offshore often in the names of "front companies". Some success has been achieved in this regard with the Swiss government returning US\$684mio. According to Transparency International in 2004 he was the second most corrupt leader who stole funds of around US\$5-10bio.

Country: Philippines
Key date: 1986 (fled into exile in Hawaii)

Special Focus 1 Papa Doc & Baby Doc Duvalier

Francois Duvalier (known as Papa Doc) was the President of Haiti from 1957 to 1971. He trained as a doctor and subsequently specialised in fighting tropical diseases which ravaged the poorer segments of the Haitian population. This work was to first bring

him to public prominence and helped result in him being known as "Papa Doc". He subsequently served as Director of the National Public Health Service. In 1949 he was forced to go into hiding as a result of a military coup. A succession of provisional governments followed but Duvalier finally gained the Presidency in 1957. Whilst his early years weren't particularly corrupt the later years in office was when he misappropriated millions of dollars in international aid with the funds being moved off the island and into accounts held in his name and the names of his family in a variety of other jurisdictions. In addition, he used his position to obtain official loans from other countries which he then promptly took for his personal use. Corruption became endemic and included extortion of local businesses and industries and created a situation where bribery was essential if anything associated or dependent on a government agency or department was going to progress. The government seized land from farmers and awarded them to those in the military and militia who supported Duvalier and famine and malnutrition spread widely.

Duvalier held power until his death in early 1971 and was succeeded by his son Jean-Claude who became known as "Bebe Doc". He made some token gestures such as releasing political prisoners but in reality opposition continued not to be tolerated and was frequently eliminated.

Like his father before him he abused his position and the finances of the country exploiting his near monopoly of the tobacco industry to generate considerable profits for himself and his direct family. He married in 1980 and through a combination of factors, including the vast expense of the ceremony which exceeded US\$3mio, further alienated the population

which was already suffering from a spread of AIDS which had, in turn, dramatically reduced tourism levels in the country. In 1983, Pope John Paul II visited Haiti and declared that "something must change here". This, combined with comments from other international observers, triggered a revolt in 1985 which included demonstrations and raids on government offices and storage facilities. This led to a series of measures by Duvalier which included deployment of the military, huge rises in the price of food and restrictions on the media.

In 1986 the US began to pressure Duvalier to leave and he finally left for France in 1986 transported in a US military aircraft. In France, Duvalier lived the high life in a plush villa, shopping at jewellers and vacationing at ski resorts, then gradually ran out of money after his wife divorced him in 1993 and was eventually placed under house arrest.

In his 15 years in power, Baby Doc and his glamorous wife, Michele Bennet, stole an estimated US\$500mio from the Haitian treasury, mainly through the president's "non-fiscal account" at the Regie du Tabac, the Haitian government's Tobacco Administration. Apparently the Duvaliers lived an expensive life in France; when the French authorities once raided their house in the South of France and seized a notebook from Mrs Duvalier. It showed some of her expenses from a recent shopping trip. They included US\$168,000 for clothes at Givenchy, US\$270,000 for jewellery at Boucheron, US\$9,752 for two children's horse saddles at Hermes, US\$68,500 for a wall clock and US\$13,000 spent for a week's stay at a Paris hotel. When the Duvaliers divorced in 1993, and Baby Doc was left apparently with little money for himself.

In 1986, The new Haitian government made a request for mutual legal assistance to Switzerland. Several accounts held by the Duvaliers in Switzerland were then frozen. These seizures included an account (approx US\$4mio) held by the Brouilly Foundation (incorporated under the laws of Liechtenstein), whose beneficiary was Simone Ovide Duvalier (the wife of Papa Doc). Over the course of the next 14 years, the court would be challenged by the legal claims from the Duvalier family to the money and Haitian government resistance to charging Baby Doc with any crimes in Haiti, which was a pre requisite under Swiss law to allow the Swiss to take the monies and provide it to the Haitian government. As a way out, the Swiss government had proposed giving the money to aid groups working in Haiti but in 2011, the Swiss Supreme Court whilst stating its unhappiness at the decision ruled that due to the Statute of Limitations it

could no longer object to the assets being claimed by the Duvaliers. It urged lawmakers to make it easier for assets belonging to deposed dictators to be repatriated to national governments and taking up this request Swiss lawmakers did just that passing the so-called "Duvalier law". The legislation was designed to open the way for the return of the funds, frozen in Swiss bank accounts during years of legal argument and efforts by Duvalier to reclaim them. In May 2011, the Swiss government started proceedings to return these assets (now US\$6.7mio) to the government of Haiti.

In January, Duvalier unexpectedly returned to Haiti after 25 years of exile in France, saying he wanted to help his compatriots rebuild after the huge earthquake that killed more than 300,000 people a year before. Since his return to Haiti, he has been charged with corruption, embezzlement and other abuses of power. Authorities have confiscated his passport. According to Transparency International in 2004 Papa Doc was the sixth most corrupt leader who stole funds of US\$300-800mio.

Position: Presidents of Haiti

When: 1957-1971 / 1971-1986

Amounts Involved: US\$300-800mio

Country: Haiti

Key date: 1986 (Baby Doc fled Haiti)

Manuel Noriega

President Manuel Noriega (also known as Pineapple face to his detractors) was infamous as the man who was the de facto military dictator of Panama from 1983 to 1989. Noriega worked with the CIA and US Army and became a paid intelligence agent since at least 1966 until 1986. In fact from 1978 until 1987, Noriega received numerous letters of appreciation from US officials for his cooperation in combating drug trafficking, for example, from Attorney General William French Smith in 1984 and DEA Administrator John C. Lawn in 1987. However by 1988 the US Senate Subcommittee on Terrorism, Narcotics and International Operations announced that: "The saga of Panama's General Manuel Antonio Noriega represents one of the most serious foreign policy failures for the US. Throughout the 1970s and the 1980s, Noriega was able to manipulate US policy toward his country, while skillfully accumulating near-absolute power in Panama. It is clear that each US government agency which had a relationship with Noriega turned a blind eye to his corruption and drug dealing, even as he was emerging as a key player on behalf of the Medellin Cartel a member of which was notorious Colombian Drug lord Pablo Escobar". They then went on to say that Noriega was allowed to establish "the hemisphere's first 'narcoleptocracy'". Noriega, in effect sold his government to drug traffickers for millions of dollars in bribes and turned Panama into a centre of international cocaine smuggling. US

prosecutors suggested a clear connection between Noriega and the Medellin Colombian drug cartel that was responsible for more than half of the cocaine smuggled into the US, in particular for example by receiving millions of dollars in payoffs. The US invaded Panama in December 1989 arresting and taking Noriega as prisoner to Miami. He stood trial and in 1992 was convicted of drug trafficking, money laundering and racketeering. His sentence was reduced from 30 to 17 years for good behaviour and he was released and then extradited to France in September 2007. In Paris in 2010, a Court sentenced him to 7 more years, but later in 2011 as the result of a request from Panama, France agreed to extradite Noriega to Panama so he would face trial for human rights violations and be convicted and sentenced to three 20-year sentences for crimes committed during his notorious 1983-1989 regime.

Key date: 1989 (US invasion of Panama and arrest of Noriega)

Special Focus 2

Raúl Salinas

Raúl Salinas is the brother of former President of Mexico Carlos Salinas. He is best known for all the wrong reasons, being convicted of arranging the killing in 1995 of his former brother-in-law, although he was acquitted upon appeal in 2005, and being the focus of US

Senate hearings which claimed that he had laundered over \$90 million out of Mexico via the US and into private bank accounts in London and Switzerland, between 1992 and 1994, being largely the proceeds of corruption and/or receipts from the Mexican criminal gangs involved in the drug trade.

Carlos Salinas was elected (though claims of election fraud abound) Mexican President in 1988 and served until 1994 as the nominee of the Institutional Revolutionary Party (PRI) that had won all presidential elections since its inception in 1929. The corruption associated with the Salinas Presidency and the activities of Raúl Salinas were influential in the shift away from one party rule, as Mexicans looked for political reform that would eliminate the potential for similar abuses.

In November 1995, Raúl Salinas' wife, Patricia Salinas and her brother Antonio Castañón were arrested in

Geneva, Switzerland after attempting to withdraw US\$84mio from accounts believed to be beneficially owned by Raúl Salinas.

A report by the US General Accounting Office led to hearings in the US Senate which highlighted that Raúl Salinas transferred over US\$90mio out of Mexico and into private bank accounts in London and Switzerland, through a complex set of transactions between 1992 and 1994, via Citibank and its affiliates. In 2008, the government of Switzerland turned over US\$74mio, out of the US\$110mio in frozen bank accounts held by Raúl Salinas, to the government of Mexico. The Swiss Justice Ministry indicated that the Mexican government had demonstrated that US\$66mio of the funds had been misappropriated, and the funds, with interest, were returned to Mexico. The money was wired by and through Citibank offices to bank accounts held at Citibank in Zurich but assets were also identified at Pictet & Cie, Julius Baer Bank, Banque Privée and Edmond de Rothschild in Geneva and Zurich. Other funds were returned to third parties, including Mexican billionaire Carlos Peralta Quintero, who had given the funds to Raúl Salinas to set up an investment company.

According to the US government, the US report also made criticisms about other Citibank private banking accounts held by the sons of Nigeria's late military dictator Sani Abacha, Asif Ali Zardari, the husband of former Pakistani Prime Minister Benazir Bhutto and future Pakistani President and the President of Gabon, Omar Bongo. The US Senate focussed however mainly on the Salinas relationship, claiming that from 1992, Citibank assisted Salinas with transfers out of Mexico effectively disguising the funds' source and destination, thus breaking the funds' paper trail. Citibank according to the US government first opened a checking account in New York under Mr Salinas' name. This was then replaced with a complex structure of Companies, established by Citibank in the Cayman Islands. First an offshore private investment company named Trocasa Private Investment, Co. was established. The Directors of Trocasa were 3 separate Citibank Cayman nominees companies, Madeline Investment SA, Donat Investment SA, and Hitchcock Investment SA. Trocasa's officer and principal shareholder was another company formed by Citi Cayman named Tyler Ltd. Further, Confidas, a Cititrust affiliate located in Switzerland, acted as Trocasa's manager and handled all administrative requirements. Trocasa opened two private banking accounts, one with Citi in London and another with Citi in Switzerland. Whilst no formal documentation identifying the beneficial owner existed in London, those dealing with the account were aware of the Salinas connection to Trocasa. In Switzerland documentation did exist as

required under Swiss law identifying the beneficial owner of the funds in Trocasa as being those of Salinas. Posing as Patricia Rios and introduced to Citibank Mexico by Citibank New York, Salinas' girlfriend (Patricia Rios Castañón would only become Patricia Salinas through marriage later in 1993), she deposited peso cheques drawn on Mexican banks with Citibank Mexico, even though she had no account there. Citibank Mexico converted the pesos into US\$ and wired the funds to Citibank New York for receipt into a Citibank Concentration account. These funds were received from Citibank Mexico as being from numerous entities including "Tyler Ltd and PS." Once in the concentration account in New York the funds were then wired to London or Switzerland and invested as directed by Citibank New York to Citibank London and Switzerland. On occasion Mr Salinas did contact for example Switzerland making direct contact and making investment decisions.

The very critical view taken by the US Senate of Citibank and its dealings with Raúl Salinas contrasts with the evidence provided to the US Senate by Salinas' Client Adviser 32 year Citibank veteran Amy Elliot. It is also worth noting that US regulators confirmed that Citibank did not appear to be in violation of any US laws and or regulations then in force. Ms Elliot was born in Cuba and emigrated to the US in 1961 when she was only 17 years old, with her family being persecuted by the Castro government. Ms Elliot joined Citi in 1967 and worked in a variety of positions until 1983, when she joined the Private Bank. In 1992, whilst as the Mexico Team Leader in New York and having worked for 8 years covering Mexican clients, she became the client relationship manager for Raúl Salinas who wanted to establish a new relationship. Ms Elliot first met Raúl Salinas in early 1992, at the same time as his brother, Carlos Salinas, was the President of Mexico. At this time President Salinas was seen as a hero both in his own country and abroad for his reforming agenda, Elliot told the US Senate. Elliot further explained that in Mexico in the early 1990s, the Salinas family was known as an old, distinguished family that had wealth going back many generations.

Raúl Salinas was referred to Ms Elliot by an existing 10 year Citibank client, (the then existing Agriculture Minister in Mexico) covered for 4 years by Ms Elliott and where the existing client personally attended at the Bank in New York, together with Mr Salinas to make the introduction. The existing long standing client had been close friends with Raúl Salinas since childhood and he told Ms Elliott he had worked with Salinas on numerous business projects. According to Ms Elliot Mr Salinas requested that his accounts be structured

in the same manner as the accounts of the client who referred him to the Bank. The use of a personal investment company, or "PIC," to hold his investments, and the method of transferring monies provided for confidentiality and also allowed for efficient tax and estate planning.

Confidentiality was required because many wealthy Mexicans are frequently the targets of kidnappings and other violent crimes in Mexico. Mr Salinas initially deposited US\$2mio, money, in fact, that was being returned to him by the referring client as a result of a joint venture that did not go through. In mid-1993 Mr Salinas started to deposit larger amounts of money at Citibank. The Wealth was believed to have been generated from a number of sources. First, from the sale of his construction company and secondly as Mr Salinas was a member one of Mexico's wealthy families and the children often received their inheritances, called patrimonio, while their parents were still alive, this was a source and thirdly the Mexican stock market had been doing very well, and Ms Elliot believed that Salinas' financial investments and the patrimonio had grown considerably. Lastly Mr Salinas married Paulina Castañón in June of 1993, and she had received a substantial divorce settlement. According to Ms Elliot for these reasons, the size of the account, the structure and the activity in the account never appeared suspicious to her. In particular Mr Salinas' decision to transfer money out of Mexico and from Mexican pesos into US\$ in 1993 -- which was the year before the Mexican Presidential election -- is exactly what many other wealthy Mexicans, including other Mexican clients, were doing at the time. This is, sadly, a tradition in Mexico because of the political and economic instability that occurs in the country around Presidential elections. The value of the peso and the Mexican stock markets usually drop preceding Presidential elections. There seems to be a fear that, with political transition, Salinas could suddenly find himself under enormous political attack. So, there were large amounts of money leaving Mexico in the 1993-94 time frame, including the funds of Raúl Salinas. That, in the context of Mexican politics, was not surprising and it was certainly not illegal; rather it was prudent and happened like clockwork every Presidential election year.

Citigroup Chairman and Citibank Co Chairman, John Reed gave evidence at the Senate hearings and admitted that controls over Citibank's private banking unit, had been unsatisfactory. He said there had been "oversight lapses" in the early 1990s, but that since then the bank had taken steps to rectify this. Committee chair Senator Susan Collins, a Maine Republican, said: "Too often, Citibank's private bank essentially paid lip service to its

own procedures. She went on, "We cannot allow the integrity of our banking system to be sullied by the dirty money that fuels the engine of criminal enterprises both here and abroad," and "Our banks must be vigilant in their efforts to detect and report criminal activity and avoid acting as conduits for money laundering."

Ms Elliot concluded her testimony at the US Senate stating, "The world in which I operated as a private banker in the early nineties was different from the private banking environment today. Procedures, technology, and safeguards are very different today at Citibank. Today, given all the changes that have taken place at the Bank, there is much more I would be required to do to accept a new private banking client such as Raúl Salinas."³

In October 1998, the Federal Reserve proposed that banks develop a profile of their customers' typical transactions and monitor them for deviations.

Position: Brother to President of Mexico
When: 1998-1994 (Brothers term of Office)
Amount involved: US\$100s mio
Country: Mexico
Key date: 1995

Mobutu Sese Seko

Mobutu was president of Zaïre from 1965 to 1997. In 1960 Mobutu was appointed state secretary in the first government of President Lumumba and later becoming head of the Army. In 1965 President Lumumba was assassinated and Mobutu took over the Presidency using his Army position as his power base. Mobutu introduced a sophisticated system of power and corruption shamelessly taking much of the profits of one of the richest nations in Africa due to its abundant mineral resources. As a bulwark against communism during the cold war, Mobutu used his pro-west credentials to obtain western development aid, which he then diverted and benefited from.

Mobutu became known for his lavish standard of living. During the 1980s the official budget allocated for the President exceeded the budget for roads, schools and hospitals combined. Anecdotes for his spending include his trips in a chartered Concorde to go to his dentist in Nice – accompanied by a 747 for his luggage and entourage. Perhaps to illustrate the corruption endemic in Zaïre during the Mobutu Presidency, the following quote came from Mobutu himself, "When I need one million, I ask my private secretary. He calls the Prime Minister asking for two million. The Prime Minister asks the Finance Minister for three million who in turn calls the Governor of the Central Bank

demanding 4 million. In the end I (Mobutu) get my million." Mobutu had an important real-estate portfolio around the globe including houses and apartments in many western countries and used the state entities (central bank, embassies etc.) to settle his private bills. Mobutu's imperial behaviour whilst objectionable to many was not unusual in the context of earlier times. His exhibition of power and potency were reflections of earlier times when African Kings ruled absolutely. Eventually and after more than three decades in power, Mobutu's reign came to an end in 1997.

With Mobutu weakened with little support from the West following the ending of the Cold War and the state seen as chronically corrupt, rivals rose to oust Mobutu. One rival Laurent-Desiré Kabila who secured support from Rwandan troops was able to force out Mobutu who fled the country dying shortly thereafter of cancer. Kabila would die soon after from a heart attack but not before renaming the country The Democratic Republic of the Congo and enabling the succession of his son who remains the current President. Mobutu left the country in a much poorer state than it was before colonial times. According to Transparency International in 2004, he was the third most corrupt leader who stole US\$5bio.

Country: Zaire
Key date: 1997 (forced into exile)

Augusto Pinochet

Augusto Pinochet was a Chilean general who assumed power in a coup d'état in September 1973 becoming President until 1990 when he was finally forced to hand over to a democratically elected government. His period of power was to be marked by widespread abuse of human rights including torture and murder. The number of people believed to have been killed under his orders and by the "death squads" he formed will never be known but it has been claimed that as many as 3,000 were murdered with ten times that number being tortured and even more being imprisoned or interned for protesting against his rule. His period of power saw the junta which he led sell state controlled industries and land to the private sector a process that offered plenty of opportunity to "skim" money off for his own benefit. The desire to ensure the Chilean economy remained stable ensured that international donors and financial institutions such as the World Bank and International Monetary Fund made significant sums of money available and these policies eventually saw the economy prosper even though its levels of foreign debt soared. Following the return of a democratic government in 1990, Pinochet left the country to settle in the UK having been sworn in as a "senator for life"

and been granted immunity from prosecution.

He was however, then arrested in 1998 following an extradition request from the Spanish authorities alleging abuses of power but following a long battle in the courts was finally released without trial in March 2000 and returned home to Chile claiming that he was in poor health. In March 2000, the Chilean congress removed his immunity from prosecution and in August of that year he was finally indicted for the disappearance of 75 individuals whose bodies had never been found which made it impossible to bring a charge of murder. In 2002 these charged were dismissed on the grounds that Pinochet was suffering from senility and he then resigned from his seat as a senator.

In 2004 the Supreme Court overturned the previous decision and he was then charged with several murders and other offences which was merely the start of a set of international actions and indictments arising from long standing investigations. Pinochet, nearing his 90th birthday, was placed under house arrest. In 2006 he was charged with a further set of offences including further kidnapping and torture charges together with involvement in the production and distribution of cocaine, the proceeds of which has allegedly been transferred offshore and into accounts controlled by Pinochet.

The financial dealings of Pinochet and his associates was the primary focus of an investigation by US authorities which centred on a network of accounts and other assets held at a number of US financial institutions and Riggs Bank in particular. Partly as a result of these findings, Pinochet's wife and four of his children together with business and political associates were all charged with tax evasion along with other offences linked to the funds uncovered by the US investigation. At least US\$27mio was alleged to have been illegally obtained and transferred through a network of trust funds and shell corporations. For more information see Riggs Bank at Part 2, Section 8, Enforcement Cases below.

In 2005 "The Guardian" newspaper alleged that Pinochet had been the beneficiary of "commission" payments related to the awarding of substantial arms related contracts to the Chilean armed forces. Pinochet was never to stand trial for these offences as he suffered a heart attack and died on the morning of 3 December 2006 an event that caused widespread celebration within Chile

Country: Chile
Key date: 1998 (arrested under a Spanish Warrant)

Special Focus 3 Sani Abacha

Sani Abacha was born in Kano Nigeria on 20 September 1943 and rose through the ranks of the Nigerian military before assuming overall command of the military forces in that country when he was appointed Minister of Defence in 1990. At the same time, he pursued a parallel

career in politics and through a combination of both positions became the de facto President of Nigeria from 1993 to 1998, following the annulment of elections, from which major unrest ensued. Whilst continuing to publicly assert his commitment to bringing democracy to Nigeria he pursued a campaign of repression aimed at undermining and, in some cases, eliminating opposition action which was criticised by human rights campaigners, civil rights lawyers and other pressure groups and commentators around the world. Abacha's response to this was to ban political activity and exert control over all forms of the Nigerian press as well as surrounding himself with a loyal military powerbase which secured his position.

His ability to do so was assisted by the increasing value of Nigeria's reserves of oil which generated considerable income and opportunities for him, members of his family and close colleagues to siphon off huge amounts of money and deposit it in accounts held around the world. Frequently this was done through corruption associated with the tendering and subsequent award of contracts awarded to foreign entities and individuals operating in the petro-chemical industry sector.

According to post-Abacha government sources, between US\$3-4bio or up to 10% of all Nigeria's oil revenues during the five years he was in power was illegally diverted and moved offshore. The schemes to steal and subsequently launder the money varied. In one scheme, Abacha's National Security Advisor would simply make a letter request for funds for unspecified "security needs." Abacha would countersign his approval on the letter, and his national security advisor would present the letter for payment to the Nigerian Central bank. Money was issued in traveller's cheques in blank (the first embezzlement of this type involved US\$2mio in Thomas Cook traveller's cheques being issued in a single day), cash, and wire transfers. Cash was deposited into Nigerian accounts of local business, smuggled overseas and deposited into foreign institutions, and wire transfers were deposited into accounts in false names, shell and bearer share companies, and trusts.

Another scheme involved an overbilling and kickback scheme, in which a corrupt company would supply goods to the government at grossly inflated prices and then kick back a portion to Abacha and his cronies. In one instance, the government of Nigeria paid US\$110mio for vaccines that were in fact worth less than US\$23mio. In another instance, he directed Ismaila Gwarzo, his National Security Advisor, to present him with false funding requests for security operations or equipment, which he had the power to authorise, and would do so. These funds would then be remitted to Gwarzo in cash (US\$1.31mio and £413mio) or in travellers cheques from the Central Bank of Nigeria. The funds would then be taken directly to Abacha's house.

Abacha died in June 1998 while at the presidential villa in Abuja. He was buried on the same day, according to Muslim tradition, without an autopsy. This fuelled speculation that foul-play was involved and that he may have been poisoned by political rivals via prostitutes. Whilst Nigerian military rulers cited his cause of death as a sudden heart attack it is suspected that he was in the company of six teenage Indian prostitutes imported from Dubai. It is thought that these prostitutes laced his drink with a poisonous substance, making Abacha feel unwell around 4:30am. He retired to his bed and was dead by 6:15am.

Following his death, recovery of the looted assets became a major objective for subsequent Nigerian governments with requests for mutual legal assistance being submitted to Liechtenstein, Luxembourg, Switzerland, the UK, Jersey and the US. Assets of approximately US\$2.6bio have been identified, with half of this being frozen and returned to Nigeria, following major legal battles. The remainder remains subject to dispute. As the assets were being identified, it became clear that major financial institutions and by extension major financial centres had failed to establish money laundering controls sufficient to counter the systematic looting of state assets on such a grand scale. The sheer size of the assets involved and the numbers of financial institutions involved across all the major financial centres directly led to a re-evaluation and a recognition that controls needed to be enhanced and in particular expectations rose dramatically as to how a financial institution should treat prospective business relationships with politicians and their direct family and associates. In future, relationships with individuals identified as PEPs or with entities with a significant PEP involvement in their management would need to be subject to significant additional scrutiny. According to Transparency International in 2004, he was the fourth most corrupt leader who stole US\$2.5bio.

Position: President of Nigeria

When: 1993-1998

Amounts Involved: US\$2.5bio

Country: Nigeria

Key date: 1998 (died in office)

Pavel Lazarenko

Pavlo Lazarenko was the seventh Prime Minister of Ukraine from 1996 to 1997, promoted from his position as Energy Minister by then Ukrainian President Leonid Kuchma but soon after quickly dismissed. While in office, he exercised control over a large swathe of the economy and influenced the privatisation of Ukraine's vast natural gas sector.

During his time in government, Lazarenko engaged in many different corruption schemes including extorting funds from businesses that wished to do business in Ukraine. Shortly after leaving office, Ukrainian prosecutors began an investigation into Lazarenko's alleged corruption and the members of the Ukrainian parliament sought to lift his immunity from prosecution.

In December 1998, he was arrested by Swiss police after attempting to cross the border by car from France on a Panamanian passport. The Swiss had already started their own investigation into his financial affairs and whilst he maintained assets found in his accounts in Switzerland were legitimately earned, the Swiss court found otherwise. He was given an 18-month suspended sentence and US\$6.5mio was confiscated from his Swiss accounts. Lazarenko was found guilty in absentia as he had left Switzerland soon after his arrest after posting a US\$2.5mio bail bond. Fearful of Ukrainian prosecutors, or others from the Ukraine, claiming he had received death threats, he travelled to the US seeking political asylum. He was granted a long stay in the US though that would not be at the 18-acre estate in San Francisco, for which he is said to have paid US\$6.7mio in cash. US prosecutors accused Lazarenko of laundering US\$114mio stolen while in office in Ukraine in American banks and he remains in a US prison having been found guilty of money laundering, wire fraud and extortion.

Lazarenko used corporate vehicles to avoid direct connections between themselves and the funds, for example, in the purchase of the US property, as funds flowed from a corporate shell account (Dugsbery) in the US, which in turn had received the funds from a corporate shell account (Lady Lake) in the Bahamas, which itself had been funded by a corporate shell account in Switzerland (CARPO-53). To give a sense of the scope and the ease in which corporate vehicles were used to transfer money, Lazarenko in one instance transferred US\$78mio through the issuance of two sequentially numbered cheques, made payable to "bearer" from a US-based account in the name of a corporation and those cheques were then deposited into the accounts of two different corporations at a bank in Antigua. According to Transparency International, he is the eighth most corrupt leader who stole funds of around US\$114-200mio.

Country: Ukraine

Key date: 1998 (arrested by Swiss Police)

Slobodan Milosevic

Slobodan Milosevic was the President of Serbia from 1989 to 1997 and President of the Federal Republic of Yugoslavia from 1997 to 2000. His Presidency was marked by the breakup of Yugoslavia and the subsequent Yugoslav Wars. In the midst of the 1999 NATO bombing of Yugoslavia, Milosevic was charged with war crimes and crimes against humanity in connection with the wars in Bosnia, Croatia and Kosovo by the International Criminal Tribunal for the former Yugoslavia (ICTY) and would become known as the Butcher of the Balkans. He died in his cell at the Hague in 2006.

When UN sanctions were imposed on Yugoslavia in May 1992 because of the Bosnian war, Milosevic had already anticipated the embargo and established the infrastructure for exploiting the international banking and trading systems to bust sanctions and keep importing vital commodities. The scale of the asset transfers out of Serbia was material. According to Transparency International, Regime insiders, including Milosevic's close relatives, are believed to have taken and moved hundreds of millions of dollars abroad in private, numbered or alias accounts in Cyprus, Switzerland, Lebanon, Russia, Greece, and Israel. Whether the money was fully intended to avoid economic sanctions or also for personal use is unclear, though what's more likely is that the idea was formed for the former but later became available to those holding the assets. The monies most likely came from flawed privatisations, from siphoning off customs receipts, preferential loans to crony companies and individuals plus windfalls from manipulating the foreign exchange black market.

It is believed that Milosevic's brother, wife and daughter had bank accounts, which were later frozen, in Switzerland, according to Yugoslav government sources and western diplomats in Belgrade. Mirko Marjanovic, the former Serbian prime minister who controlled the lucrative grain export business to Russia throughout the 1990s and Dragan Tomic, a Milosevic aide and former parliament speaker also had accounts that would be frozen. Assets of approximately US\$100mio were frozen by the Swiss. Two key Milosevic supporters, Nikola Sainovic, a former deputy prime minister who controlled the precious metals trade and who was also indicted for war crimes in Kosovo, and Dusan Matkovic, ex-deputy leader of Milosevic's Socialist party and head of the giant Sartid steel works at Smederevo outside Belgrade, had bank accounts in Beirut, according to a former banker inside the regime. The banker masterminding the financial system was Borka Vucic a Milosevic family friend. Before returning to head Serbia's biggest bank, Beogradsko Banka, in 1998, she spent nine years in Cyprus as head of the bank's offshore subsidiary. The operation was centred on Cyprus because of its banking secrecy, offshore companies culture, and the sympathy of Greek Cypriots for the plight of their fellow Orthodox Serbs. Cyprus was the conduit for billions of dollars in cash from

Serbia. The funds were then dispersed globally or into the accounts of scores of anonymously owned offshore companies registered in Cyprus. In the early 1980s, Milosevic was President of Beogradsko Banka and Mrs Vucic was his deputy. If there is no doubt that Mrs Vucic was the linchpin of the Milosevic money system, she vehemently denies handling Milosevic family money or doing anything illegal. She insists she was only doing her patriotic duty in helping her country to evade sanctions. "I know Mr Milosevic quite well and I know the family. He was a fighter, a good banker and a good President," she said "But we had no business at all with the family. I believe they have some other banks but not Beogradsko." All through the 1990s she headed Beogradsko Banka's offshore subsidiary in Cyprus, the biggest offshore bank on the island, handling the accounts of the myriad Serbian offshore companies established there, such as Yugometall, the state company trading in metals. According to Transparency International in 2004, he was the fifth most corrupt leader who stole US\$1bio.

Country: Former Yugoslavia

Key date: 1999 (charged with war crimes)

Alberto Fujimori

Alberto Fujimori, the son of Japanese immigrants, became the president of Peru between 1990-2000. When Fujimori took office, the country's economy was in a state of collapse. Even worse, Peru was in the midst of a war and seemed destined to fall into the hands of the Sendero Luminoso or the Shining Path and the Túpac Amaru or the MRTA terrorist movements which controlled about a third of the country. Abimael Guzmán, a philosophy lecturer in the University of San Cristóbal de Huamanga, in Ayacucho, founded the Shining Path in 1970 as a Maoist breakaway movement from the pro-Russian Peruvian Communist Party. Poverty and injustice made Ayacucho a fertile breeding ground for the movement which started a campaign of armed insurrection in 1980. By the middle of the decade several thousand guerrillas were operating in rural areas and by the late 80s urban terrorism was also a real problem. The Movimiento Revolucionario Túpac Amaru, generally known by its initials, MRTA, or as Túpac Amaru named after the last Inca ruler who was assassinated by the Spaniards in 1572 was smaller and less extreme than Sendero Luminoso, and started its guerrilla campaign in 1984. Alberto Fujimori eventually with assistance from his security chief Vladimiro Montesinos and the army defeated the terrorists, pivotal to which was the capture of Guzman. The war against terrorism is estimated to have cost 30,000 lives. Fujimori's popularity soared but there were influential Peruvians who were troubled by his autocratic rule. After the Sendero Luminoso's grip on rural areas was weakened the Peruvian government began to tackle the drug dealers with some success. Nevertheless the revelations that the Peruvian intelligence services, headed by Mr Montesinos had been caught on TV bribing parliamentarians led to further revelations

including that at one stage drug traffickers paid protection money to the government, tarnished the government's record and was so scandalous that it also brought down Fujimori. On 17 November 2000 Alberto Fujimori arrived unexpectedly in Japan after attending a summit of Asia-Pacific leaders in Brunei. Three days later he faxed his resignation to Congress and claimed exile status in Japan from where extradition was not possible. In November 2005 Fujimori sought to achieve his goal of returning to power and flew to Chile to begin his campaign, only to be arrested by the Chilean authorities. Eventually he would be extradited to Peru and on 11 December 2007 he received his first conviction and was sentenced to six years in prison for abuse of power later being also sentenced to serve 25 years in prison for further crimes. According to Transparency International in 2004, he was the seventh most corrupt leader who stole US\$600mio.

Country: Peru
Key date: 2000 (resigned as Peru's President due to corruption scandal)

Vladimiro Montesinos

In August 2000 President Fujimori held a news conference to announce the interception of a large consignment of arms from Jordan destined for FARC guerrillas in Colombia and he gave the credit for smashing the operation to his right hand man, Vladimiro Montesinos. However, the Jordanian government claimed that it had sold the arms to the Peruvian armed forces. Not long afterwards, on Thursday 14 September 2000 a video was broadcast that was to lead to the fall from power of Alberto Fujimori and to the arrest and imprisonment of Montesinos. The video, that had fallen into the hands of one of the opposition parties in Peru, showed Montesinos, giving a bribe of US\$15,000 to congressman Luis Alberto Kouri to switch sides in order to try and ensure that the government's favoured candidate would be chosen as the President of Congress. According to one later report Montesinos himself had been responsible for the arms sale to FARC, angering the CIA, who turned against a man with whom they had previously had close links, and a group of Peruvian army officers who were emboldened to break into his office and steal the tape - one of a collection of thousands incriminating politicians, officials and military officers.

Whatever the truth about the origin of the video, in the uproar that ensued following its broadcast, Fujimori announced that he would hold new presidential and parliamentary elections in which he himself would not be a candidate. At the same time, he announced the dissolution of SIN, el Servicio de Inteligencia Nacional (the National Intelligence Service), of which Montesinos was the de facto chief. The parents of the

spy chief, regarded by many as Fujimori's Rasputin, were communists and therefore they named their son, who was born in Arequipa in 1946, Vladimir Ilyich after Lenin, an ironic choice for the boy who was to grow up to become the pillar of a right-wing regime. By coincidence Arequipa was also the birthplace of the novelist Mario Vargas Llosa, Fujimori's opponent in the 1990 election, and Shining Path leader Abimael Guzmán. In 1966 Vladimiro Montesinos joined the army and subsequently became the personal adjutant of another officer from Arequipa, General Mercado Jarrín. When the President, General, Juan Velasco Alvarado made Jarrín his prime minister in January 1973, Montesinos moved closer to the reigns of power in what was a left-wing regime. Soon it became apparent that information was being leaked to the US embassy and suspicion fell on Montesinos. When General Guillermo Arbulú took over as commander-in-chief of the army in 1976, Montesinos was transferred to a remote garrison of El Algarrobo near the Ecuador border. Montesinos stayed there only a matter of days before flying to Washington where he had meetings with officials in the CIA but on his return to Peru he was arrested and convicted of falsehood and desertion of command, expelled from the army, and sentenced to a year's imprisonment. While in prison he studied law and on his release specialised in defending people accused of tax fraud and drug trafficking. As the cocaine barons had corrupt allies in the army and police the information Montesinos acquired through his job made him an increasingly powerful figure. When General José Valdivia was accused of having been responsible for the massacre of innocent civilians in the Shining Path stronghold of Ayacucho in 1988, he turned to Montesinos for help and the case against him was dropped. Even SIN found Montesinos useful because of his contacts and files on all sorts of people and he began to supply the agency with information.

When, during his campaign for the Presidency in 1990, Fujimori was worried about accusations of tax evasion which were damaging to a candidate who made much of his clean reputation, General Díaz, the boss of SIN, suggested that Montesinos should help him. From then onwards Fujimori found himself increasingly dependent on Montesinos whose reputation became even more controversial. Demetrio Chavez also known as "El Vaticano" at his trial in 1996 claimed that he had paid US\$50,000 a month to Montesinos for protection, but when he reappeared in court about a week later, apparently somewhat the worse for wear, he withdrew the accusation saying that he had been "confused" when he made it. The money mentioned in El Vaticano's recanted statement was relatively trivial compared with the amounts mentioned in allegations

after Montesinos fell from power. Roberto Escobar, the brother of the former head of the notorious Medellin drug cartel in Colombia, Pablo Escobar, who was killed in 1993, wrote a book published in January 2001 called *Mi Hermano Pablo* (My Brother Pablo) in which he claimed that Fujimori's first election campaign was financed by a donation of US\$1mio of drug money and that total payments to Montesinos to ensure that Escobar's planes carrying partly processed cocaine were not shot down in Peruvian airspace, came to US\$45mio.

After the broadcast in September 2000 of the video showing him bribing a congressman, Montesinos left for Panama but, after being refused asylum in that country, returned to Peru and immediately went into hiding. President Fujimori gave orders for the arrest of his former spy chief but his own hold on power was almost at an end. On 2 November Switzerland announced that it was freezing about US\$50mio in five bank accounts linked to Peru's ex-spy chief, prompting the Peruvian government to launch a probe into allegations that Montesinos laundered money through Swiss banks. Evidence of other unexplained bank accounts (in various places, including the Cayman Islands, Uruguay and New York) containing US\$274mio allegedly amassed from arms deals and drug trafficking was soon uncovered. Even those discoveries leave the bulk of the US\$800mio thought to have been taken illegally from the Peruvian government's coffers, unaccounted for. On Saturday, 23 June 2001, Vladimiro Montesinos was arrested in Venezuela, a month after Jose Guevara - a former Venezuelan intelligence service agent, had attempted to withdraw part of the US\$38mio Montesinos held in a frozen account at a bank in Miami. Guevara opted to reveal the fugitive's whereabouts in return for the US\$5mio reward offered by the Peruvian government. Ketin Vidal, Peru's interior minister, flew to Venezuela to arrange the handing over of the former SIN boss. Almost a year later, on 3 May 2002, it was reported that the Peruvian government had still not paid the promised US\$5mio reward for the capture of Montesinos and was trying to decide between the competing claims of a banker, a bodyguard and a private investigator. On 1 July 2002 Vladimiro Montesinos was convicted of illegally controlling Peru's spy agency and he was sentenced to nine years and four months in prison. Nearly a year later, on 29 May 2003 he was sentenced to eight years imprisonment on embezzlement charges. Altogether Montesinos faces about 70 different trials. The legal procedures against him are still not complete and in April 2005 he was sentenced to five years imprisonment after he pleaded guilty to accepting US\$15mio in "severance pay" from President Fujimori as their regime collapsed.

Mohamed Suharto

Mohamed Suharto was the second President of Indonesia holding office from 1967 to 1998, resigning that year after huge protests by Indonesians. He held office for about 31 years and was sometimes popularly referred to in the media as Pak Harto, or Father Harto and 'The Smiling General'. Suharto and his family used their power to enrich themselves and their friends, gaining billions of dollars through their control of government enterprises and charities and their acceptance of kickbacks for state contracts. Ties to Suharto were seen as an essential prerequisite to doing business in Indonesia, with those in favour being given lucrative government contracts often at the expense of economic efficiency. Suharto's cronies used their positions for personal enrichment and to enhance their political power. His six children wielded significant influence and launched many questionable business ventures, funded from established government foundations. Suharto's wife came to be known as 'Madam Ten Percent' due to the commission she demanded from business deals where her support was solicited.

The collapse of Indonesia's economy following the crony capitalism of the Suharto Regime was inevitable but was triggered by the Asian financial and economic crises in late 1996. This led to popular discontent with Suharto's rule and provoked widespread rioting forcing his resignation in 1998. A World Bank report that year estimates that at least 20-30% of Indonesia's development budget over the previous two decades had been embezzled for personal and political gains. The report went on to state that "Indonesia is in deep economic crisis." "A country that achieved decades of rapid growth, stability and poverty reduction is now near economic collapse," a study by the bank found. "No country in recent history, let alone one the size of Indonesia, has ever suffered such a dramatic reversal of fortune."

In 1998, according to Time magazine, the Suharto family fortune was worth an estimated US\$15bio in cash, shares, corporate assets, real estate, jewellery and fine art. US\$9bio of this was reported to have been deposited in an Austrian bank. The family was said to control about 3.6 million hectares of real estate in Indonesia, including 100,000 square metres of prime office space in Jakarta and nearly 40% of the land in East Timor. Over US\$73bio was alleged to have passed through the family's hands to friends and family

during Suharto's 32-year rule. By 2000 Suharto came under investigation for the corruption that occurred during his Presidency, being first placed under house arrest and then charged with embezzling US\$571mio of government donations to one of a number of foundations under his control and then using the money to finance family investments, though a panel of court-appointed doctors found him permanently physically and mentally unfit to stand trial. Indonesian prosecutors again tried in 2000 bringing a US\$1.5bio civil lawsuit against Suharto to recover funds allegedly siphoned from the Supersemar educational foundation set up in 1974. The prosecutors alleged that, beginning in 1978 and continuing until Suharto's ouster, 85% of the money sent to the foundation was embezzled. The court ordered Supersemar to pay the government US\$110mio in compensation but failed to find Suharto responsible. Whilst Suharto escaped justice his youngest son, Hutomo (Tommy) Mandala Putra, was found guilty and jailed for 15 years for organising the murder of a judge who in September 2000 sentenced him to 18 months for his role in a land deal, however he was released on parole in 2006 serving less than five years of the original 15 year sentence. According to Transparency International, Mohammed Suharto was the number one most corrupt leader who stole funds of around US\$15-35bio. No funds were ever recovered abroad and returned to Indonesia.

Joseph Estrada
Joseph "Erap" Ejercito Estrada was the 13th President of the Philippines from 1998 to 2001. He is the only Filipino president to have resigned from office. Before joining politics, he was a popular film actor who played a lead role in over 100 films and won awards for his performances. Estrada's tenure as president was short-lived, however, as a corruption scandal erupted in October 2000 when a fellow politician claimed that Estrada had accepted millions of dollars worth of bribes. In November the Philippine Senate began an impeachment trial, but it was abandoned after some senators blocked the admission of evidence. On 20 January 2001, Estrada was ousted amid mass protests, and his Vice President, Gloria Macapagal Arroyo, ascended to the Presidency. Later that year Estrada was brought to trial on charges of large scale corruption and accused of having procured more than US\$80mio through bribes and corrupt dealings. Estrada denied the accusations, calling them politically motivated, and he remained relatively popular in the Philippines despite the charges. In September 2007 he was convicted and sentenced to a maximum of 40 years in prison. The

following month, however, Estrada was pardoned by then President Arroyo. According to Transparency International who published a list in 2004, he was the tenth most corrupt leader who stole funds of around US\$78-80mio

Paulo Maluf

Paulo Maluf is a successful Brazilian politician with a career spanning over four decades having been State Governor of São Paulo, Mayor of the City of São Paulo, Congressman and Presidential candidate. As of 2011, Maluf is on a second consecutive term as a Federal Deputy. His political base is on the right-wing in the Progressive Party of Brazil. His career has been plagued with substantial allegations of corruption. He was convicted on one charge in 2001 by the Brazilian courts, and is currently wanted for fraud conspiracy and theft by Interpol.

Paulo Salim Maluf, the son of Lebanese Christian immigrants grew up in São Paulo, and in his youth he was a self-acknowledged playboy with a taste for fast-racing sports cars. Maluf entered professional politics thanks to his family's friendship with the then military President Artur da Costa e Silva, with whom he shared a common interest in horse racing and gambling. Based on this friendship, he was appointed mayor of São Paulo in 1969. An early act was to suspend the construction of the São Paulo Metro and build instead one of the most controversial constructions in Brazil: the Costa e Silva elevated expressway, also known as Minhocão ("Big Earthworm" in Portuguese). In 1972, following his mayoralship, he served as secretary of transport of the state of São Paulo and then afterwards elected governor for the state of São Paulo in 1978. During his ensuing term (1979–1983), Maluf spent wildly on public works, including some schemes of doubtful validity, such as on a failed plan to move the state's capital city. It was because of such schemes that one of the most notable accusations of corruption against him emerged, concerning the oil company Paulipetro. This was a state company founded by Maluf during his tenure as governor with the purpose of digging the state for oil and which consumed around US\$500mio whilst drilling 21 holes and finding nothing but a few pockets of natural gas and water. By then, Maluf had already fostered a reputation "for engaging in corrupt machine politics". Maluf was a presidential candidate in the first direct presidential elections in 1985, though he didn't do well. Maluf was still able to forge a successful career in post-dictatorship Brazil, despite his perennial reputation for corruption. One notable example of the allegations of corruption that surfaced around Maluf was the Ayrton Senna tunnel, which passes underneath Ibirapuera Park and cost more, per kilometer, than the UK/French Channel Tunnel with allegations that the tunnel cost

over US\$400mio more than it should.

Under dispute is Maluf's personal wealth, which critics attribute to his involvement in corruption scandals; supporters, conversely, point to a legitimate origin of such wealth in his family's companies. Maluf has been convicted of corruption multiple times, but only in 2001 was the sentence considered final, with no possibility of appeal. At the time, he was forced to pay approximately R\$500,000 to the state. Many of his alleged crimes cannot be prosecuted, due to the nature of the Brazilian statute of limitations. In early September 2005, Paulo Maluf and his son Flávio Maluf were temporarily arrested by the Brazilian Federal police, under the charge of intimidating witnesses of an ongoing investigation. They were only incarcerated for a few weeks. So notorious is Maluf's reputation that in Brazil the verb malufar was created, meaning "to steal public money".

In the 2006 elections, Maluf ran for a seat in the Brazilian Chamber of Deputies, being elected as the candidate for the federal legislature with the greatest number of ballots cast personally for him. In 2007, Robert M. Morgenthau of the Manhattan's District Attorney's office issued an indictment against Paulo Maluf for Money Laundering in relation to kickback and inflated invoice scheme that allegedly stole US\$11.6mio from a Brazilian road contract project totalling US\$140mio. In March 2010, Paulo and Flávio Maluf were included in an Interpol Red notice, however this arrest warrant is not valid in Brazil because the Brazilian Constitution does not allow for the extradition of Brazilian citizens.

Country: Brazil
Key date: 2001 (convicted of corruption in Brazil)

Arnoldo Alemán

Arnoldo Alemán was born in Managua and rose to become the President of Nicaragua in 1996. In 1979 following a short-lived civil war, the Marxist Sandinista guerrillas came to power. The US sponsored anti-Sandinista Contra guerrillas through much of the 1980s. In 1996 he campaigned for President under a strong anti-Sandinista platform. It is reported that unidentified individuals attempted to shoot Alemán, killing one of his bodyguards in the process. He defeated Daniel Ortega, the Sandinista leader, by 48% of the vote to Ortega's 40%. Many claimed widespread election fraud and Ortega refused to concede.

Alemán was successful in promoting economic recovery with reduced inflation and growth of GDP. Foreign investment grew during his administration, which helped to improve Nicaragua's infrastructure. Alemán was constitutionally barred from running for another term, and was succeeded by his vice president, Enrique Bolaños who soon raised serious allegations that Alemán had engaged in massive corruption during his administration for example, one scheme was reported to have involved several members of Arnoldo Alemán's closest family, including a brother and sister,

as well as Alemán's daughter María Dolores Alemán, and her husband Jerónimo Gadea. Ex-ministers and close friends were also charged, some of whom fled the country. However, one of the central figures in the corruption plot, the former Chief of Department of Taxes Byron Jeréz, was imprisoned on the basis of another charge of corruption. Several foreign governments froze Alemán's bank accounts in their countries and threatened to confiscate the funds. In such cases, his defence has been to claim that the funds were not stolen, but that they came from his coffee plantations.

Alemán was formally charged in 2002, and in 2003 he was sentenced to a 20-year prison term for a string of crimes including money laundering, embezzlement and corruption. During his trial, prosecutors produced evidence showing that he and his wife had made extremely large charges to government credit cards, "including a US\$13,755 bill for the Ritz Carlton hotel in Bali and US\$68,506 for hotel expenses and handicrafts in India." Because of health problems, he was allowed to serve his prison term under house arrest. He was also barred from entering the US. In 2009, Nicaragua's Supreme Court overturned the 20-year corruption sentence against Alemán. The decision generated much controversy. Many believed that Alemán struck a secret deal with now President Ortega and leader of the Sandinista Party, who wielded considerable influence and control over the courts, in exchange for persuading many of the now opposition to co-operate with Ortega. According to Transparency International in 2004, he was the ninth most corrupt leader who stole US\$100mio.

Frederick Chiluba

In the late 1990s and early 2000s, then-President of Zambia, Frederick Chiluba, together with the Head of the Zambian Security Intelligence Services, Xavier Franklin Chungu, concocted a scheme to embezzle over US\$70mio from the Zambian Treasury. In one aspect of the scheme, Chiluba and Chungu, through an intermediary, appeared to contract with a Bulgarian company for the purchase of military equipment, including helicopters, aircraft and weapons. US\$20mio, in a number of tranches, was paid by the Zambian Treasury to two accounts in Belgium and Switzerland to satisfy the contract. In reality, no arms were ever delivered and the money that had been transferred into the accounts was dissipated by Chiluba, Chungu and their associates. The withdrawals from the accounts, purportedly set up to purchase arms from Bulgaria, included US\$7.6mio being withdrawn in cash. Some cash withdrawals were quite large, including one US\$1.3mio withdrawal. Other transfers were to law firms associated with the Zambian President and his associates.

Saddam Hussein

Saddam Hussein Abd al-Majid al-Tikriti was the fifth President of Iraq, rising to ultimate power in 1979, long a leading member of the revolutionary Arab Socialist Ba'ath Party, which espoused ba'athism, a mix of Arab nationalism and Arab socialism. Saddam played a key role in the 1968 coup and later Vice President and then President before being captured and executed following the 2003 Iraqi invasion by Western forces. Saddam was credited with the creation of internal security forces through which he tightly controlled conflict between the government and the armed forces.

In the early 1970s, Saddam nationalised oil and other industries. The state-owned banks were put under his control, leaving the system eventually insolvent mostly due to the Iran-Iraq War, the Persian Gulf War, and UN sanctions. Following his capture in December 2003, the trial of Saddam took place under the Iraqi interim government. On 5 November 2006, Saddam was convicted of charges related to the 1982 killing of 148 Iraqi Shi'ites and was sentenced to death by hanging. He was certainly responsible for many more atrocities than these and during his time in office Saddam was widely condemned for the brutality and corrupt nature of his dictatorship. His execution was carried out on 30 December 2006.

The UN sanctions placed upon Iraq for its invasion of Kuwait were relaxed because of the hardships suffered by ordinary Iraqis, with a formal agreement being agreed between Iraq and the UN in 1996 with the coming into being of the Oil-for-Food Programme, ('Programme'), which was systematically manipulated by Saddam. Under the Programme, which ended in 2003 with the invasion of Iraq by the US and its allies, Iraq would be permitted selective sales of its oil with the proceeds to be deposited in a bank account controlled by the UN. The UN would use the approved purchases negotiated by Iraq and disburse payments to vendors to buy food and other goods: Iraq would be allowed to sell oil and goods prices independently and to enter into contracts directly with buyers and sellers of its own choosing. Coupled with what turned out to be lax oversight by UN Programme management, internal and external auditors, and investigatory bodies, the ability to set prices and select contracting parties ended up giving Saddam Hussein an opportunity to circumvent the Programme's purpose and realize a direct gain in the form of bribes. An investigation of the Programme was set up by the UN to determine whether charges of corruption were founded in fact. The Independent Inquiry Committee ('IIC') was chaired by Paul Volcker who was joined by Judge Richard Goldstone and Professor Mark Pieth. The report of the Committee's findings was published in October 2005. The key findings were that: the Iraqi government systematically levied bribes on oil

and goods under the Programme and the Independent Inquiry unearthed documents showing that the oil ministry and other government departments were directed to impose and collect fees on the total price of each contract, preferably prior to shipment. The illicit payments were usually a matter of cents per barrel on oil contracts and 10% of contract price for the purchase of goods. The investigators were able to locate ledgers, databases, spreadsheets and documents that tracked on a contract by contract basis the price agreed for the goods, the contract price which included the 10% uplift, and the bribe levied and collected. Many kept side letters in which the vendor promised to pay the 10%, often referred to as an 'after service sales fees'. Records were also found which showed hard currency side payments for inland transportation, in direct contravention of UN rules and agreements. This evidence was corroborated by ample evidence found in banking, embassy, and company records that bribes had in fact been paid. Embassy records in Moscow, for example, showed tens of millions of dollars transported in cash from Russia to Baghdad in diplomatic pouches, corresponding to the records kept by the Iraqi oil marketing company of bribes levied and paid on particular oil deals. In terms of humanitarian aid contracts, shippers kept proof that the suppliers for whom they were transporting goods had paid the 10% bribes. This became necessary for shippers in order to avoid Iraqi port agents refusing to unload the ship's entire cargo if any portion of the shipment had unpaid bribes. Further transportation agents who served as the primary collectors of the bribes payments had chronicled inland transportation fees paid by company and contract number. Companies and traders involved in buying the oil or supplying humanitarian aid also had maintained copious records including evidence of side payments, while banks from around the world had left a paperwork trail replete with letters of credit, deposits and money transfers. As a result of the forensic techniques employed by the skilled investigators working for the IIC, an organised web of bribes maintained by Saddam Hussein's government was discovered. Oil surcharges were paid in connection with the contracts of 139 companies, and humanitarian kickbacks were paid in connection with the contracts of 2,253 companies. The total amount of illicit income was estimated at US\$1.8bio by the IIC although subsequent analyses have put the figure much higher. The way the bribes were structured meant that they did not represent losses for the companies paying them. Instead they were, in effect, paid by the Iraqi people. They were embedded in prices: prices that were either lower than market, in the case of oil sales, or higher than market, in the case of goods. The identification of the bribes, in other words, may also represent the identification of the amounts recoverable from vendors. The models developed by the investigators and applied to the data they had uncovered indicated that Iraq routinely undervalued its oil and overpaid for humanitarian goods, even beyond the cost of the bribes. When it came to the former, it was found that once the oil surcharge scheme got underway in 1999, Iraqi oil was consistently priced under market by

an amount much greater than what was warranted by the surcharge alone. The conclusion was drawn that it was likely that the Iraqi officials wanted a wide enough margin to assure that there would be sufficient funds for the purchaser to: pocket enough profit to keep them and their partners in the schemes buying; pay the bribes; and pay various non-contractual beneficiaries, such as political parties or individuals. Since the IIC published its report, there has been a steady trickle of cases being brought against the companies involved in bribery.

Many corporates were involved and named and shamed including for example, American oil giant Chevron Corp, which agreed to pay US\$30mio to resolve US criminal and civil liabilities as well as the Australian Wheat Board where the Australian government concluded its judicial investigation in 2006 in which it was found that AWB paid more than US\$220mio in kickbacks to Saddam Hussein's regime for wheat sales and Mercedes Benz parent Daimler AG who pleaded guilty to US bribery charges and fined US\$185mio in 2010.

Key date: 2003 (Saddam captured after invasion and put on trial, later executed)

Ali Zardari - Bhutto

Mr Asif Ali Zardari is the former President of Pakistan and the co-chairman of the Pakistan Peoples Party. He was married to former prime minister Benazir Bhutto until her death in a terrorist attack in 2007. During the times his wife was prime minister (1988-90 and 1993-1996) he became known as "Mr 10%" because of his alleged role in obtaining kickbacks as an intermediary in government deals. French arms deals during the first tenure of Ms Bhutto probably are the most famous of all alleged corruption deals of Mr 10%. According to an investigative report, Zardari offered exclusive rights to Dassault to replace the fighter jets of the air Force for a commission of 5% to be paid to a Swiss corporation under his control.

Links to the Karachi bombing of 2002 where 11 French citizens were among the 15 killed are being made alleging that the bombing may have coincided with France stopping the commission payments. 19 corruption cases were filed against Mr Zardari and his wife between 1990 and 1992 alone. It is worth noting that at the time of the commission agreement, bribing foreign official was not a criminal offence in France: it was a tax deductible. In 1997 the Swiss Authorities froze more than US\$13mio assets of the Zardari and Bhutto families and handed over documents relating to corruption allegations to the Pakistani government in 1998. In 2003 the Swiss court found Zardari and Bhutto guilty of money laundering and ordered them to pay US\$11mio to Pakistan. The assets had been a commission payment by a Swiss firm. Bhutto and Zardari appealed the 2003 Swiss conviction, which required the reopening of the case in October 2007. He

was jailed for corruption between 1990 and 1993 and arrested again in 1996 in Pakistan. While in jail, he was elected to parliament (1990 National Assembly; 1997 Senate). In 2004 he was released and went into self-exile from which he returned in 2007 after the assassination of his wife. He was elected President in 2008 until 2013. Efforts to re-open the corruption cases are being pursued by the Pakistani judiciary.

Key date: 2003 (Swiss court finding of money laundering)

Teodoro Obiang & Son ("Teodorin")

Teodoro Nguema Obiang, attained the Presidency of Equatorial Guinea, an oil rich West African State in 1979 and continues as President still today. Equatorial Guinea is one of the smallest countries in continental Africa. Obiang became President via a bloody coup d'état. Since 1979 some 12 real and perceived unsuccessful coup attempts have occurred. The 'real' coup attempts were often perpetrated in an attempt by rival elites to seize the state's economic resources, including one notable case led by Simon Mann. The discovery of sizeable petroleum reserves in recent years has made the country one of the wealthiest in the world, however, most of the country's considerable oil wealth actually lies in the hands of only a few people. Equatorial Guinea also has one of the worst human rights records in the world, consistently ranking among the "worst of the worst" in Freedom House's annual survey of political and civil rights.

According to testimony provided to the US Senate in 2004 Teodoro Obiang, banked significant sums of money offshore, at Riggs Bank in Washington where he opened multiple personal accounts for himself, for his wife and for relatives. Riggs helped establish offshore shell corporations for the President and his sons and over the course of three years, nearly US\$13mio in cash was deposited into accounts at Riggs controlled by the President and his wife. In addition, an Equatorial Guinea government account was established which received funds from largely US oil companies doing business in the country, under terms allowing withdrawals with two signatures, one from the President and the other from either his son or his nephew. More than US\$35mio from this government account was then wired to two further companies with accounts offshore, most likely owned or controlled by the President.

Teodoro Nguema Obiang Mangue (commonly referred to as Teodorin") is currently the Minister of Forestry and Agriculture in the Equatorial Guinea and is the son of President Teodoro Nguema Obiang. He is the subject of an international arrest warrant issued by France and the subject of civil forfeiture proceedings in the US for allegedly abusing his position to profit from

corruption related to the countries oil wealth. Whilst his only obvious sign of income appears to be a government salary of US\$100,000 he has amassed a personal fortune of over US\$100mio, leading the US Senate in 2004 to name him as a “major perpetrator of corruption and finally to action by both France and the US in 2011. Teodorin appears to have been undone by the level of conspicuous consumerism he undertook flaunting his extravagant lifestyle in both Europe and the US. Assets he acquired included a US\$38.5mio Gulfstream G-V Jet, a US\$30mio house in California, US\$1.8mio worth of Michael Jackson memorabilia, a Ferrari worth more than US\$530,000, to add to his collection including 8 more Ferrari's, 7 Rolls Royces, 5 Bentleys, 4 Mercedes, 2 Lamborghinis and 2 Bugattis, an Aston Martin and a Porsche.

Diepreye Alamieyeseigha

Diepreye Alamieyeseigha was elected Governor of Bayelsa State Nigeria in 1999 and re-elected in 2003. In asset declarations in 1999 and 2003, Alamieyeseigha failed to reveal, as he was required to, that he controlled numerous accounts in London with millions of pounds of deposits. In 2005, Alamieyeseigha was arrested on a flight to the UK and interviewed at a London police station. One of his London properties was searched and £1mio cash was found in numerous locked bags in a locked bedroom. During his interview he denied being involved in corruption and claimed the cash was his “strategic reserve.” An analysis of the UK-based accounts associated with Alamieyeseigha showed both cash deposits and account activity highly inconsistent with its stated purpose. For example, shortly after opening one account, there was a sharp rise in deposits from £35,000 to £1.5mio.

In 2003, Alamieyeseigha also instructed a London-based fiduciary/trust company and service provider to register a company in the Seychelles of which Alamieyeseigha was the sole shareholder and director. This company then opened an account with a UK bank. The bank had predicted a turnover of £250,000, but in the first 14 months the account received deposits totalling approximately £2.7mio and, contrary to the characteristics of a functioning business, did not have any outgoings. Also, £1.6mio came from a bank in Nigeria from a contractor to Bayelsa State. Additionally, at least one of those accounts received cash deposits, often in increments of £10,000 to £15,000.

Country: Nigeria
Key date: 2005 (corruption charges laid)

Special Focus 4

Randy “Duke” Cunningham

Randy Cunningham is a US Navy veteran and was a member of the US House of Representatives between January 2003 and December 2005 and a former member of the powerful Appropriations Committee.

Cunningham's prior military experience allowed him to have significance in the military budget. As part of his duties, he had the ability to insert special requirements, known as “earmarks” into defence budgets, requiring that the military purchase a certain good or service. Some of these earmarks also mandated the use of “no-bid” contracts, which would circumvent the normal open bidding process, purportedly because the good or service was highly specialised or classified.

In 2005 Cunningham pleaded guilty to receiving at least US\$2.4mio in bribes and benefits from defence contractors. Cunningham accepted bribes, typically through asset transactions, in exchange for no-bid earmarks. In one instance, a defence contractor was able to receive millions in no-bid contracts by purchasing the Congressman's home from him at an inflated price so that Cunningham could purchase a more expensive house. To disguise the transaction, the contractor used a corporate vehicle to purchase Cunningham's house. The contractor paid additional money to the Congressman, disguised through cheques made payable to a corporate entity that Cunningham had previously established. Other similar bribes included the purchase of a yacht, nominally owned by a third party but in fact owned and used by Cunningham and the purchase of antiques and other furniture. Investigators in the case were aided by the fact that Cunningham was required to disclose his assets and his income. An examination of those records showed that Cunningham's net worth skyrocketed in a few short years, but that his net income had not.

Position: US Congressman

Special Focus 5

Omar Bongo

Omar Bongo was Gabon's second President, (1936-2009) succeeding to the highest position at only the age of 31. Gabon whilst achieving its independence from France still maintained close relationships and retained close ties with French oil giant, Elf-Aquitaine, giving the

Company privileged rights to exploit Gabon's significant oil reserves in exchange for France's assistance in helping the young President retain his grip on power. France kept its military bases in the country and a contingent of paratroopers underwrote Bongo's rule. The President trusted no-one but the French and his own family. Bongo duly made his son, Ali-Ben, defence minister and his daughter, Pascaline, foreign minister and then chef de cabinet. He spent much time as he could in Paris, revelling in his friendship with a succession of French Presidents, particularly Valery Giscard d'Estaing and Jacques Chirac. The latter, together with President Sarkozy were the only Western leaders to attend Bongo's funeral in 2009. As a result of investigations conducted largely by US authorities and in particular the US Congress and as a result of the evidence arising out of the corruption trial in France of Elf-Aquitaine executives President Bongo's corrupt practices could be unearthed.

President Bongo had opened a foreign offshore account at Citibank in 1970, mostly out of New York. Most of the private bank accounts managed out of New York would later be held in the hands of Tendin Investments Ltd ('Tendin'), a Bahamian shell company set up in 1985. In 1985 President Bongo transferred about US\$52mio from his accounts in Bahrain to newly opened accounts in New York for Tendin. The total funds in the Tendin accounts fluctuated over time from anything between about US\$28mio to about US\$72mio including withdrawals of about US\$67mio. However records indicated that funds moving through the private bank account at Citibank under President Bongo's control since 1985 exceeded US\$130mio. President Bongo also had extensive bank credit relationships. Between 1989 and 1996 he obtained multiple loans collateralised by his deposits. Many of these loans were issued under a complex arrangement in which the bank allowed President Bongo's accounts in Gabon to incur multi-million dollar overdrafts. These were immediately covered by transfers from President Bongo's accounts in Paris. These were in turn covered by transfers from offshore accounts belonging to Tendin. It has been suggested that this three step process may

have been designed to avoid direct transfers from the Tendin offshore accounts into the President's accounts in Gabon, so as to minimise the chance that Gabon bank personnel would learn the name of President Bongo's private investment company. It appears that the President also had accounts in Paris and Switzerland, the details of which are not clear, but were thought to contain millions of dollars in allegedly improper payments by Elf. During the trial of the disgraced Elf executives, they admitted that they paid Omar Bongo US\$40mio a year for concession rights to his oil rich but economically impoverished country. The executives claim the millions of dollars were transferred directly into Bongo's bank accounts held by a close associate, his oil adviser, Samuel Dossou.

More suspicious transactions were identified this time by the US Permanent Subcommittee on Homeland Security and Governmental Affairs, in 2006, including US\$18mio in funds from Gabon wired to the US corporate bank accounts of a US lobbyist who then distributed the funds within the US and abroad, directed by President Bongo in connection with two projects to support his regime, buying US-made armoured cars and C-130 military cargo planes. Among the funds the lobbyist distributed was US\$9.2mio which he wire transferred to an account for President Omar Bongo in Malta. Other notable transactions included in 2007, President Bongo brought US\$1mio shrink-wrapped US\$100 bills into the US under cover of diplomatic immunity without declaring the cash to US authorities as required. This was discovered when his daughter first deposited the cash in a US safe deposit box and later into her US bank account. More recently, in 2007 a police investigation into real estate owned by Bongo and his family in France found that they had 33 properties in Paris and Nice, worth an estimated US\$190mio, finally forcing France to freeze Bongo's bank accounts held in French banks.

Zine El Abidine Ben Ali

Ben Ali was the second President of the Republic of Tunisia. He ascended to the office of President on 7 November 1987. He was subsequently reelected with enormous majorities exceeding 90% every time; the final reelection was on 25 October 2009. On 14 January 2011, following a popular uprising called the Tunisian Revolution, he was forced to step down and flee the country to Saudi Arabia along with his family, ending his 23-year grip on power. Ben-Ali's government was deemed authoritarian and undemocratic by independent international human rights groups such as Amnesty International and Freedom House. They criticised Tunisian officials for not observing international standards of political rights and interfering with the

work of local human rights organisations.

Ben Ali and his family are accused of corruption, which was a major contribution to the 2010–2011 Tunisian protests which led to the fall of his government. Since he fled Tunisia, details have gradually come to light of the extent of corruption under his rule. He and his wife Leila Trabelsi, along with their inner circle, are suspected of having pocketed much of the country's wealth over the years and of taking personal stakes in much of the economy. Tunisian Central bank chief stated that Tunisian banks funded businesses linked to the families of the couple to the tune of US\$1.8bio. Videos show that the President stashed cash and jewellery some of which had "historic value" in the president's palace. The total amassed wealth of Ben Ali is unknown to date. However, news media have claimed the wealth of the former leader and his entourage to be estimated at US\$5bio, although they have not detailed how they came to this figure, which thus cannot be verified. The family's interests are thought to include banks, insurance, fishing and construction as well as about 30 properties, including hotels. The interim Tunisian government asked for Interpol to issue an arrest warrant, charging him for money laundering and drug trafficking. On 20 June 2011, Ben Ali and his wife were sentenced in absentia to 35 years in prison.

Muammar Gaddafi & Son

Muammar Muhammed Abu Minyar al-Gaddafi, commonly known as Colonel Gaddafi, was the ruler of the Libyan Arab Republic from 1969 to 1977 and then the "Brother Leader" of the Libyan Arab Jamahiriya from 1977 to 2011, during which he pursued a largely Arab nationalist and Arab socialist philosophy. In 1969, he seized power from King Idris in a bloodless coup, after joining and founding a revolutionary group within the military. Following unsuccessful border conflicts with Egypt and Chad, and Gaddafi's support for foreign militants led to Libya being labelled an "international pariah", with a particularly hostile relationship developing with the US and UK, who accused him of being a dictator and autocrat whose authoritarian administration oversaw multiple human rights abuses and supported international terrorism. For example, in 1981, the new US President Ronald Reagan famously declared Gaddafi an "international pariah" and the "mad dog of the Middle East". He immediately pursued a hard line approach to Libya, considering its government a puppet regime of the Soviet Union. Relations became ever more strained, particularly after Libyan diplomats were accused of shooting dead Yvonne Fletcher, a British policewoman stationed outside their London embassy, in April 1984 and after the US accused Libya of orchestrating the 1986 Berlin discotheque bombing, in which two American soldiers died. Reagan decided to retaliate militarily and in 1986, US military planes launched a series of air-strikes on Libya, bombing

military installations in various parts of the country, killing around 100 Libyans, some of whom were civilians.

One of the targets had been Gaddafi's home in the Bab al-Azizia barracks. In the aftermath of the 1986 US attack, the army was purged of perceived disloyal elements and in 1988, Gaddafi announced the creation of a popular militia to replace the army and police. In 1987, Libya began production of mustard gas at a facility in Rabta, although publicly denied it was stockpiling chemical weapons, and unsuccessfully attempted to develop nuclear weapons. The period also saw a growth in domestic Islamist opposition, formulated into groups like the [Muslim Brotherhood](#) and the [Libyan Islamic Fighting Group](#). Libya stepped up its support for anti-western militants such as the [Provisional IRA](#), and in 1988, [Pan Am Flight 103](#) was blown up over Lockerbie in Scotland, killing 259 passengers. British police investigations identified two Libyans – Abdelbaset al-Megrahi and Lamin Khalifah Fhimah as the chief suspects, and in November 1991 issued a declaration demanding that Libya hand them over. When Gaddafi refused the UN imposed economic sanctions which had deep repercussions for the country's economy. They would only be suspended in 1998 when Libya agreed to allow the extradition of the suspects to the Scottish Court in the Netherlands.

In 2001, Gaddafi condemned the September 11 attacks on the US by Al-Qaeda, expressing sympathy with the victims and calling for Libyan involvement in the War on Terror against militant Islamism. Influenced by the events of the Iraq War, in December 2003, Libya renounced its possession of weapons of mass destruction, decommissioning its chemical and nuclear weapons programmes. Relations with the US improved as a result, while UK Prime Minister Tony Blair met with Gaddafi in the Libyan desert in March 2004 and soon after with the EU in Brussels. The following month, Gaddafi travelled to the EU in Brussels and in 2006 was removed from the US list of state sponsors of terrorism.

After protests against the Libyan government started in February 2011, following the start of the Arab Spring, the UN, the US and EU imposed sanctions again against Gaddafi's regime, and supported rebel groups that led to his downfall and his death in 2011. After the fall of Gaddafi, Libya's interim government the so called National Transitional Council accused Gaddafi and his son Seif al-Islam of using the much of the wealth of the country for their personal use and embezzling billions of dollars. In July 2011 the corruption and human rights non-profit organisation Global Witness published a report on the Libyan Investment Authority, the Country's Sovereign Wealth Fund, and its investments based on a leaked document. According to this report the LIA deposited well over US\$1bio with some major international banks. The LIA not only courted financial institutions but also other bodies in

a bid to garner respectability for example the London School of Economics (LSE) which has an international reputation as one of the world's best universities. Libya's dealings with the LSE called some of its judgments and particularly of those of Sir Howard Davies its Head and a former Head of the UK FSA due to their agreement to accept millions in donations for example a £1.5m Gaddafi International Charity and Development Foundation (GICDF) and to LSE Global Governance (£300,000 received) as well as US\$50,000 paid to the university in return for Sir Howard's advice to Libya's sovereign wealth fund and an award of £2.2mio contract between LSE Enterprise and Libya's Economic Development Board to train Libyan civil servants and professionals. Such was the damage to the reputation of the LSE once these were publicised that it ultimately led to Sir Howard's resignation.⁴

Key date: 2011 (killed in civil war in Arab Spring)

Muhammad Hosni Mubarak

Mubarak served during three decades as the fourth President of Egypt, from 1981 to 2011. He was elected to his fifth consecutive term as president in September 2005. But the election was the first contested presidential election in Egypt's history, with official results showing Mubarak having won 88.6% of the votes cast. However, civil organisations observing the elections and the Egyptian Organisation for Human Rights reported mass rigging activities, bought votes and fraud. On 25 January 2011, mass protests in Egypt calling for Mubarak's resignation began. Violence in the streets quickly escalated between Mubarak supporters and the opposition following his 1 February 2011, announcement that although he would not seek another term in the presidential elections scheduled for September 2011, he would not resign from his post. On February 10, 2011, protests continued and, Mubarak announced he would be handing over powers to his vice-president, Omar Suleiman, but would remain as president. The following day, Suleiman announced that Mubarak was stepping down and the military's supreme council would run the country.

There are many reasons for the collapse of Mubarak's regime, but one of the most important reason is corruption. Corruption in Egypt had reached unprecedented heights. Reports from Egypt speculated that the personal wealth of Mubarak and his family to be between US\$40bio and US\$70bio due to corruption, kickbacks and legitimate business activities. However, these figures are likely widely inaccurate and cannot be verified. The money was said to be spread out in various bank accounts at home and abroad, and also invested in foreign property though again little has been publicly identified.

James Ibori

James Ibori, was Governor of Nigeria's Delta State from 1997 to 2007. In 2012, Ibori pleaded guilty in the UK to ten counts of money laundering and fraud in relation to an estimated US\$250mio of stolen state assets and was sentenced to 13 years imprisonment. Ibori's wife was also been convicted of money laundering. Ibori had an official salary of £4,000 per annum and his formal asset declaration stated that he held no cash or bank accounts outside of Nigeria. Despite this, he bought several houses around the world including one in the UK valued at approximately £2.2mio. The purchase of this house was hidden in a company name called 'Haleway Properties Ltd' which was a previously-formed company incorporated in Gibraltar and had been arranged by his wife, Theresa Ibori, through a UK based fiduciary agent. The beneficial owners of 'Haleway Properties Ltd' were James and Theresa Ibori. The mistress of Ibori was also responsible for the transfer of funds out of Nigeria, investing them on behalf of Ibori, acting as a conduit to pay for properties in the UK. By the end of 2003, his mistress had deposited more than £3mio into a trust fund in Guernsey for the benefit of the Ibori family. The administrators of the trust fund, consistent with the purpose for which it was established, expected that money would be deposited into the account from UK banks. When they received transfers from an unknown Nigerian company called "Sagicon," they conducted further due diligence. Ibori's mistress obtained forged company accounts and incorporation documents, certified by a corrupt solicitor in Nigeria, to falsely show Ibori as a major shareholder of Sagicon.

Ibori and his associates also used multiple UK bank accounts to launder funds. In 2005, Ibori utilised the services of a corrupt London-based solicitor, to launder his funds. Money had been transferred from Nigeria to a UK corporate bank account, which was beneficially owned by Ibori but controlled by his former special assistant. The special assistant transferred some US\$4.7mio from the UK account into a Swiss company account which was beneficially owned by Ibori. Once the funds were held in the account, they were then transferred to yet another Swiss company bank account, which was beneficially owned by another client of the corrupt solicitor. The solicitor then transferred the US\$4.7mio back to one of his client accounts in London, effectively 'washing the money.' Once the money was in the solicitor's client account, it was then deposited into a Texas bank account and used for the deposit on the purchase of a private jet aircraft for Ibori.

Key date: 2012 (guilty of corruption)

Corporates

Lockheed Martin

Lockheed Martin is the world's largest defence contractor. Over the past 40 years, Lockheed has been the subject of major bribery scandals. The payment of bribes, usually via intermediaries and slush funds, were simply once part of doing business.

In the mid-1970s, US Congress investigated foreign payments by US companies revealing allegations and admissions of bribery to foreign government officials and led to the introduction of the FCPA in 1977.

The US Congress investigation included noteworthy mentions of Lockheed Aircraft Corporation bribing senior government officials in Japan and Holland. The Japan case related to payments of US\$1.7mio to then Japanese Prime Minister Tanaka in return for the sale of 21 TriStar planes valued at US\$6.3mio. Lockheed's covert middleman, Yoshido Kodama via a local trading company Marunbeni, provided four lump sum payments to officials over an eight month period including deliveries on 10 August 1973 at the back of the British Embassy in a cardboard box; 12 October 1973, at a phone booth; 21 January 1974 in a hotel parking lot; and 1 March 1974 at an officials' apartment.

The US Senate Committee also learned of US\$1.1mio paid by Lockheed to Prince Bernhard of the Netherlands, then Inspector General of the Dutch Armed Forces and husband of Queen Juliana of the Netherlands, nearly resulting in the abdication of the Queen's position. He renounced his role in exchange for immunity.

Twenty years later, in 1994, Lockheed was investigated by US authorities under the FCPA with respect to paying bribes in Egypt and submitting false statements. Lockheed paid a criminal fine of US\$21.8mio, a civil penalty of US\$3mio and was barred from foreign exports. Lockheed had hired a local consultant and government official, Dr Leila Takla, who was responsible for marketing and sales for Lockheed in Egypt. Lockheed made monthly payments to a company called Takla Inc, whose signatory was Takla's husband.. Dr Takla improperly used her influence with the Ministry of Defence to direct business to Lockheed

Key date: 1973 (LM bribed Japan's then Prime Minister to secure lucrative plane contracts)

Bofors

The name Bofors has been associated with the iron industry for over 350 years. Located in Karlskoga, Sweden, the company originates from the hammer mill "boofors" founded in 1646. A leading Swedish steel producer by the early 1870s, Bofors expanded into weapons manufacture with the first cannon workshop being opened in 1884. Since 1987, Bofors pedigree name also became associated with the murky world of corruption, bribery and unfair trade practices.

The saga began when the Government of India floated a tender in 1984 for buying Howitzer guns for the Indian army. Two providers were shortlisted, the French Sofma and Swedish Bofors. The army tested the two guns and opinions were divided on the quality of the two guns. The chief of the Indian Army, General Sundarji, eventually opted for Bofors and the Government approved the decision in a record 24 hours from receiving the army's recommendation. On 24 March 1986 the contract was awarded to Bofors for the supply of over 400 155mm Howitzer field guns.

Whilst rumours about commissions being paid to the ruling political party for awarding arms deals had been floating for a while, the Bofors scandal first properly surfaced on 16 April 1987, when the Swedish Broadcasting Corporation broke the story that Bofors paid kickbacks to top Indian politicians and key defence officials to secure the deal. The Swedish radio quoted senior Bofors sources as saying that in total, kickbacks of around US\$50mio were paid into the secret Swiss bank accounts of, among others, the then prime minister of India, Mr Rajiv Gandhi.

The Swedish broadcaster insisted it had evidence to back up its report and the scandal picked up steam with the respected Indian daily paper, The Hindu, publishing documents evidencing payments by Bofors to certain questionable companies, namely AE Services. AE Services was shown to be a company which had a paid up capital of Lira 100 and no employees. It was widely alleged that the contract with AE Services specified that payment to AE Services would be made only if the contract for the guns was signed before 30 March 1986.

The media onslaught on Bofors continued and a private diary allegedly belonging to the CEO of Bofors included various code words such as : "Q's" involvement may be a problem due to the closeness with "R". Q's account was at a Swiss Bank where the money from AE Services was paid and was operated by Mr. Ottavio Quattrocchi, an Italian businessman who represented the petrochemicals firm Snamprogetti and was reportedly close to the family of Mr Rajiv Gandhi, allegedly the "R" of the infamous diary. Several other names including the UK-based Hinduja brothers with business interests spread across the media. Mr Win Chadha, a Dubai-based businessman and Mr S.K. Bhatnager, a former Defence Secretary who later served as the Gov-

ernor of Sikkim, were mentioned in the media reports in connection with the burgeoning Bofors scandal.

The unraveling story lost the Government and the ruling party headed by Mr. Rajiv Gandhi its credibility, although Mr Ghandhi always denied it.

After spending years in chasing the accused through domestic and international courts and incurring costs of close to US\$100mio, none of the accused parties in the Bofors matter were convicted. Ironically, the Bofors guns themselves proved to be a success and some say the defining factor, in ensuring India's victory over following conflicts with Pakistan.

Country: Sweden, India

Key date: 1987 (investigations started by Swedish and Indian authorities into allegations of corruption)

Special Focus 6 Thomson CSF - Thales

Thomson CSF now known as Thales is the largest French Defence Company and is associated with a major corruption scandal connected with the sales of Arms to Taiwan. In 1991, the Taiwanese government abruptly ordered the Taiwan Navy to cancel its longstanding commitment to purchase frigates from South Korea and instead purchase a more expensive class of frigates via French company Thomson CSF (now Thales). The contract, valued at US\$2.5bio, was the largest procurement in Taiwan history and also represented a U-turn by France on its foreign policy of not supplying arms to Taiwan.

Employing the services of a local Taiwan agent, Andrew Wang, Thompson CSF arranged kickbacks to persuade the Taiwanese authorities to drop their project with South Korea. The defence contract was heavily inflated and at least US\$26.75mio was paid in kickbacks to Taiwanese politicians and military leaders. Wang was also charged in absentia for the murder of a Taiwan navy Captain Yin, who disappeared the day after representatives from Thomson CSF visited the Taiwan Navy General Headquarters and was believed to have been a whistleblower.

The frigates were delivered but substandard and the Taiwanese would ultimately conclude in 2002,

following a government investigation that the price of the frigate deal had been inflated to FF15bio (US\$2bio) from the original quote of FF10bio, and that Taiwanese politicians and military leaders pocketed us\$26.75mio in kickbacks from the sale. The authorities put the loss incurred by Taiwan from the payment of bribes at US\$520mio (plus interest).

The investigation quickly focussed on Andrew Wang Thomson's agent and accounts blocked in Switzerland following suspicion raised by Swiss Banks. In total, 46 bank accounts were held by Andrew Wang in Switzerland in the names of Andrew Wang, his three sons and a company owned by Wang.

The French side of the frigate affair was no less scandalous. As a result of a broader corruption investigation involving former state owned oil giant Elf Aquitaine, the role of the former foreign minister, Roland Dumas, and his former mistress, Christine Deviers-Joncour, in the frigate deal unraveled. In return for switching foreign policy and approving the contract, Dumas received bribes from Ms Deviers Joncour, who at the time was employed as a lobbyist by Thomson CSF.

Elf was cash-rich at that time and was appointed as the lead public enterprise to help facilitate foreign business of other state-owned companies with generous commissions and bribes. The Elf facilitation team on behalf of Thomson approached Ms Deviers-Joncourt, who persuaded Dumas to approach Mitterrand on the frigate sale. As for herself, Deviers-Joncourt admitted receiving some US\$10mio in commissions from Elf and claims that Elf paid out a total of FF5.5bio (US\$827mio) on behalf of Thomson-CSF (Thales). Ms Deviers Joncour captivated the French public with her book in 1999 titled "The Whore of the Republic", where she detailed gifts she had provided to Dumas in return for his support towards Elf Aquitaine generally, but also the Frigates deal. She also alleged that bribes had been paid to placate China.

In March 2003, Dumas admitted to Le Figaro that France paid US\$500mio in bribes for the frigate deal. Dumas said that the sum was approved by former president Francois Mitterrand, that US\$400mio was paid to the secretary-general of Taiwan's ruling KMT party and that US\$100mio went to the Chinese Communist Party's Central Committee in Beijing. Despite these revelations, the French prosecutors dismissed the case in August 2008 after 7 years of investigations for "lack of evidence". The inquiry had sought to establish whether French politicians, military officials and other middlemen had illegally profited

from the 1991 sale, as it was alleged that substantial parts of this money disappeared into the pockets of various officials.

The finding was hardly surprising given that the French financial judges Renaud van Ruymbeke and Xavière Simeoni claimed at the end of their initial investigation in 2005 that they had repeatedly been denied access to confidential government defence files which were at the heart of the case. This was confirmed when in 2006 the French Consultative Commission on National Defence Secrets (CCSDN) decided not to release documents requested by the investigating magistrates.

Taiwan's navy filed for arbitration with the Paris-based International Court of Arbitration, an offshoot of the International Chamber of Commerce court in 2001 and final judgment was pronounced in May 2010. In an unprecedented ruling the court found that Thales violated the anti-corruption clause in its 1991 contract and spent over US\$500mio on bribes to secure the US\$2.5bio deal to sell six Lafayette class frigates to Taiwan.

More than 20 people, including three senior Taiwan Navy officers were jailed in Taiwan as a result of the frigates scandal. In June 2011 the French government and Thales Group announced that they would pay a fine of €630mio (now about US\$913mio), after losing their appeal against the international court of arbitration ruling for breaching the anti bribery provision in their contract.

As part of the broader corruption scandal in France, Dumas was jailed for six months and forced to resign as head of the French Constitutional Council for receiving illegal funds from Elf Aquitaine while he was foreign minister. Ms Deviers-Joncours was sentenced to three years in prison.

Apart from the death of the naval Captain there are several others who died under mysterious circumstances according to a French investigating magistrate. The Captain's nephew, who was helping to investigate his uncle's death, also died an unusual death, as did a Taiwanese bank official acting for the naval dockyards. Later, Thierry Imbot, a French intelligence agent who had been following the frigate negotiations for the French secret service, fell to his death from his Paris apartment under suspicious circumstances. A year later, a former Taiwan based Thomson employee named Jacques Morrison, who told associates he feared for his life because he was a witness to the talks, also fell or was pushed to his death.

The case though is not yet over. In October 2011 the Taiwanese government filed a US\$98.4mio lawsuit against the French state-owned arms company DCN. The allegations, announced by Taiwan's Defence Minister Kao Hua-chun in Parliament, are also an indication that the French contractors apparently continued with illegal activities well after the original scandal was uncovered. Kao said additional kickbacks prohibited by a 1996 order agreement have been found. Taiwan is seeking the additional penalty for alleged violation of the 1996 agreement, bringing the total to well over US\$1bio

The French government has further problems in other countries because DCN's operations face questions across almost the entire globe, including in Pakistan, Malaysia, India, Saudi Arabia and Chile, with bribes and kickbacks reportedly comprising 8% to 12% of DCN's entire budget and involving political parties and government leaders including former French Prime Minister Edouard Balladur and associates of the former French President Nicholas Sarkozy (who denies all the allegations).

Penalty: US\$913mio (potentially more to come)

Actions: illegal bribes paid to win sale of Navy frigates from France to Taiwan

Country: Taiwan, France

Key date: 2002 (investigations started by Taiwanese authorities into allegations of corruption)

Statoil

Statoil is an Oil company located in Norway. In 2002 and 2003, it paid bribes to an Iranian government official for him to use his influence to assist Statoil in obtaining certain contracts to develop an oil field in Iran and to open doors generally to further work inside Iran.

The bribe was facilitated by the use of a "consulting contract" with an intermediary company organised in the Turks and Caicos Islands and nominally owned by a third party in the UK. The Iranian official, who was described as an advisor to the Oil Minister, and who was not named in the contract, facilitated Statoil's success in obtaining the contract by providing them with non-public business information, including copies of the bid documents from competing companies.

The bribe payments – two payments totaling US\$5.2mio, were effected by wire transfers from Statoil through a US bank account to an account in Switzerland held by a company not named in the contract.

The conduct was discovered in March 2003 during an

internal audit as a result of the payment being made to an entity not involved in the contract, and future payments were suspended in June 2003. The findings were subsequently disclosed in the Norwegian press in September 2003, and Statoil subsequently terminated the contract. Statoil would later agree to the terms of a Deferred Prosecution Agreement with US authorities in 2006.⁵

Country: Norway, Iran

Key date: 2003 (investigations started into bribes paid to Iran)

BAE Systems

BAE Systems Plc (BAE) is the world's second largest defence company and Europe's largest. In 2010, after almost a decade of scrutiny and allegations by the British media and multiple regulatory investigations worldwide, BAE pleaded guilty to criminal charges in the US and agreed to pay US\$400mio fine, one of the largest corporate financial penalties ever imposed in a corporate bribery case.

As part of its guilty plea with the US, BAE also agreed to maintain a compliance programme designed to detect and deter violations of foreign bribery laws and to appoint a compliance monitor for three years.

As a result of the scandal, BAE has also replaced almost all of its top leadership, including its former Chief Executive Officer and Chairman of the Board and overhauled and expanded its Corporate Responsibility efforts.

The UK authorities also fined BAE US\$50mio after it pleaded guilty to a criminal accounting charge. This outcome was widely criticized by anti corruption campaigners, who saw it as a weak outcome after years of investigation into billions of dollars of alleged bribe payments made over years by BAE across Europe, Middle East and Africa. The corruption scandal is one of Britain's most important and politically charged cases.

In 2006, former UK Prime Minister, Tony Blair's government drew heavy criticism for requesting the UK's Serious Fraud Office to drop its case into BAE relating to arms contracts worth billions of pounds, on the grounds of national security. This decision alone compounded by the role of the media and not for profit corruption watchdogs, cemented BAE's place in corporate scandal history and ensured the case had a damaging impact on Britain's reputation regarding its stance against corruption.

The BAE scandal also kickstarted the long overdue

reforms on bribery offences in the UK, leading to the [UK Bribery Act in 2011](#). BAE regularly retained "marketing advisors" to act as intermediaries to assist in the soliciting, promoting and securing of deals. BAE maintained inadequate information on its intermediary advisors namely, who they were and what work they were doing to advance BAE's interests. BAE avoided communicating with its advisors in writing, obfuscating and failing to record the key reasons for the suitability of the advisor or any relevant document pertaining to the work performed. Often, contracts with the marketing advisors were maintained in secret legal trusts in offshore locations.

This conduct served to conceal the existence of payments through BAE's advisors. BAE made payments to these marketing advisors through offshore shell companies beneficially owned by BAE.

BAE also encouraged its marketing advisors to establish their own offshore shell entities to receive payments to disguise the origins and recipients of such payments.

Two examples of payments to marketing advisors which were suspected as questionable were payments of i) more than £19mio to entities associated with an individual, at least some of which was in connection with the promotion or otherwise to secure the leases of Gripen fighter jets from Sweden to the Czech Republic and Hungary and ii) US\$12.4mio made between 1999 and 2005 to Shailesh Vithlani, a Tanzania-based businessman, for his work as an agent in helping to secure a radar deal in Tanzania in 1999.

Key date: 2006 (investigations started by British authorities into allegations of corruption)

Special Focus 7

Siemens

Siemens is a German conglomerate originally founded in 1847. It currently has around 400,000 employees operating in some 190 countries. Beginning in the mid-1990s, Siemens engaged in systematic payments of bribes to win business.

The pattern of bribery by Siemens was unprecedented in scale and geographic reach. The corruption involved more than US\$1.4bio in bribes to government officials in Asia, Africa, Europe, the Middle East and the Americas. Siemens and its subsidiaries in Argentina, Venezuela, France, Turkey, Middle East and in Bangladesh made use of cash desks and slush funds and used numerous persons as conduits to conceal the corrupt payments, describing such payments in the books and records as consulting fees or legal fees.

In 2007 a Bank in Zurich reportedly submitted a suspicious activity report to Swiss law enforcement officials with respect to suspected improper payments by Siemens, who passed the information on to their German counterparts and so the case was uncovered. In 2008, as a result of cases brought by the US DoJ, the US SEC and the Munich Public Prosecutor's Office, Siemens paid a combined total of more than US\$1.6bio in fines, penalties and disgorgement of profits, including US\$800mio to US authorities, making the combined US penalties the largest monetary sanction ever imposed in an FCPA case at that time.

The DoJ and the SEC closely collaborated with the Munich Public Prosecutor's Office in bringing these cases. The high level of cooperation, including sharing information and evidence, was made possible by the use of mutual legal assistance provisions under the 1997 Organisation for Economic Cooperation and Development Convention on Combating Bribery of Foreign Public Officials in International Business Transactions, which entered into force on 15 February 1999.

Siemens was found to be using intermediaries extensively in order to facilitate bribery and corruption and retained a number of "payment intermediaries" whose sole purpose was to transfer money from

Siemens to business consultants. According to the SEC complaint, there were at least 4,283 payments, totalling approximately US\$1.4bio. Some of the consultants were being paid for legitimate consulting services and were subject to business consultant agreements, in addition to the illicit payments.

Other examples of the use of intermediaries were:

- approximately €6mio was paid to employees of ENEL (a partly government-owned Italian power company) in connection with two power plant projects. A Dubai-based business consultant routed the payments through slush funds in Liechtenstein;
- Slush funds were maintained in the name of current and former Siemens employees, third parties or affiliates and bribes were directed through these accounts
- Siemens used sham supplier agreements, receivables and other write-offs to generate payments.

Some 300 people were also investigated by the German authorities and by Siemens itself who also dismissed many senior managers and has sought compensation from 11 board members. The criminal investigations and cases against individuals culminated in April 2010 when a Munich court found Michael Kutschenerreuter, the former financial head of Siemens' telecommunications unit, guilty of breach of trust and abetting bribery. Kutschenerreuter was the most senior Siemens executive found guilty of corruption. He was placed on probation for two years and fined €160,000 (US\$215,300) after admitting that he had covered up slush funds and bribes paid by his employees. The other defendant, Hans-Werner Hartmann, who was in charge of accounting at the company's telecommunications arm, was placed on probation for 18 months and fined €40,000. According to prosecutors, the funds were used to bribe government officials and business contacts to win lucrative contracts in Russia and Nigeria. Siemens announced at the same time as the plea agreement with the DoJ its decision to appoint Theo Waigel, former German finance minister, its first "compliance monitor". Waigel, an architect of German monetary union after the fall of the Berlin Wall, was to report to the US authorities on Siemens' implementation of new compliance measures.

Siemens own internal FCPA investigation was of unprecedented scope with estimated costs exceeding US1bio. It assisted government investigators by providing detailed information from interviews, corporate records, and financial records and routinely shared documents collected overseas that otherwise would be difficult for US authorities to obtain (due to, for example, foreign privacy laws), and provided English translations of documents.

In some instances, Siemens also shared forensic analyses of transactions. Furthermore, Siemens "exported" its cooperation to foreign authorities, including cooperating with the World Bank, the Inter-American Development Bank, and other international development banks to investigate projects that received funding from those banks. It shared the results of that and other investigations with the authorities and cooperated extensively. It took appropriate disciplinary action against individual wrongdoers, including senior management with involvement in or knowledge of the violations. It took remedial action, including the complete restructuring of Siemens AG and the implementation of a sophisticated compliance programme and organisation.

This level of cooperation and the disclosures helped to reduce the ultimate fine which some commentators had thought could be in the region otherwise of US\$5bio.

Penalty: US\$1.6bio

Actions: Illegal systematic bribe paying to secure contracts

Country: Germany and elsewhere

Key date: 2007 (SAR filed in Switzerland starting investigations into bribe paying)

Kellogg Brown & Root

The US government's top contractor in Iraq, KBR, Inc., pleaded guilty in 2009 to bribing high-level officials in the Nigerian government during a decade-long scheme to win more than US\$6bio in overseas construction contracts in connection with the Bonny Island Project in Nigeria. The SEC charged the firms KBR and Halliburton with violating the 1977 Foreign Corrupt Practices Act's anti-bribery provisions and with abuses related to the companies' books, records and internal controls.⁶

KBR and its former parent company, Halliburton, agreed to pay the US government a combined US\$579mio in fines to settle the criminal and civil charges, the most ever paid at that time by a US firm in a foreign corruption case (US\$402mio criminal fine related to the bribery case and the disgorging of US\$177mio in "ill-gotten profits" to the Securities and Exchange Commission under FCPA charges.) Halliburton, which owned KBR before it spun off on its own in 2007, agreed to pay all but US\$20mio of the penalty. In addition to the fines, KBR agreed to hire an independent corporate monitor for the next three years to ensure that the company complied with anti-corruption laws and internal accounting controls.

Mr Jack Stanley former KBR CEO was jailed and fined

US\$10.8mio. KBR was part of a joint venture of four companies, the other three firms involved were not identified -- to build liquefied natural gas facilities on Bonny Island, Nigeria, on Africa's West Coast. The Bonny Island Project involved the development of a very large liquefied natural gas (LNG) processing and transportation facility.

As a result of French, US, and Nigerian investigations, it was revealed that a series of contracts awarded by the Nigerian government, collectively valued at over US\$6bio, were obtained as a result of corrupt payments to Nigerian officials. Specifically, four companies from the US, Japan, France and Italy, formed a joint venture to obtain the Bonny Island contracts, and formed three special purpose Portuguese corporations to engage in operations. The joint venture then employed two intermediaries to bribe government officials. One intermediary formed a Gibraltar corporation, through which US\$130mio of bribe money from the joint venture was funnelled. The second intermediary, a Japanese trading company, received US\$50mio to bribe government officials. The money that moved from the joint venture to the intermediaries was disguised as money received as a result of consulting contracts and moved via wire transfer from accounts in the Netherlands to accounts controlled by the intermediaries in Monaco and Switzerland. The money was ultimately paid to government officials through wire transfers to Swiss accounts controlled by the corrupt officials and by very large cash deliveries, including the delivery of up to US\$1mio in currency at a single time.

At crucial junctures before the contract awards, KBR's then-CEO Albert "Jack" Stanley and others met with members of the Nigerian government to negotiate bribe amounts. Mr. Stanley arranged for US\$182mio in bribes to be paid to senior government officials in Nigeria and to leading executives of a Nigerian energy company controlled by the Nigerian Government.

The only Nigerian official to be named in documents is former President General Sani Abacha. Mr. Stanley arranged for a portion of the bribes to be kicked back into his personal bank accounts.

SEC Chairman Mary Schapiro stated that "Any company that seeks to put greed ahead of the law by making illegal payments to win business should beware that we are working vigorously across borders to detect and punish such illicit conduct."

Key date: 2009 (guilty plea to bribing Nigerian Public Officials to secure lucrative contracts)

Macmillan Publishing

In April 2010, Macmillan Publishing Limited ("MPL") was debarred from participating in World Bank funded tender business for a minimum period of three years after it was established that employees of the company engaged in a scheme in which they gave cash and other items of value to officials of the Ministry of Education, Science and Technology, South Sudan (MOEST) in an effort to influence the officials to ensure that Macmillan was awarded a World Bank contract valued at US\$2.35mio supply of school text books. This influence initially resulted in a request by MOEST to sole source the contract award to MPL, a request which the World Bank refused. Following a subsequent investigation across three East African countries covering the period 2002-2009, it was impossible to be sure that the awards of tenders to the MPL in those jurisdictions were not accompanied by a corrupt relationship. Accordingly, it was plain that the Company may have received revenue that had been derived from unlawful conduct.

The Director of the UK Serious Fraud Office (SFO) took action in the High Court, which resulted in an Order for MPL to pay in excess of £11mio in recognition of sums it received which were generated through unlawful conduct related to its Education Division in East and West Africa. The investigation revealed some of the methods used to establish a relationship with key government officials who were able to influence the outcome of the contract evaluation process in their respective countries. This included the use of local agents or country representatives who received payments transferred to private and business bank accounts which were then withdrawn in cash and paid to government officials. In addition to this other bribery methods such as gifts, for example, travel and holidays, were also used.

Key date: 2010 (Macmillan debarred by World Bank due to bribe paying)

Special Focus 8 GlaxoSmithKline

In 2012 a Federal Judge in Boston approved a plea agreement between the US Food and Drug Administration and GlaxoSmithKline ("Glaxo") to pay a US\$3bio fine for criminal and civil violations relating to health care fraud involving 10 drugs manufactured by Glaxo.⁷ The fine was considered the largest settlement involving a

pharmaceutical company. US federal prosecutors had charged the British drug maker with illegally marketing drugs not approved by the FDA (anti-depressants) and withholding safety data from US Regulators relating to the drug Avandia, which was found to increase heart attacks and congestive heart failure.

The case stemmed from claims made by four employees of Glaxo which tipped off US federal investigators that the company was engaging in a number of improper practices for a period that spanned more than five years (late 1990 to the mid 2000s). These practices included providing lavish hospitality, such as all-expense paid trips to Bermuda, Jamaica and California, and other kickbacks to doctors who promoted the sale of the drugs for unapproved uses.

For example, in 2000 and 2001, Glaxo held eight lavish three day events in Puerto Rico, Hawaii and Palm Springs including providing US\$750 in spending money, free board and lodging and access to deep sea fishing, golfing and rafting in an effort to persuade doctors to prescribe the various anti-depressants to patients. Airfares were also covered for doctors and their spouses and speakers at the events were paid as much as US\$2,500 for one hour sessions up to three times per day. Glaxo paid one speaker in particular up to US\$1.5mio over a three year period to promote the drug Wellbutrin, again for unapproved uses. Misleading articles were also prepared and given by sales reps to doctors to secure more business. One doctor wrote "Dinner and a Yankee game with family. Talked about Paxil studies in children." The false reports used by Glaxo employees were published and used despite knowing that three trials had failed to prove the drug was effective for children.

Sales reps were encouraged to push Glaxo drugs and were given an expense account of up to US\$600,000 for entertaining doctors. The events included providing regular golf lessons, taking potential clients on fishing trips and to Nascar race days and other sporting events, and providing tickets to Madonna concerts.

The case was prosecuted under the US False Claims Act which penalizes those who commit fraud and rewards those who report it.

Country: US

Penalty: US\$3bio

Actions: illegal activities regarding the sales of drugs

Key date: 2012 (GSK pleaded guilty to US false Claims Act violations and also admitted essentially to paying bribes)

Environmental Crime

Seveso

In 1976 an explosion occurred in a chemical reactor in the ICMESA chemical company in Meda, Italy, not far from Seveso, a neighboring town. A toxic cloud was released containing high concentrations of a highly toxic form of dioxin. Health effects were immediately recognised as a consequence of the disaster and victims were compensated. A long-term plan of health monitoring has been put into operation. Seveso victims suffered from a directly visible symptom known as chloracne, affecting the skin but also from genetic impairments.

The Seveso accident and the immediate reaction of authorities led to the introduction of European regulation in 1982 for the prevention and control of accidents involving toxic substances. This regulation is now known as the Seveso Directive, which is a mainstay for European countries to manage industrial safety. It obligates appropriate safety measures, and also public information on major industrial hazards, which is now known as the 'need to know' principle. Interestingly local and regional authorities had no idea the plant was a source of risk. The factory had produced its goods for more than 30 years but the local authorities as well as the public had little idea of the nature of the operation and the potential dangers.

Bhopal

The Bhopal disaster, also referred to as the Bhopal gas tragedy is classified as the world's worst industrial catastrophe and man-made environmental disaster which took place in the late night hours of 2-3 December 1984 in Bhopal, Madhya Pradesh, India at the Union Carbide India Limited (UCIL) pesticide plant. The UCIL was an Indian subsidiary of the Union Carbide Corporation (UCC), Indian Government controlled banks and the Indian general public controlled a 49.1% share of the UCIL. The disaster was a leak of methyl isocyanate (MIC) gas and other various chemicals from the plant which resulted in exposure of the chemicals to several thousand people. The death toll estimate counts vary, but official estimates indicate the immediate death toll as 2,259 and the government of Madhya Pradesh has officially confirmed 3,787 deaths related to the accidental gas leak. Other estimates by government agencies estimate 15,000 deaths, whilst another estimates 8,000 deaths within the first several weeks of the leak and another 8,000 from gas leak exposure related diseases since the accident.

In 2006, the government released an affidavit stating that the gas leak caused 558,125 injuries including 38,478 temporary partial and approximately 3,900 severely and permanent disabling injuries. The cause of

the leak was water entering a tank containing 42 tons of methyl isocyanate or MIC, which created an exothermic reaction which increased the temperature inside the tank to over 200°C or 392°F, and raised pressure inside the tank resulting in the venting of toxic gases into the atmosphere, and ultimately being blown by northwesterly winds over Bhopal. There are differing theories on what transpired to cause the water to get into the MIC tank, varying from maintenance to sabotage

Key Date: 1984

Chernobyl

In 1986 tests were conducted in nuclear reactor 4 of the Chernobyl nuclear power plant in Ukraine, located 80 miles from Kiev. These tests required part of the security system to be shut down. The tests however caused the cooling water to start boiling, which accelerated with temperatures reaching more than 2000°C in the reactor, melting fuel rods and further cooling water boiling. Steam escaped from pressures in water cooling pipes which resulted in cracks, which caused an explosion, blowing off the roof of the reactor, starting a major fire and simultaneously forming an atmospheric radioactive cloud instantly killing 31 people. The following day over 135,000 people were permanently evacuated from within a 30kms radius of the accident. This area was labelled the "special zone" as the high levels of radioactivity have been predicted to exist for several centuries. The radioactive cloud soon blew north and northwest, with the cloud covering a large area of Northern Europe, as far as the Netherlands, causing fresh fruit and vegetable consumption to be prohibited. After much discussion the entire Chernobyl nuclear power plant was finally closed in 2000, despite the fact that Ukraine derived 5% of its power supply from the power plant.

The World Health Organisation (WHO) stated that approximately 800,000 people worked on restoring the reactor and cleaning up pollution in the first year after the accident, with risks to health obvious, albeit many only worked for short periods of time. Ukrainian government figures show that more than 8,000 Ukrainians have died as a result of exposure to radiation during the first cleanup operation. It is stated that the eventual death toll resulting from the nuclear explosion may end up as high as 300,000-400,000, with increases in cancers also in neighboring countries, particularly in Belarus. The numbers that will ultimately be affected by the Chernobyl disaster has been estimated as high as 11 times that of the cancer deaths expected from the combined 1945 bombings of Hiroshima and Nagasaki. Today it is believed that over 4 million people in the Ukraine, Belarus and Western Russia still live on contaminated ground.

Fraudsters

Accounting Fraudsters

Alan Bond

Alan Bond could perhaps be regarded as one of the most controversial figures in Australian public life. Born in the UK, Bond rose from being a sign painter to the chairman of one of Australia's largest listed companies, Bond Corporation. Bond achieved cult status in Australia for his role in financing Australia's America's Cup challenge in 1983 which saw the Cup leave America's shores for the first time. This achievement aside, Bond through his activities in Bond Corporation was involved in what is still perhaps Australia's largest corporate fraud. Bond Corporation was listed on the Australian Securities Exchange and during the late 1980s experienced cash flow problems. To address this and following the fall of global stock markets in 1987, which provided the opportunity, Bond Corporation moved to acquire listed Bell Group which possessed the real prize, a cash rich subsidiary, Bell Resources.

Three individuals including Alan Bond, Tony Oates and Peter Mitchell set about to strip Bell Resources of its cash transferring monies directly from Bell Resources to or for the use of Bond Corporation in contravention of Australian company law. The offences included failing to act honestly as a company director with intention to defraud, conspiracy to defraud and improper use of their positions as a company directors. Ultimately A\$1bio was drawn from the company and routed to a number of Bond controlled entities. Ultimately the asset stripping was in vain, Bond Corporation was declared insolvent in 1991 and the three individuals charged and convicted. Bond and Mitchell sentenced to 4 years jail and Oates to 5 years.

The ability to both trace and retrieve the stolen assets possessed by Bond has been hampered for many years according to his trustee in bankruptcy by the use of quite sophisticated corporate structuring in multiple jurisdictions, use of fiduciary representatives in secrecy jurisdictions and companies issuing bearer shares, all of which have been designed to distance Bond being identified with them. As an aside, Bond has returned to corporate life, albeit in Britain and has been associated with several proposed start-up companies, none of which has yet been able to access the public markets.

Robert Maxwell

On 5 November 1991, at the age of 68, Maxwell was sailing on his luxury yacht, the Lady Ghislaine, cruising off the Canary Islands. His global business empire was seriously overextended and he had taken illegally hundreds of millions of pension fund assets, to support his ailing companies. Banks and financial investigators in London were closing in and one had referred that very day their concerns with evidence to Britain's Serious Fraud Office. Maxwell was informed and at some stage that day he fell off the boat, his body subsequently being found floating in the Atlantic Ocean. The official ruling was death by accidental drowning. Some commentators have alleged suicide, others that he was murdered.

Robert Maxwell was born Ján Ludvík Hoch into a poor Yiddish-speaking Jewish family in a small town in Czechoslovakia. Most members of his family died in Auschwitz during the second world war, but he himself escaped, arriving in Britain in 1940 as a 17-year-old refugee. Maxwell joined the British Army in 1941. He was involved in action across Europe from the Normandy beaches to Berlin. In January 1945 he received the Military Cross from Field Marshal Montgomery. It was during this time that British Intelligence changed his name several times, finally settling on Ian Robert Maxwell. In 1945 he married and with his wife Betty had nine children.

After the war, Maxwell worked as a newspaper censor for the British military command in Berlin. Later, he used various contacts in the Allied occupation authorities to go into business, becoming the British and US distributor for Springer Verlag, a publisher of scientific books. In 1951 he bought three quarters of Butterworth-Springer, a minor publisher. They changed the name of the company to Pergamon Press and rapidly built it into a major publishing house.

In 1964, representing the Labour Party, he was elected as Member of Parliament (MP) for Buckingham. He was re-elected in 1966, but lost in 1970.

Maxwell established the Maxwell Foundation in Liechtenstein in 1970. In 1974 he acquired the British Printing Corporation (BPC) and changed its name Maxwell Communications Corporation. By the 1980s Maxwell's various companies owned the popular UK titles, Daily Mirror, the Sunday Mirror, the Scottish Daily Record and Sunday Mail and several other newspapers, Pergamon Press, Nimbus Records, Collier books, Maxwell Directories, Prentice Hall Information Services, Macmillan (US) publishing, and the Berlitz language schools. He also owned a half-share of MTV in

Europe and other European television interests, Maxwell Cable TV and Maxwell Entertainment.

Maxwell was also well known as the chairman of Oxford United Football Club, saving them from bankruptcy and leading them into the top flight of English football, winning the League Cup in 1986. Maxwell bought into Derby County FC in 1987.

It was through Maxwell's purchase of Macmillan Inc the American publishing firm, for US\$2.6bio, which by some estimates was over three times its value, which put the Maxwell empire into financial distress. As a result of overextending his group, he was forced to sell his successful Pergamon Press and Maxwell Directories to Elsevier for £440mio though he used some of this money to buy the ailing New York Daily News.

Maxwell was given a funeral in Israel better befitting a head of state than a publisher. On 10 November 1991, Maxwell's funeral took place on the Mount of Olives in Jerusalem, across from the Temple Mount. It was attended by the country's government and opposition leaders. No fewer than six serving and former heads of the Israeli intelligence community listened as Prime Minister Yitzhak Shamir eulogized: "He has done more for Israel than can today be said." It has been hinted that Maxwell's service to the Israeli state related to his role in persuading the Czech government in 1948 to arm Israel in their War of Independence that year. Czech military assistance was both unique and crucial for the fledgling state as it battled for its existence. It was Maxwell's covert help in smuggling aircraft parts into Israel that led to the Jewish state having air supremacy during their 1948 War of Independence. Jewish leaders were also grateful for Maxwell's intervention and material help in securing the freedom and immigration between 1988–1991 of over one million Russian Jews through his friendship with Mikhail Gorbachev.

Maxwell's death triggered a flood of claims with banks frantically calling in their massive loans, estimated at over US\$4.5bio. Following the shock that the Maxwell empire was broke and couldn't repay its debts, came the even more shocking discovery that Maxwell had illegally pledged the same assets as collateral for various loans, for example, Maxwell had secretly, "borrowed" US\$767mio from his employees pension funds at the two public companies under his control.

His two sons Kevin and Ian struggled to hold the empire together, but were unable to prevent its collapse. The essence of Maxwell's crime was simple. On the one hand, he had companies where he owned 50-70% of the capital and whose shares were publicly quoted on

the stock exchange; the employees of these companies subscribed to a company pension fund. On the other hand, he had private companies. What he did was to siphon off cash and assets from the public companies and from their pension funds into the private ones which were in financial distress.

He also siphoned off cash borrowed from financial institutions, from intended companies and away from promised purposes. For example, Maxwell purchased an investment fund, First Tokyo Index Trust, (FTIT), a UK listed investment trust in the summer of 1999 as the Maxwell empire was in deep financial distress, though this was only known by Maxwell himself. Through Headington Investments, a finance company under his control, Maxwell borrowed \$100 million from Swiss Bank Corp. to buy the entire First Tokyo portfolio, which owned a broad based selection of marketable securities. The transaction was complex due to English law requirements, but in essence, Maxwell was given the money to purchase FTIT in exchange for his promise to provide collateral for the loan by securing the marketable securities in favor of the lender. The collateral couldn't be provided whilst FTIT was a listed company as English Law prohibited such action, so it was agreed as part of the loan that once purchased FTIT would be delisted and then as a private company the collateral would be provided. The time period from providing Maxwell with the funding and the Swiss Bank receiving the collateral was estimated at around 6-8 weeks. Following the acquisition of FTIT, and in breach of his agreement with the Swiss Bank, Maxwell pledged the securities owned by First Tokyo to other Lenders who had been pressurizing Maxwell over their loans to other Maxwell Companies. When delays were reported and the collateral didn't arrive, and alternative collateral also failed to materialize, and when the Swiss Bank realised that its collateral had been pledged to third parties, it informed Maxwell that it was notifying the UK police and Serious Fraud Office. The date of this message and notification coincided with the date Maxwell fell from his luxury yacht, the Lady Ghislaine.

Eventually, the pension funds were mostly replenished with monies recovered from investment banks, Lehman and Goldman Sachs, as well as contributions from the British government and creditors recovered some of their assets. The result was that, in general, pensioners received about 50% of their company pension entitlement. The Maxwell companies filed for bankruptcy protection in 1992. His son, Kevin Maxwell was declared bankrupt with debts of £400mio. In 1995 Maxwell's sons Kevin and Ian and two other former directors went on trial for conspiracy to defraud, but were unanimously acquitted by a twelve man jury in

1996.

It is 20 years now since Maxwell fell from his yacht and drowned. Maxwell was clever, self-confident, forceful and, on occasion charming. His fraudulent activities were carried out intelligently, tenaciously, ruthlessly. They involved famous businesses in Britain the Daily Mirror, the Sunday Mirror, the Daily Record and in the US the New York Daily News and the Macmillan publishing group.

The account written by UK government DTI inspectors into the affair provide a valuable insight into how Maxwell systematically plundered both the non-family shareholders in his businesses and the company pension funds and provide lessons for the future.

Maxwell was very secretive. His objective was to prevent anybody having a full picture of his activities. Only Maxwell himself knew how everything fitted together. He engaged in deceit by confusion. His private companies were given different financial years, constantly lent and borrowed to and from each other and transferred assets between themselves all so that the bankers lending to these entities would never be able to see clearly what was going on.

Certain decisions must be ratified by a company's directors. So all companies, public and private, must hold board meetings. When he couldn't avoid them, Maxwell called them at short notice, provided the necessary documents only a few minutes before and taking back the papers as soon as the meeting was over. If, as was necessary in the public companies, a board meeting had long been scheduled, then it would be postponed at the last moment and be re-arranged with the result that often only a few directors could attend.

If secrecy was Maxwell's rule number one, then securing all power into his own hands came next. He made sure that he was the only director able to sign cheques for more than a trifling amount. On the same evening that Maxwell acquired control of Mirror Group Newspapers, he went to the Mirror Building in Holborn, London, and ordered that a board meeting be summoned. It took place at 2.45am. Maxwell obtained agreement that he had the authority to sign cheques and make transfers from the company's bank accounts on his sole signature for any amount. In effect, he had picked the lock on the company safe.

A second method of securing power was to get the directors of the public companies to agree that the entire powers of the board be delegated to him as a committee of one. He told board members that this was necessary because he was often abroad when quick decisions were

needed. Actions taken would be reported to the next meeting of the board so that they could be ratified.

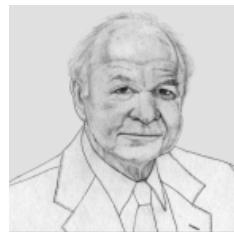

The third element in Maxwell's technique was to wear the cloak of respectability at all times. He was able to get top class advisers, lawyers, accountants and bankers, as well as establishment figures to work with him. He also courted leading statesmen around the world.

Company: Maxwell Communications Corp PLC

Key date: 1991 (Maxwells unexplained sudden death leads to unravelling of major corporate fraud)

Special Focus 9 Ken Lay & Others

On 5 March 2001 Bethany McLean a financial journalist working for Fortune magazine was the first to seriously question the financial performance of one of Americas most successful Companies, Enron Corp. Enron was created in 1985, through

the merger of two Texas based natural gas pipeline companies, Houston Natural Gas and InterNorth, by Ken Lay. In the early 1990s, pushed by the likes of Enron, the US Congress passed legislation deregulating energy markets, which then made it possible to sell energy at higher prices, significantly increasing revenues for those involved. By 1992 Enron rose to become the largest seller of natural gas in North America as well as acquiring and operating a variety of assets including electricity plants, pulp and paper plants, water plants, and broadband services. The corporation also gained additional revenue by trading contracts for the same array of products and services it was involved in. Enron's stock rose from the start of the 1990s until year-end 1998 by 311%. The stock increased by 56% in 1999 and a further 87% in 2000, compared to a 20% increase and a 10% decline for the index during the same years. By 31 December 2000, Enron's stock was priced at US\$83.13 and its market capitalization exceeded US\$60bio, 70 times earnings and six times book value. Bethany Mclean in her article, "Is Enron Overpriced?" pointed out though that analysts and investors did not know how Enron was earning its income, that she found "strange transactions", "erratic cash flow", and "huge debt."⁸ Whilst Enron reacted aggressively but

without substantive answers, others began to raise questions over the summer of 2001. The price of the stock began to fall.

On August 14, 2001 then CEO Jeffrey Skilling announced he was resigning his position as CEO after only six months.⁹ Skilling had long served as president and COO under now Chairman and then CEO Ken Lay before himself being promoted to CEO. Skilling cited personal reasons for leaving the company. Skilling had recently sold 450,000 shares of Enron at a value of around US\$33mio. Ken Lay, assured stunned market watchers that there would be "no change in the performance or outlook of the company going forward" from Skilling's departure. On 15 August, Sherron Watkins, vice president for corporate development, sent an anonymous "whistleblowing" letter to Ken Lay warning him about the company's accounting practices, stating for example, that "I am incredibly nervous that we will implode in a wave of accounting scandals," though this warning whilst internally investigated was essentially rejected.¹⁰

On 2 December 2001, Enron sought Chapter 11 protection. It was the largest bankruptcy in US history (before being surpassed by WorldCom's bankruptcy the following year), and resulted in 4,000 lost jobs. The day that Enron filed for bankruptcy, the employees were told to pack up their belongings and were given 30 minutes to vacate the building. Nearly 62% of 15,000 employees' savings plans relied on Enron stock that was purchased at US\$83 in early 2001 and was now practically worthless. On 17 January 2002 Enron fired Arthur Andersen as its auditor, citing its accounting advice and the destruction of documents. Andersen countered that they had already severed ties with the company when Enron entered bankruptcy.

It quickly became clear that the Company's financial statements significantly inflated revenues and asset prices and hid debts off the Enron balance sheet. According to McLean and Elkjaer in their book *The Smartest Guys in the Room*, "The Enron scandal grew out of a steady accumulation of habits and values and actions that began years before and finally spiraled out of control."¹¹ The combination of these habits, values and actions led to the bankruptcy of the company in late 2001. Enron's US\$63.4bio in assets made it the largest corporate bankruptcy in US history until WorldCom's bankruptcy the following year. Enron Chairman and founder Ken Lay, CEO, Jeffrey Skilling, and CFO Andrew Fastow, together with other executives, constantly focused on meeting Wall Streets quarterly expectations. Enron used unethical practices including questionable accounting practices to misrepresent and to portray a favorable

depiction of its financial performance, particularly with respect to overbooking revenues and hiding debt. Examples of unlawful and unethical practices included booking Future Revenues upfront and the use of special purpose vehicles to hide mounting debt to circumvent accounting conventions. The Enron bankruptcy also led to the dissolution of Arthur Andersen, which was one of the five largest audit and accountancy partnerships in the world, who were both misled but also pressurised by Enron to ignore certain issues.

Fastow and his wife, Lea, both pleaded guilty to charges against them. Fastow was initially charged with 98 counts of fraud, money laundering, insider trading, and conspiracy, among other crimes. Fastow pleaded guilty to two charges of conspiracy and was sentenced to ten years with no parole in a plea bargain to testify against Lay, and Skilling. Lea was indicted on six felony counts, but prosecutors later dropped them in favor of a single misdemeanor tax charge. Lea was sentenced to one year for helping her husband hide income from the government.

Lay and Skilling went on trial for their part in the Enron scandal in January 2006. The 53-count, 65-page indictment covers a broad range of financial crimes, including bank fraud, making false statements to banks and auditors, securities fraud, wire fraud, money laundering, conspiracy, and insider trading. On 25 May 2006, the jury in the Lay and Skilling trial returned its verdicts. Skilling was convicted of 19 of 28 counts of securities fraud and wire fraud and acquitted on the remaining nine, including charges of insider trading. He was sentenced to 24 years and 4 months in prison. Lay pleaded not guilty to the eleven criminal charges, and claimed that he was misled by those around him. He attributed the main cause for the company's fall to Fastow. Lay was convicted of all six counts of securities and wire fraud for which he had been tried, and he faced a total sentence of up to 45 years in prison. However, before sentencing was scheduled, Lay died on 5 July 2006. At the time of his death, the SEC had been seeking more than US\$90mio from Lay in addition to civil fines. The case surrounding Lay's wife, Linda, is a difficult one. She sold roughly 500,000 shares of Enron ten minutes to thirty minutes before the information that Enron was collapsing went public on 28 November 2001. Linda was never charged with any of the events related to Enron. All told, sixteen people pleaded guilty for crimes committed at the company, and five others, including four former Merrill Lynch employees, were found guilty. Eight former Enron executives testified the star witness being Fastow against Lay and Skilling, his former bosses. Another was Kenneth Rice, the former chief of Enron Corp's high-speed Internet unit,

who cooperated and whose testimony helped convict Skilling and Lay. In June 2007, he received a 27-month sentence.

Arthur Andersen was charged with and found guilty of obstruction of justice for shredding the thousands of documents and deleting e-mails and company files that tied the firm to its audit of Enron. Although only a small number of Arthur Andersen's employees were involved with the scandal, the firm was effectively put out of business; the SEC is not allowed to accept audits from convicted felons. The firm surrendered its CPA license on 31 August 2002, and 85,000 employees lost their jobs. The conviction was later overturned by the US Supreme Court due to the jury not being properly instructed on the charge against Andersen. The Supreme Court ruling theoretically left Andersen free to resume operations. However, the damage to the Andersen name had been so great that it has not returned as a viable business even on a limited scale.

Enron's shareholders lost US\$74bio in the four years before the company's bankruptcy (US\$40 to US\$45bio was attributed to fraud). As Enron had nearly US\$67bio that it owed creditors, employees and shareholders received limited, if any, assistance aside from severance from Enron. To pay its creditors, Enron held auctions to sell assets including art, photographs, logo signs, and its pipelines. More than 20,000 of Enron's former employees in May 2004 won a suit of US\$85mio for compensation of US\$2bio that was lost from their pensions. From the settlement, the employees each received about US\$3,100. The following year, investors received another settlement from several banks of US\$4.2bio. In September 2008, a US\$7.2bi settlement from a US\$40bi lawsuit, was reached on behalf of the shareholders. The settlement was distributed among the lead plaintiff, University of California (UC), and 1.5 million individuals and groups. UC's law firm Coughlin Stoia Geller Rudman and Robbins, received US\$688mio in fees, the highest in a US securities fraud case. At the distribution, UC announced in a press release "We are extremely pleased to be returning these funds to the members of the class. Getting here has required a long, challenging effort, but the results for Enron investors are unprecedented."

Enron management was extensively compensated using stock options, similar to other US and non-US companies. This setup of stock option awards caused management to create expectations of rapid growth in efforts to give the appearance of reported earnings to meet Wall Street's expectations. The stock ticker was located in lobbies, elevators and on company computers. At budget meetings, Skilling would develop

target earnings by asking "What earnings do you need to keep our stock price up?" and that number would be used, even if it was not feasible. At 31 December 2000, Enron had 96 million shares outstanding under stock option plans (approximately 13% of common shares outstanding). Enron's proxy statement stated that, within three years, these awards were expected to be exercised. Using Enron's January 2001 stock price of US\$83.13 and the directors' beneficial ownership reported in the 2001 proxy, the value of director stock ownership was US\$659mio for Lay, and US\$174mio for Skilling. Skilling believed that if employees were constantly cost-centred, it would hinder original thinking. As a result, extravagant spending was rampant throughout the company, especially among the executives. Employees had large expense accounts and many executives were paid sometimes twice as much as competitors. In 1998, the top 200 highest-paid employees received US\$193mio from salaries, bonuses, and stock. Two years later, the figure jumped to US\$1.4bio.

Enron's auditor firm, Arthur Andersen, was accused of applying reckless standards in their audits because of a conflict of interest over the significant consulting fees generated by Enron. In 2000, Arthur Andersen earned US\$25mio in audit fees and US\$27mio in consulting fees (this amount accounted for roughly 27% of the audit fees of public clients for Arthur Andersen's Houston office). The auditors' methods were questioned as either being completed solely to receive its annual fees or for their lack of expertise in properly reviewing Enron's revenue recognition, special entities, derivatives, and other accounting practices. Enron hired numerous Certified Public Accountants (CPA) as well as accountants who had worked on developing accounting rules with the Financial Accounting Standards Board (FASB). The accountants looked for new ways to save the company money, including capitalizing on loopholes found in Generally Accepted Accounting Principles (GAAP), the accounting industry's standards. One Enron accountant revealed "We tried to aggressively use the literature [GAAP] to our advantage. All the rules create all these opportunities. We got to where we did because we exploited that weakness."

Between December 2001 and April 2002, the Senate Committee on Banking, Housing, and Urban Affairs and the House Committee on Financial Services held multiple hearings about the collapse of Enron and related accounting and investor protection issues. These hearings and the corporate scandals that followed Enron led to the passage of the Sarbanes-Oxley Act on 30 July 2002.¹² The Act is nearly "a mirror image of Enron: the company's perceived corporate governance

failings are matched virtually point for point in the principal provisions of the Act." The main provisions of the Sarbanes-Oxley Act included the establishment of the Public Company Accounting Oversight Board to develop standards for the preparation of audit reports; the restriction of public accounting firms from providing any non-auditing services when auditing; provisions for the independence of audit committee members, executives being required to sign off on financial reports, and relinquishment of certain executives' bonuses in case of financial restatements; and expanded financial disclosure of firms' relationships with unconsolidated entities. On 13 February 2002, due to the instances of corporate malfeasances and accounting violations, the SEC called for changes to the stock exchanges' regulations. In June 2002, the New York Stock Exchange announced a new governance proposal, which was approved by the SEC in November 2003. The main provisions of the final NYSE proposal include: All firms must have a majority of independent directors; independent directors must comply with an elaborate definition of independent directors. The compensation committee, nominating committee, and audit committee shall consist of independent directors. All audit committee members should be financially literate. In addition, at least one member of the audit committee is required to have accounting or related financial management expertise and in addition to its regular sessions, the board should hold additional sessions without management .

The following are examples of some notable transactions of interest: Booking Future Revenues upfront - For one contract, in July 2000, Enron and Blockbuster Video signed a 20-year agreement to introduce on-demand entertainment to various US cities by year-end. After several pilot projects, Enron recognised estimated profits of more than US\$110mio from the deal, even though analysts questioned the technical viability and market demand of the service. When the network failed to work, Blockbuster pulled out of the contract. Enron continued to recognise future profits, even though the deal resulted in a loss. Enron used special purpose vehicles to hide its mounting debt to circumvent accounting conventions and by 2001 had hundreds of such vehicles. Examples looked into by the US Senate in January 2002 and the subject of a Report were SPVs or transactions known as Fishtail, Bacchus, Sundance, and Slapshot.¹³ These four transactions took place in Q1 and Q2 2001 and were all related to Enron's electronic trading business in the pulp and paper industry - a new business being developed by Enron. The senate found that none of the transactions could have been completed without the backing and active participation of a major financial institution willing to facilitate a

client's deceptive accounting or tax transactions. The evidence compiled in the Report and hearings indicated that major US financial institutions deliberately misused structured finance techniques to help Enron engage in deceptive accounting or tax strategies, being rewarded with millions of dollars in fees or favorable consideration in other business dealings.

The Senate subcommittee found that all four transactions "reflected efforts by Enron to keep debt off its balance sheet or to manufacture immediate returns" to artificially improve financial results for 2000 and 2001. Three of the transactions were categorised as "sham asset sales" - ie transfers of assets at inflated values from Enron to Special Purpose Entities ("SPEs") or joint ventures that Enron orchestrated where essentially the required independence or risk to funds to did not exist. Essentially they allowed Enron to create a disguised 6 month loan from Citigroup. The fourth transaction was categorised as a "sham loan" - of US\$1bio advanced by Chase to obtain around US\$60mio in tax benefits and around US\$65mio of financial statement benefits to Enron. The Sub-committee's findings showed that in each transaction it is apparent that the financial institutions involved often had reservations regarding the transactions and either internal systems failed ultimately to give effect to these reservations, or financial reward was deemed sufficient to outweigh the perceived risks. For example, relating to Citigroup's involvement in the "Sundance" transaction: "Just prior to the closing for the Sundance transaction, three senior Citigroup officials strongly warned against proceeding with the deal, in part due to its "aggressive" accounting. The head of Citigroup's Risk Management team for the Global Corporate and Investment Bank stated in a memorandum sent to the head of the investment bank "This is a follow-up to our lunch conversation on the transaction for Enron. If you recall, this is a complex structured transaction, which I have refused to sign off on. Risk Management has not approved this transaction for the following reasons: ... The GAAP accounting is aggressive and a franchise risk to us if there is publicity (a la Xerox)." In an accompanying email, the head of Citigroup's Global Relationship Bank wrote "We ([the Global Energy and Mining group head] and I) share Risk's view and if anything, feel more strongly that suitability issues and related risks when coupled with the returns, make it unattractive. It would be an unfortunate precedent if both GRB relationship management and Risk's views were ignored." Despite these strongly worded warnings from senior personnel the transaction went forward on 1 June 2001. In testimony to the sub committee and although Citigroup internal policy requires signed management transaction approvals for transactions as

large as Sundance, Citigroup could not locate any of the normal signed approvals.

The second case relates to Chase's role in the "Slapshot" transaction: In relation to this transaction, the Subcommittee noted that: "Chase was paid more than US\$5mio for designing and orchestrating Slapshot. Enron could not have completed this transaction without the initiative and enthusiastic backing of a major financial institution with the resources to issue and move a US\$1bio daylight overdraft through multiple bank accounts across international lines in a single day. Without Chase's willing efforts to design, fund, and execute the incredibly complex transactions involved, whose details had to be carefully planned and co-ordinated, Enron would not have been able to make use of this deceptive tax strategy."

Company: Enron

Penalty: Top management arrested on fraud charges
Actions: Systemic corporate fraud and manipulations
Country: US
Key date: 2001 (Enron filed for bankruptcy, largest at that time)

Bernie Ebbers

Bernie Ebbers was the CEO of WorldCom which at its height, was the US's second largest long distance phone company (after AT&T). WorldCom grew largely by aggressively acquiring other telecommunications companies, most notably MCI Communications. On 5 October 1999 Sprint Corporation and MCI WorldCom announced a US\$129bio merger agreement between the two companies. Had the deal been completed, it would have been the largest corporate merger in history, ultimately putting MCI WorldCom ahead of AT&T. However, the deal did not go through because of pressure from the US Department of Justice and the EU on concerns of it creating a monopoly. On 13 July 2000, the boards of directors of both companies acted to terminate the merger. Later that year, MCI WorldCom renamed itself to simply "WorldCom".

Only 2 years later, on 21 July 2002, WorldCom filed for Chapter 11 bankruptcy protection in the largest such filing in US history at the time (since overtaken by the collapse of Lehman Brothers and Washington Mutual in September 2008). The WorldCom bankruptcy proceedings followed that of Enron which was, up until WorldCom, the largest bankruptcy.

In 2000, the telecommunications industry entered a downturn and WorldCom's aggressive growth strategy suffered a serious setback, particularly following its abandoned deal with Sprint. By September 2000,

WorldCom's stock was declining and Bernard Ebbers, the Company's CEO came under increasing pressure from banks to cover margin calls on his personal WorldCom stock that was used to finance his other business interests (timber and yachting, among others).

During 2001, Ebbers persuaded WorldCom's board of directors to provide him corporate loans and guarantees in excess of US\$400mio to cover his margin calls. The board hoped that the loans would avert the need for Ebbers to sell substantial amounts of his WorldCom stock, as his doing so would put further downward pressure on the stock's price. However, this strategy ultimately failed and Ebbers was ousted as CEO in April 2002.

Beginning modestly in mid-year 1999 and continuing at an accelerated pace through May 2002, the company (under the direction of Ebbers, Scott Sullivan (CFO), David Myers (Comptroller) and Buford "Buddy" Yates (Director of General Accounting)) used fraudulent accounting methods to mask its declining earnings by painting a false picture of financial growth and profitability to prop up the price of WorldCom's stock.

The fraud was accomplished primarily in two ways: Under-reporting 'line costs' (inter connection expenses with other telecommunication companies) by capitalising these costs on the balance sheet rather than properly expensing them. Inflating revenues with bogus accounting entries from "corporate unallocated revenue accounts".

In 2002, a small team of internal auditors at WorldCom worked together, often at night and in secret, to investigate and unearth US\$3.8bio in fraud.¹⁴ Shortly thereafter, the company's audit committee and board of directors were notified of the fraud and acted swiftly: Sullivan was fired, Myers resigned, Arthur Andersen withdrew its audit opinion for 2001, and the US Securities and Exchange Commission (SEC) launched an investigation into these matters on 26 June 2002. By the end of 2003, it was estimated that the company's total assets had been inflated by around US\$11bio.

On 14 April 2003, WorldCom changed its name to MCI and moved its corporate headquarters from Clinton, Mississippi, to Dulles, Virginia. Under the bankruptcy reorganisation agreement, the company paid US\$750mio to the SEC in cash and stock in the new MCI, which was intended to be paid to wronged investors.

Dennis Kozlowski

Dennis Kozlowski, was Tyco's CEO in 2002. Tyco manufactured a wide variety of products, from electronic components to healthcare products. The conglomerate operated in over a hundred countries around the world and employed 240,000 people.

Dennis Kozlowski together with Mark Swartz, Tyco's then CFO; and Mark Belnick, the company's chief legal officer, took over US\$170mio in loans from Tyco without receiving appropriate approval from Tyco's compensation committee and notifying shareholders.

For the most part these loans were taken with low to no interest. Many of them were offset as bonuses without open approval. Kozlowski and Swartz also sold seven and a half million shares of Tyco stock for US\$430mio again without telling investors. Formal charges were made by the SEC in September, 2002 and all were found guilty of securities fraud violations.

Perhaps the most eye catching of the allegations related to the abuse of corporate hospitality directed mostly towards senior employees of Tyco themselves.

Tyco has been able to regain much in lost ground under new leadership. Because the acts of securities fraud committed by former senior Tyco executives were concealed and, for the most part, disguised, the majority of Tyco's employees were innocent. As a precautionary act, however, Edward Breen, who replaced Kozlowski, removed nine members of Tyco's original board.

Key date: 2002 (Former CEO of Tyco and others arrested on securities fraud violations)

Calisto Tanzi

Calisto Tanzi founded Parmalat in 1961 a maker of long-life milk, yogurts and juice and ran it until 2003. The company, which had annual sales of around €7.5bio (US\$9.2bio), was the largest Italian food company and the fourth largest in Europe, controlling 50% of the Italian market in milk and milk-derivative products. It had 36,000 employees and offices in 29 countries around the world. It was based in Parma, about 250 miles northwest of Rome. Parmalat grew to success as a family run enterprise and became one of the emblems of northern Italy's business prosperity.

The Company became engulfed in crises when a Bank

of America letter confirming Parmalat bank account credits of €3.9bio (\$4.9 billion) was revealed as a forgery and didn't exist and that €8mio in bonds of investors' money had evaporated as well.

Parmalat filed for bankruptcy in December 2003 after information emerged that a decade-long fraud had left the company saddled with €14bio (US\$18.57bio) in debt.

Prosecutors subsequently uncovered a global web of offshore companies and a myriad of documents that had been falsified often in crude ways, such as forged on a scanner and then run though fax machines to make them look authentic.

An Italian court sentenced Parmalat founder Calisto Tanzi to 18 years in prison for his role in the 2003 collapse of the Italian dairy firm, after a seven-year investigation and sometimes called "Europe's Enron". Parmalat was the largest bankruptcy in European history, representing 1.5% of Italian GNP, proportionally larger than the combined ratio of the Enron and WorldCom bankruptcies to the US GNP.

The court in Parma, the dairy firm's headquarters, ruled that Mr Tanzi, the company's former chief financial officer, Fausto Tonna, Mr Tanzi's brother Giovanni and several other executives were guilty of fraud that led to Parmalat's bankruptcy.

Messrs Tanzi and Tonna were also ordered to pay a combined €2bio to Parmalat, which since the bankruptcy has been restructured and relisted. The court also ordered those convicted to pay creditors 5% of the nominal value of the shares or bonds that they had bought in Parmalat.

The fraud went back 15 years and initiated to cover up industrial and financial losses, not to extract money from the company.

The problems at Parmalat can be traced back to a decision in 1997, when Parmalat decided to become a "global player" and started a campaign of international acquisitions, especially in North and South America, financed through debt. The firm also engaged in several exotic enterprises, such as a tourism agency called Parmatour, and the purchase of the local soccer club Parma. Huge sums were poured into these two enterprises.

The massive expansion, instead of bringing in profits, contributed significant losses.

While accumulating losses, and with debts to the banks, Parmalat started to build a network of offshore companies, which were used to conceal these losses. The Companies were made to appear as assets or as a net provider of liquidity to the Parmalat group. In order to finance the continuing losses, Parmalat issued bonds the security for which was provided by the alleged liquidity represented by the offshore schemes.

The Bond issues were arranged by Banks including Citigroup, Deutsche Bank and Morgan Stanley who were then charged but later acquitted of an administrative charge for failing to have adequate procedures in place to prevent the fraud that led to the collapse. The banks argued that they too were victims of Parmalat's fraud and committed no wrongdoing. The prosecutors had sought to confiscate €120mio from the banks in damages and penalties. BOA also charged had earlier reached a settlement with Parmalat paying US\$100mio. Two further Banks, UBS and Credit Suisse both agreed to settle civil cases relating to the issuance of Bonds paying a total of €184.1mio (US\$284.7mio) and €172.5mio (US\$266.8mio) respectively.

Nextra, the fund-management arm of Italy's Banca Intesa, agreed to pay €160mio (US\$197mio) to Parmalat. The sum represented its settlement of prospective charges that it bought and sold €300mio of Parmalat bonds in the months before the collapse, knowing that there was fraud at the company. Banca Intesa said that it wanted to avoid protracted litigation, but maintained that its dealings with Parmalat had been "absolutely correct".

Company: Parmalat

Country: Italy

Key date: 2003 (Parmalat, the Italian Dairy company filed for bankruptcy and would become known as Europe's Enron)

Helmut Elsner & Others

In July 2008, a Vienna court sentenced nine people to prison for their role in causing €1.7bio (US\$2.6bio) losses at the fourth largest Austrian bank, Bawag PSK. Bawag's former chief executive Helmut Elsner and eight other defendants received jail terms over failed speculative investments and the cover up of these losses through balance sheet fraud.

While Elsner's actions did not directly result with the failed trades causing the losses, he was considered as the mastermind behind the scandals in the cover up of the losses and as a consequence he was given the longest prison sentence of nine and a half years.

In a trial that involved numerous parties, and lasting

nearly a year, the final sentences imposed were more severe than expected, presumably setting a standard for the legal responsibility of bank executives and auditors. BAWAG, literally translating to 'the Bank for Employment and Commerce', has a very interesting history. Founded in 1922, with the intention of extending 'favourable terms of credit to ordinary people', the bank was known to have had close ties to the Social Democratic Party of Austria and Labour Unions. In 2004 The Austrian Trade Union Federation (ÖGB) became the sole owner of Bawag. However this history was soon tarnished with what was considered as one of the biggest financial scandals in Austria since World War II.

The 'Bawag scandal' or 'Bawag affair' became public following revelations of Bawag's involvement with a US brokerage firm, Refco, which faced bankruptcy in 2005.

In October 2005, Refco announced that Phillip Bennett (Refco's former Chief Executive and Chair) had hidden €281mio (US\$430mio) in bad debts from the company's auditors and investors and had agreed to take a leave of absence. Bennett had been involved in buying bad debts from Refco in order to prevent the company from needing to write them off and was in turn paying for the bad loans with money borrowed from Refco itself.

Bawag had provided a loan of €350mio to Bennett, just days before the brokerage firm filed for bankruptcy protection in October 2005. The bank had also extended a €75mio loan to Refco itself. A few days subsequent to the receipt of this loan, Bennett was arrested in the US and charged with falsifying Refco's books. The bankruptcy filing took place a week later. Bawag agreed to pay €441mio (US\$675mio) to avoid US prosecution, as they had been named as "co-conspirator" in the fraud which led to the demise of Refco. The US authorities stated that Bawag had assisted Refco in masking its bad debt, through the credit it had provided to Bennett. Bennett was sentenced to 16 years imprisonment by the US authorities in July 2008.

In the process of these investigations into Refco, details emerged of Bawag's suspicious accounts in relation to their investments in the Caribbean. The Austrian Financial Market Authority announced a special investigation into the credit line that Refco was given by Bawag. The involvement of Bawag in the Refco scandal was overshadowed by revelations that Bawag had tried to cover up years of losses they had themselves incurred.

Bawag's losses occurred as a result of a series of failed bets using risky derivative investments on off-balance-

sheet vehicles, from 1995 to 2000. These trades were undertaken by Wolfgang Floettl. Floettl was the son of former Bawag CEO, Walter Floettl, Elsner's predecessor.

When Elsner became a Chief Executive in 1995, he encouraged Floettl to make risky and highly speculative investments into currencies to boost Bawag's earnings. Floettl made investments which were unprofitable, mainly speculative trades in Yen derivatives, which led to severe losses as a result of a depreciating Yen in 1998. By October 1998, Floettl bet the entire fund available to him on the falling Yen, losing more than €392mio (US\$600mio) in days. Again in 1999 and 2000, Floettl bet two more tranches of Bawag's cash in currency deals, making a loss on both.

Elsner instructed other board members to conceal the losses incurred by Floettl which had reached approximately €1.6bio (US\$2.4bio) by the end of 2000. Senior management conspired to disguise the losses through manipulation of Bawag's accounts. At the end of 2000 it was decided by Bawag's senior management (Wenigner and Verzettlnich), that these losses would be kept hidden. Several smaller business branches of the ÖGB, including the so called ÖGB-Privatstiftung which covered the 'strike fund' were used as collateral to avoid a substantial one-off write-down. Wenigner and Verzettlnich argued that this was the only way of protecting the bank.

These concealments did not become public until investigations into Refco uncovered suspicious Bawag accounts. During the trial while Elsner claimed that Floettl ignored investment rules by opting for riskier products, Floettl in contrast insisted that he was allowed to invest in such a way. However, the sentencing reflected the firm stance the authorities took against the parties that played a key role in encouraging the speculative trades, through use of unauthorised funds, followed by a calculated cover-up of the losses.

Helmut Elsner was sentenced to nine-and-a-half year imprisonment by the Vienna District Court following a conviction of fraud; breach of trust and falsification of the balance sheet. In December 2010, the Austrian Supreme Court reduced the length of sentence given to Elsner by the Vienna District Court in July 2008, to seven-and-a-half years following an appeal.

The Supreme Court also partially overturned the lower courts verdict by quashing Elsner's conviction of charges of fraud and falsification of the balance sheet. The Court also ruled that Bawag had sustained losses of €1.2bio as a result of Elsner's actions, as compared with the lower court's estimate of €1.7bio.

In July 2011 Elsner was released from prison due to his fragile health condition, having spent a period of four and a half years in prison. Wolfgang Floettl fully co-operated with the investigations and was sentenced to two-and-a-half years in prison (with 20 months of his sentence suspended) for aiding breach of trust in a minor case.

Robert Reiter, a former KPMG partner, in July 2008, was sentenced to one year in jail and two years on probation for colluding in the cover-up. The verdict against Reiter was considered most surprising as there had been doubts over his culpability. Other defendants involved in the cover up of the losses included Wenigner and Verzettlnich. Verzettlnich was the only Trade Union representative made aware of the losses and played a part in hiding them. They received sentences ranging between two and five years, some with partial suspension. Bawag was protected from bankruptcy by declarations of support from the ÖGB, its shareholder. However, due to ÖGB's ownership, the 'Bawag Affair' of 2006, was considered to have had wider political consequences. In order to diffuse the negative political impact of these scandals, in December 2006, Bawag was sold to the US investment firm Cerberus Capital Management. This was seen as a necessary step to protect the Austrian financial community and Austria's international reputation.

Company: BAWAG

Country: Austria

Key date: 2008 (former CEO of Austrian Bank BAWAG, sentenced to imprisonment for fraud)

B Ramalinga Raju

B Ramalinga Raju created India's fourth largest IT outsourcing company, Satyam Computers Services ("Satyam"), and was regarded as a leader and inspiration by the 50,000 strong work force of Satyam and numerous industry observers, customers and stakeholders.

Under Raju's helmsmanship Satyam boasted of 185 Fortune 500 companies as customers and operations in 66 countries. Satyam had also won two Golden Peacock awards for Excellence in Corporate Governance in 2002 and 2008 respectively and Raju himself was awarded with the Entrepreneur of the Year Award in 2007 by Ernst & Young. Raju maintained that company's staunch commitment to training and educating its people and understanding its customers had worked in its favour.

Satyam was consistently rated among the best employers in India and had the highest employee cost to sales ratio of around 60% compared to 50-53% reported by its larger peers.

Raju, who hails from a wealthy agrarian family from Andhra Pradesh, one of the southern states in India, holds a Bachelor of Commerce (B.Com) Degree and a Masters in Business Administration (MBA) from Ohio State University. He initially ventured into textiles and real estate businesses but found his forte in IT with Satyam which he started in 1987 with only 20 employees and later took public in 1992 in a high profile IPO which was oversubscribed 17 times.

For the intensely competitive and ambitious Raju who wanted to be ahead of his peers and competitors and had staked claim to being the fastest growing IT company in India, troubles apparently began when he announced Satyam's plans on 16 December 2008 to enter the depressed realty and infrastructure sector by buying all of privately held Maytas Properties for US\$1.3bio and 51% of builder Maytas Infra for US\$300mio, as he thought it would "de-risk" Satyam's core business in IT services. The two companies were promoted by Raju's family, Satyam's promoters owned 35% stake in Maytas Properties and 36% in Maytas Infra and Raju's sons sat on the boards.

By trying to enter into related-party deals without shareholder approval, Satyam lost investors' trust. Satyam's stock came under severe pressure after the announcement and institutional investors showed their displeasure by hammering the stock both on the NYSE and National Stock Exchange causing the stock to drop by 55% and 33% respectively.

Raju was forced to call off the deal but in the process the market capitalisation of Satyam fell by US\$1bio to US\$2.23bio on 17 December from US\$3.2bio. His troubles compounded with the World Bank barring Satyam from doing any business with it for the next eight years upon allegations of "malpractice's including bribery" on 24 December 2008. News reports indicated that the World Bank debarment, the harshest sanction ever made by the bank since 2004, was meted out for 'improper benefit to bank staff' and 'lack of documentation on invoices'. Resignation by four independent directors on the board of Satyam followed quickly. While Satyam's stock took a beating on the stock exchanges, the company's image took a drubbing by the national and international media.

Just over a week later, on 7 January 2009, Raju released a letter addressed to the Board of Directors of Satyam with copies to the chairman of the Securities and Exchange Board of India and the stock exchanges where Satyam's stock was listed which would bring to light the biggest fraud in corporate India.

In the letter, Raju revealed shocking facts – that he had falsified the accounts of Satyam such that the reported financials of Satyam now had a gap of US\$1.2bio from the actual. He claimed that Satyam's balance sheet carried very large inflated/non-existent cash and bank balances, accrued interest and debtors

and understated liabilities. Raju further stated that the revenue for September quarter alone were overstated by approximately US\$131mio and operating margin by US\$117mio.

Raju stated in the letter that what started as a marginal gap between actual operating profit and the one reflected in the books of accounts continued to grow over the years. The differential in the real profits and the one reflected in the books was further accentuated by the fact that the company had to carry additional resources and assets to justify higher level of operations -thereby significantly increasing the costs.

Raju averred that every attempt made to eliminate the gap failed and as the promoters held a small percentage of equity, he was concerned that poor performance would result in a take-over, thereby exposing the gap. He compared it to "riding a tiger, not knowing how to get off without being eaten."¹⁵

Raju claimed in the letter that in the past two years a net amount of US\$246mio was arranged to Satyam to keep the operations going by resorting to pledging all the promoter shares and raising funds from known sources by giving all kinds of assurances. These loans and transactions were not reflected in the books of Satyam either. However as the value of Satyam's stock fell, most of the pledged shares were sold by the lenders on account of margin triggers. This was the last straw for the once-dominant entrepreneur who found himself irretrievably tangled in the complex web of financial chicanery he had woven and led to his confession.

He revealed that the aborted Maytas acquisition deal was the last attempt to fill the fictitious assets with real ones. Maytas' investors were convinced that this was a good divestment opportunity and a strategic fit. Raju believed that once Satyam's problems were solved, given the family ownership of Maytas, its payments could be delayed. However, that stratagem failed due to the adverse reaction of investors. Further, perversely, the market reaction to the news and the resulting fall in Satyam's stock further escalated the situation.

The revelation sent shock-waves through the stock markets with NYSE halting trading in Satyam's stocks. The NSE removed it from its key indicator index.

On 10 January 2009 the Company Law Board decided to bar the current board of Satyam from functioning and appointed 10 nominal directors. Raju was arrested followed by the arrest of Satyam's then-CFO on 11 January 2009. The Government appointed several eminent individuals to the board of Satyam and lent its support to the troubled IT giant in order to save jobs and confidence in corporate India.

Two Pricewaterhouse partners responsible for the audit of Satyam's financials were also arrested, charged with criminal conspiracy and falsification of accounts. Pricewaterhouse also announced the resignation of its assurance leader in India. (An assurance leader oversees a firm's audit practices, policies and procedures, and growth and quality control.) PWC has also been charged in at least one class action suit in the US in relation to Satyam by the ADR holders for having 'recklessly disregarded' a multi-year massive fraud by the former management of Satyam.

Several investigative, enforcement and regulatory agencies swung into action to investigate the fraud and pin responsibilities, including the Crime Investigation Department, Serious Fraud Investigation Office and SEBI.

The chargesheet presented by the prosecutor alleged that Raju forged Satyam's fixed deposits documents, diverted as much as US\$4mio monthly from the IT company, held more than 400 land transactions running into thousands of acres under shadow names, and claimed that the company overstated employee numbers by 13,000. Raju was personally charged with several offences, including criminal conspiracy, breach of trust, and forgery and still languishes in prison without bail while the case against him makes its way through the court processes. Satyam has been sold through an open bidding process overseen by the Government-appointed board of directors to Mahindra & Mahindra.

Tech Mahindra, the IT arm of Mahindra and Mahindra, an Indian conglomerate, bought a majority stake in Satyam (now renamed Mahindra Satyam) at approx. US\$1.23 per share. Given Satyam had touched, and traded at, a high of approx US\$12, this was a mere 10% of the value of Satyam shares at their peak. Tech Mahindra paid a total consideration of US\$646mio.

The Satyam case raised several questions about effectiveness of corporate governance in Indian companies and led to action by Companies Law Board, SEBI and other authorities for stronger corporate governance.

The case also brought into focus the risks of continued family-control over listed companies, particularly by founders. Some of the outcomes of the shocking Satyam scandal are strengthening the role of non executive/independent directors, greater accountability of statutory auditors and tightening of disclosure norms around stocks held by promoters including disclosure of pledging of stock. Interestingly, there were no additional red-flags in terms of numbers or financials. Satyam had

slightly higher than industry norm employee cost ratio and lower net operating margins, however nothing alarming. They were known to be aggressive in acquiring business and under-cutting peers on price. They showed a healthy cash & equivalent balance of over US\$1bio which tied in with other cash-rich IT players. Perhaps the only cause of concern was the tight control maintained by the Raju family in running the company though there were professional managers appointed to take care of the company's affairs. The reason the scam sustained for the period it did was due to the complicity of the CFO with Raju in falsifying books and accounts and the failure on the part of the auditors to verify documents/check for fraud.

Key date: 2009 (Raju writes a letter exposing massive fraud at his Indian Company Satyam)

Tsuyoshi Kikukawa and Others

In February 2012, Seven Olympus executives were arrested by Japanese police and prosecutors. Olympus Corporation is a major Japanese manufacturer of camera's lenses and similar and/or related optics and reprography products. Ex-president Tsuyoshi Kikukawa, former executive vice president Hisashi Mori and former auditor Hideo Yamada were taken into custody on suspicion of violating the Financial Instruments and Exchange Law, along with former bankers Akio Nakagawa and Nobumasa Yokoo and two others, suspected of having helped the board hide significant losses. On 25 September 2012, the company and Kikukawa, Yamada and Mori pleaded guilty to collusion to submit false financial reports.

The charges spring from events in late 2011, when the company fired its newly appointed British CEO Michael Woodford, following his concern and notification about very dubious company activities precipitating a scandal that wiped 75% off the company's stock market valuation. Woodford alleged that his removal was linked to several prior acquisitions he questioned, particularly the US\$2.2bio deal in 2008 to acquire British medical equipment maker Gyrus Group, where it has been reported that US\$687mio was paid to a middle-man as a success fee, a sum equal to 31% of the purchase price and that the company acquired three other Japanese companies outside its core business and recognised that the assets were worth US\$721mio less than their acquisition value 12 months previously.

Following his dismissal, Woodford passed on information to the British Serious Fraud Office, and

requested police protection. He said the payments may have been linked to "forces behind" the Olympus board. Japanese newspaper Sankei suggest that a total of US\$1.5bio in acquisition-related advisory payments could be linked to the Yakuza. In June 2012, Olympus announced it would cut 2,700 jobs, or 7% of its global work force, by the end of March 2014 and will scrap around 40% of its 30 manufacturing plants around the world by the end of March 2015 to reduce cost due to investment losses of Yen117.7bio (US\$1.5bio) dating back to the 1990s.

Advanced Fee Fraudsters

Special Focus 10 Chief Nwude & Banco Noroeste

Banco Noroeste was a Brazilian bank at the centre of a Nigerian 419 scam, which was described as the "single biggest advanced fee fraud case in the whole world" by the former chairman of Nigeria's Economic and Financial Crimes Commission (EFCC), Alhaji Nuhu Ribadu. The

draining of approximately US\$242mio from the Brazilian Bank Noroeste was discovered in 1998 after its sale to the Spanish group Santander.

The branch of the bank in Cayman managed the Capital of the Bank holding blue chip investments in US banks such as JP Morgan and Bank of New York. Between May 1995 and February 1998, a total of US\$242mio was reportedly stolen from the Banco Noroeste S. A. through offshore banks in the Cayman Islands.

Whilst the fraud appears to have been a 419 Advance Fee Fraud scam, there are also suggestions that whilst it may have started this way, a senior employee of the Bank may have been involved also.

The senior employee in question was Nelson Sakaguchi, Head of Noroeste's Cayman Branch, who on a business trip to Nigeria in 1994, was introduced to Chief Nwude who purported to be Paul Ogunwuma the Governor of

the Central Bank of Nigeria. Sakaguchi was asked to invest in a proposal to build a new Airport in Abuja, promising big returns. Despite his experience, Sakaguchi agreed and gave the instructions to liquidate the Cayman Branch's blue chip investments and to invest US\$190mio in the fake project.

Following the discoveries, Chief Nwude and his associates were charged in Nigeria and convicted of obtaining US\$190mio by false pretences. They pleaded guilty and forfeited US\$170mio in assets.

Penalty: convicted of fraud

Actions: longest advance fee fraud recorded

Country: Nigeria, Brazil, Cayman Islands

Key date: 1998 (Nwude charged with masterminding the largest advance fee fraud in history)

Hasan Ali Khan

Hasan Ali Khan or Syed Mohammed Hasan Ali Khan is currently charged in India with money laundering on a massive scale.

According to the Indian authorities, the 56-year-old scrap metal dealer and stud farm owner has over US\$8bio in assets which if true would make him one of the richest men in India. In early 2007 the Indian authorities raided Mr Khan's Pune residence and came across documents that purportedly showed that he had billions of dollars in accounts at UBS in Switzerland with possibly additional funds in other accounts in other banks. Such alleged wealth seems totally contrary to both the known business activity of Mr Khan and his more modest lifestyle.

The document that has received most attention from the raid was a letter purportedly from UBS in Zurich, dated 2006 and written "to whom it may concern" with the subject heading stating Hasan Ali Khan.

The letter, available on the internet, read as follows - Khan can withdraw US\$6bio was free to invest this amount as and when he chooses to do so and that the balance amount of US\$2.04bio would remain bound with UBS until 15 January 2007, after which Khan was free to invest the same as and when he chooses to do so." The letter was on UBS Ltd letterhead and was allegedly signed by the then CEO.

Further claims according to charges brought against Khan are that Khan dealt with the notorious Saudi arms dealer from the 1970s, Adnan Khashoggi in a US\$300mio missile deal through UBS and that Khan when negotiating to pay approx CHF28mio for a Swiss Chateau that UBS had confirmed that these monies could be paid from Khan's "petty cash".

UBS both in 2007 and since, repeated and issued press releases stating that the document is a crude forgery and its contents are untrue.

The case has generated massive media interest in India and even the attention of the Indian Supreme Court which has personally intervened in the case amid concern that the Indian authorities have failed to fully investigate the case or are failing to pursue the case thoroughly. This concern is heightened as the case has been linked with allegations that Mr Khan may have acted for and/or be fronting for leading Indian politicians in moving and hiding massive monies amassed from corrupt activities in India and that the investigation is being hampered by and Mr Khan somehow being protected by political interference.

Country: India

Key date: 2007 (Khan arrested in India)

Hedge Fund/Investment Co Fraudsters

Jordan Belfort

Jordan Belfort was convicted of fraud related to stock market manipulation and running a penny stock boiler room for which he spent 22 months in prison. His story has been made into the recent movie, "The Wolf of Wall Street", released in 2013, starring Leonardo DiCaprio but also the movie "Boiler Room", released in 2000 and starring Ben Affleck, was inspired by Belfort's operation. Belfort was born in New York to Jewish parents, one an accountant and one a lawyer. He started his financial career as a broker at L.F. Rothschild, before starting his own brokerage firm Stratton Oakmont in the 1980s with partner Danny Porush.

Belfort never ran a legal operation, his intent was to establish a boiler room operation marketing penny stocks, where he defrauded investors with fraudulent stock sales, underrating classic pump and dump manipulation techniques. For example, Belfort and several of his executives would buy up a particular company's stock and then have an army of brokers (following a script he had prepared) pump it up by selling it to unsuspecting investors. This would cause the stock to rise, pretty much guaranteeing Belfort and his associates a substantial profit, who would then dump the stock or sell out. Soon after the stock would fall back to reality, with the investors bearing a significant loss, effectively Belfort defrauding the investors and taking much of their money.

At its peak in the 1990s, Stratton Oakmont, Belfort's firm that he co-founded with Danny Porush, employed more than 1,000 brokers. During his years at Stratton Oakmont, Belfort developed a lavish partying lifestyle,

which included a serious addiction to drugs. In 1996 Stratton Oakmont was banned from the brokerage industry, which eventually forced the company to close its doors.

Belfort was indicted in 1998 for securities fraud and money laundering. After cooperating with the FBI, he served 22 months in prison admitting responsibility for approximately US\$200mio in investor losses. Belfort was ordered to pay back US\$110mio. Danny Porush served 39 months in prison for his part in the fraudulent dealings of Stratton Oakmont.

Country: US

Key Date: 1996 (Stratton Oakmont, Belfort's firm was closed down)

Michael Brown

A brash, ponytailed Michael Brown from Glasgow, UK, claimed to be a successful offshore trader living in Majorca, whose clients included, Martin Edwards, the former Manchester United Chairman, who had invested £8mio with Browns company, 5th Avenue Partners. Instead of investing this and other client funds, Brown used the money for his own purposes, and after his arrest on fraud charges in the UK he disappeared from Britain while on parole and was sentenced in his absence to seven years in prison. Whilst he would later be found and arrested in the Dominican Republic, it was how he used some of the money that brought him to the attention of the UK media. As the UK elections approached, Brown met in 2004 with the UK's third largest Party, the Liberal Democrats, bankrolling the party with £2.4mio of stolen money and becoming their biggest ever donor. Within months, Brown was flying Lib Dem leader, Charles Kennedy across Britain in a private jet and was being invited to dinners in Mayfair.

Despite not being a party member, not being registered to vote and living abroad, he was welcomed with open arms by the Lib Dems who clearly failed to conduct proper due diligence. Despite the fact that the funds were the proceeds of a crime, and notwithstanding the fact that the Lib Dems failed to conduct adequate due diligence, the Lib Dems maintain that the money was received in good faith and refuse to return the funds. Due diligence rules on campaign finance monies differ from those applying to financial institutions accepting monies from customers markedly. In the UK and elsewhere, Political Parties are restricted from receiving donations from foreign persons so as to prevent foreign involvement in a third country's politics. In this case whilst monies were received directly from a foreign company, namely, 5th Avenue Partners, this was the investment vehicle controlled by the British citizen,

Michael Brown. Therefore, whilst a technical violation may have occurred, Brown was entitled to fund the Lib Dems and they were entitled to accept his donation. What is less palatable is that as this was the largest ever donation made to the Lib Dems, from a source that was not known to them, it was essentially a walk-in supporter without any history of previous support, without adequate care and attention being sought as to his source of funds and the fact that he turned out to be a fraudster, enough red flags should have caused the Lib Dems to reject the donation. Instead not only did they accept and spend the funds, but then once the facts had been established they refused to return the funds and to claim in their defence that the parliamentary investigation had exonerated them, when in fact it had simply confirmed that as Michael Brown was a UK citizen they had not broken that part of UK finance rules, nothing more.

Country: UK

Samuel Israel III

The most common form of reported fraud involving hedge funds relates to offences perpetrated by hedge fund managers against their customers, especially in terms of false or misleading net asset valuations. Exaggerated statements of assets under management and net annual profits are not unknown in the hedge fund world. From 1996 until 2005, Samuel Israel III managed a group of US onshore and Cayman Islands offshore hedge funds under the family name Bayou (the "Bayou funds"). While these hedge funds were apparently originally conceived as legitimate investment vehicles, large trading losses during early fund operations forced the managers to conceal the losses through a variety of false accounting practices, including issuing false financial statements to investors and fabricating false "independent audit reports" by creating a sham accounting firm.

In April 2004, the fund managers in an attempt to win back losses incurred suspended trading on behalf of the funds, emptied their prime brokerage accounts, and wire transferred US\$150mio into Citibank's Bayou account. Of this US\$150mio, they moved US\$120mio into a German bank account in the name of one of the fund managers for investment in a "prime bank instrument trading programme". They had been convinced by a third fraudster that massive returns were possible investing in these secretive prime bank instruments. With the Banks suspicious, Israel was warned that he might be being defrauded though he didn't take their warnings seriously. Ultimately the

third fraudsters didn't get the remaining Bayou funds but the original Fraud was uncovered when large value, third party international wire transfers, coupled with other third party fund movements, lack of apparent legitimate business activity and large dollar values of the account, caused the retail bank involved to contact the authorities, who ordered the funds to be frozen, prosecuted the fund managers.¹⁶

Country: US, Cayman Islands
Key date: 2005 (Fund Managers arrested and prosecuted for Fraud)

Special Focus 11 Bernie Madoff

Bernie Madoff orchestrated the largest Ponzi scheme ever recorded. In December 2008, he was charged in both a criminal information and US Securities and Exchange Commission (SEC) complaint alleging that he ran a multi-billion dollar

Ponzi scheme. Madoff settled the SEC suit and on 12 March 2009, he pleaded guilty to the criminal information that charged him with security fraud resulting in investor losses of US\$10-17bio. The information largely contained Madoff's admissions of his criminal conduct he made to his two sons shortly before his arrest. His plea ended the criminal matter, and the full details of his scheme were thus never detailed in an indictment. At his pleading allocution, however, Madoff admitted to running a Ponzi scheme that he stated began in the early 1990s. He acknowledged that he did not invest any of his clients' money, but rather deposited the money into his business account at JP Morgan Chase & Co (JPM). To conceal the scheme, he admitted to false trading activities masked by foreign transfers and false SEC returns. When clients requested account withdrawals, he paid them from the JPM account, claiming the profits were the result of his own unique "split-strike conversion strategy". On 29 June 2009, Federal District Judge Denny Chin sentenced Madoff to the maximum sentence of 150 years in prison.

The Madoff case has resulted in a proliferation of books and other media accountings of his decades-long scheme, as well as US Congressional hearings and

regulatory reforms. At its core, Madoff perpetrated a classic Ponzi scheme by paying investors with other investor funds. What separates Madoff from other Ponzi schemes is the sheer breadth in terms of: the dollars; the investors (individuals to large institutional victims); the global reach of his investors and feeder funds; and duration (decades). Moreover while most Ponzi and Investment Fraud schemes rely on the promise of high returns for investments in unregistered instruments or unconventional investment strategies, Madoff's scheme involved false trading returns through a regulated broker-dealer. In the aftermath, much of the public attention as to why this scheme went undetected focused on the shortcomings and failures of the regulators, primarily the SEC, but like any other Ponzi scheme, Madoff needed the use of a financial institution to gather and move the cash. Questions of AML controls by the financial institutions that did business with Madoff have largely been raised in civil actions brought by the Trustee appointed for Madoff's Broker Dealer in his efforts to recoup funds for the victims of the scheme and by the US authorities, for example, against JP Morgan for failures on their part which have resulted in fines of US\$2bio being incurred.

Madoff was a former Chairman of the board of directors of the NASDAQ stock market.

In the early 1960s, he founded Bernard L. Madoff Investment Securities LLC, (BMIS) a registered Broker-Dealer and Investment Advisory Firm. The Firm had three distinct business lines - investment advisory services, market making services, and proprietary trading. The Ponzi scheme was conducted through the advisory services arm in which Madoff falsely reported investment earnings to his clients when in fact no trades were ever executed. In fact, in classic Ponzi scheme formula, he reported consistently high returns on investments through fictitious trades and when investors sought to redeem their investments, Madoff simply paid investors with funds he obtained from other investors. The scheme collapsed during the 2008 credit crisis when Madoff could not keep up with finding new investor funds to match the redemption demands. Given the enormity of the fraud, few believed Madoff's claims that he acted alone. Criminal cases have since been brought against BMIS back office employees, and criminal pleas have been entered by Frank DiPascali, Jr., the CFO and Director of Operations Trading at BMIS, and David Friehling, BMIS' CPA.

In addition to the Congressional Hearings, in August 2009, the SEC's Office of Investigations (OIG) issued its report, Investigation of Failure of the SEC to Uncover Bernard Madoff's Ponzi Scheme.¹⁷ The report

detailed failures of the SEC to uncover the scheme, and found that: "the SEC received more than ample information in the form of detailed and substantive complaints over the years to warrant a thorough and comprehensive examination and/or investigation of Bernard Madoff and BMIS for operating a Ponzi scheme, and that despite three examinations and two investigations being conducted, a thorough and competent investigation or examination was never performed ...". The OIG also found that numerous private entities conducted basic due diligence of Madoff's operations and, without regulatory authority to compel information, came to the conclusion that an investment with Madoff was unwise. Specifically, Madoff's description of both his equity and options trading practices immediately led to suspicions about Madoff's operations. With respect to his purported trading strategy, many simply did not believe that it was possible for Madoff to achieve his returns using a strategy described by some industry leaders as common and unsophisticated ... The private entities' conclusions were drawn from the same "red flags" in Madoff's operations that the SEC considered in its examinations and investigations, but ultimately dismissed."

Before Harry Markopolos first raised his concerns to the SEC in 2000 that went unheeded, the OIG also found that the SEC missed an opportunity to detect Madoff's Ponzi scheme from their review in the early 1990s into claims made by investors of a Ponzi scheme regarding the investment firm, Avellino & Bienes.

The OIG report noted that the: "The SEC was provided with several documents that Avellino & Bienes created that indicated that they were offering "100%" safe investments, which they characterized as loans, with high and extremely consistent rates of return over significant periods of time. Not everyone could invest with Avellino & Bienes, as this was a "special" and exclusive club, with some special investors getting higher returns than others. As the SEC began investigating the matter, they learned that Madoff had complete control over all of Avellino & Bienes' customer funds and made all investment decisions for them, and, according to Avellino, Madoff had achieved these consistent returns for them for numerous years without a single loss. Avellino described Madoff's strategy for these extraordinarily consistent returns as very basic: investing in long-term Fortune 500 securities, with hedges of the Standard & Poor's (S&P) index. The SEC suspected that Avellino & Bienes was operating a Ponzi scheme and took action to ensure that all of Avellino & Bienes' investors were refunded their investments. Yet, the OIG found that the SEC never considered the possibility that Madoff could have taken the money that was used

to pay back Avellino & Bienes' customers from other clients as part of a larger Ponzi scheme."

Madoff's fraud, like any Ponzi scheme, involved the movement of funds to carry out its uniform objectives – steal from its investors and use the funds from other investors to conceal the fraud. The Madoff story has not been completely told as to whether institutions where he banked will be deemed, either civilly or from a regulatory perspective, to have had inadequate AML controls (JP Morgan have since admitted liability to mistakes and have been fined US\$2bio). The AML issues have largely been raised in the lawsuits filed by Irving Picard, the Trustee appointed for the Liquidation of Bernard L. Madoff Investment Securities LLC. Picard initiated civil proceedings against JPM, Madoff's primary banker, seeking US\$19bio in damages. The civil suit alleges JPM "was at the very centre of the fraud, and thoroughly complicit in it." To support this claim, the Trustee's complaint alleged certain notable red flags that its AML programme was "not effectively executed", including: - billions of dollars flowed through the BMIS account and no trading/investment activity ever occurred that would be consistent with either business purpose of the account – market making or advisory services; - the transactions were repetitive, in large dollar amounts and in certain situations, the same amount was sent in multiples to the same client on the same date; - many transactions involved hand-written cheques; - wire activity also involved the use of high risk offshore entities; -large amounts of funds were received from investors and funds sent out to other investors; - it noted that JPM was made aware back in 1997 that a financial institution on the other side of JPM transactions had concluded that the circular flow of funds between two Madoff accounts was suspicious and closed its business with Madoff; - since JPM maintained accounts for both BMIS and private bank accounts for two of its largest investors, it had greater visibility into the suspect transactions; and -despite the large fund movements, the circular transactions, no monitoring alerts were generated.

In addition, the complaint also alleged there were further red flags unrelated to transactional activity that JPM learned through its own due diligence from the structured product business it also conducted with certain Madoff feeder funds, such as: -BMIS' returns were consistently high even in down markets; -Madoff would not allow transparency into his trading strategy, nor would the feeder funds provide its trading agreements it had with BMIS to JPM in connection with its due diligence reviews of these funds; - Madoff would not reveal and the feeder funds had no idea of whom the purported counterparties were on his OTC

trading; -Madoff and BMIS had a conflict of interest since it acted as the clearing broker, sub-custodian, and sub-investment advisor; - concerns about the use of a small, unknown auditor for such a large business operation; and - JPM was in possession of certain regulatory reports that should have put them on notice that said filings were false since they maintained the banking relationship for BMIS.

Picard and investors have also filed law suits against financial institutions that serviced the Madoff-related feeder funds. The central theme to the theory of liability is that the institutions breached their fiduciary duties by failing to conduct adequate due diligence on Madoff and his funds before accepting millions of dollars.

Penalty: sentenced to 150 years imprisonment
Actions: affinity fraud and Ponzi scheme racking up US\$10-17bio in losses for investors
Country: US
Key date: 2008 (Madoff charged with operating the largest Ponzi scheme in history)

Sammy Goldman & Harry Tanner Jr

Florida based precious metals firm, American Precious Metals, LLC (APM) and its founders and principals, Sammy J Goldman and Harry Robert Tanner, Jr. offered customers the opportunity to make a lot of money, with little risk, by purchasing precious metals through a financing agreement, leveraging their investment and increasing their likely returns. Customers were asked to send a down payment, which came to as little as US\$5,000. APM would then finance up to 80% of customers' purchases and store customers' physical metals in a secure depository. In fact using this sales pitch APM should have purchased more than US\$23mio of precious metals for customers.

The reality was that this was a fraud. APM should have been regulated by the US Commodity Futures Trading Commission (CFTC) but it wasn't. It deducted 40% of all monies received as commissions, pooled the remaining funds and sent much of that money to a related third party. These monies were never used to buy precious metals or to provide storage. In May 2011 the CFTC prosecuted APM for this fraud. The CFTC then put out advisories to be alert to companies that sell investments in precious metals based on sales pitches claiming that customers can make a lot of money, with little risk, by purchasing metal through a financing agreement.

others for fraud)

Ponzi - Pyramid Schemes

Special Focus 12 Charles Ponzi

With less than three dollars in his pocket, Charles Ponzi emigrated from Italy to the US in 1903. In less than 20 years after his arrival, Ponzi was deported back to Italy and labeled as one of the most infamous fraudsters for orchestrating one of the biggest financial crimes of the 20th century.

Ponzi was constantly looking for ways to make his first million and at the end of 1918 he thought he had found a way. Ponzi's idea involved buying international postal reply coupons in European currencies at fixed, outdated rates of exchange and then redeeming them in the US for dollars. Ponzi saw an incredible opportunity since the currencies of post-World War I countries were in shatters and redeeming the postal reply coupons in the US almost guaranteed a profit. However, once Ponzi put his idea in motion he found that redeeming the coupons, at the volume he desired, was nearly impossible due to excessive postal regulations. Still determined, Ponzi started to tell friends and family that the returns available from postal reply coupons made impossible profits possible. Within weeks, immigrants swayed by Ponzi's investment venture proposal were transferring large sums of money to Ponzi with some receiving a 75% return. But what they didn't know was that Ponzi was paying investors who wanted to cash out with monies from newer investors or with monies from investors who were willing to reinvest with Ponzi. Unbeknownst to the investors of Ponzi's scheme, they further perpetrated the fraud by spreading the word of the returns he was able to achieve and an avalanche of investor funds ensued. To promote his investment venture further, Ponzi started a company and employed a multitude of agents to take in money from investors across the northeast coast. With money pouring in and investors choosing to reinvest rather than taking the profits, Ponzi began depositing the funds into Hanover Trust Bank of Boston with the goal of buying a controlling interest in the bank. It took Ponzi less than six months from his initial idea of investing in postal

reply coupons to buying a controlling interest in a small bank. Obviously his success raised suspicions, most notably by the press.

The Boston Post contacted the publisher of Barron's, a financial paper, to investigate Ponzi's investment company. Barron's investigation found that Ponzi did not invest in his own company and more troubling was the fact that 160 million postal reply coupons would have had to be in circulation to cover the investment Ponzi was claiming. The US Postal Service confirmed that no such quantity was in circulation; rather, there were around 27,000. Ponzi, aware of Barron's investigation, hired a publicist, William McMasters to counter the negative press. But after McMasters discovered documentation that Ponzi was an actual fraud, he went to the Boston Post to write a story of his findings. The cascade of negative press left Ponzi scrambling to pay out investors who were requesting their investments be paid back. The Massachusetts bank commissioner noticed the massive runs on Ponzi's investment company and an order was made in 1920 for bank examiners to watch Ponzi's accounts. A week after the order, examiners found there were enough investors who had cashed their cheques with Ponzi's main account that it was almost certainty overdrawn. After this discovery, the commissioner ordered Hanover Trust Bank not to pay out any more cheques from Ponzi's main account. This action forced the Massachusetts Attorney General to release a statement that there was little evidence to support Ponzi's claims of large scale dealing in postal reply coupons. Charles Ponzi's house of cards had fallen to the ground.

A day after the Attorney General released his statement Ponzi decided to turn himself in to authorities. He was charged with 86 counts of mail fraud but pleaded guilty to only one count and was sentenced to five years in a federal prison. After serving three and a half years, Ponzi was released and then immediately indicted on 22 counts of larceny by the State of Massachusetts and was sentenced to nine years in state prison. After only three years, he was released on bail and fled to Florida where he began another scheme, similar to his previous one, but this time relating to real-estate. Early in 1926, Ponzi was arrested and charged with violating Florida trust and securities laws. A jury found him guilty and he was sentenced to one year in prison. Before he served his time, Ponzi appealed his conviction and was freed after posting bond. Tired of running from the law and after failing at multiple schemes, Ponzi tried to flee back to Italy by jumping on a merchant ship, but was caught by the ship's captain and sent back to Massachusetts to serve the rest of his state prison sentence. He was released in 1934 and then deported to Italy as an

undesirable alien. At a charity hospital in Rio de Janeiro on 18 January 1949, Charles Ponzi died from health complications without a penny to his name.

To this day the name 'Ponzi' remains synonymous with large scale investment fraud and in particular pyramid schemes. A pyramid scheme is a form of fraud similar in many ways to a Ponzi scheme, relying as it does on the hope of an extremely high rate of return. One of the main differences of the two schemes is that Ponzi schemes are structured such that they use the entry fees from participants to make profits for the earlier entrants to the scheme; whereas a pyramid scheme usually requires that participants make a payment for the right to recruit additional participants, at which point they will receive money. A pyramid scheme is bound to collapse much faster because it requires exponential increases in participants to sustain it. By contrast, Ponzi schemes can survive simply by persuading most existing participants to "reinvest" their money, with a relatively small number of new participants. Unfortunately, investors still fall victim to this scheme even today because, among other reasons, they are lured by access to great wealth and exclusivity proffered by Ponzi's emulators.

Penalty: imprisoned many times for frauds
Actions: put his name to "Ponzi Schemes"
Country: US
Key date: 1920 (Ponzi scheme collapsed)

Special Focus 13 Ivar Kreuger

Ivar Kreuger was known as the "Match King" producing 75% of the world's matches in 1930. One biographer called him a "genius and swindler", John Kenneth Galbraith wrote he was the "Leonardo of larcenists. A national hero

in his native Sweden, Kreuger was admired for his generosity, including the loans he made to a dozen struggling countries. But after his suicide in 1932, the world learned about the true basis of his company.¹⁸ His father owned a small match factory, which he took over in 1917. Just a few years earlier, a Swedish professor had invented the safety match, a form of non-toxic phosphorous that could be manufactured on a box of matches. Seeing an opportunity for growth in post-war

Europe, he snapped up dozens of small match factories. He began approaching cash strapped countries with an attractive offer: he would make a sizable loan in exchange for a national monopoly on match production. The more matches he sold, the more money the government made in taxes. Whether because of desperation or Kreuger's skills of persuasion, a dozen countries signed up for the deal by 1930. Germany secured the biggest loan of US\$125mio.

Kreuger, who cultivated an image as a person more concerned about creating global stability than profit, loaned out approximately US\$253mio taking in monies from investors lured by the prospect of significant profits and dividends. Unable to pay the high dividends he promised, Kreuger turned his business into a Ponzi-Pyramid-type Scheme. On 12 March 1932, Kreuger committed suicide in a hotel room in Paris. At first, his death was deemed a "suicide while despondent." But, as the depth of the fraud was revealed, ill health was ruled out as a cause. With more new revelations, about other frauds in his business empire a so-called "Kreuger crash" ensued. Beyond the shock of seeing its national hero exposed as a criminal, Sweden sustained losses of about \$60 million. To stave off a complete meltdown, the government acted fast to put the equivalent of \$7 million into banks affected by the crash. In the US, legislation was drafted to fill in the gaps of oversight that Kreuger exploited. America's Securities Act, which passed in 1933, required greater disclosure on the part of companies seeking to sell stock.

Penalty: Suicide, loss of business empire
Actions: Fraud, giant Ponzi type scheme
Country: Sweden and elsewhere
Key date: 1932 (unavailing of major fraud)

Barry Minkow

Barry Minkow ran a carpet cleaning business in the US, starting as a 16 year old, establishing "ZZZZ Best" and growing it to a company with over 1400 employees who specialized in insurance restoration cleaning. The company went public in 1996 and temporarily had a market value of over US\$200 million. However, the company was simply a massive Ponzi scheme, raising money from new investors to pay off old ones, with thousands of documents forged to maintain the appearance of a thriving business.

The company quickly collapsed and Minkow and 11 others were indicted on 54 different counts of fraud. Minkow was sentenced to 25 years in prison, but served 7 1/2.

Key date: 1986 (Company listed)

Rogue Traders

Special Focus 14 Nick Leeson

On 17 January 1995 a massive earthquake shook the Japanese city of Kobe damaging property and taking 6,434 lives. The shockwaves that took their toll on Kobe would also claim another victim, the oldest of British Banks, Barings Bank, which unbeknown to its senior

management held massive unauthorised trading positions, placed by Star Trader Nick Leeson, which would be exposed as the Nikkei 225 began to fall. Leeson had been placing unauthorised bets on the Nikkei 225 index in both Japanese and Singapore markets for 3 years without detection.

Leeson reported fictitious profits of £9mio for 1993, £25.5mio for 1994 and £18.5mio in 1995. These "profits" amounted to half of Barings Singapore's 1993 profits and half of the entire firm's 1994 profits.

The real financial picture was one of increasing losses, amounting to £21mio in 1993, £185mio in 1994 and £619mio for the first 2 months of 1995, before the Bank was forced into Liquidation on 26 February, 1995, hundreds of years after it was first founded (1762) by and continuously controlled by members of the Barings family.

Leeson engaged in unauthorised activities almost as soon as he started trading in Singapore, moving from Barings London in 1992, making a £2mio loss in his first year and hiding this loss in a trading error suspense account. The loss was incurred by conducting proprietary trades for Barings which he was not authorized to undertake. He was supposed to be trading low risk proprietary arbitrage trades as well as executing client orders on both Japanese and Singapore exchanges. This arbitrage strategy, which Barings called 'switching', was intended to take advantage of a market anomaly where temporarily the prices for certain contracts (specifically Nikkei 225 contracts traded on SIMEX and on the Osaka Stock Exchange (OSE) were different. When these price differences emerged, Leeson

would be authorised to quickly buy on one exchange at the cheaper price and sell simultaneously the more expensive one before the prices came back to parity. This kind of arbitrage strategy should have little risk because positions are matched. In order to make money large purchasers and sales would however be required. As far as client transactions were concerned Leeson would execute these on the exchange for clients and charge a fee or commission and the risk of price movements would remain at all times with the clients.

Unfortunately for Barings, Leeson was not only engaged in the "switching" and client execution business but additionally in highly risky proprietary position taking. For example most of the ultimate losses, which brought down the Bank came from Leeson selling put options and call options with the same strikes and maturities. This strategy is known in the market as a "straddle."

On the day prior to the Kobe earthquake, Leeson had large straddle positions that would make Barings money if the Nikkei 225 Index continued to trade in a range of 19,000 - 20,000. On the day of the quake, 17 January, the Nikkei 225 was at 19,350. The Markets reacted negatively and sent the Nikkei down, with Traders worried about the costs to Japan and to Japanese Companies from the effects of the quake. The Nikkei ended that week slightly lower at 18,950 so Leeson's straddle positions were starting to look problematic. The call options Leeson had sold, which would benefit the buyer in case the Nikkei rose above 20,000 were beginning to look worthless and so the premium received on these calls sold could likely be banked as profits. However, the put options sold, would become very valuable to their buyers if the Nikkei continued to decline. Barings losses on these puts were unlimited and totally dependent on how far the Nikkei would fall. The premium earned on the sale of these puts would be easily eaten away by the compensation Barings would have to pay.

Rather than accept the distinct likelihood of taking major losses with a Nikkei 225 falling further and fast, and instead of minimizing his losses (for example by covering his long position with sales of the Index) Leeson decided on 20 January to make major purchases of the Index, either because he thought the market had over-reacted to the Kobe shock and would bounce back or because he wanted to try to move the market back up and by acting in this way so reducing his likely losses.

The manoeuvre failed. Leeson was swimming against a tide of negative Japanese market sentiment and there was nothing he could do could stop it. The Nikkei dropped another 1000 points to 17,950 on Monday

January 23 and Leeson found himself showing losses on his two-day old long futures position and facing now even bigger losses on the put options he had sold. Over the next three weeks, Leeson doubled this long position to reach a high on 22nd February. The large falls in Japanese equities, post-earthquake, increased so called volatility in the market. For options, increases in volatility are beneficial to buyers. This is because the likelihood of the Nikkei being outside the range of 19,000 - 20,000 say in 3 months time had significantly increased due to the changes already seen in the market reacting to the effects of the earthquake. This would lead to increased losses for Barings as a seller of options (the calls and the puts) as a seller wants volatility to decline so that the value of the options decrease and of course the buyer is predicting the reverse.

Barings eventually could not meet the enormous trading obligations, which Leeson established in the name of the bank. The size of the positions built up by Leeson required massive funding from the Bank and the scale is underlined by the fact that in January and February 1995, as the positions grew and the losses mounted Barings transferred US\$835mio to its Singapore office to enable Leeson to continue to trade (Leeson was obliged to post collateral on Simex for the growing losses.) With reported capital of about US\$615mio for Barings as a whole the scale of the funding was astonishing.

Realising the game was up Leeson fled both Barings and Singapore on 23 February. Losses eventually reached £827mio (US\$1.4bio), twice the bank's available capital. After a failed bailout attempt, Barings was declared insolvent on 26 February. Leeson travelled to Malaysia, Thailand, and finally Germany where he was arrested at Frankfurt Airport after a short international Manhunt. Leeson pleaded guilty to two counts of "deceiving the bank's auditors and of cheating the Singapore exchange", including forging documents. Sentenced to six and a half years in Changi Prison in Singapore, he was released from prison in 1999, having been diagnosed with colon cancer, which he survived despite poor forecasts at the time.

Whilst Leeson admitted his guilt and has been punished for his crimes, the Singapore authorities in their published report on the incident were scathingly critical of Barings management, claiming that senior officials knew or should have known much more than they did, blaming the bank's internal auditing and risk management practices.

At Barings risk management failed spectacularly. For example, the management of Barings failed to establish

and maintain an independent operations function. The need for separation between those making trading decisions and those settling trades is perhaps the most important risk management principle. This lack of segregation removes a critical independent and necessary check. An effective back office function will record, confirm and settle trades transacted by the traders, it will reconcile them with details sent by the bank's counterparties and will assess the accuracy of prices used for its internal valuations. It also accepts/releases securities and payments for trades. Some back offices also provide the regulatory reports and management accounting. As such the back office provides the necessary checks to prevent unauthorised trading and minimizes the potential for fraud. Since Leeson was in charge of the operations back office, as well as responsible for trading he had the final say on payments, incoming and outgoing confirmations and contracts, reconciliation statements, accounting entries and position reports.

Abusing his position as head of the back-office, Leeson used an internal suspense account in Singapore to cover his tracks. The account was set up in July 1992 and was used by Leeson claiming to the Singapore exchange that it was a London client behind the account and not Barings, and removing the account from reports to Barings Management so they couldn't see the mounting losses and so perpetuate the myth of continued profitability in Singapore. Suspense accounts are not uncommon within Operations departments and are used for a number of reasons including for example to house trades that cannot be reconciled immediately. These accounts should only be used on a temporary or ad hoc basis and all trades should be properly allocated and reconciled with legitimate accounts. These accounts should not be used by traders and reports of activity on these accounts should be reviewed by management. The particular account used by Leeson gained additional fame as it was named and numbered account '88888', so styled after the number 8 seen as a lucky number in Asia.

With a trader also responsible for the operations back office function, there is a significant danger of unauthorized and or fraudulent activity occurring. It is still possible to avoid problems nevertheless or at least to identify them at a relatively early stage if remaining controls are effective. For example, a bank is required to have an internal audit department that reviews in detail areas of the banks activity and operations, a banks management is meant to closely supervise the activities of subordinates, the treasury department of a bank must be prudent when it comes to financing the bank's activities, the credit and market risk department should

manage the bank's financial risk taking, the compliance department similarly when it comes to compliance with laws, regulations and internal policies and a bank should listen to concerns raised in the market or from exchanges about the sizes of positions. Last but not least a bank's regulators should effectively supervise the bank, its activities and be assured of its overall risk management and controls.

Not everything failed at Barings but even when things were identified, these red flags were ignored or not sufficiently acted upon. For example, an internal auditor's report in August 1994 concluded that Leeson's dual responsibility for both the front and back offices was "an excessive concentration of powers." The report warned that there was a significant general risk that Leeson could override the controls. The audit team recommended that Leeson be relieved of four duties: supervision of the back-office team, cheque-signing, signing-off SIMEX reconciliations and bank reconciliations. Leeson never gave up any of these duties.

Penalty: sentenced to 6.5 years in prison in Singapore

Actions: Barings went bust after losses of US\$1.4bio

Toshehide Iguchi

On 13 July 1995 Iguchi, then Executive Vice President of Daiwa's New York Branch and head of its Securities Custody Department, sent a personal letter to "Mr Fujita", the President of Daiwa, at Daiwa headquarters in Osaka, Japan. In the letter, Iguchi would confess that in trying to cover up a US\$70,000 loss made in 1983, he had caused a US\$1.1bio loss from unauthorised proprietary trading and unauthorised sales of clients' holdings in US Treasury Bonds. Iguchi further stated that he believed Daiwa should "keep the secret until the Bank and possibly the Japanese authorities could take appropriate measures." Born in 1951 in Kobe Japan, Iguchi moved to the US to complete his education. He studied at Southwest Missouri State College (now called Missouri State University) where he graduated after five years with a low scoring major in Psychology, and a minor in Art. Upon graduation some sources have his first employment as being a car salesman. Still in 1976, Iguchi was hired by Daiwa's New York Branch within its securities depository section, where his main duty was to process securities account payments. By 1980 he had been promoted to the position of portfolio manager and just four years later, in 1984, he was put in charge of a new section of the New York Branch, heading up the US Treasury bonds desk. Daiwa had been a traditional

financial institution in every sense of the word, and had steadily grown from its inception in 1918 to becoming a leading Japanese financial institution and then from the mid 1970s Daiwa increasingly turned to securities trading.

Whilst the losses were shocking what came next compounded the problems for Daiwa and would lead to the US authorities forcing Daiwa to close their business in the US. Daiwa management in Japan and in New York conspired to conceal the losses and instead of reporting the fraud to the authorities as they were legally compelled to do, the management went to incredible lengths, to cover up the losses. Daiwa, at Iguchi's suggestion, agreed to try to use its large capital reserves to replace the losses to clients by continuing to trade hoping to make profits and to replace the losses. Using fraudulent documentation, making false disclosures, pretending that Iguchi was on annual leave, so that an audit had to be postponed and even disguising the nature of his trading department, in order that it appeared as a back office function, Daiwa acted appallingly. It was only after it became apparent that the additional trading was producing continued losses and that this would be unsustainable that they instructed Iguchi to confess his crime to the US authorities. The US regulator barred Daiwa from operating in the US, whilst also fining it US\$340mio.¹⁹

By 1996 Daiwa had closed down its 15 US offices, selling US\$3.3bio of assets in the process. The effect on the bank was more lasting though with a revision to a deposit taking institution and a drastic reduction in their global presence. What was once a sizeable institution with a global presence had been reduced to a little more than a medium sized national bank. Iguchi was sentenced to four years in prison and after writing a number of best sellers for the Japanese market detailing how he undertook the fraud, is now commonly believed to be teaching English in a school in Kobe, Japan. A number of Daiwa senior executives were ordered to pay more than US\$750mio in compensation for losses incurred during fraudulent trading.²⁰

A court in Daiwa's home town of Osaka in Japan decided that 11 senior executives at Daiwa bore responsibility for their failure to supervise staff and detect the fraud, as well as their conspiracy to cover up the losses when they did come to light. "The risk management mechanism at the (New York) branch was effectively not functioning," presiding Judge Mitsuhiro Ikeda told the court. The case was brought by two Daiwa Bank shareholders. The executives have been ordered to repay a total of US\$775mio in damages to their own bank. The bulk of the award has been made

against the former president of Daiwa Bank's New York branch, Kenji Yasui, who has been told to pay more than US\$500mio. In 1984 Iguchi was put in charge of a new trading section of the New York Branch, heading up the US Treasury bonds desk. It was as a trader that Iguchi incurred a US\$70,000 trading loss which would set in motion a chain of events which ultimately led to his arrest, Daiwa's ban from operating in the US and a loss of US\$1.1bio. In order to make back the loss, Iguchi began to sell US Treasury bonds held by other clients, without their consent, hoping to use the proceeds of the sales to cover the original loss. Iguchi as both trader and a back office head was uniquely placed to carry out these illegal and unauthorised transactions, by booking the trades, processing and confirming them and then by altering the custody reports received from Custodian Bank, Bankers Trust he could sell the Bonds cover the loss and still show the custody positions as including the sold Bonds.

Unfortunately for Daiwa, Iguchi began losing money again and he quickly lost a few hundred thousand dollars, and again to cover these losses he sold off client Bonds from the Bankers Trust sub custodian account and forged documents to cover for the sales. During a period of eleven years, (1984-95) he is said to have forged some 30,000 documents. When customers sold off securities that Iguchi had, in fact, already sold off on his own behalf, or when customers needed to be paid interest on long-gone securities, Iguchi settled their accounts by selling off yet more securities and changing yet more records. The planning required for this deception also entailed creating false account statements for the defrauded clients in advance, in order that when Iguchi did go on holiday, which he rarely did, the client would only see their invented account history, and not the true condition of their account. In this manner Iguchi was able to quite literally retype both company's and clients' records to create a false reality.

By the end of 1984 Iguchi had lost US\$30mio, by 1988 US\$200mio and by 1993, US\$900mio. Eventually about US\$377mio of Daiwa's customers' securities and about US\$733mio of Daiwa's own investment securities had been sold off by Iguchi to cover his trading losses. Risk-taking functions must be segregated from record-keeping and risk assessment functions. This should have a very broad application. Firstly it should mean that no individual has the ability to perform both functions. Secondly, no individual should have access to systems which perform these functions simultaneously. Lastly it should be considered that those who have previously undertaken administrative functions may have sufficient understanding of how to circumvent controls which they themselves would have previously enforced.

Accordingly they present a higher risk to the firm when operating in a risk taking capacity. They should be monitored accordingly. Rules which enforce the risk management of the bank must be enforced without exception. This transcends preconceptions based on an individual's cultural background, their performance or standing in the bank. Inexperienced employees should not be providing oversight on desks where the bank itself has little experience. This risk is further exacerbated by the likelihood that the risk management controls may be theoretical in nature, and not robust enough to deal with a determined effort to circumvent them. Accordingly risk management controls must not just be based on theoretical models driven by regulatory requirements and expectations, but also by the inherent weaknesses in a bank's operations, as understood from the back, middle and front office, which deal at various levels with the same product. Both internal and external audits failed to identify the fraud. Given that this desk was involved in the growth area of finance in the 1980s, it might be considered that it warranted greater scrutiny, given the exposure it carried.

Accordingly it should be considered that the significant loss or profit making departments of an institution should warrant greater oversight from audit on an ongoing and continuous basis. Given that the events occurred over the course of eleven years, and that it appears that Iguchi at least originally acted out of fear of losing his job, rather than out of greed, it may be assumed that he would have displayed significant signs of stress.

Whilst this is to be expected in the occupation in which he worked, it may be considered that there was a failure in managerial oversight not just from the perspective of allowing Iguchi a range of responsibilities for both back and front office, but in not questioning why a seemingly successful trader (towards the end of his career at Daiwa Iguchi was reportedly producing half the profits of the entire branch) was becoming increasingly distressed. Finally, the role of management in concealing the fraud demonstrates the importance of senior management in dealing with misconduct both decisively and with full transparency.

Iguchi himself had a different take on the responsibility for this incident which he set out in his book published following his release from Prison. Iguchi wrote, "Although corporations are criticised for their failure to have proper internal controls, traders are prosecuted for causing the loss. In the eyes of the public, the rogue trader is the only culprit. When he's sent to prison, the case is closed. He is being punished so he won't do it again. The problem is that no rogue trader thinks he

is going to lose a billion dollars, because it begins with a small loss, usually less than a hundred thousand. In reality, most financial institutions have now installed check-and-balance systems to prevent anyone from losing millions without being detected. If a trader loses more than he is allowed, he may do things he shouldn't in order to dig himself out, especially if one of the consequences of admitting a loss is losing his job. But he wouldn't even consider it if proper control measures were in place. Institutions must take responsibility for deterrence if they engage in the trading business. The management must take any loss from unauthorised trading as its own loss and not be allowed to call itself a victim. Many people who read my book in Japan maintained that traders like Yamada, Mizuno, Takagy, and me were the victims of Daiwa's lack of effective controls. Trading is a tough business. To trade well, one must often go against human nature. In doing so, one must ignore inner warnings and take a course that seems self-destructive. It's much like turning the wheels of a car toward the direction of skidding. It takes enormous discipline to do this day-in and day-out. Traders are constantly tempted by inertia to stay on the safe side. In the course of business, all traders make erroneous judgments and lose money, especially the many junior traders who fall into traps that are set by those who are much bigger and wiser. If the institution has strict internal controls in place, they are likely to lose their job. It's a merciless world. There are no other jobs like trading. Because of its nature and the psychological pressures traders are under, the least an employer can do is to not give them the chance to consider unauthorised activities. Passing out severe sentences will not deter them from rolling the dice one more time if they can, when that's measured against the disgrace of losing their job. On the other hand, making management culpable will force it to implement effective controls, so we will not hear another case of a 'rogue trader'."

Country: US

Key date: 1995 (confessed to US\$1.1bio losses for Daiwa)

Kyriacos Papouis

In 1997, NatWest Markets (NWM), the corporate and investment banking arm of one of the UK's largest banks, National Westminster Bank now part of the Royal Bank of Scotland Group revealed that a £50mio loss had been discovered in its interest rate options and swaptions trading books. The loss figure escalated to £90.5mio after further investigations.

NWMs troubles started with a systematic mispricing of various options and swaptions by traders in its rate risk management group. As losses mounted, Kyriacos

Papouis, a 29 year old trader who traded Deutschemark (DEM) interest rate options and swaptions, began to mismark options positions in the banks books in a concerted attempt to cover up the losses. His supervisor, Neil Dodgson, who traded Sterling (GBP) interest rate options and swaptions, also mismarked positions and was later found to have lacked the due skill, care and diligence required of him by UK regulators. Investor and shareholder confidence in the management of NWM was severely shaken and, in June 1997, Martin Owen, the head of National Westminster's investment banking group, also resigned. Rightly or wrongly, confidence was shaken so badly that in July 1997, the Bank of England had to instruct NatWest to resist calls for the resignation of its most senior executives in an effort to draw a line under the affair. The banks internal controls and risk management were questioned and severely criticised in May 2000, after a lengthy investigation.

The regulator imposed a penalty of £420,000 on NWM, and fined and reprimanded Papouis and Dodgson for breaches of UK Regulator's principles. But the real damage was to the reputation of National Westminster Bank itself, and with confidence undermined, the Bank fell in a hostile takeover in February 2000 to the much smaller Royal Bank of Scotland. In addition, Papouis was found to have violated principles of integrity and fair dealing, while Dodgson was reprimanded for not acting with due skill, care and diligence, however the investigations did not suggest that there had been widespread collusion at the bank, or that the mismarking had been conducted in the pursuit of personal gain. Both Papouis and Dodgson were fined by the SFA, to the tune of £50,000 and £5,000 respectively, and Papouis was expelled from the industry in the UK. Its not entirely clear how Papouis made his initial mistakes in options pricing, but it is clear his losses mounted steadily as the markets moved away from his mispriced options portfolio.

The UK Regulator estimated that Papouis' losses escalated from £1.1mio in March 1995 to £7.96mio in late-June 1995, and to £22.4mio by late-December 1995. The relatively slow escalation of the losses shows that NWM had plenty of time in which to halt the traders' actions. Furthermore, at this point, most of the losses were related to exchange-traded DEM options. These losses should have been relatively easy for NWM's back office to spot, given the discrepancy between any values in the bank's systems and readily available market price data supplied by the exchange.

Peter Young

Peter Young was a fund manager for Morgan Grenfell Asset Management, trading for three large European funds seeking international exposure. Morgan Grenfell was owned by Deutsche Bank who bought the business in 1989 from Mercury Asset Management. Young had made good profits on speculative investments in unlisted stocks in previous years and he continued to ramp up risk in order to maintain his run. To get around fund regulations that stated a fund could own only 10% of any company, Young created a mirror holding company through which to buy a major stake in a company he wanted. He proceeded to hold 10% of both the mirror holding company and the stock he originally targeted. Further, Young went on to use similar methods to circumvent the 10% limit on the amount of the fund that could be put into unlisted stocks. On top of illegal speculation, Young also used a system of warrants and dummy companies to filter the fund's money into his own personal account. Morgan Grenfell became suspicious when one of Young's investments, Solv-Ex, came under SEC and FBI scrutiny for possible violations. Despite the news and the resulting massive sell-off of Solv-Ex, Young went through with plans to buy the company's shares at a premium.

Morgan Grenfell suspended the equity funds that Young was running and began an inquiry. It found that Young was holding over three times the legal limit in unlisted shares and the bank hurried to cover the losses by closing out positions. One of the companies in the fund, Russ Oil, turned out to be wholly owned by Peter Young. He used it as a way to steal money from the fund to pay for his lifestyle. Young was sacked and later charged for conspiracy to defraud investors. The trial became highly publicized when Young wore dresses to the hearings and asked to be called Elizabeth. In 2002, the former fund manager was found unfit to stand trial and was in the hands of professional carers. Deutsche Bank is said to have lost around £400mio as a result of Peter Youngster actions.

Key date: 1997: (Peter Young fired from MG and charged with conspiracy to defraud investors)

Yasuo Hamanaka

On his release from prison in 2005 Yasuo Hamanaka expressed surprise at how the price of copper had risen while he had been incarcerated. This is the man who, at the height of his powers, was known as "Mr Copper" or "Mr 5%" due to the amount of the global copper market that he was believed to control. This is the same man who lost his employer, Sumitomo

Corporation, US\$2.6bio nine years earlier following a decade of fraud and forgery. To this day, aside from admitting the forgery of trading documents, Hamanaka has not spoken a word to anyone about the trading practices that enabled him to artificially inflate the price of copper for 7 years. As head of Sumitomo's metal trading division, Hamanaka controlled approximately 5% of the world's copper supply. This may sound relatively insignificant given that 95% remained in the hands of others but copper is highly illiquid and it cannot easily be transferred around the world to meet shortages. For example, a rise in copper prices due to a physical shortage in one country will not immediately be replenished by shipments from other countries with an excess of copper due to the time it takes to ship the metal and the costs of doing so. These logistical challenges meant that even a 5% share of the world's supply is significant. In 1986 Hamanaka, previously a non-ferrous metals trader at Sumitomo, was appointed Head Metals Trader but the first three years of his tenure were disastrous. He bought and sold physical copper without success and attempted to cover his losses with parallel trades in copper futures. He opened a secret book, known only to him, where he booked his unauthorised trades and it is reported that throughout this period he forged signatures, falsified trading data and peddled lies to his superiors in order to maintain the veil of secrecy around his losses.

In 1989 Hamanaka met David Campbell, Head of Metals trading firm RST Resources, and devised a plan to recoup his losses and actually start generating profits by artificially inflating the price of copper. He would trade off the market; selling below the market, buying above it, and selling large quantities of over the counter options cheaply. This is known as "painting the tape". The prime reason for selling cheap options is to create current income to cover bad price trading. Over the next four years Sumitomo became RST's biggest client and then in 1993 David Campbell set up Global Minerals & Metals Corp. Soon after, Sumitomo ceased trading with RST and quickly became the biggest client of Campbell's new venture. The Fordham Law Review articulates the details of Hamanaka's scheme well: "Hamanaka and Campbell entered into a string of intricate agreements whereby Sumitomo agreed to make monthly purchases of copper from Global from 1994 to 1997. Ultimately the goal of these agreements was to establish the appearance of legitimate and genuine commercial need to obtain physical copper. Global would purchase copper warrants from a Zambian copper producer. Subsequently, Global would sell the copper to Sumitomo, and finally Sumitomo would complete the circle by selling the same amount of copper back to the Zambian firm. As a result of the

paper transactions, Hamanaka established a façade of legitimate business, thereby providing him with false commercial justification to establish a large futures position supposedly hedging the illusory delivery obligations.

The second step in Hamanaka's plan mandated the establishment of a massive futures position. In order to acquire the necessary futures contracts on the London Metal Exchange, Sumitomo opened an account with Merrill Lynch (the "B" account) under a power of attorney signed by Hamanaka, authorising Global to trade using Sumitomo's vast line of credit. This move provided Global, a thinly capitalised start-up company, with instant credibility and the necessary credit to purchase the large number of futures contracts needed to execute Hamanaka's planned course of action. Using the "B" account, Global began to establish a large long position in LME copper futures. By September 1995, Global acquired an open long futures position of 780,000 metric tons of copper. Through the use of other small brokers in combination with the "B" account, Sumitomo possessed two million metric tons of copper in the form of futures and owned nearly one half of LME copper warrants. At this point, Hamanaka began to unwind the futures positions by taking delivery on expiring futures contracts to further his plan to control the cash supply of copper and ultimately generate large profits. He masked this scheme under the guise of legitimate commercial need for physical copper. Merrill, through the "B" account, provided Global with the financing necessary to take delivery on the LME warrants. By November 1995, Sumitomo controlled virtually 100% of the LME warehouse receipts."

Hamanaka had not only obtained a dominant position in the cash market, but he also established a powerful long futures position. These positions would force traders who previously sold copper futures and who innocently waited until the end of the delivery period, to run to Hamanaka to offset their positions at prices that Hamanaka could virtually dictate.

According to various reports, Hamanaka's manipulation seemingly did not go unnoticed. Apparently many speculators and hedge funds knew that Hamanaka was long in both copper physical holdings and futures. Whenever anyone attempted to short Hamanaka, however, he would use the considerable resources of Sumitomo and inject more cash into his positions, thereby sustaining the price and outlasting the shorts. Hamanaka held long cash positions that forced anyone shorting copper to deliver the goods or close out their position at a premium.

Hamanaka was helped greatly by the fact that, unlike

the US, the LME had no mandatory position reporting and no statistics showing open interest. Basically, traders knew the price was too high, but they did not have exact figures on how much Hamanaka controlled and how much money he had in reserve. In the end, most gave up, cut their losses and let Hamanaka get his own way. Following the resurgence of mining in China in 1995, the market conditions changed. With the price already floating away from the fundamentals, the price of copper was significantly higher than 'real value'. Sumitomo had made significant profits on Hamanaka's price manipulation, but it was now left vulnerable because it was still long on copper at a time when the market was heading for a significant correction. To compound the matter, if Sumitomo shortened its position, i.e. by hedging it with shorts, its significant long positions would lose money faster because the company essentially had been playing against itself.

While Hamanaka and Sumitomo continued to wrestle with the dilemma of how to reduce their positions in an orderly manner, the LME and the Commodity Futures Trading Commission (CFTC) began investigating the manipulation of the copper market worldwide. At this point Sumitomo took the ill-conceived step of transferring Hamanaka away from his trading role. Given Hamanaka's reputation in the market, such a dramatic event was enough to send the price of copper through the floor. Sumitomo soon announced that it had lost over US\$1.8bio and that the losses could go as high as US\$5bio as the long positions were due to settle in such an unfavourable market. Sumitomo also claimed that Hamanaka was a rogue trader and that his actions were completely unknown to management. The common view seemed to be that Sumitomo must have been aware of Hamanaka's fraudulent activity because the company continued to supply money every time speculators tried to move his price. However, it could simply be that his matrix of trades was so complex that the firm, content with its resulting profits, were happy to continue to fund his positions.

Hamanaka was charged with forging one of his supervisor's signatures on a form and in 1998 he was convicted to 8 years in prison. He was released one year early in 2005. Sumitomo eventually disclosed a loss of US\$2.6bio and despite its protestations of ignorance, its reputation was significantly tarnished because it had profited for so long from the actions of one Yasuo Hamanaka. Hamanaka's pattern of trading became increasingly complex, increasingly large and more opaque. This process accelerated after 1993 though the use of various derivative contracts, i.e. futures, options and swaps. Given the leverage that these types of instruments can provide, Hamanaka's trading should

also have raised red flags both with his immediate supervisors and in the control functions such as Risk, Compliance and Finance. His volume of trading was primarily through small and newly formed brokerage firms with offshore locations. He represented a large portion of their business and the firms were extremely profitable. Again, from a credit risk perspective this fact should have alerted the firm to ask questions of his actions. Hamanaka granted powers of attorney over Sumitomo trading accounts to brokers and effectively lent Sumitomo's debt capacity to third parties. These actions are highly unusual and should have been an immediate red flag to senior management that questions needed to be asked.

Hamanaka is also reported to have had the authority to create brokerage accounts, bank accounts, execute loan documents, and authorize cash payments. In a robust control environment these actions would require multiple approvals from a number of different functions, such as Data Management, Settlements, Legal and Finance. Segregation of duties is one of the primary protections for any firm against fraud and clearly traders must never be permitted to authorise, let alone cash payments.

Unsurprisingly Hamanaka worked long hours, late into the night at Sumitomo, he turned down transfers, and he had a good reputation within the company. We can therefore assume that he was working late for some reason other than to gain promotion or a new role. Human nature is to focus on the poor performers and where money is not being made. This case, and others like it tell us that equal, if not greater scrutiny, should be given to top performers and those generating significant profits. HR policies must also be robust in order to detect this type of behaviour. Managers must be expected to notice if a member of staff regularly works long hours and takes almost no holiday. Sumitomo transferred Hamanaka away from trading to a new role on 17 May 1996 while it still had a large exposure to the price of copper. Prices fell 30% after the market became aware of the reassignment of "Mr Copper". Hamanaka confessed on 5 June and Sumitomo unwound some positions in the following days but ultimately incurred a loss to the tune of US\$2.6bio. This highlights how difficult it is for a firm to deal with the discovery of a rogue trader. Whilst being open and transparent with regulators and law enforcement authorities a firm must act very carefully in protecting its own interests and those of the market.²¹

Joseph Jett

In July 1991 US based securities firm, Kidder, Peabody & Co, hired 33 year old bond trader, Joseph Jett, to work on their US Government Bond Trading Desk within the Fixed Income Division. With undergraduate and graduate degrees in chemical engineering from MIT and a 'Master in Business Administration' degree from Harvard, Jett's commendable academic background stood in stark contrast to his unimpressive employment history at that time, having been terminated from roles at both Morgan Stanley and First Boston in the prior three years due to poor performance in trading collateralised mortgage obligations. When first employed at Kidder in 1991, Jett's role was simple and his authority was limited, working to learn his trade working on the US government bond desk. This market involved the most liquid and actively traded market in the world, and as such provided limited profit opportunities. After several months of achieving insignificant profits, Jett identified a serious flaw in the KP computerised analytic trading system in which government securities transactions were entered. He realised that Kidder's trading and accounting system would allow unprofitable trades to appear profitable for a period of time. He would go on to devise "carefully planned trading strategy" to exploit this IT fault in order to generate millions in false profits, securing himself promotions and large bonuses.

However, this success was short lived. The "strategy" was ultimately unsustainable and would crumble to reveal more than US\$264mio illusory profits, and actual trading losses of US\$74.6mio and undeserved bonuses paid to Jett of US\$11.4mio. The regulators NYSE, SEC and NASD all took action against Jett, though no criminal charges were ever filed.

Jett was banned from the Industry but was initially only charged with a relatively minor record keeping violation, avoiding securities fraud charges in 1998 after a 4 year investigation. The SEC announced that "This Initial Decision finds that, for over two years, Mr Jett exploited an anomaly in Kidder's software, in the manner of a pyramid scheme, that credited him on Kidder's books with enormous, but illusory, profits. He did this with intent to defraud". The SEC ordered Jett to forfeit his US\$8.2mio in bonuses associated with the false profits, fined him US\$200,000, and barred him from any future association with a securities broker or dealer. Both Jett and the SEC's Enforcement Division appealed the decision. In March 2004 the Securities and Exchange Commission finally ruled on the appeal, and concluded that, in addition to upholding the record-keeping violation, Jett had also committed securities fraud.²² Specifically, they found that Jett committed

fraud by deliberately exploiting weaknesses in Kidder Peabody's automated trading records system in order to book fake profits of about US\$264mio (when he had actually lost the firm about US\$75mio). The Commission re-affirmed the penalty that Jett forfeit US\$8.2mio in fraudulently-obtained bonuses, plus the fine of US\$200,000 and a lifetime bar from the industry. The SEC started an enforcement action against Jett in 2007, ordering him to pay the fines due, though it is not known how successful they were.

Jett denied concealing the trades and put the blame on KP management, stating that the company knowingly engaged in fraud in an attempt to wrest control of KP back from GE. As a result of Jett's actions GE would ironically disengage from KP, when GE decided to exit this business following this and an earlier insider dealing scandal at KP (see the insider dealing case of Ivan Boesky below for details) selling KP to Paine Webber, since acquired by UBS.

Jett's primary strategy was to exploit a flaw in Kidder's computer systems that made unprofitable trades appear profitable. The few real trades he executed consistently lost money. The problematic trades involved US Treasury Bonds and the coupon or interest attached to them. Jett bought the coupons which had already been stripped from the Treasury Bond and reconstituted them back to the T Bond so that it returns to its original form. Kidder's system incorrectly valued forward-dated transactions as if they were immediately settled, rather than taking into account the time value of money for the period before settlement of the trade.

The method Jett followed was facilitated by this error. By buying US Treasury bond strips (whose price increases each day due to accretion), hedged by a short treasury bond position (whose price remains relatively stable over the settlement period), Jett was able to book immediate, illusory profits. The problem was that at the date of settlement in the future these profits were reversed and would instead then record a loss. Therefore, in order to continue to appear profitable, Jett had to engage in more and more trades, enough to both offset the losses on the settling trades plus additional trades to keep delivering profits. For the scheme to persist, the size had to continually grow, and in essence it became a pyramid scheme. It was the size of the trading that eventually brought it to an end. General Electric, the owner of Kidder Peabody at the time, had become concerned with the expansion of the KP balance Sheet and in September 1993 instructed KP to reduce the size. KP committed to reduce the Fixed Income Division's balance sheet inventory by US\$26.2bio which included reducing strips inventory by approximately US\$5bio

over the next year. This meant over time moving to close out some of Jett's existing transactions early which would then realize losses. Jett stepped up his trading activity significantly in January and February 1994, to counteract the closing out of existing positions in order to counteract the losses and still generate profits. By early March 1994, KP management became concerned about Jett's trading increases when the strategy was to reduce overall positions. The concern led to closer scrutiny which led management to realise that in closing out profitable trades early realized losses and the illusion was gone. Jett, who was previously a marginally profitable trader, started earning large bonuses once he began executing the trades that exploited the system flaw.

Jett was paid a bonus of US\$2.1mio in 1992 and US\$9.3mio in 1993. The board of General Electric, who had owned Kidder Peabody since 1986, had to approve the US\$9.3mio outsized bonus in 1993. Later, in his autobiography *Straight from the Gut*, Jack Welch would admit and lament not personally looking into how one of his employees could become so successful so quickly. As the scandal first came to light, Kidder Peabody hired lawyer Gary G. Lynch from the law firm of Davis, Polk & Wardwell, the former enforcement chief of the Securities and Exchange Commission, to conduct an internal investigation. The result was an 86-page document that became known as the Lynch Report.

The report was released in August 1994 and concluded that Jett acted alone, but also blamed the losses on a complete breakdown of the system of supervision at KP. "Jett was provided the opportunity to generate false profits by trading and accounting systems" Mr Lynch wrote, "It was his supervisors, however, who allowed Jett that opportunity for over two years because they never understood Jett's daily trading activity or the source of his apparent profitability. Instead, their focus was on profit and loss and risk-management data that provided no insight into the mechanics of Jett's trading."²³

John Rusnak

From the mid-1990s Asian currencies, the yen in particular, did not fare so well over the dollar. In 1995, before the markets began to turn, Allfirst Bank in Baltimore hired John Rusnak as a foreign exchange trader. Rusnak began accumulating losses: US\$29.1mio by 1997, US\$300mio by 2001, leading to a total loss of US\$691mio in 2002. Rusnak traded, manipulated and

deceived between 1995 and 2002 before not showing up for work on Monday, 4 February 2002. It was the next day that the FBI were called in to investigate the activities of this rogue trader.

Allfirst Bank's Baltimore office was a small outfit. A subsidiary of Allied Irish Bank at the time, Allfirst hired Rusnak to grow the bank's foreign exchange operations, hoping for a considerable profit. They got what they hoped for on paper at least, as Rusnak worked hard to hide his spiralling losses using his knowledge of the weaknesses in the bank's systems, controls and supervision, creating the illusion of profitability. In fact, he left Allfirst open to significant liabilities. As the senior trader of only two foreign exchange traders at Allfirst, he enjoyed the kind of autonomy and control that would allow him to mount losses and cover them up continuously. Whilst he received bonuses calculated at 30% of his trading profits, he did not appear to have benefited financially in any other way from his activities.

Most of Rusnak's losses were accumulating whilst betting that the yen would appreciate against the dollar. In order to obtain a level of protection in these circumstances, a trader would normally buy forward contracts to secure yen for cheaper than the expected market value, whilst hedging the position with a combination of put and call options. An option is a contract that gives you the right, but not the obligation, to buy or sell something on or before a specified date at a specified price. Rusnak, full of arrogance and wishful thinking, did not hedge his forward contracts. He went about creating fictitious trades to make it appear he had hedged his position but in fact he had created huge liabilities for Allfirst that were not reflected on their balance sheets. Allied Irish Bank's profits for 2001 were cut in half as it covered the losses that Rusnak had made. Keen to continue his actual profitable trading when he started at Allfirst, Rusnak had purchased forward contracts believing that the yen would appreciate consistently against the dollar. When the opposite happened, instead of re-evaluating his trading strategy, he ploughed more of Allfirst's money, into yen's recovery. He believed it would happen, so he had to find a way of buying time, of covering his losses and avoid getting caught. To keep the bank from discovering his losses, Rusnak entered false options into the bank's systems to make it look as though his positions were hedged. When options are bought or sold, they are usually confirmed by the buyer or seller. The back office function would usually seek to obtain this confirmation. For the bogus options Rusnak had created, he convinced the back office that no confirmation was required. He

bullied the back office into accepting that as the deals offset each other, there was no net cash position: the first option would involve a receipt of a large premium and the second would involve paying out an identical premium. These options would normally expire on the same day, but that would not have helped Rusnak hide his mounting losses. The first option expired on the same day it was written, while the other option would not expire for several weeks, buying him time. He also stated that it was common practice not to confirm Asia trades as it would have meant getting up in the middle of the night to do so. An independent check on either of these issues would have shown a red flag and could have helped limit the loss.

The fictitious trades grossly misrepresented the value of Rusnak's trading and the risks and potential liabilities that would eventually manifest. When it was clear that this alone would not help his situation improve, he requested permission for a prime brokerage account from his superiors. On paper, he was making a profit and at the prospect of even greater profits, he was granted his wish, notwithstanding it was a highly unusual course of activity for any firms except the largest ones. Such an account allowed him much more capital to gamble with and would restrict the ability of the back office to interfere with his activities, with the prime broker in effect acting as the back office.

To further conceal his losses and try to buy more time, he used historical rate rollover contracts, which would allow him to hold off realizing his losses by extending the rate of the original contract to later date. Rusnak created the illusion that there were no losses. The balance sheet showed increasing amounts of capital being used for foreign exchange trading and it was when he was told by Allfirst's Head of Treasury in 2000 that he needed to reduce the amount being used that his deception began to unravel. At this time, foreign exchange trading revenue at Allfirst was US\$13.6mio, whilst net trading income was only US\$1.1mio. In order to continue in his attempt to recover his losses, he sold deep-in-the-money options with high premiums. These options acted as loans which he would have to repay after a year, when the options were due to be exercised, in order for Rusnak to buy back yen at a cheaper rate. He needed the yen to rise so he could buy at a lower rate. If it did, he would be able to generate real profits. Instead, the yen continued to fall. To hedge against this liability, he began to enter bogus options giving the appearance that Allfirst had repurchased the options. As the yen continued to fall, his losses continued to increase. As the strike prices for these options were so deep, it was extremely likely that they would be exercised, creating huge potential

and eventually actual liabilities for Allfirst. Yet neither anyone at Allfirst nor any of the counterparties involved raised any concerns. When he was pushed for a confirmation of his trades by the back office, he bullied and intimidated them into accepting his approach.

A lack of appropriate supervision of his activity and support for the back office meant that he went unchallenged for a long period. At the start of 2002, following a review by the Allfirst Treasurer, Rusnak's positions were closed down for a period; action which the Treasurer believed would identify any problems with Rusnak's trading. By this point, he had been trading for nearly seven years with almost complete autonomy. Rusnak was then challenged on trades that did not have the required confirmations. As he could not produce them, he took to forging confirmations purporting to be from Asian brokers, using a file on his personal computer called 'fake docs', where he kept names and company logos. The company Treasurer was not satisfied with the confirmations Rusnak produced. At the end of a week where Rusnak came closest to being found out, he promised to provide the name of a broker who could confirm 12 particular trades that had been challenged by the night of Sunday, 3 February 2002 when the Asian markets opened. He never did. He never returned to work at Allfirst.

For his endeavours, in January 2003 Rusnak received a seven-and-a-half year prison sentence, as part of a plea bargain with US prosecutors, serving just under 6 years and ordered to undergo drug rehabilitation and repay the US\$691mio he lost. The actual amount he repaid would be dependent on the amount of money he would make once he left prison, but including at least US\$1,000 a month for the five years of his probation. Six executives responsible for the oversight of Rusnak's activities were also dismissed, whilst Allfirst's Chairman and AIB's Group Treasurer resigned. There were many reasons that led to Rusnak accumulating such large losses. Following identification of his activity, Allfirst commissioned an independent report which was provided in March 2002. Whilst not having the full facts (the court case against Rusnak did not take place until 2003) the report highlighted significant concerns relating to Allfirst and AIB's ability to identify and manage the risks in its foreign exchange trading operations. They were found to have inadequately supervised Rusnak. Together with a lack of independent challenge and weak controls, Rusnak was able to exploit a number of loopholes.

There was no segregation of duties between front and back office as Rusnak was effectively able to control both. Back office staff and risk managers should

have been undertaking robust supervision and AIB should have had greater involvement in the foreign exchange business at Allfirst. In particular, Rusnak was able to take advantage of the lack of experience and authority of back office staff, who should have obtained confirmation of trades with Asian counterparties independently, rather than relying on Rusnak.

Policies and procedures were not reviewed regularly and Rusnak's working practices were largely outside of existing policies and procedures without suitable reprimand or remediation action. The arguments used by Rusnak, for example, when convincing the back office not to require confirmation of his trades, should have given rise to discussion as to whether policies and procedures were appropriate and whether management had enough knowledge of what Rusnak was doing. This apparent culture of non-compliance permeated Allfirst's treasury operations, where either controls were in place and not adhered to or they were missing altogether. On one occasion, Rusnak e-mailed a trader at another bank stating "I have come to you with a problem, we need to outsource our balance sheet funding". This admission to another bank that he needed more funds to finance the firm's trading activity should have at least caused that other bank to raise concerns. Presumably the opportunity to do business with Rusnak and the expectant profits stopped the trader at that bank from taking the issue any further. Rusnak was dealing with Allfirst's funds, trading on their behalf, rather than using client money. Known as proprietary trading, this is a high-risk activity. Financial institutions need strong controls in this area to prevent the kinds of activity undertaken by Rusnak. A small office such as Allfirst's Baltimore office would struggle to manage this in a way that would make the risk-reward calculation favourable without access to the breadth and depth of information, expertise and economies of scale of larger financial institutions.

Rusnak used his knowledge of banking systems and weaknesses in controls to perpetuate his rogue trading, with little challenge from any internal risk control or audit function. For example, he manipulated the Value-at-Risk (VaR) figures used to monitor his trading activities. VaR is the most amount of capital a bank can afford to lose in adverse trading conditions. Rusnak would manipulate the figures prior to them being distributed to the rest of the bank, to mask the fact that his allocated risk limit far exceeded the bank's limit. He also manipulated currency exchange rates that the rest of the bank believed came from the market.

Even when loopholes were identified, Allfirst did not take remediating action for over a year, in one instance refusing to pay US\$10,000 for a Reuters feed that

would have circumvented Rusnak's personal computer and meant he would not have been able to manipulate the figures prior to the rest of the bank seeing them. The internal audit function itself was ineffective.

In 1999, during an audit of the treasury operation, none of Rusnak's transactions were checked to see if they had the appropriate confirmations. A year later, only one of his trades was checked. Rusnak's supervision by management was inadequate. His management did not understand what he did or market practices in foreign exchange trading. They placed a huge amount of trust in his integrity and ability without undertaking sufficient independent checks or taking seriously claims by the back office. So much did they believe in him, that the bank allowed Rusnak to trade during his vacations and did not monitor his out of hours activities, where he spent considerable time trying to trade his way out of trouble. Whilst his losses were mounting, he never actually took the ten consecutive days off required.

Given Allfirst's weak control culture it is not surprising that a trader who showed five years of profitability was not scrutinised more closely. The AIB Group did not have sufficient oversight of its subsidiary's activities. They took a very "hands off" approach and it seems that as profit continued to rise, albeit losses were being hidden, they were happy with the Baltimore office. Nor did Allfirst take directions from regulators seriously.

In September 2001 the US Securities and Exchange Commission sent a comment letter on Allfirst's financial statement, inquiring into the cash flow related to foreign exchange activity. Rather than undertake an in-depth review, Allfirst merely directed internal audit to pay it increased attention on their next audit. Such a comment from a regulator should have led to escalation to the AIB Group and immediate action.

The chronology of Rusnak's fraudulent activity was littered with many opportunities for someone to raise concerns and action to be taken. Rusnak was able to exploit weaknesses in controls, get away with bullying and intimidating staff and was not reprimanded sufficiently for activity that his superiors knew was against internal policies and procedures. This case highlights the importance of the need to go further than paying lip service to internal control policies, to have independent controls and checks, for senior management to drive a culture of compliance across its organisations and for firms to ensure that they grow their businesses in accordance with law, regulation and market practice

Country: US

Key date: 2003 (Rusnak gets 7.5 years prison for losses of US\$691mio for Allfirst Bank in Baltimore) Liu Qibing

Chinese copper trader Liu Qibing was a trader for China's State Reserve Bureau, which accumulates stockpiles of commodities for the nation's needs. Expecting prices of copper to fall, Lui Qibing took massive short positions in copper on the London Metal Exchange. Unfortunately the reverse happened and prices rose dramatically when China's central bank began lending increased sums to real estate developers, many of whom needed the metal for wiring. Liu suddenly disappeared but it was reported that the Chinese government, who initially denied Liu's existence, eventually detained him and sentenced him to seven years in prison. His actions led to losses estimated between US\$200 - US\$1bio as the Chinese government had to close out the short positions, by buying copper for delivery at higher prices or using copper from its own stockpiles.

Country: China

Key date: 2005 (Chinese trader goes missing leaving significant copper losses for Chinese State Reserve Bureau)

David Lee

David Lee was a New York based trader, that by 2007 aged only 36 had risen through the ranks at Canada's fourth largest Lender, through Bank of Montreal's (BMO) US broker dealer subsidiary to become a Managing Director, responsible for the firm's commodity derivatives trading business. He had been employed at the firm since 1997, originally as an analyst and then in 2000 climbed up the ranks into trading, where he bought and sold natural gas contracts, futures, options, swaps and swaptions. At first Lee started trading on behalf of client accounts but he steadily moved to grow the firm's proprietary trading activity into what was to be the tenth largest trading book at BMO. By May 2003, Lee began overvaluing, or "mismarking", his legitimate trading positions by overstating their fair market value, which made his book look more profitable to BMO than it was. This would enhance Lee's position in the firm and entitle him to receive additional compensation, but would lead to losses of US\$650mio by 2007. To successfully mark his positions in his favour, Lee would need to find a mechanism to circumvent BMO's controls which were meant to ensure trading books were valued at a fair price.

BMO, in accordance with best market practice, required traders to mark their positions to market daily themselves but would also control these marks by comparing these to price quotes for similar positions

obtained from independent third-parties, thereby observing real prices in the market and verifying the traders marks, and thus therefore reflecting accurately market prices. Whether Lee found the solution entirely himself or it was part of an arrangement or whether he was induced is unclear. What is clear is that Lee couldn't have carried off the illusion of profitable trading at BMO without the support of Kevin Cassidy.

Kevin Cassidy was a convicted felon, convicted for wire fraud in 1987 for which he received one-year probation and the payment of restitution, for tax evasion in 1993 for which he received six months in prison, and credit card and money laundering crimes in 1993 for which he served 30 months in prison. Astonishingly he was still able to establish a Brokerage business in New York State, called Optionable Inc, of which he became CEO, fooling the authorities and hiding his past. Cassidy helped Lee circumvent BMO's independent price verification process. Under an agreement with Cassidy, Lee sent to Optionable price quotes for his positions that matched the self-serving, inflated marks that Lee used at BMO. At Cassidy's direction, Optionable brokers later reiterated Lee's price quotes, virtually unchanged, to BMO's price verification personnel in "round trip" or "u-turn" e-mails. The back office at BMO unsuspectingly took these quotes as fair independent prices to verify Lee's trading book.

The deception was finally uncovered in 2007 when BMO decided, following advice received from a review of their risk management practices, that they ought to rely on numerous brokers to value trades and mark positions and to move away from one market counterparty. When they did this they quickly identified that there were significant discrepancies between valuing Lee's options using Optionable's data and data from other brokers. When BMO's management became certain of Lee's activities it announced losses of approximately US\$650mio. In the four years from May 2003 to May 2007, BMO paid Lee compensation totalling US\$10mio while his supervisor Robert Moore received US\$13mio. BMO also paid Optionable "millions of dollars" in fees and commissions, with BMO becoming the largest revenue generator for Optionable, with estimates that it received more than 40% of BMO's brokerage business.

David Lee pleaded guilty in a New York court to inflating the value of his portfolio and conspiring with Optionable to hide trading losses from the bank. He was ordered to pay a US\$500,000 fine and was barred from the industry. Robert Moore was dismissed by BMO and banned from the industry by the Commodity Futures Trading Commission and fined US\$150,000. Kevin

Cassidy, was charged with numerous criminal offences and after initially contesting the charges he eventually changed his plea to guilty to a count of conspiracy to commit wire fraud.

Lee's improper trading activity meant deliberately inflating the value of his portfolio of derivative positions in OTC natural gas options to overstate the value. Like all derivatives, the trade in options does not directly result in the transfer of a physical commodity's ownership. The product itself is derived from the underlying value of the commodity; the actual trading activity is therefore around obligations over the underlying product; in this case natural gas options which are contracts that give the owner the right, but not the obligation, to buy or sell (depending on the type of contract) natural gas. The contract will be bought at a particular price and a predetermined maturity date. Derivatives may be traded over the counter (OTC) or through an exchange. OTC trades are transactions that are privately negotiated between a buyer and a seller of the derivative; it does not require an exchange or other central counterparty to clear the trade. It is often considered to be an unregulated market since the disclosure requirements are not at the same level as trades on an exchange, this is because the OTC market is comprised of other banks and hedge funds that are commonly considered sophisticated market participants. Since the trading and pricing of OTC trades occurs privately the reporting and visibility of each trade and the price is not fully transparent. All of Lee's trades, as with his fellow colleagues, were subject to individual limits imposed by BMO, in addition to limits placed around the counterparty to the trades based on its credit worthiness. The risk department at BMO then routinely monitored compliance with those limits.

Robert Moore, Lee's supervisor, was responsible for setting and ensuring that Lee remained within his trading limits. Part of his role also required him to ensure that all traders complied with BMO's internal policies and procedures. In order to monitor the value of all open positions, Lee was responsible for assigning values (marking) to each of his open position. The method employed by the desk was based on "mark-to-model" i.e. a mathematical formula/model was used to simulate the price of the open options. The model would be periodically calibrated to ensure its effectiveness. The calibration required by the bank's risk department necessitated its traders to collect broker price quotes from other market participants – such quotes would be obtained and retained in electronic form to be used in the model. The process was seemingly a means to independently value each trader's positions – a process that the bank followed on a bi-

monthly basis. If independence was fully achieved the process should have provided a reasonable comfort level that the trading book was valued in line with market prices and prices quoted independently by external sources (brokers).

All traders at BMO were required to obtain quotes from external brokers. The firm maintained a list of preferred brokers that it would utilise for the purpose of ensuring that its book were fairly valued for NYMEX listed natural gas options. Dedicated personnel in the BMO's back office function completed verification of the process by receiving quotes from brokers. Where differences existed between the trader's valuations and that of independent brokers the firm took steps to ensure prices were adjusted inline with its internal accounting practices. Thus, using this process the valuation of the trader's books could be adjusted up or down. Of course, if the value were adjusted downwards resulting in the estimated profits being lower than the trader's own marking would suggest, this would reduce the trader's bonus and salary expectations. Optionable Inc, was a preferred provider for the independent verification process and Lee used Optionable since 2003 knowing they would take and transmit to BMO's back office the misknowned prices. The back office department unsuspecting took these quotes as fair independent prices to verify Lee's trading book. As mentioned above it isn't clear who initiated the misknowning idea.

BMO in a civil suit issued later against Optionable indicates that the idea and inducement came from Cassidy in exchange for BMO increasing trading with Optionable. The extensive use and provision of gifts and entertainment also played its part, particularly in compromising Lee's supervisor Robert Moore. BMO claimed, "In order to encourage Lee to continue to participate in his fraudulent scheme with Optionable, and to encourage Moore to look the other way, Optionable and Cassidy plied Lee and Moore with gifts and inducements, including gambling vacations." Lee and Moore allegedly accepted an assortment of lucrative gifts, including: US\$650 in tickets purchased by Cassidy for Moore on 16 March 2004; A string of "expensive dinners" for Moore at the Foxwoods Resort Casino, a Manhattan restaurant and at the Mohegan Sun Resort and Casino on six occasions from 2004 to 2007; "Hundreds of dollars" at a men's grooming club in Manhattan for Moore and Lee on two occasions in 2005; Expenses topping US\$1,000 for Lee and Moore at the Borgata Hotel Casino & Spa in Atlantic City, NJ in November 2005; Pricey car and limo services for Moore on 7 March 2005, 1 June 2006 and 17 August 2006.²⁴

As with many cases of unauthorized trading or fraudulent activity, a major weakness is usually found in a lack of management supervision. Of course the corrupting nature of the relationship that existed between Lee's supervisor Robert Moore and Optionable's Kevin Cassidy, made it extremely difficult for Moore to view Optionable and Lee objectively. Moore routinely enjoyed gifts, travel, meals and money from Cassidy. These expenses were not business related and were not pre disclosed to BMO. They may not have been lavish individually but in aggregate they most likely could be so described and the type of entertainment was often inappropriate, for example they even included gambling vacations and money to gamble with for both Moore and Lee. Moore also knew that Lee's relationship with Optionable, like his, violated BMO's gift and entertainment policies and put them at conflict between their personal interests and the interests of their employer. Moore also allowed Lee to trade while Lee was on vacation despite internal policy requirements that prohibited such practices. It is a well documented principle that block leave by staff helps to identify fraud. The rationale is simple; if the staff member is not in the office performing their routine activity then other staff members have to provide cover. This simple step significantly increases the likelihood of malpractice to be identified and reported by other members of staff. The other major weakness related to the reliance by BMO on Optionable as a single source price verifier for BMO marks. BMO was foolish to rely on only one such source for OTC prices and in particular should have realized that with increasing business flows Optionable was not an independent source. Finally BMO could have done a better job in conducting its initial due diligence over Optionable, prior to establishing trading lines, bearing in mind Cassidy's past criminal record, however it appears that Cassidy was able to fool the authorities in New York State as well as NYMEX who in April 2007 purchased a 19% ownership interest in Optionable, including US\$5.1mio of Optionable stock owned by CASSIDY.

Key date: 2007 (Bank of Montreal made losses of US\$650mio)

Jerome Kerviel

On Monday, 21 January 2008 fears that the looming recession in the US would spread to every other continent triggered a global crash in share prices. Large overnight falls on Far Eastern stock markets prompted a ripple effect through Europe, a day of panic selling left the UK FTSE 100 index down 323.5 points at 5578. or 5.48% representing the biggest one-day points fall in London's history and the largest percentage fall since the

9/11 (2001) terrorist attacks. In other markets, Japan's Nikkei index was down almost 4%, while Germany's Dax and France's CAC index both fell by 7%. Since the start of the year share prices had dropped by an average of 14%, with the near 900-point fall in the UK FTSE 100 wiping out all the gains of the previous last 18 months. This sudden event provided the catalyst which triggered the announcement on the 24th January that the French bank Société Générale, one of the largest banks in Europe was to write down a US\$7bio loss (€4.9bio) as a result of a rogue trading incident within their Global Equity Derivative Solutions (GEDS) Department. This represented the largest single loss recorded in the financial industry by a single trader.

The rogue trader behind the fraud was named as Jerome Kerviel, a relatively junior trader, allegedly earning a comparatively modest €75,000-a-year. Initial reports indicated that Mr Kerviel's responsibilities were limited to arbitrage of equity derivatives; an activity that sought to manage two portfolios of comparable size and composition. The portfolios should offset each other and residual income is generated by exploiting the pricing differences between the underlying stocks and the futures contract prices for that exchange. Therefore if Société Générale's other traders had bought into the equity markets, expecting a rally, he was responsible to hedge some of this market risk through trading index futures. His remit was to neutralise such market risk. Kerviel did not have any approval to take directional risk, i.e. create open trading positions in the market.

Jerome Kerviel had joined Société Générale in 2000 having graduated from University Lumière Lyon with a Master of Finance degree specializing in organisation and control of financial markets. Kerviel joined the middle office of the bank Société Générale in the summer of 2000, with responsibility for trade monitoring. In 2005 he was promoted to the bank's "Delta One" products team in Paris where he was a junior trader. Société Générale's Delta One business included programme trading, exchange-traded funds, swaps, index futures and arbitrage trading. Kerviel earned a bonus of €60,000 on top of a €74,000 salary in 2006, considered modest in terms of the salaries paid to traders in the financial markets. He had hoped for a €600,000 bonus for 2007 and would have received at least half that amount. Investigations carried out by Société Générale concluded that during 2006 Kerviel began making fraudulent transactions that were considered to be precursors to the fraud. At the end of January 2007 Kerviel had built up a significant short position on DAX futures, estimated to be €850mio, this coincided with the departure of his former desk manager. By end-February 2007 this

had grown to €2.6bio and by end-March 2007 more than doubled to €5.6bio. By mid July a peak of €30bio was reached before the position was cut and rebuilt from September onwards. At the same time Kerviel continued his fraudulent activity by holding globally short positions on single shares. From mid-September to early-November the total size of his positions extended to over €100mio and finally reached a maximum of approximately €350mio. From November to December 2007 Kerviel began to unwind his positions on DAX and EUROSTOXX futures, such that by 31 December his fraudulent index positions were zero. Whilst some notable losses were recorded at the close of the year €1.5bio in profits were realised. January 2008 saw Kerviel build a €49bio long position of index futures, that was discovered on 20 January and unwound between 21-23 January leading to losses of €6.4bio, (€4.9bio after the €1.5bio profits are included). The EUREX exchange is suggested to have enquired as to why Société Générale had a significant Open Interest position (open interest being a relative percentage of the open contracts in futures on an exchange)

During early 2007 Kerviel began using various techniques to conceal fictitious directional risk taking trades including; cancelling positions and earnings generated by fraudulent positions, recording equal and opposite paired trades using off market prices but concealing losses generated. Entering false provisional cash flows to mask the fraudulent losses. This was an option that was supposed to be used by trading assistants to correct "modelling bias" by entering positive or negative provisions modifying the revaluation calculated by front office systems. It was concluded that Kerviel was well aware of the accounting practise that the use of provisional flows was only reviewed at month end, and thus cancelled any such flows prior to the control being completed. Kerviel regularly cancelled fictitious trades before they gave rise to any confirmation, settlement or control, with his previously gained in depth knowledge of the systems processes and controls gained whilst in the middle office he was able to use features that left him time to cancel such trades and replace them with new false trades. Such trading also included booking fraudulent transactions using "technical counterparties" typically used when a trader is waiting for the name of a counterparty from a broker or awaiting completion of a client set up in the front office system. Typically once questioned by either middle office or Operations Kerviel would cancel such trades, thus from an accounting and settlement perspective all appeared in order. Fraudulent trades were also created using a deferred start date (i.e. with a value date much in advance of the trade date) but which are confirmed only several days before value date, in accordance with

generally accepted market practice. Internal and external investigations reviewed the processes and controls around Kerviel's activities and his supervisions, and highlighted a number of significant failures. Throughout January to April 2007 Kerviel was not the subject of any specific desk supervision as the desk head had left and from April 2007 the new desk head did not complete any analysis of Kerviel's activities. Kerviel had also been reluctant to take any vacation, which whilst raised formally by the desk manager including during yearly appraisals nothing was ever done. Desk management had also failed to complete any in depth review of trading activities or analysis of earnings generated by trades or traders or their positions. Further to this when questioned by risk and operations for explanations around unusual trades, cancelled trades or unmatched trades against counterparties, Kerviel's explanations were taken at face value or such questions were disregarded and general excuses were made without any substance or follow up. Further to this, multiple persons were often involved with such concerns therefore no one person would be in full possession of the facts around a problem. This assisted Kerviel, allowing him to cancel or amend any suspicious activity.

Risk and Management also failed to exercise appropriate controls over the use of dummy counterparties and the use of cash flow adjustments. No review or analysis was undertaken of transactions cancelled, amended or suppressed from flowing from front office to risk and operations. Initial margin is payable on the difference between the market price and the strike price for futures contracts, such margin calls for the GEDS desk were abnormally high as were collateral costs, however neither the Delta One manager nor Kerviel's desk manager had visibility of such costs. Further, the middle office function responsible for margin, deposit or collateral requirements failed to identify Kerviel's sizeable positions as it did not complete any control over the aggregation of such positions to identify where such positions originated. As positions were aggregated only globally, the globalised treatment of such margin calls did not allow for the detection of the significant amounts paid and received related to Kerviel's activities.

The Société Générale loss redefined the potential impact of an operational risk loss event. As a result the key European Regulators (FSA, FINMA, BAFIN) reminded financial institutions of the key areas of focus particularly related to preventing rogue trading including; internal assurance control framework should be comprehensive and operate effectively; Basel II Advance Measurement Approach calculation to include a rogue trader stress scenario; appropriate segregation of duties, both systemically and physically

controlled, between risk taking, risk management and operations processing and settlement functions; excessive risk taking and non-adherence to risk (or other) limits to be identified, escalated and management action taken: Regulatory imposition of "Block Leave" requirements for persons deemed to occupy sensitive roles (e.g. traders); exchange limits are captured and monitoring, specifically around open interest limits; timely processing, settlement and confirmation of such financial instruments; effective management supervision controls over the use of "dummy counterparties and "Risk only" trading portfolios; effective risk and management review of transactions cancelled and amended; and unusual and excessive margin or collateral calls should be escalated to appropriate management.

Frances Yung

In 2008, the Chairman of Citic Pacific, (a Hong Kong diversified company, and a subsidiary of China's Citic Corp focussing on special steel manufacturing, property and iron ore mining, which supplies the raw material needed in the making of special steel and property development in mainland China), Larry Yung disclosed that the firm lost more than HK\$15bio (US\$2.3bio) due to "unauthorised currency trades". The board became aware of this on 7 September 2008, and disclosure was made to the financial markets after trading in its shares was suspended on 20 October. When the shares resumed trading, the share price had fallen by some 75% since the previous close, and would lead to the resignation of the Chairman and other senior managers. Citic Pacific said that the currency bets, made by the company's financial director and overseen by the financial controller, were unauthorised. Among those involved in the disastrous trades was Yung's 37-year-old daughter Frances, who, along with Yung's son, Carl, soon after left the company.

The events that led to Larry Yung's resignation was a remarkable downfall for the former richest man in mainland China (Forbes:2005). Larry Yung, was the son of Rong Yiren, a former vice president of China from 1993 to 1998 both members of a famous family, widely considered as China's first major entrepreneurs. The family's owned flour and cotton mills were nationalized by the communist government in the 1950s. Rong served as an economic adviser to the Communist Party under Deng Xiaoping and helped enact the pro-market reforms of the 1980s. Rong set up state-owned China International Trust and Investment Corporation, now known as CITIC Group, as a vehicle to co-ordinate the

massive foreign investment needed to jump start the economy. He was appointed to the largely ceremonial but prestigious position of Vice President in 1993. As his father prospered, Yung moved to Hong Kong in 1978 and started an electronics business, later joining CITIC in 1986 before leading the takeover of an existing listed company and renaming it CITIC Pacific. The deal created one of the first "red chips," mainland-controlled companies with shares traded in Hong Kong. CITIC Pacific made many acquisitions and grew aggressively and as the Company grew, the Yung family's links to CITIC deepened. Two of his children, son Carl Yung Ming-jie and daughter Frances Yung Ming-fong, joined the Company in senior positions.

Key date: 2008 (Citic Pacific announced losses of US\$2bio due to unauthorised currency hedges)

Kweku Adoboli

In September 2011, UBS announced that it had lost over US\$2bio, as a result of unauthorized trading performed by Kweku Adoboli, a director of the bank's Global Synthetic Equities Trading team in London. On 24 September 2011 Oswald Gruebel, the CEO of UBS resigned "to assume responsibility for the recent unauthorised trading incident". On 5 October Francois Gouws and Yassine Bouhara, the co-heads of Global Equities at UBS, also resigned. UBS stated that no clients funds were lost as a result of the scandal, but the amount lost was almost the same as the savings UBS had planned via the elimination of 3,500 jobs. Whilst the loss to UBS was described as "manageable" and indeed UBS were even able to record a profit for the quarter, on the day of Adoboli's arrest, the price of the stock of UBS closed down 10.8%, while the price of other European bank stocks rose between 3-6%. It has been reported that Adoboli informed UBS of his unauthorised trades, and then the bank informed the UK Regulator and the police. On 16 September, City of London Police charged Adoboli with fraud by abuse of position and false accounting. On 18 September 2011, UBS issued a statement which revealed the losses from the alleged unauthorised trading stood at US\$2.3bio. The rogue trader reportedly racked up the losses by speculating on EuroStoxx, DAX and S&P 500 indexes. Kweku Adoboli was born 21 May 1980. His family home was in Tema, Ghana, but he had lived in the UK since 1991 and been described as "British by culture, citizenry and fame." He graduated from the University of Nottingham, where he studied computer science and management, in 2003. Prior to this, he studied at Ackworth School (a Quaker-run private boarding school near Leeds), where he was Head Boy between 1997–1998, the year he graduated. According to the

Daily Telegraph, shortly before the news of the incident broke, Adoboli had posted on his Facebook account that "I need a miracle".²⁵ Kweku's father, John Adoboli, is a former Ghanaian official at the UN. On the day of his son's arrest, he expressed the family's shock and disbelief: "We are all here reading all the materials and all the things being said about him. The family is heartbroken because fraud is not our way of life."

As mentioned, Adoboli worked on the Exchange Traded Funds desk in the Global Synthetic Equities (GSE) department at UBS in London in the Investment Bank. Whilst joining as a graduate trainee, he worked in a number of positions including for a time in the middle office in operations before joining the front office as a junior trader working his way up to become a senior trader.

Between October 2008 and September 2011, he executed a series of unauthorised trades which, when discovered, resulted in a loss to the bank of over US\$2.3bio. Adoboli amassed unhedged positions which far exceeded his risk net delta limits. He concealed the exposure to the bank by using a number of different mechanisms, by booking fictitious, offsetting trades, extending settlement dates, and hiding the extremes of the profits and losses the trades produced in an off-book account ("the umbrella account") from which profits and losses were drip fed back into the desk's legitimate systems.

Following Adoboli's arrest, UBS instructed an external advisory body to prepare an independent report into risk controls at the bank. The report identified a number of deficiencies, in the front, middle and back offices which were also largely accepted and formed the basis for regulatory action against the Bank by the UK FSA and Switzerland's FINMA in November 2012.

These included: (i) IT systems designed to assist in identifying rogue trading were inadequate; (ii) significant deficiencies existed in the trade capture and processing system. The system allowed trades to be booked to an internal counterparty without sufficient details and there were no effective methods in place to detect trades at material off-market prices and there was a lack of integration between systems; (iii) the Operations unit did not properly perform their role, rather than challenging the traders where appropriate, they perceived their function as being to assist traders in reconciling trades, accepting their explanations for breaks (a trade which would not reconcile between one system and another, or between one counterparty and another); (iv) there was inadequate front office supervision, for example, following the transfer of the

ETF desk to the GSE division, oversight for the ETF desk was assigned to a senior trader in New York. When the Operations unit reported problems with reconciling external futures trades which had been late booked by Adoboli, the desk's supervisor accepted Adoboli's explanations without challenge; (v) traders on the desk (including Adoboli) regularly breached the risk limits set for their desk, though they were not routinely disciplined. On one occasion Adoboli was disciplined, but not before being congratulated for the profit he had made; (vi) between 2010 and the first and second quarters of 2011, the net revenue recorded by the ETF desk increased significantly, several times greater than the increase in the desk's risk limits and no explanation for this was sought; and (vii) profit and loss suspensions to the value of US\$1.6bio were requested by Adoboli during the course of August 2011 and were accepted without sufficient challenge or escalation. For more details see Part 2 Section 8.

This incident is all the more shocking as it followed the massive unauthorised trading event at Société Générale, where Jerome Kerviel lost the Bank €4.9bio in 2007. Following this incident the FSA published guidance in its issue of Market Watch in 2008 on measures to take to minimise the risk of unauthorised trading. These included: (i) monitoring whether a trader had a high number of cancelled or amended trades; (ii) considering whether those exercising control functions had sufficient understanding, skill and authority to challenge front office staff effectively when agreed parameters for activity are breached or when something else suspicious takes place; (iii) enforcing risk limits with disciplinary action where appropriate; (iv) understanding where the desk's profit and loss is coming from; and (v) having proper systems to reconcile trades, and to confirm internal trades.

In addition to this guidance the following additional guidance can be added. First, firms should invest in intelligent systems and review controls in order to ensure a proactive and proportionate response to risk across the business. The inherent risk is significant and the investment and resources applied to design and operational effectiveness of controls must be commensurate with this risk. This means, for example ensuring that the middle and back office functions are adequately resourced and sufficiently skilled and trained. Firms need to balance the generation of profit with not only adequate but strong risk management for significant risks.

Second, increasingly within financial institutions, the amount of information, that is produced, deafens those that are trying to listen for anomalies and red

flags. Large individual red flags are rarely identified, and individual smaller ones are rarely brought together to form a clear picture. This is exacerbated by the numerous actors involved in the control space, from supervision, to front office colleagues, to HR, finance, operations, risk control, IT, legal, compliance etc. Many of the warning signs or red flags such as the exceeding of risk limits or considerable increases in profit in a short space of time, or the failures to take action on so called misdemeanours, including personal account dealing breaches or failure to attend mandatory training sessions, or the failure to spot lying about his qualifications at the start of his employment, or the failure in an outsourced confirmation checking process, point to a broader issue, and one that is unlikely to be a challenge only at UBS. These individual infractions, breaches and/or violations and/or concerns were not investigated or considered alongside each other. A silo approach to risk management and control presented Adoboli with the opportunity to continue his unauthorised activity for far too long.

For example, during Adoboli's trial, the court heard that risk limits had been breached by Adoboli on various occasions. The court heard of an e-mail sent by Adoboli to John DiBacco, the manager of the exchange-traded fund (ETF) desk where Adoboli worked, in which he stated he had been "running around US\$200mio of deltas". This was double his risk limit, set at US\$100mio intraday. DiBacco's initial response was "well done", later replying "when over US\$100mio and certainly US\$200mio, I need to know before, not after". DiBacco, who was based in New York, was not aware however of most of the information concerning profit and loss, risk positions, or any cancelled, amended or late trades. This information was instead sent to the desk's former supervisor, Ron Greenidge, who was based in London and was European Head of Cash Equities at the time. Furthermore, information from the risk management sub-system "was not being fed to the supervisory portal through most of the relevant time when Adoboli was trading on his own authority. The court also heard that there had been a "substantial increase in profitability of the desk". In 2010, the ETF desk made a total profit of US\$11.5mio, the court heard - by the end of the first half of 2011, the desk had made over US\$60mio. Similarities can be found in the case of Jérôme Kerviel, the convicted rogue trader who caused a loss of €4.9bio to Société Générale in 2008. Managers were made aware he had generated €7mio in 2006 and €43mio in 2007, yet no alarm bells were rung. Adoboli had even requested profit and loss suspensions to the value of US\$1.6bio during the course of August 2011. A UBS Finance executive, who worked as a P&L controller for the ETF desk, acknowledged

in court that he had allowed such suspensions without further information or challenge. Signs of fraudulent activity can be as simple as a reluctance to take holiday, as was the case with Kerviel. In 2007 Adoboli took just four days' holiday, though later he did take his required holiday entitlement.

One of the major control failures to emerge from the trial, was the failure over long-dated settlement controls, which allowed Adoboli to enter into fictitious trades without being caught. The control was supposed to be triggered when a settlement date had been extended 14 days or more after the date on which a trade was confirmed. Whilst this control had been in place in 2008 and was one of the lessons learned from the Soc Gen, Jerome Kerviel case the control had been offshore and outsourced and in fact had not been functioning between November 2010 and September 2011. Moreover no-one had raised the alarm that the control was no longer in operation.

Thirdly and finally the most important guidance comes back to culture and the culture and effectiveness of supervision and the culture of challenge and professionalism within an organisation. No systems and controls are bullet proof, yet with an exceptional culture, high quality employee selection with integrity at the heart of the process and excellent supervision, the control framework need not be. In an era where the costs of compliance continue to rise and the need to build and invest in risk management and control systems, resources and programmes, in large part as a result of individual failures, are essential, the costs of non-compliance are much greater. Adoboli was eventually caught by a single relatively junior employee in the Finance department who refused to be ignored and asked the right questions and was not satisfied with the answers. Adoboli turned himself in, once he knew the game was up and that the firm was onto him. Many more had been close, knew a lot, or a little but chose to ignore the warnings, the behavior and the conduct. Another year without being caught and who knows how big the loss could have been.

Key date: 2011 (UBS announces losses of US\$2.3bio)

Private Banker Fraudsters

Hans Peter Walder

On the night of 24 September 2001, while celebrating his 30th wedding anniversary, Hans Peter Walder left the party handcuffed by 2 FBI agents and 2 Tarrytown, NY Police officers. The anticlimactic event took place

at The Castle which was owned by Walder, a veteran Swiss Private Banker employed at UBS New York, and his wife, Steffi. Guests were left stunned, shocked and in complete disbelief as to why someone like Walder would be escorted out by law enforcement agents. Unbeknownst to them, Walder had utilised his charm, knowledge of the banking system and influence among his colleagues to commit a major fraud in order to purchase the Castle and maintain a lavish lifestyle.

As a charismatic and trusted person, he was able to maneuver through existing controls, defrauding his clients and the bank of US\$73mio from 1992 to 2001. Hans Peter Walder was a seasoned veteran of the Private Bank. He had worked for UBS, in various international roles, for over 30 years and had developed close ties with his clients and senior management throughout the bank. The scheme required meticulous attention to detail and an understanding of operational controls and their limitations. Walder single-handedly committed the fraudulent transactions with no accomplice. The driving force behind the crime was the ownership of the Castle in Tarrytown, NY. He manipulated his colleagues, clients and family to feed his desire. The underlying theme with embezzlement is greed. It begins as a desperate measure with the intention to commit it as an isolated incident. The "thrill" of successfully executing the transaction without any repercussions or discovery, becomes the motivation behind subsequent and continued illicit efforts. The impulse spirals out of control the longer it is left undetected and allowed to continue.

The control environment during the time of his fraudulent activities allowed Walder to have total autonomy in various aspects of maintaining and establishing client relationships. Client Advisors were allowed to disburse client funds independently without additional supervisory approval; utilise existing documentation to open additional new accounts on behalf of their customers; and drawdown credit facilities without client or supervisory approval. In addition, the model at that time was such that there were no rigid controls over retained mail, verification of client disbursements or account openings etc., which led to Walder's abuse of the system.

A few years prior to buying the Castle, Hans Peter Walder was in a financial predicament and saw an opportunity to embezzle US\$700,000 from one of his client's effectively dormant accounts. However, the downside was when the client, eventually requested the transfer of the dormant funds to another account, this led Walder to steal yet from another client; which perpetuated into a domino effect of stealing from client accounts to cover up each prior abuse. Hans Peter Walder noted that he had become a prisoner of his own crime. His knowledge of the operational process enabled him to identify weakness in the system and exploit it to his advantage. It has been reported that for over eight years, Walder exploited his wealthy clients'

accounts, all for his own gains. From 1992 to 2001, a bulk of the proceeds of the fraud was for the purpose of refurbishing and operational expenses associated with the Castle in Tarrytown, NY. The obsession behind the ownership of the Castle and the status it provided him became the driving force behind the crime. Hans Peter Walder created a company named 400 Benedict Corporation which was the recipient of US\$69mio.

The discovery of the fraud occurred when Walder could no longer cover all his tracks, and the Bank identified a US\$15mio deficit. Upon discovering the fraudulent activities, the bank notified federal authorities, which led the FBI to arrest Hans Peter Walder on 24 September 2001. Walder was sentenced to 97 months (8 years) in prison in January 2003. He served his sentence in a federal prison in Ohio. After the incident UBS implemented a series of corrective actions to prevent similar occurrences. Policies were updated to include: call back procedures on disbursement of client funds; consolidated statements capturing all account activity; creation of retained mail analysis; clients were given internet access to view account history; all new loans required new documentation; and the principle of the four-eyed approach on disbursements was instituted. As a Private Banker, Walder was able to exploit his knowledge of the inner workings of the bank in order to defraud the institution by altering statements, capitalizing on hold mail policy, forging documents, allowing disbursement of funds without confirmations, abusing credit facilities on behalf of clients, etc. Initially, he believed that in purchasing the Castle he could turn a profit and pay back the loans he had obtained illegally. However, as the operational costs rose, the theft of client monies also rose.

Tax Fraudsters - Tax Evaders

Mikhail Khodorkovsky

Mikhail Khodorkovsky was arrested at gunpoint on 25 October 2003, at a Siberian airport on charges of tax evasion, fraud, and theft. At the time of his arrest he was considered the most successful Russian Oligarch, the wealthiest man in the country by far and the 16th wealthiest in the world. Khodorkovsky's self-made fortune was estimated by Forbes to be approximately US\$15bio, mostly held through assets owned by the Menatep Group, chief amongst them OJSC Yukos Oil Company. Forbes now estimates that his personal wealth is approximately US\$500mio. His was not the first arrest. July 2003 saw the arrest of his

business partner Platon Leonidovich Lebedev, arguably Khodorkovsky's right-hand man. Lebedev (the second largest share holder in Yukos and a senior executive at the company) was arrested for fraud in relation to the 1994 privatisation of Apatit, a company engaged in the extraction of raw materials for the manufacture of chemicals and fertilizers. Lebedev's arrest may have been a warning specifically aimed at Khodorkovsky to leave Russia and to curtail his political gestures.

Many believe Khodorkovsky's woes stem from a personal vendetta against him by Putin, after the tycoon broke an unwritten pact between Russia's oligarchs and the Kremlin that they could keep their wealth as long as they stayed out of politics. However, rather than leaving Russia, Khodorkovsky entered into dialogue with Russia's regional governors and other politicians in order to persuade them to intervene – this perhaps angered Putin further. Khodorkovsky's arrest, like Lebedev's, related initially not to Yukos but to the privatisation of Apatit in 1994. A September 2011 report by the International Bar Association's Human Rights Institute²⁶ documents the criminal charges made against him by the government as being "[i]n 1994, while chairman of the board of the Menatep commercial bank in Moscow, M. B. Khodorkovsky created an organised group of individuals with the intention of taking control of the shares in Russian companies during the privatisation process through deceit and in the process of committing this crime managed the activities of this company". With respect to Apatit a state owned fertilizer manufacture, it was alleged that Khodorkovsky and his associates did not fulfill their investment obligations under the privatisation agreement, and that there was not a fair competitive bidding process for the 20% of Apatit that was being privatized in 1994. Allegedly the four companies that bid for the shares were front companies that ultimately were controlled by Khodorkovsky and Lebedev. Volna won the auction. Volna is a subsidiary company of Bank Menatep and it allegedly "misled" representatives of the administration of the Murmansk Region and members of Apatit's board by failing to adhere to the purchase agreement. The sale agreement required Volna to invest RUB563.17bio (US\$283mio) in developing Apatit and the town of Kirovsk over a period of two years. Apatit in return sued but the case did not go to court since the required funds were credited to Apatit's account held at Bank Menatep. However, apparently as soon as the case was settled the funds were transferred out of Apatit's account back to accounts under the control of Khodorkovsky. The 20% stake held by Volna was then sold to numerous companies all owned or controlled by Khodorkovsky and Lebedev. The "Khodorkovsky & Lebedev communication Centre" (a website developed

by the international legal team defending the two men) refutes these allegations and argues that the facts do not support the prosecutor's position. The Centre argues that had it not been for Khodorkovsky and his associates' investments and management, the company would not now be "one of the largest fertilizer producers in the world".

This was the first case against Khodorkovsky and Lebedev. The hearing lasted for two years and they were eventually imprisoned on May 2005 for eight years but with the possibility of early release. This prospect, however, was dashed when, in February 2007, new charges of embezzlement and money laundering were brought against both men. Also in 2003 the government made multiple claims against Yukos for failing to pay billions in taxes and made demands for repayment, ultimately this led to a Russian court in 2006 declaring the company bankrupt. Yukos' assets were sold off at bargain prices mostly to government owned entities. The fall of Yukos resulted in Khodorkovsky's own fortune falling to approximately US\$500mio. The second trial was concluded in December 2010 and the court found both Khodorkovsky and Lebedev guilty of embezzlement – stealing from Yukos and then laundering these proceeds. Prosecutors claimed they stole over US\$25bio of oil from the company over a period of several years – essentially, the entire output of the company. Commentators on the trial have highlighted concerns and in some cases laws were applied retrospectively to what were at the time commonly accepted business practices. Khodorkovsky's defence said that the second trial was a logical nonsense – in the first trial, he was convicted of tax evasion; and then he was accused of stealing the same oil he supposedly didn't pay tax on. A more cynical view is that figures in the Kremlin panicked that Khodorkovsky was due to be released in 2011 and scrambled to put together another case.

Khodorkovsky was, until a December 2013 pardon issued by President Putin, languishing in prison, but now he is released, surprising many including supporters, including international organisations such as Amnesty International, and many in political circles, who considered his incarceration to be politically motivated. While this view is furiously denied by the Kremlin, who would argue that the 2005 (and subsequent) trial of Khodorkovsky and associates was a just investigation based on merit, its critics argue that his imprisonment was an attempt by President Putin to silence a potential and credible presidential rival. Discussions on the fate of Khodorkovsky, his associates, and Yukos reached all levels in Russia but also around the world; from media and news to political pundits

and courtrooms; from local statesmen to the President of the US. Evidence of the discussions at political level and the debate that charges are politically motivated can be found in many places, including leaked US cables by WikiLeaks. For example, in a cable written in 2009 during the second trial against Khodorkovsky and Lebedev states that "[on] 23 December the Russian Supreme Court ruled that the 2003 decision to arrest and detain Lebedev was illegal, in keeping with a 2007 ruling by the European Court of Human Rights". The cables also argue that, while the second trial is apparently holding the rigors of fair legal proceeding, this in itself "may appear paradoxical" for a "case whose motivation is clearly political".²⁷

A number of NGOs and high ranking authorities campaigned to highlight the injustices of the case against the two men. For example, a report published by the Council of Europe in 2009 highlights the "authoritarian abuse of the system".²⁸ Statements of criticism can also be found from senior US administration officials including Hillary Clinton and various other US politicians. The same is true in the UK and other EU countries. Leading figures cite this case as the "erosion of democracy and rule of law in Russia". Sir Malcolm Rifkind, the former UK Foreign Secretary told the BBC "It is manifestly a politically inspired trial and Khodorkovsky is in effect a political prisoner". Khodorkovsky stated at the closing of the second trial, "Shameful. I am ashamed for my country."²⁹ With Khodorkovsky's release, Russia's most famous political prisoner is no longer behind bars. He has since his release, publicly announced he has no further interest in politics.

Key date: 2003 (arrested by Russian authorities)

Operation Wickenby

Operation Wickenby is a code name adopted by the Australian Taxation Office and the Australian Crime Commission and a number of other Australian investigative agencies for the investigation into and prosecution of tax fraud and tax evasion. The probe commenced from data obtained from the computer of Philip Egginshaw a principal of Strachans Accountants. The computer was seized by a raid in his Melbourne hotel room in 2004, but has now moved to encompass a number of lines of enquiry and a broader probe and is not isolated to those parties associated with Strachans. The Strachans related investigations have been derived from advice to set up tax schemes which were marketed and promoted by both Egginshaw and another individual associated with the company, Philip de Figueiredo. Strachans initially operated from Jersey and thereafter Switzerland. As a result of the Australian prosecutions, De Figueiredo has since been arrested by

the Jersey authorities, however is yet to be extradited to Australia. As at September 2011, the Operation has secured 20 convictions which have led to imprisonment, and clawed back A\$1.18bio from parties associated with offshore accounts which were the proceeds of tax evasion. The cost of the Operation to date is estimated to be US\$300mio. The schemes used to achieve the evasion all contained the essential element in a tax fraud, that being dishonesty. The basic modus operandi of the schemes involved sending money to offshore companies based in secrecy havens that were controlled by Strachans, this money was disguised as loans. Strachans provided the perpetrators with credit or debit cards, some in fictitious names, enabling the proceeds to be withdrawn as cash, the intention being that such withdrawals would be untraceable.

While many of the existing cases remain sub judice, for the purposes of closer analysis, the case of Glenn Wheatley is worth a review. Glenn Wheatley has been an Australian music and entertainment manager and as part of his work in managing a successful tour of Australian entertainer Johnny Farnham, Wheatley was due to be paid as an employee of International Management Group of America Pty. Ltd ('IMG'). The conspiracy involved money that was due to be paid to Wheatley being directed to a Strachans associated company, the payment was not declared as assessable income by Wheatley. In a further fraudulent act, Wheatley was advised by his Australian practicing solicitor, Paul Gregory to divert his proportion of proceeds from a boxing match featuring Kosta Tszyu, being \$400,000 to a company called Overseas Promotions, this was also a company controlled by Strachans. Paul Gregory then assisted Wheatley embark on sophisticated deceit whereby Eggleinshaw would write to Wheatley with a false demand of \$700,000, Wheatley would respond to claim legal advice from Gregory was necessary and a pre-determined negotiated outcome would be reached for \$400,000. This deception was designed in order to assist Wheatley in avoiding paying tax. In relation to this particular offence, Wheatley plead guilty and received a 12 month sentence, Gregory, was sentenced to 16 months in imprisonment, a term which has been subsequently commented upon on appeal as being 'manifestly inadequate'. It is useful to analyse Wheatley's case as it involves the criminal participation of two gatekeepers of the anti-money laundering regime, lawyers and accountants. Their roles have been integral to the conspiracy. They had the intention to participate in the tax fraud. It appears with the success of recouping lost revenue, Operation Wickenby and its successors will run for some time still.

Pasquantino Brothers

Whilst in Niagara Falls, New York State, residents David

and Carl Pasquantino began smuggling cheap liquor from the US for sale on the black market in Canada in 1996. The brothers realised that Canada's average liquor tax was 83% and therefore was almost double that of the US. For over four years the Pasquantinos sourced liquor from discount stores in Maryland and hired drivers to avoid border controls by hiding liquor in their trucks. The smugglers, failed to declare it on Canadian customs forms and used US wires (phone calls) to place orders with the liquor stores in Maryland. Their activities cost the Canadian revenue almost US\$6mio. The Bureau of Alcohol Tobacco and Firearms investigating increases in orders into Maryland stores and with the stores co-operation finally gained evidence against the smugglers which led to their arrests. The smuggling of alcohol did not violate any US federal alcohol statute and although it did implicate an anti-smuggling statute, this one was unenforceable because there was no reciprocal agreement with Canada. Instead of extraditing them to Canada to stand trial on smuggling or fraud charges, the US authorities took a gamble and instead in April 2000 charged them with US Wire Fraud. They did this using a technicality to help shut down widespread liquor and cigarette smuggling between the US and Canada. In February 2001 a Maryland Federal court sentenced the brothers to five years in prison. The smugglers were convicted of wire fraud, that criminalises (1) "any scheme or artifice to defraud" combined with (1) use of the wires "for the purpose of executing such scheme." Defendants argued that their convictions should be reversed because (1) courts have recognised that a scheme to defraud must be aimed at depriving another of "property" and Canada's interests in collecting customs duties did not qualify, and (2) interpreting the wire fraud statute to apply to their conduct would contravene the common law revenue rule, pursuant to which US courts refuse to enforce another country's revenue laws. On appeal in 2002 this decision was reversed. Finally in April 2005, the Supreme Court, in a 5-4 decision, affirmed the brothers guilt on wire fraud based on a scheme to evade Canadian customs duties. In the current atmosphere of heightened scrutiny over financial transactions involving offshore clients, some have suggested that Pasquantino could criminalise certain conduct by non-US clients of US financial institutions and expand the obligations of such institutions to file suspicious activity reports ("SARs"). The Court, considering only the specific facts before it, rejected both arguments, explaining that Canada's interest in collecting taxes is "property" and that the revenue rule was not implicated because the wire fraud statute was punishing the defendants' US misconduct (i.e. misuse of US wires to help defraud others), not enforcing Canada's tax laws. In response to an argument made by dissenting justices, the Pasquantino majority held that it was not applying the wire fraud statute extra-territorially, because the scheme to defraud was conceived and completed in the US. Pasquantino does not expand the circumstances in which a US financial institution can be held criminally liable for a wire fraud scheme committed by one of its clients. A financial

institution itself should not commit wire fraud, unless it devises or actively participates in a scheme to defraud. A financial institution should not be liable as its client's co-conspirator, unless the institution agrees with the client to commit the wire fraud offense, and should not be liable for aiding and abetting its client's wire fraud, unless it intends to facilitate its client's wire fraud and assists or participates in the commission of the crime.

Pasquantino does not purport to change any of these standards. As a result, a financial institution's unknowing and unintentional involvement in a client's criminal activity is not unlawful. A US financial institution generally would not have any reason to know (or reasonably suspect) whether or not one of its non-US clients was honouring his or her home country tax obligations. Accordingly, absent knowledge or reasonable suspicion of a possible crime, the US financial institution should not violate any US criminal statute or reporting duty simply by virtue of the fact that a client wired monies into a bank as part of a client's scheme to avoid paying his or her tax obligations abroad. Pasquantino does not impose additional obligations on financial institutions to discover whether clients may be involved in criminal misconduct. Nevertheless, some have suggested that Pasquantino may require financial institutions to inquire whether their customers are satisfying their non-US tax obligations and, if the customer refuses to answer or the financial institution is not otherwise able to confirm that such tax obligations have been satisfied, the institution is required to file a SAR based on suspected fraud. No aspect of the Pasquantino decision directly supports this conclusion. Under the Bank Secrecy Act (the "BSA"), a US financial institution must file a SAR when it detects a known or suspected federal criminal violation transacted through the institution and exceeding certain monetary thresholds (e.g., \$5,000 for known, non-employee suspects). However, based on the Pasquantino decision, in the absence of a reasonable suspicion, a financial institution has no affirmative obligation, to inquire or attempt to discover whether such a violation has occurred, and absent knowledge or reasonable suspicion that a violation has occurred, the institution has no obligation to file a SAR. Further, if the client's conduct does not violate the wire fraud statute itself due to the particularities of this offence, the institution will not be obligated to file a SAR for that reason as well. Pasquantino's claim essentially that the US Government can't prosecute citizens for cheating the Canadians out of tax because of a long standing rule of law about not enforcing foreign tax laws was held to be invalid. Nevertheless, the above decision could be seen by some as expanding the application of the wire-fraud statute to cover foreign tax evasion, an expansion that could have consequences for businesses, tax cheats as well as bootleggers and as such arguably imports so called "all crimes" for this read "foreign tax evasion" as a predicate offense to money laundering.

Others

Douglas Jackson

Mr Jackson created a new business venture called E-Gold, registered in 1999 in Nevis in the West Indies which functioned as an alternative payment system and was purportedly backed by stored physical gold. Persons seeking to use the E-Gold payment system were only required to provide a valid E-Gold e-mail address to open an E-Gold account with no other contact information verified. Once an individual opened an E-Gold account, he/she could fund the account using any number of exchangers, which converted national currency into E-Gold. Once open and funded, account holders could access their accounts through the Internet and conduct anonymous transactions with other parties anywhere in the world. E-Gold claimed that the number of accounts grew from 1 million in November 2003 to 3 million in April 2006. In 2008, the company reported more than 5 million accounts.

The US government prosecuted resulting in 2008 guilty pleas from E-Gold, its founder and two senior directors accusing them of creating a vehicle which became a haven for criminals because of the anonymity E-Gold provided account holders, allowing cybercriminals to turn ill-gotten proceeds into clean cash. The indictment alleged that E-Gold has been a highly favoured method of payment by operators of investment scams, credit card and identity fraud, and sellers of online child pornography. The indictment further alleged that the defendants conducted funds transfers on behalf of their customers, knowing that the funds were the proceeds of unlawful activity; namely child exploitation, credit card fraud and wire (investment) fraud; and violated federal money laundering statutes.

The defendants were also charged with operating the E-Gold operation without the required licenses and thereby violated US federal and various state money transmitting laws. Law enforcement viewed E-Gold as a dangerous new threat that had the potential to be a favoured new banking channel. E-Gold was unique unlike previous digital currencies, E-Gold's focus on backing its accounts with gold provides more value than merely having money in a bank, especially in volatile markets. The judge found that whilst E-Gold was a haven for criminals, it was not the intent of Jackson to create such a business. Jackson was sentenced to 300 hours of community service, a US\$200 fine, and three years of supervision, including six months of electronically monitored home detention. E-Gold faced a maximum fine of US\$3.7mio, but they were fined US\$300,000. The defendants were also ordered to obtain licenses to do business in the states in which

a license is required for money transfer businesses. In September 2008, E-Gold hired KPMG to aid its development of an anti-money laundering programme.

PokerStars and Others

On 13 October 2006, the US enacted the Unlawful Internet Gambling Enforcement Act (UIGEA), making it a federal crime for gambling businesses to "knowingly accept" most forms of payment "in connection with the participation of another person in unlawful internet gambling." Shortly after the UIGEA was signed into law, Absolute Poker, an online poker company, announced that they would continue its US operation because "the US Congress has no control over" the company's payment transactions.

Despite the passage of UIGEA, the online poker companies, mostly those based in lightly regulated or unregulated jurisdictions in the Western Hemisphere, continued operating in the US. After the enactment of the UIGEA there was a temporary decline in online gambling by US residents, but the volume of online bets soon recovered. In fact the popularity of internet gambling continued despite the governments attempt to discourage it.

In 2010, online gambling revenues from US gamblers exceeded US\$4bio.

On 15 April 2011 the US government announced indictments against 11 individuals. Seven of the defendants are the poker companies; PokerStars, Full Tilt Poker, and Absolute Poker ("Poker Companies") and their owners and executives, and the remaining four are their payment processors, including one banker. The charges included money laundering, bank fraud and illegal gambling offenses, with the focus on the processing of payments to and from the gambling websites' customers, in contravention of the Unlawful Internet Gambling Enforcement Act. The US government also filed a civil money laundering and forfeiture case against the Poker Companies, their assets, and the assets of several payment processors for the Poker Companies. The indictment alleged that the online operators tricked banks into processing billions of dollars in payments from customers. In one instance, after US banks and financial institutions detected and shutdown multiple fraudulent bank accounts used by the betting websites in late 2009, the founders developed a new processing strategy. For example, one of the payment processing companies, created fictitious companies, including fraudulent online flower shops and pet supply stores, to help facilitate credit card transactions, to have developed pre-paid debit cards or phone cards that could be loaded with funds from a US customer's credit card without using a gambling transaction code. Of the billions in dollars in payment

transactions that the poker companies tricked the US banks into processing, about one-third of the funds went directly to the poker companies as revenue.

The US Department of Justice seized the .com internet addresses of the three online gambling sites, replacing them with a takedown notice, but let Full Tilt and PokerStars use them again once they pledged to no longer serve the US. About 76 bank accounts in 14 countries were frozen, including an unknown amount of player funds. The prosecutors sought jail sentences for the 11 criminal defendants including site founders and executives, US payment processors, and an executive of a small Utah bank, who prosecutors maintain were engaged in an elaborate criminal fraud scheme, using the bank in Utah to mis-code transactions with other banks to bypass UIGEA restrictions. The companies ceased their U.S.-facing ad campaigns, resulting in cancellations of poker-themed television shows. In June, Full Tilt had its e-Gambling license suspended, which halted all of its remaining online play. The Alderney Gambling Control Commission on the British Channel Islands later revoked its license. In July 2012, the US government dismissed "with prejudice" all civil complaints against all PokerStars and Full Tilt Poker companies after coming to a settlement with PokerStars which includes PokerStars purchasing Full Tilt and agreeing to pay US\$731mio. Nevertheless, the criminal indictments remain in place for the named individuals.

Whilst many of those indicted were beyond the direct jurisdiction of US authorities, one of the payment processors, Ira Rubin was not, and he pleaded guilty to conspiracy charges related to illegal gambling, bank fraud, wire fraud, and money laundering on behalf of three online gaming sites and was sentenced to three years in prison. Absolute Poker co-founder Brent Buckley pled guilty to misleading banks, and he was sentenced to 14 months. John Campos was part-owner and vice chairman of the board of directors for SunFirst Bank, who pled guilty to a single misdemeanor bank gambling charge, being sentenced to three months in prison. During his plea, Campos said his processing of the gambling proceeds for PokerStars and Full Tilt Poker was not in return for a US\$10 million investment in the bank.

Insider Traders

R Foster Winans

Winans was a former columnist for The Wall Street Journal who co-wrote the "Heard on the Street Column" from 1982 to 1984 and was convicted of insider trading and mail fraud. He was indicted by then-US Attorney Rudolph Giuliani and convicted in 1985 for leaking advance word of the contents of his columns to a stockbroker, Peter N. Brant at Kidder, Peabody & Co. Winans' conviction was affirmed by

the US Supreme Court in 1987 as *Carpenter v. US* by a rare 4-4 deadlocked vote. Winans admitted his participation in the scheme and to earning US\$31,000 from it, but pleaded not guilty, arguing that his behavior was unethical but not criminal. Winans was found guilty and sentenced to 18 months in prison, serving 9 months. Both the securities industry and the First Amendment lobby criticized the prosecution as over-stepping the bounds of the securities laws, and filed amicus briefs during the appeals process. Winans' case included two co-defendants and reached the US Supreme Court in 1987. The missing member was due to the retirement of Justice Lewis F. Powell, Jr. The US Supreme Court cited an earlier ruling while unanimously upholding mail and wire fraud convictions for a defendant who received his information from a journalist rather than from the company itself. R. Foster Winans conviction was also upheld on the grounds that he had misappropriated information belonging to his employer, the Wall Street Journal. The court ruled that "It is well established, as a general proposition, that a person who acquires special knowledge or information by virtue of a confidential or fiduciary relationship with another is not free to exploit that knowledge or information for his own personal benefit but must account to his principal for any profits derived therefrom." Winans once observed: "The only reason to invest in the market is because you think you know something others don't."

Key date: 1985 (convicted of insider dealing for leaking advance word of his newspaper column "the heard on the street" to his broker)

Special Focus 15 Ivan Boesky & Others

The son of a Russian immigrant, Ivan Boesky started on Wall Street in 1966 as a stock analyst. Marrying into money, helped Boesky start his own arbitrage firm in 1975. By the mid-Eighties, "Ivan the Terrible" as he became known was worth an estimated US\$200mio, through trading in stocks of companies targeted for takeovers. Corporate mergers and acquisitions soared in the 1980s. Nearly 3,000 mergers and buyouts worth more than US\$130bio

occurred in 1986 alone, many of these takeovers taking the form of leveraged buy outs, financed from junk bonds, many of which were arranged by Michael Milken and the firm in which he was the star banker, and undisputed junk bond king, Drexel Burnham Lambert.

Using a fund established by limited partners, Boesky would bet on takeover situations, mostly after a deal had already been announced, making a profit if the deal went through at the announced price, but losing money if the deal fell through. In May 1982, Gulf Oil announced a takeover attempt of Cities Service but the takeover failed. Boesky had placed a large bet that the takeover would go through, losing around US\$24mio on this deal. It was this loss, it is believed, that led Ivan to conclude that he needed a greater edge and so he began to build a secret network of investment bankers and brokers who would then supply him with insider information and in return would receive a cut of the illegal profits. Two of the key figures in this network were Martin Siegel of Kidder Peabody and Dennis Levine of Drexel Burnham Lambert.

Using inside information supplied by Siegel, Boesky made US\$28mio from Nestle's acquisition of Carnation in 1984 and up to US\$50mio on further tips from Mr Siegel. In return Boesky paid Seigel between 1 to 5% of the profits made and in one case paid him US\$800,000 in cash. In one case Levine made US\$2.69mio. Boesky was successful making lots of money on many of the major takeover deals in the 1980s, for example, Getty Oil, Nabisco, Chevron and Texaco profiting from insider tips. Despite these repeat successes, defying the odds, and as was becoming common, the share prices of stocks in companies targeted for leverage buyout (LBO) or hostile takeovers would rise before the deals were announced, indicating that insider trading was occurring, the SEC took no action. It wasn't until Merrill Lynch provided the SEC with their own inside tip that the SEC would start an investigation that would lead to the arrest of first Dennis Levine of Drexel Burnham Lambert, and then Ivan Boesky and Martin Siegel.

Levine spent most of his career as a specialist in mergers and acquisitions. He was known as a good researcher with a voracious appetite for information. Over the years, Levine built up a network of professionals at various Wall Street firms who engaged in insider trading. Participants exchanged and traded on inside information they obtained through their work. Levine placed his trades through an account maintained firstly at Bahamian subsidiaries of Swiss banks, Pictet & Cie, and then at Bank Leu eventually earning more than US\$10mio in profits. Some of those at Bank

Leu realized that Levine must have been trading on inside information and instead of shutting down the account and informing the authorities, some of them decided to copy Levine's trades, known as "piggyback trading", making money themselves. In order to protect Levine's trading from discovery, Bank Leu traders broke up Levine's trades among several brokers. A broker at Merrill Lynch, also began piggybacking the trades for himself. In May 1985, Merrill Lynch detected suspicious activity in two brokers' personal trading accounts, which led an internal investigation to focus on the trades coming from Bank Leu in the Bahamas.

Unable to get information on the client at Bank Leu, due to Bank Leu's resistance and Bahamian banking secrecy, Merrill Lynch informed the US Securities and Exchange Commission (SEC). The SEC aggressively pursued Bank Leu, who would ultimately co-operate but not after destroying many documents related to Levine's activity. Their retained lawyer, Harvey Pitt (a future SEC head) had noted major discrepancies in their answers to his questions and he insisted that they come clean. Bahamian Attorney General Paul Adderly issued an opinion that stock trading was separate from normal banking transactions, and thus was not subject to the bank secrecy laws. The bank was thus free to reveal Levine's name, and he was arrested soon afterward.

On 5 June 1986, Levine pleaded guilty to securities fraud, tax evasion and perjury. He also agreed to cooperate with the government and revealed the other members of his insider trading ring. Levine also settled the SEC's charges, agreeing to disgorge US\$11.5mio—at the time, the largest such penalty in SEC history. He also agreed to a lifetime ban from the securities industry. Levine also agreed to pay US\$2mio in back taxes out of the amount he disgorge to the SEC. Subsequently, Levine directly implicated Ivan Boesky, and information from the Boesky case also implicated Martin Siegel. Both Boesky and Siegel subsequently pleaded guilty. The investigations also led to [Michael Milken](#), who was highly influential in the junk bond market at the time.

Due in part to his cooperation, the judge imposed a lenient sentence of two years in prison and a US\$362,000 fine on Levine. Boesky admitted to numerous offenses and then turned state's evidence, primarily against Milken. He received a 3 1/2 year prison sentence (of which he served 18 months) and US\$100mio fine after admitting to the charges, reaching a very favourable plea bargain with Rudy Giuliani, US attorney for the Southern District of NY. The authorities even allowed Boesky to reduce his partnership liabilities by selling stocks and securities before his crimes were made public. In return for

leniency, Boesky allowed the SEC to secretly tape his conversations with associates. The prize sought though was Michael Milken. Boesky lured Milken to a hotel room, where they discussed deals in a conversation recorded using a microphone hidden in Boesky's clothes.

The case against Milken was not clear cut however. For more details see [Michael Milken](#) later.

As Boesky left federal court in 1987 to serve his sentence he proclaimed, "Greed is all right...everybody should be a little greedy." The invocation of greed, was a throwback to a famous quote from Boesky in 1985 telling an audience of business students at Berkeley, that "Greed is all right, by the way—I want you to know that," and that "I think greed is healthy. You can be greedy and still feel good about yourself." The greedy Boesky also admitted in an interview that he fantasized about climbing atop a huge pile of silver dollars: "Imagine—wouldn't that be an aphrodisiac experience?"

Boesky's story inspired the 1987 movie "Wall Street," with Michael Douglas playing a reptilian character named Gordon Gekko—who recited, nearly word for word, Boesky's now-legendary "greed is good" speech.

Penalty: US\$100mio fine and imprisonment

Actions: Insider dealing, implicating others and helping to bring down Drexel Burnham Lambert and Michael Milken

Country: US, Bahamas

Key date: 1987 (found guilty of insider dealing charges)

George Soros

In 1988 Soros was interested in purchasing shares in French companies. The Socialist Party had lost its majority of seats in the Assembly and the new government under President Chirac had instituted an aggressive privatisation programme. Many people considered shares in the newly privatized companies undervalued. During this period, a French financier named Georges Pébereau contacted one of Soros' advisors in an effort to assemble a group of investors to purchase a large amount of shares in Soc Gen, a leading French bank that was part of the programme. The advisor reported to Soros that Pébereau's plan was ambiguous and included an implausible takeover plan (it would indeed fail). On that advice, and without ever meeting the financier, Soros decided against participating. He did, however, move forward with his strategy of accumulating shares in four French companies: Société Générale, as well as Suez, Paribas and the Compagnie Générale d'Électricité. In 1989,

the Commission des Opérations de Bourse (the French stock exchange regulatory authority) conducted an investigation of whether Soros' transaction in Société Générale should be considered insider trading. Soros had received no information from Société Générale, and had no insider knowledge of the business, but he did possess knowledge that a group of investors was planning a takeover attempt. The COB concluded that the statutes, regulations and case law relating to insider trading did not clearly establish that a crime had occurred, and that no charges should be brought against Soros. Several years later, a Paris-based prosecutor reopened the case against Soros and two other French businessmen, disregarding the COB's findings. This resulted in Soros' 2005 conviction for insider trading by the Court of Appeals (he was the only one of the three to receive a conviction). The French Supreme Court confirmed the conviction on 14 June 2006, but reduced the penalty to the minimum. Punitive damages were not sought because of the delay in bringing the case to trial. Soros denied any wrongdoing, saying news of the takeover was public knowledge and it was documented that his intent to acquire shares of the company predated his own awareness of the takeover. In December 2006, he appealed to the European Court of Human Rights on various grounds including that the 14-year delay in bringing the case to trial precluded a fair hearing. On the basis of Article 7 of the European convention on human rights, stating that no person may be punished for an act that was not a criminal offence at the time that it was committed, the Court agreed to hear the appeal. In October 2011, the court rejected his appeal in a 4–3 decision, saying that Soros has been aware of the risk of breaking insider trading laws.

Key date: 1989 (French regulators start investigation into insider dealing)

Special Focus 16

Ernest Saunders

Ernest Saunders had a career in management with Beecham, Great Universal Stores and Nestlé before becoming Chief Executive and Chairman of Guinness Plc (now a part of Diageo Plc) in 1981, remaining in the position until 1986 on a salary of £375,000pa.

He was born Ernest Walter Schleyer in Austria and moved to the UK in 1938 when his parents emigrated to escape Nazi rule. He was renowned for his ambition and ruthless cost-cutting efficiency, earning from his employees the nickname 'Deadly Ernest'.

He would however become best known as one of the "Guinness Four", a group of businessmen who attempted to fraudulently manipulate the share price of the Guinness company. He was sentenced to five years' imprisonment, but released after 10 months as he was suffering with apparent Alzheimer's Disease. After leaving prison he fully recovered.

Determined to turn a brewer of unfashionable stout as well as a collection of more than 150 other businesses ranging from sweets to canal boat holidays, into a dynamic, international drinks conglomerate, Ernest Saunders quickly 'rationalised' - cutting down, selling off and closing up parts of the business. He ditched the Guinness campaign in favour of the Genius campaign. Profits and the share price went up. But there was a limit to rationalisation and so next he focussed on growth by acquisitions. Saunders, flexed his muscles on buying a chain of newsagents and then took over the Arthur Bell, the Scotch group in an acrimonious bid battle. He then identified "Distillers" which owned whisky brands such as Dewars and Johnnie Walker and in 1986 when Distillers became the subject of a hostile bid from Argyll, a retailing group, Saunders saw his chance.

Saunders, in secret talks with Distillers, secured their approval for a friendly merger, with Guinness agreeing to pay for Distillers by a combination of cash and shares. At the start of the bidding war Argyll looked set to win as the Guinness share price stood at around 280p a share and as such valued Distillers at around £2bio. Within weeks however, Guinness shares rose to a peak of 353p, which valued Distillers at £2.5bio and allowed Guinness to win the bidding war.

At the time, the sudden share surge seemed to reflect shareholder confidence and support for the acquisition. It wasn't until later that SEC investigators would provide information to their UK counterparts that the truth behind the surge would become known. The tip came from none other than [Ivan Boesky](#), who was co-operating with US authorities and in a plea bargain, provided the critical information that led to the share support operation being exposed. [Ivan Boesky](#), on whom Gordon Gekko from Wall Street fame was based, told US authorities that a friend of Ernest Saunders, Gerald Ronson first contacted him about the Distillers bid soliciting his support to purchase Guinness shares

in early 1986, and assured him that Guinness would "repay any losses" incurred. These terms were confirmed with a non-executive director of Guinness. The terms would also include a monthly kickback fee of 5% on any sums invested.

With these assurances in place Boesky began to build up his position ultimately holding 14 million Guinness shares at a cost of about US\$80mio, by the time the bid became successful. In addition to mobilising Boesky, Guinness used friends to 'support' and push up the share price. Methods ranged from indemnities and guarantees on losses and also included the illegal purchase of its own shares. At the same time, Guinness was driving down the value of Argyll shares.

Following the tip from America and after an investigation into the allegations by UK inspectors, Saunders (along with others including 3 leading UK entrepreneurs, Jack Lyons, Anthony Parnes and Gerald Ronson) was prosecuted and convicted in 1990 of fraud in operating an illegal share support operation so as to keep the Guinness share price attractive to Distillers shareholders and ensure a Guinness victory.

Mr Saunders claimed he knew nothing of these illegal arrangements. At his trial in 1990, the judge and jury found otherwise. However, Saunders was released just over nine months into his five year jail sentence, after producing a medical report which said that he might be suffering from the early onset of Alzheimer's Disease. He quickly made a remarkable recovery. Ronson was sentenced to one year in prison and given the then biggest fine in British history, US\$9.75mio (£5mio), for what the judge called "an attack on the integrity of the market."

Key date: 1990 (prosecutions and convictions in UK's biggest Insider Trading case)

James McDermott Jr
The former chairman and CEO of Wall Street investment bank Keefe, Bruyette & Woods Inc. (KBW), was charged in 1999 and convicted of insider trading for passing inside information to his girlfriend, porn actress Kathryn B. Gannon, also known as "Marylin Star." McDermott passed insider secrets to Gannon, who then told another boyfriend, Anthony Pomponio. McDermott did not act on the information, but Gannon and Pomponio each made more than US\$80,000. McDermott was barred from working in the industry and served five months in prison. Gannon and Pomponio each served three months.

Key date: 1999 (charged with insider dealing and convicted and imprisoned for 5 months in US)

Martha Stewart

About an hour after the verdict was read, Stewart - wearing a fur around her neck and a black overcoat and carrying a brown leather bag - strode poker-faced down the stairs of the courthouse, accompanied by her lawyers, and left. She did not respond to questions shouted at her by reporters. As she came within sight of a crowd in the street, some people began chanting, "We want Martha!" The above is how CNNMoney reported Martha Stewart's exit from court following her conviction on four charges relating to a well timed stock sale. Born in 1941 Martha Stewart is a household name in the US and across the world. Stewart started her career in the investment industry after passing her broker's exam in 1968 and spent 5 years on Wall Street. After this short spell on Wall Street she launched her catering business and her first book 'Entertaining' was published in 1982. Magazine deals, endorsements followed and then in 1993 her own weekly TV show 'Martha Stewart Living' was launched. Her business Martha Stewart Omnimedia was publicly listed on the NYSE in 1999. So how did this modern day 'Mrs Beeton' find herself at the centre of a media circus, a criminal trial and subsequent imprisonment?

The charges against Stewart related to an incident that occurred on 27 December 2001 when Peter Bacanovic, her broker at Merrill Lynch, ordered his assistant to tell Stewart that the ImClone CEO Samuel Waksal, his family and friends were selling shares in advance of a negative ruling by the Food and Drug Administration. Upon receipt of this information Stewart sold her entire holding of nearly 4,000 ImClone shares. The next day the FDA announced its ruling which rejected ImClone's application for a licence for a cancer drug. As a result, ImClone's shares fell by 16% during trading on the day of the incident. Stewart's prescient sale allowed her to avoid a loss of US\$45,000. In June 2002 Samuel Waksal was arrested after it was established that his family and friends and also other company executives had sold over US\$15mio worth of shares prior to the announcement. Waksal would later be sentenced on this and other conspiracy, wire fraud and tax charges to over seven years in jail and more than US\$4mio in fines and back taxes.

With the spotlight on ImClone trading it is no surprise that a review of similarly timed trading was undertaken and Stewart became embroiled in the scandal. Stewart repeatedly denied any wrong doing stating that the stock sale was based on an early price agreement with

her broker. Her position was subsequently weakened after Merrill Lynch suspended Bacanovic on 21 June 2002 after an internal investigation identified conflicting accounts about whether Stewart's sale price agreement with Merrill Lynch existed. In September 2002 a House committee asked the Department Of Justice to launch an investigation into Stewart's alleged insider dealing. This investigation initially forced Stewart to step down from the NYSE board to which she had recently been appointed and later from the board of Martha Stewart Omnimedia. The investigation highlighted sufficient evidence to bring a case against Stewart who was to stand trial in March 2004. Throughout the investigation Stewart continued to deny the allegations and came to trial with a phalanx of lawyers. The prosecution reacted in kind. Because of Stewart's fame the court proceedings became a show trial for the five weeks it ran, with wall to wall TV coverage and acres of column inches devoted to the case. This made it the most talked about corporate fraud cases of that period. This provided the prosecution with the perfect opportunity to demonstrate that they were prepared to bring cases against famous individuals and that no one was above the law because of their fame or connections.

The five week trial ultimately established that both Stewart and Bacanovic were guilty of conspiracy, obstruction of agency proceeding and making false statements to federal investigators in relation to the ImClone investigation. It is important to highlight that Stewart was not tried for insider dealing. If she had admitted when first approached by the Department of Justice/Regulators that she had acted upon the information received from Bacanovic then in all likelihood she would have been able to plea-bargain and probably only faced a fine. However, as she denied the allegation throughout, she was not able to benefit from a bargain and once convicted faced the full consequences of her actions and her earlier efforts to obstruct the investigation.

Her sentence was delivered in July 2004. Stewart was only given the minimum punishment available; she was required to spend five months in prison, a further 5 months under house arrest and to pay a fine of US\$30,000. Although this brought to an end the criminal proceedings against her, Stewart also had to settle the civil insider dealing charges with the SEC. An out of court settlement was reached in August 2006 where Stewart agreed to pay US\$195,000, (US\$58,000 in disgorgement and US\$137,000 in civil penalty). She was also barred from serving as a director of chief executive officer of any public company for five years. Ultimately, the advice Stewart received to sell shares

which initially saved her US\$45,000 ended up costing her far more and included a period of incarceration, disgorgement and fines totalling US\$225,000, extensive legal costs and damage to her reputation, company and brand including lower profits necessitating the loss of staff. Remarkably Stewart has been able to rebuild her company and a quick Google search identifies that her brand goes from strength to strength. Maybe this is as a result of the fact that insider dealing is, by some, still often seen as a victimless crime. Fans have therefore been able to continue to support her in a way they wouldn't have been able to if she had committed what the public might consider a less palatable offence.

Key date: 2002 (US Congressional Committee requested investigation into Stewart's alleged insider dealing)

Philippe Jabre

Mr Philippe Jabre and GLG Partners LP (GLG) were each fined £750,000 for market abuse and breaching UK Regulator's principles. On 11 February 2003 Mr Jabre a former managing director of GLG was 'wall crossed' by Goldman Sachs International as part of the pre-marketing of a new issue of convertible preference shares in Sumitomo Mitsui Financial Group Inc (SMFG). Mr Jabre was given confidential information and agreed to be restricted from dealing SMFG securities until the issue was announced. Mr Jabre breached this restriction by short selling around US\$16mio of SMFG ordinary shares on 12-14 February 2003. When the new issue was announced on 17 February 2003, Mr Jabre made a substantial profit for the GLG Market Neutral Fund. Margaret Cole, FSA Director of Enforcement said: "Mr Jabre traded on information he had received as a result of the position he enjoyed as a leading hedge fund manager. The stability and fair operation of the markets through legitimate pre-marketing activities is jeopardised if those who are wall-crossed do not respect the restrictions imposed on them. "GLG is also responsible for Mr Jabre's market abuse. Firms are accountable for the behaviour of their employees, particularly if they are at a senior level."³⁰

Anthony Elgindy & Others

Elgindy paid an FBI Agent Jeffrey Royer, to log into government databases using his credentials to dig up confidential information that could then be used for financial gain. For instance, if the CEO of a company

had an ongoing criminal investigation against him, Elgindy would short the stock (bet that it would fall) and then disseminate the confidential information which would usually trigger a fall in prices. Elgindy would also inform the companies that he possessed this information, and then try to extort funds from them in exchange for not releasing the info. Eventually the FBI caught on to the scheme and Elgindy ended up receiving 11 years in jail.

Country: US
Key date: 2005 (convicted of insider dealing)

Michael Guttenberg & Others

Michael Guttenberg, an institutional client manager in UBS' equity research department in New York was arrested and sentenced in 2006 to six and a half-years in prison and ordered to pay back US\$15.8mio he made from his involvement in an insider trading scheme involving several hedge funds. Guttenberg had access to potentially price sensitive confidential information due to his membership on the UBS's Equities investment review committee since 2001. As a member of this Committee, Guttenberg regularly had access to stock recommendations by influential UBS analysts before the information was made public. Guttenberg provided this information to two Wall Street traders, for example a 2006 downgrade of Caterpillar Inc., the world's largest maker of bulldozers, and a 2006 upgrade of Goldman Sachs Group to Erik Franklin and David Tavyd, in exchange for a cut in the profits they made from trading on that information.

Erik Franklin and David Tavyd in turn cut more deals and gave tips to others who made money on this information. He also passed hundreds of tips to Tavyd and Franklin. At a meeting at the Oyster Bar in New York's Grand Central Station in 2001, Guttenberg offered to settle a US\$25,000 debt to his friend Franklin, by slipping him analyst ratings in advance. At the time, Franklin was working at Bear Stearns in New York and managing money for Lyford Cay Capital, which invested on behalf of some of Bear Stearns' senior officials. He and his colleague, David Tavyd made more than US\$4mio on inside trades in brokerage accounts they controlled. Three Bear Stearns brokers also traded on Guttenberg's tips. He continued to do this from 2001 to 2006 and was paid hundreds of thousands of dollars, while others who were involved in this insider trading made more than US\$17.5mio. Guttenberg made similar deals with others, including another hedge-fund manager where he routinely provided tips about ratings changes on stocks such as Amgen Corp, Whole Foods Market, and Union Pacific Corp. He tried to cover his tracks by using coded text messages made from disposable cell phones, no use of e-mails, no telephone calls, no trading in his personal account, no wire transfers accepting only cash.

In a separate but connected scheme, Randi Collotta was working as a compliance officer for Morgan

Stanley in New York. Collotta worked with her husband a New York Attorney to leak price sensitive information to her friend Marc Jurman, a broker in Florida, and others for example in 2004 and 2005 information about Johnson & Johnson's failed US\$24.2bio bid for Guidant Corp, UnitedHealth Group Inc's US\$8.2bio acquisition of PacifiCare Health Systems Inc. and ProLogis' US\$5.5bio purchase of Catellus Development Corp were leaked. In addition to Marc Jurman, the information was sold to Wall Street hedge fund traders including Erik Franklin at Bear Stearns. As an active Hedge Fund trader, Franklin thought he could bury these trades in the mass of trading conducted on the exchange and via his 50 to 100 different trades per day. The demand for performance among hedge funds where a percentage point in performance can mean the difference in millions of dollars of additional compensation based on pre agreed performance fees is a clear risk factor.

It appears that the SEC was able to pick up irregular profitable trading patterns in the merger and acquisition of two publicly traded companies, Adobe Systems, and its acquisition of Macromedia in 2005, and ProLogis, and its acquisition of Catellus Development. Once the SEC saw the irregular trading, they then focussed on those trading ahead of publicly available information, then matched these professional investors with other public deals to identify whether similar patters could be identified. Randi and Christopher Collotta was sentenced to four years' probation and three years' probation respectively. None of the Wall Street firms were named in the criminal or civil complaints. Linda Thomsen, the SEC's then enforcement chief, described the trading scandal as "one of the most pervasive Wall Street insider trading cases since the days of Ivan Boesky and Dennis Levine."

Franklin pleaded guilty to two counts of conspiracy, securities fraud and commercial bribery in February 2007. Erik Franklin co-operated with the authorities, ultimately sentenced to 3 years probation. He was also ordered to forfeit US\$2.59mio and to complete 200 hours of community service. Franklin's co-operation led authorities to another trader David Slaine and he in turn pleaded guilty and told the authorities about the activities of Zvi Goffer. Goffer, a former Galleon Group employee, was arrested in November 2009 and accused of leading an insider-trading ring tied to the Raj Rajaratnam investigation. Tavyd by contrast had little to offer the authorities in a plea bargain and was sentenced to 63 months in prison.

Country: US
Key Date: 2006 (arrested and convicted of insider dealing)

Takafumi Horie

In Japan, the case of Livedoor Co, in 2006, was one of the biggest insider trading scandals which engulfed the flamboyant former president of the Internet

company and shareholder activist in legal flames. The case goes back to July 2003 when Yoshiaki Murakami, a former investment manager, and his Murakami Fund emerged as the second-biggest shareholder in Nippon Broadcasting. Mr. Murakami later raised the fund's stake in the radio station to become the largest shareholder – and unbeknownst to him, laid the plot elements for the attempted hostile takeover bid that would come back to bite him three years later. In May 2004, the Tokyo-based Nippon Broadcasting rejected Murakami's overtures to become an outside member of its board. That allegedly then led to collusion between the financier, Murakami and Takafumi Horie, the ex-president of Livedoor. On 15 September, Mr. Murakami allegedly urged Livedoor, an Internet and financial services company, to purchase Nippon Broadcasting shares with the aim to gain control over the Fujisankei Communications Group. On 8 November Mr Murakami reportedly obtained information from Livedoor's top management that the start-up company planned to buy a large amount of shares in Nippon Broadcasting. The following day the Murakami Fund started to purchase additional shares of the radio station. During their subsequent trials, both men said the purchases were a coincidence. Livedoor announced it acquired a 35% stake in the radio station on 8 February and it was believed that the Murakami Fund had sold a slice of its shareholding to the company. On 5 June 2006 the day Mr Murakami was arrested. Prosecutors asserted that the Murakami Fund acquired 1.93 million shares in the radio broadcaster between November 2004 and January 2005, acting on the non-public information from Livedoor that it was trying to grab a 5% stake in the business. The investment fund earned about JPY3bio (US\$25.5mio) by selling about 5 million Nippon Broadcasting shares to Livedoor. Mr Murakami narrowly avoided a prison term. The Tokyo High Court overturned a lower court ruling that sentenced the ex-fund manager to two years in jail, revising it to a suspended term for three years in February 2009. But Mr. Murakami was still forced to pay a JPY3mio fine and a JPY1.15bi in additional penalties. The former Livedoor leader was not as lucky. In March 2007, Mr. Horie, the rebellious internet entrepreneur that favored casual dress over business suits, was convicted and sentenced to two and a half years in jail for his role in a securities fraud.

Country: Japan
Key date: 2006 (arrested and charged with insider dealing in connection with Japan's first hostile takeover bid)

Chen Rongsheng

Chen Rongshen, a chinese businessman who started by cultivating and selling mushrooms, then exporting eel snacks to Japan, became in 1999 the first private company from Xiamen province to list on the Shanghai Stock Exchange changing its name on listing Xiamen Prosolar Technology. Chen controlled the company

indirectly, owning much of the company shares. The company continued to prosper and its shares increased in value, for example Xiamen Prosolar's profits jumped to 110 million yuan in 2007 after the company sold a real estate project subsidiary. Chen, along with company executives then sought advice from a securities firm about a plan to inject assets into Xiamen Prosolar in April 2007. A deal was reached a month later. But this information was only released to the public some time later. In the meantime and during the time Chan had inside information he bought shares in Xiamen Prosolar in the secondary market. Investigators found that, Chen opened a few hundred different broking accounts via various parties with Chen having the ultimate authority. Later, in 2007, Chen successively transferred about 50 million yuan from Dragon Wing and Shanghai Zhen to numerous securities accounts opened by these companies, which then traded in Xiamen Prosolar stock. Astonishingly Chen may have made up to 19 billion yuan in all (US\$3bio) through insider trading in Xiamen Prosolar stock. This was the first insider dealing case in China according to the China Securities Regulatory Commission (CSRC). Chen transferred most of his assets to his 24-year-old son, Chen Guanquan, in 2008. A year later, the young man was on the Hurun List of Richest Chinese men. Chen was arrested and prosecuted and sentenced to two years in prison with a two-year reprieve.

Country: China
Key date: 2007 (China's first insider dealing case, led to Chen's arrest and imprisonment of 2 years)

Chris Littlewood & Others

Chris Littlewood, his wife, and family friend Helmy Omar Sa'aid all pleaded guilty to insider dealing on the London Stock Exchange and AIM listed shares. Littlewood, who earned £350,000 a year working for German investment bank Dresdner Kleinwort Wasserstein with access to inside information.

Littlewood passed information to his wife who then passed this on to family friend Helmy Omar Sa'aid. The FSA investigation began in August 2008 when a standard review of trading patterns ahead of the announcement of a possible takeover of a company revealed that Mr Sa'aid regularly bought a small number of shares in the company in the weeks before the announcement. Further investigation of Mr Sa'aid's trading activities revealed that he had made similar trades before 22 other merger announcements. The FSA checked and learned that one Bank had advised on 15 of those 22 deals, and therefore this was most likely the source of the inside information. The breakthrough in the investigation which tied Mr Sa'aid to Mr Littlewood came when the FSA checked Mr Sa'aid's bank accounts and found that a Ms Siew Yoon Lew paid money from her bank account into the account of

both men. Siew Yoon Lew was the maiden name of Mr Littlewood's wife. Ms Lew was the conduit by which the insider dealing was conducted. Her husband passed information to her which she then made available to Mr Sa'aid, and after the deal had been made payment was facilitated through her bank account.

Littlewood was sentenced to three years and four months in custody, Sa'aid to two years and Mrs Littlewood to twelve months, suspended for two years. Littlewood, 37, spied on colleagues to pass on information so that he and his wife Angie, 39, and her friend Helmy Sa'aid, 34, could make almost £600,000, on investments of £2mio on LSE shares purchased between 2000 - 2008 in what the judge described as "the biggest prosecution for insider trading ever brought".

Country: UK
Key date: 2008 (investigations into insider dealing started by UK FSA)

Nicos Stephanou & Others

On 27 December 2008, when his Cancun-to-London flight stopped at Newark Liberty International Airport, Greek Cypriot, Nicos Stephanou was arrested on insider dealing charges.

Stephanou had joined UBS in 2002 after working in the corporate finance department of Coopers & Lybrand LLP and the mergers and acquisitions group at Credit Suisse. Whilst at Credit Suisse in London, Stephanou became friends with Ramesh Chakrapani who later moved to the Blackstone group. In 2006, Nicos Stephanou was a member of the team at UBS that advised ABS on its response to an approach by a consortium of buyers looking to acquire the company, prior to ABS publicly announcing that this approach would lead to an agreed takeover. Also in 2006, ELK publicly announced that it had agreed to be acquired by The Carlyle Group. ELK hired UBS as its financial advisor. Nicos Stephanou also worked on this deal. In late 2006, NHI publicly announced that it had retained Blackstone as its financial adviser to consider strategic alternatives and had received a buyout offer from its CEO, but stated that the offer was inadequate. Ramesh Chakrapani as an employee of Blackstone had access to material non-public information concerning this announcement by virtue of his membership of the team at Blackstone that advised NHI on strategic choices. Ramesh Chakrapani and Nicos Stephanou each provided inside information they were privy too, to family members and to Joseph Contorinis, a hedge fund trader and personal friend at Jefferies Group. Nicles Stephanou and Ramesh Chakrapani and Joseph Contorinis were charged with insider dealing offences. By virtue of the insider trading, illicit profits of approximately US\$7mio were made by Jeffries' Paragon Fund. In total seven individuals were found to be engaged in the insider trading ring which generated a combined total of over US\$1.6mio in illegal profits. Nicos Stephanou served 19 months in custody after his

arrest but was then freed following his co operation in acting as the star witness in the trial and conviction of Joseph Contorinis who received 6 years imprisonment.

Country: US

Key date: 2008 (arrested on insider dealing charges, later convicted and serving 19 months in prison)

Stanko Grmovsek

Canada's first criminal conviction for illegal insider trading occurred in November 2009 when the Ontario Court of Justice accepted a guilty plea from Stan Grmovsek. His co-defendant to related OSC and SEC civil actions, Gil Cornblum committed suicide on 27 October 2009, a day before he was scheduled to plead guilty. Cornblum and Grmovsek collaborated in a deliberate and prolonged illegal insider trading scheme. Cornblum and Grmovsek, who were classmates at law school, started the illegal insider trading scheme after their graduation in 1994. Cornblum sought and obtained inside information about pending corporate transactions that he passed on to Grmovsek who then executed trades in the securities of the corporations involved in the corporate transactions for a profit that they split between them. During the time of the illegal insider trading, Grmovsek worked at a number of law firms in New York and Toronto. Cornblum received some of the inside information in his role as counsel to certain issuers on pending corporate transactions and through conversations with colleagues or other counsel. Cornblum would also use the night secretarial staff's temporary passwords to search for confidential information in the computer databases at the law firms that he worked for. He also conducted early morning searches through the hallways, photocopy rooms, fax machines and files of his colleagues at the firms for documents that contained confidential information about pending transactions that he was not involved in. The illegal insider trading scheme spanned a 14 year period from 1994 to 2008 and in total, Cornblum tipped Grmovsek and Grmovsek traded while in possession of inside information about 46 corporate transactions involving securities that were publicly listed in Canada and the US. In Canada, Grmovsek was charged with three offences: (i) fraud (for trades executed before the new Criminal Code insider trading provisions), (ii) illegal insider trading contrary to the Criminal Code and, (iii) money laundering contrary to the Criminal Code. In January 2010, Grmovsek was sentenced to 39 months imprisonment on the joint recommendation of the prosecution and the defence. In the US, the SEC alleged that Grmovsek violated the anti-fraud provisions, including prohibitions against insider trading. Grmovsek pleaded guilty and was convicted of one count of conspiracy to defraud. He was sentenced to a term of imprisonment of time served. In addition to the jail terms, Grmovsek agreed to disgorge orders to the SEC total of US\$8.5mio with a waiver of all but nearly US\$1.5mio and to the OSC a total of US\$1.03mio.

Country: US, Canada

Key date: 2009 (Canada's first conviction for insider dealing)

Mehmet Sepil

Mehmet Sepil, the chief executive officer of Genel Enerji, a Turkish oil exploration company, was fined £967,005 for dealing in the shares of UK listed Heritage Oil Plc (Heritage) on the basis of inside information. This was the largest fine by the FSA against an individual for market abuse. Genel Enerji's chief commercial officer, Murat Ozgul and Levent Akca, its exploration manager, were also fined £105,240 and £94,062 respectively for dealing in Heritage's shares on the basis of inside information. All three fines include the disgorgement of profits that Sepil, Ozgul and Akca made of £267,005, £35,240 and £10,062 respectively.

On 31 March 2009 Genel Enerji entered into a joint venture with Heritage regarding the exploration of the Miran oil field in Kurdistan. All three executives were actively involved in the joint venture project. As a result of the joint venture, Genel Enerji received detailed daily reports from Heritage of the drilling tests at Miran from 17 April 2009 until 3 May 2009 when the testing concluded. While it was publicly known that Heritage was testing at Miran, the progress and results of the tests were confidential and highly sensitive. On 4 May 2009, Sepil, Ozgul and Akca flew to London together to attend a series of meetings. They also discussed the positive test results. The next day, they all contacted their brokers and purchased shares in Heritage. On 6 May 2009, Heritage announced the results of the Miran testing as a "Major Oil Discovery" with oil-in-place of between 2.3 to 4.2 billion barrels. Following the announcement, Heritage's share price increased by approximately 25%. On the day of the announcement, Sepil, Ozgul and Akca sold all their Heritage shares at a profit. Three months after the trading Sepil, Ozgul and Akca voluntarily contacted the FSA expressing remorse and made certain admissions concerning the basis for their trading.

Country: UK
Key date: 2009 (FSA start proceedings for insider trading after voluntary admissions made)

Special Focus 17 **Raj Rajaratnam**

Raj Rajaratnam, a well connected US based fund manager was convicted in 2011 on 14 counts of securities fraud by earning over US\$60mio trading stocks in companies

including Hilton, Google, Intel and others, based on material, non-public information obtained through an impressive expert network, company employees and other hedge funder managers. The case was described by US Prosecutors as the largest hedge fund insider trading case in US history.

Well before the conviction and based on the allegations against RR, Galleon received requests from investors for the withdrawal of US\$1.3bio, causing the fund to close down. Investors received all of their money back in January 2010, plus profits.

RR started his career as a lending officer at the Chase Manhattan Bank where he made loans to high-tech companies. He joined the investment banking boutique Needham & Co. as an analyst in 1985, where his focus was on the electronics industry. He became the head of research in 1987 and the president in 1991, at the age of 34. At the company's behest, he started a hedge fund — the Needham Emerging Growth Partnership — in March 1992, which he later bought and renamed 'Galleon'. His hedge fund was valued at US\$3.7bio in 2009, down from a peak of US\$7bio in 2008. RR made no secret that his best ideas come from frequent visits with companies and conversations with executives. RR profited from information received from Robert Moffat, an IBM executive, Rajiv Goel, an Intel Capital executive, and Anil Kumar, a McKinsey & Company executive. It was reported that Rajaratnam, Goel and Kumar were all graduates of the Wharton Business School, class of 1983.

Raj Rajaratnam liked to tell people that his first name meant "king" in Hindi, and, coupled with his last name, that made him "king of kings."

Galleon brought RR great wealth. Forbes magazine considered his net worth at US\$1.3bio. He owns homes in the wealthy suburb of Greenwich, Conn., and a condominium at the Setai Hotel in Miami Beach. During the trial, Mr. Rajaratnam's former friends told the jury about lavish vacations including, for his 50th birthday, chartering a private jet to fly dozens of family and friends for a safari in Kenya.

RR maintained that his activity did not amount to insider dealing but was merely a type of research known as mosaic, in which Galleon had a dogged approach to information gathering that once pieced together would form a "mosaic" — a complete picture of a company's prospects that gave it an investment edge over other investors

Mr. Rajaratnam's lawyers argued that all of his supposed

illegal trading was grounded in publicly available newspaper articles, analyst reports and company news releases. For instance, the defence presented evidence showing that before Advanced Micro Devices acquired ATI Technologies, 51 news articles and 6 analyst reports speculated on the likelihood of a merger between the two companies.

Prosecutors accepted that Galleon performed legitimate research, however, they argued, the firm and RR at its head routinely violated traded on the basis of inside tips, including in the AMD case and this gave Galleon and RR an illegal advantage and was a major factor in the trading decision. In the words of a former Galleon portfolio manager who testified during the trial, the firm did its homework, but also cheated on the test.

RR was eventually caught through the tenacity and professionalism of SEC investigator, Andrew Michaelson, who whilst reviewing voluntary disclosures by Galleon, in connection with an earlier enquiry into RR's brother Rengan Rajaratnam, who noticed certain incriminating e mails and instant messages between Rengan and his brother Raj in 2006, which led investigators to suspect trading on the basis of inside tips, based on the Rajaratnans offering incentives. The idea to wiretap those involved and so to deploy investigatory techniques normally reserved for organised crime investigations was a new development in insider dealing investigations where evidence connecting the trades with intent and those with inside information had previously been difficult to establish by traditional means.

Case Example 1

From 2003 to March 2009, RR repeatedly traded in stocks after receiving material, non-public information relating to numerous corporate events for example, upcoming earnings forecasts, mergers, acquisitions, and other business combinations ("Inside Information"). The Inside Information was given as tips by insiders and others at hedge funds, public companies, and investor relations firms—including Goldman Sachs, Intel, International Business Machines Corporation ("IBM"), McKinsey & Company ("McKinsey"), Moody's Investor Services, Inc., Market Street Partners, Akamai Technologies, Inc. ("Akamai"), and Polycom, Inc. ("Polycom"). The evidence at trial included, among other things, recordings of wiretapped phone calls between RR and others including Anil Kumar, a senior partner and director at McKinsey; Rajiv Goel, an employee of Intel; Adam Smith, a portfolio manager and analyst at Galleon; and Danielle Chiesi, an employee of the hedge fund New Castle Partners, all of whom pleaded guilty to insider trading charges.

In one case RR conspired to get confidential information on the US\$bio purchase by Warren Buffett's Berkshire Hathaway of Goldman preferred stock before the September 2008 announcement of that transaction during the height of the Financial crises. A former member of the board of directors of Goldman Sachs and former McKinsey & Company chief executive, Rajat Gupta told Rajaratnam about Berkshire's investment before it became public. Gupta stood to profit as would-be chairman of Galleon International. In March 2011, Gupta was charged in an administrative proceeding by the SEC.

Case Example 2

Anil Kumar former McKinsey & Co partner admitted that he leaked secrets about the elite consulting firm's clients in exchange for US\$1.75mio in hidden payments from RR, including a secret US\$1mio payment for a tip that earned US\$20mio in 2006.

Kumar said the Galleon hedge fund founder told him: "You work very, very hard. You are underpaid. People are making fortunes ... so just keep track of your knowledge and share it with me." Kumar said he tipped RR on deals involving McKinsey clients including chipmaker Advanced Micro Devices, for example, "I told him there were advanced discussions both with Dell and Hewlett Packard," with RR replying "that was very useful information." AMD ultimately announced a pilot programme with Hewlett Packard in February 2004 worth US\$400mio to the chipmaker.

Kumar also described how RR mixed business with pleasure. While the pair sat on deck chairs at the beach outside RR's Miami condo in 2009, he said that RR took a phone call on the beach with a tip that Cisco would be buying another company, information Kumar also traded on using his laptop.

This was the first insider-trading prosecution to use methods that had been mainly reserved for organised-crime, drug and terrorism cases. Some jurors said the wiretaps of RR were the deciding factor. The secretly recorded phone calls between Raj Rajaratnam and his friends and co-workers formed the heart of the government's insider trading case. The government played more than 40 wiretapped phone conversations between Mr. Rajaratnam and his accomplices during the trial and replayed several tapes during the first two hours of closing. Whilst initial concerns about admissibility proved to be confounded, the judge finding in favor of the prosecution, the wiretap evidence, proved fatal for RR. The calls, combined with the testimony of cooperators showed how Rajaratnam cultivated

friendships with cash, trading advice and family vacations in order to obtain inside tips.

The tactics used by the US government in building the case against RR may have significant implications for how at least the hedge fund industry manages its compliance and business practices and concern since has been raised that subsequently investment ideas and trading decisions should be supported with detailed paper trails, and surveillance of electronic communications, from phone calls to emails to text messages, and contacts with insiders would be avoided or controlled which would likely affect the way investment decisions were carried out by the generally secretive hedge fund industry.

Penalty: 11 years sentence, being the longest ever for insider dealing

Actions: systematic insider trading via insider ring

Country: US

Key date: 2009 (arrested and charged with insider dealing)

Malcolm Calvert

Malcolm Calvert, a former equities marketmaker at stock broker Cazenove, was sentenced to 21 months in prison for insider dealing after making £103,883 profit from trades that took place between June 2003 and October 2004. The prosecution is also notable for the involvement of a key witness, Bertie Hatcher, a friend of Calvert, who agreed to provide evidence in the trial having been involved in the illicit dealings himself.

Margaret Cole, director of enforcement and financial crime at the FSA at the time, said: "This is another milestone in our fight against market abuse. It's a misconception that insider dealing is a victimless crime: it damages the very confidence and trust our markets operate on and it must be stopped. "The guilty verdict is a shot across the bow for any city workers who may be tempted to trade using insider knowledge. Our message is simple: if you take part in such activity, you run a very real risk of the FSA taking criminal action against you." The FSA also fined Hatcher, a retired bookmaker and insurance broker £56,098 for market abuse. The FSA found that between 2003 and 2005 Hatcher had profited from inside information, using it to buy and sell about 420,000 shares in six companies. The fine represents the full disgorgement of his share of the net profit from these trades. As part of a settlement with the FSA, Hatcher agreed to provide ongoing assistance to the investigation. In return, the FSA agreed to sanction Hatcher using its regulatory powers rather than a criminal prosecution; Hatcher's fine was also reduced substantially owing to his cooperation. Ms Cole continued: "Hatcher took part in illicit trades using inside information and profited from them, because of this he has received a significant fine. However we were also mindful of the need to encourage others to come

forward and assist in the investigation and prosecution of insider dealing and market abuse, especially where it is suspected that two or more people have been involved and that is why we made an agreement with him.

"Hatcher provided valuable evidence to the FSA, not just about his own misconduct, but also in relation to Calvert.

Country: UK

Key date: 2010 (found guilty of insider dealing in UK, sentenced to 21 months in prison)

Oswyn Indra de Silva

Mr Oswyn Indra de Silva, 37, a resident of Kuala Lumpur, Malaysia, was sentenced in 2010 by the Supreme Court of New South Wales in Australia to two years and six months imprisonment on a charge for insider trading. Mr de Silva pleaded guilty to 12 separate sets of transactions undertaken while he was employed by Macquarie Bank as a fund manager. Mr de Silva was convicted of insider trading for trading in equities and contracts for difference (CFD) products on the Singapore Securities Exchange (SGX) while in possession of information about Macquarie's trading intentions. Mr de Silva admitted purchasing securities in particular stocks, and establishing positions in particular stocks, through his personal trading account at Phillip Securities Pte Ltd prior to Macquarie trading in the same stocks on SGX. Mr de Silva was then able to dispose of his securities and exit his CFD positions and profit from the effect of Macquarie's trading in the underlying stock. This conduct is often described as 'front-running'. The trades were made by Mr de Silva between December 2006 and April 2007 and resulted in a total gross profit of approximately AUD\$1.41 million.

Country: Australia

Key date: 2010 (found guilty of front running in Australia)

John Hartman

In December 2010 John Hartman was sentenced to four and a half years imprisonment, with a minimum term of three years on 25 insider trading related charges brought by the Australian Securities and Investments Commission. In April, Hartman pleaded guilty to all charges which were committed while he was employed by Orion Asset Management Limited (Orion) as its equities dealer. Hartman was convicted of 19 counts of insider trading for trading in contracts for difference (CFD) products while in possession of information about Orion's trading intentions. Hartman admitted to establishing positions in particular stocks through his CFD account at IG Markets prior to Orion trading in the same stocks on the open market. Hartman was then able to exit his CFD positions and profit from the effect of Orion's trading on the underlying stock price. This conduct is often described as 'front-running'. The trades were made by Hartman between July 2008 and January 2009 and resulted in a total

gross profit of approximately US\$1.59mio. Hartman was also convicted of 6 counts of communicating inside information about Orion's trading intentions to an alleged associate between March 2006 and June 2008. In December 2009, Hartman consented to the forfeiture of approximately US\$1.57mio to the Commonwealth under the Proceeds of Crime Act 2002. This amount was formerly the credit of Hartman's account with IG Markets which they were holding as stakeholder.

Key date: 2010 (sentenced to 4.5 years in prison for insider dealing in Australia)

Winifred Jiau & Others

Winifred Jiau, a former consultant with expert networking firm Primary Global Research LLC, was convicted of conspiracy and securities fraud in Manhattan federal court for passing earnings and other information about Nvidia Corp in 2011 (NVDA) and Marvell Technology Group Ltd (MRVL) to hedge fund managers Noah Freeman, a former SAC Capital Advisors LP portfolio manager, and Samir Barai, founder of New York-based Barai Capital Management LP.³¹ Jiau argued at trial that the data she passed wasn't "material," meaning it wasn't something a reasonable investor would consider important for trading a stock and it wouldn't have a bearing on the stock price, but this wasn't accepted by the Jury. Primary Global, based in Mountain View, California, links investors with industry experts at public companies. "Wini Jiau gave new meaning to the concept of social networking," US Attorney Preet Bharara in Manhattan said in a statement. "She used and exploited friends at public companies for the purpose of obtaining, and then selling, inside information." With Jiau's conviction, "another link in a corrupt network has been broken," Bharara said. Three other former Primary Global employees, Daniel DeVore, Don Ching Trang Chu and Bob Nguyen have pleaded guilty in the case. At trial, it was argued that Barai had at least a dozen other people at publicly traded companies who provided him with inside information. Assistant Manhattan US Attorneys Avi Weitzman and David Leibowitz called three co-operators who pleaded guilty to insider-trading charges to describe the scheme, including Freeman. He testified he and Barai paid Jiau US\$10,000 for her insider's tips about the two, California-based chipmakers. Jiau said in e-mails to fund managers that she needed US\$2,000 per source for tips. Jurors also heard several recordings of Jiau's conversations, some of which used codes. Company insiders were "cooks," money was "sugar" and inside information was "recipes," he said. "Cooks are on strike now," Jiau wrote in a 3 June 2008, e-mail. "So drop some of your extra sugar to me," she wrote. "Cooks don't talk to me without sugar." Ex-SAC portfolio manager Noah Freeman, who pleaded guilty to securities fraud, testified at Jiau's trial that he made millions of dollars on illegal inside information using expert networking firms, which he likened to online

dating service Match.com. He said Jiau passed him "perfect information" about Nvidia and Marvell for at least eight quarters, and that he made US\$5mio to US\$10mio on Nvidia and "broke even" on Marvell.

Key date: 2011 (convicted and sentenced to 4 years in prison for insider dealing in US)

Joseph Skowron

Skowron is an Ivy League-educated doctor who left a Harvard University residency programme to become a stock picker on Wall Street. Skowron worked for several prominent hedge funds, before he became the manager of FrontPoint Partners' healthcare funds. FrontPoint was a spinoff from Morgan Stanley. Skowron violated trading restrictions imposed by FrontPoint, in attempting to avoid a loss from adverse hepatitis drug trials conducted at Human Genome Sciences, Inc., a company Skowron's hedge fund invested in. According to the US Attorney's allegations, FrontPoint avoided US\$30mio in losses by selling their Human Genome holdings prior to Human Genome's public announcement of problems with its Hepatitis C drug treatment on 23 January 2008. FrontPoint Partners has not been accused of any wrongdoing, but agreed to pay to a US\$33mio settlement to the Securities and Exchange Commission (SEC), without any admission of guilt. FrontPoint paid US\$900,000 to a firm named Guidepoint Global to gain access to that company's network of experts and consultants. Guidepoint Global is in the business of matching hedge funds with industry analysts. In this case, Dr Yves Benhamou, a 51 year old Parisian infectious disease expert, a consultant to both a biotech firm and the expert networking firm (Guidepoint Global), was paired with Skowron and FrontPoint. According to prosecutor's allegations, Skowron, in violation of FrontPoint ethics rules, made a side deal with Dr Benhamou beginning in 2007. Dr Benhamou, the network expert, allegedly provided insider trading tips to Skowron about Human Genome Sciences, Inc.

The facts and allegations brought forward by the SEC read like an international spy novel to seal their secret arrangement Skowron met Dr Benhamou at a hotel in Barcelona in April 2007 and gave him an envelope with over US\$7,000 in cash. A few months later, Skowron paid for a lavish stay at a New York hotel for Dr Benhamou and his wife. Finally, after getting tipped off about Human Genome, Skowron and Dr Benhamou met in a Milan hotel bar, where Skowron passed an envelope filled with at least \$10,000 in cash to Dr Benhamou in April 2008. Dr Benhamou has since pled guilty to securities fraud charges, conspiracy charges, and for making false statements to FBI agents. Dr Benhamou is co-operating with federal investigators and prosecutors according to the terms of his plea agreement. It is clear that the SEC and federal investigators are paying more attention to relationships between hedge funds and expert network firms, and their temptation to engage in insider trading.

"Prosecutors say expert network relationships are not inherently wrong but that some consultants have crossed the line by taking fees to leak corporate secrets to hedge fund traders and analysts."

Country: US

Key date: 2011 (insider dealing convictions, sentence of 5 years in prison in US)

US Congress

A May 2011 study by Dr. Alan Ziobrowski et al found that members of the US House of Representatives outperform the overall stock market by about 6% annually. The study measured abnormal returns for stock trades made by House delegates from 1985 to 2001 and concluded, "We find strong evidence that Members of the House have some type of non-public information which they use for personal gain." It was a follow up to Dr. Ziobrowski's 2004 Georgia State University study showing that members of the US Senate outperformed the overall stock market by 12%. The Stop Trading on Congressional Knowledge (STOCK) Act first introduced in 2006 was intended to prohibit members of Congress and federal employees from trading stocks based on non-public information obtained on the job, and it would require greater oversight of the growing "political intelligence" industry. The US Senate and the US Supreme Court are the only two out of 975 federal entities that appear to have no rules and no laws prohibiting them from trading stocks based on non-public information they gain on the job. While the US House of Representatives Ethics Manual states that its members should "never use any information coming to him confidentially in the performance of governmental duties as a means for making private profit," it was until recently still legal to do so. On 13 November 2011, CBS' 60 Minutes reported that several members of Congress allegedly used insider information for personal gain. This provided the necessary impetus for Congress finally to act and the STOCK Act came into force in 2012.

Country: US

Key date: 2011 (Published Research indicates members of the US House of Representatives regularly outperformed the stock market in connection with personal investments)

David Einhorn & Others

David Einhorn, the owner of Hedge Fund, Greenlight Capital, whose short selling famously helped to bring down Lehman Brothers bank, was fined £7.2m for insider dealing by the UK Financial Services Authority in 2012. The FSA also fined Alexander Ten-Holter, a trader and former compliance officer at Greenlight Capital, £130,000 for "failing to question and make reasonable enquiries" before selling Greenlight's shareholding in Punch ahead of its fundraising in June 2009, and banned him from holding a compliance job in the future. The FSA has also fined Caspar Agnew, a

trading desk director at JP Morgan Cazenove, £65,000 for "failing to identify and act on a suspicious order from Greenlight to sell Punch shares that allowed the firm to be used to facilitate insider dealing or market abuse". As a result of his failings, the bank failed to identify the trade as suspicious and report it to the FSA. Tracey McDermott, the FSA's then acting director of enforcement and financial crime, said of the Compliance Officer: "Ten-Holter's approach to compliance oversight was wholly inadequate. Serious compliance failures of this nature can have a dramatic effect on the orderliness and integrity of the markets. Agnew was an experienced trader, so should have been suspicious of this transaction and aware of his responsibilities to report it. "Tackling market abuse and insider dealing is not just an issue for the regulator. Compliance professionals and staff on sales and trading desks play a key role in assisting the FSA in detecting and preventing market abuse. Approved persons should be in no doubt as to their responsibilities in this area and the FSA will not hesitate to take tough action where they fall down on these." The FSA said Ten-Holter received an order to sell Greenlight's entire shareholding in Punch on 9 June 2009, despite being made aware that Greenlight had spoken to Punch management a matter of minutes before its decision to sell. The Greenlight analyst who gave the sell-order told Ten-Holter that Punch management would have told them "secret bad things" had they signed a confidentiality agreement and the analyst thought that Greenlight had potentially a window of a week before the stock "plummets". This should have alerted Ten-Holter to the risk that Greenlight may have been in receipt of inside information, the FSA said. On 15 June 2009, Punch announced a fundraising of £375mio, sending its share price down by 29.9%. Greenlight's trading avoided losses of about £5.8mio for the funds under its management, the FSA said. Turning to Agnew, the FSA said his misconduct related to his dealings with Greenlight between 9 and 12 June 2009 when he was instructed by Ten-Holter to sell 11.4m Punch shares, which constituted over 4% of its issued share capital. This represented about 68% of all trading in Punch shares over that period.

Key date: 2012 (fined for insider dealing in the UK)

SAC Capital

US hedge fund SAC Capital Group agreed in March 2013 to pay US\$602mio and US\$14mio to settle 2 SEC charges that it participated in an insider trading scheme and in November 2013 agreed a further settlement of US\$1.2bio. For more details see Part 2, Section 8 SAC Capital below.

Country: US

Key date: 2013 (settled insider dealing claims by paying US\$614mio)

Kidnappers/Robbers/ Extortioners/Forgers

Elmyr de Hory

Elmyr de Hory, a Hungarian, received his art education at Academys in both Munich and Paris, unsuccessfully attempting to make a living as an artist. His career in forgery began with one painting in the style of Picasso that a friend thought was authentic. As a forger, de Hory was distinct for two reasons. The first was his immense talent. Not only could his forgeries fool experts around the world, but he was able to forge paintings by many different artists in many different styles. He faked paintings by Pablo Picasso, Henri Matisse, Amadeo Modigliani, Pierre-Auguste Renoir, Edgar Degas, Alfred Sisley, Claude Monet, and Henri de Toulouse-Lautrec, among others. Secondly, he never copied existing works by the famous artists, but instead painted originals in the style of the artists, which made identifying forgeries more difficult. De Hory claimed he never signed any of the paintings with the name of another artist, and as such denied being a forger, though it's possible that dealers signed the famous names to de Hory's paintings. While de Hory was never convicted of forgery, he still spent a significant amount of time imprisoned, in a colorful life, in a Transylvanian prison for political dissidence, then in a German concentration camp suspected as both a Jew and a homosexual, in Mexico City, where he was jailed on suspicion of murder, and finally in Spain for homosexuality and consorting with criminals. In 1976, de Hory committed suicide, after being informed that Spain had agreed to hand him over to French authorities so he could stand trial on fraud charges. He overdosed on sleeping pills and died like many great artists, penniless. After his death, his paintings (forgeries and originals) became so popular that forged de Horys appeared on the market.

Country: Hungary and elsewhere

Key date: 1976 (committed suicide after being informed that Spain had agreed to hand him over to French authorities so he could stand trial on fraud/ forgery charges).

Gerd Heidemann

Perhaps the most famous forgery to be uncovered in recent times, at least in the 20th Century, concerned a journalist and an experienced forger who almost got away with their crime. Together they would attempt to pass off forged diaries of Adolf Hitler as genuine diaries. The set of documents, contained 62 notebooks "handwritten" as diaries as well as an unpublished third volume of Mein Kampf. The "documents" portrayed

Hitler indifferent to the Jews and largely unaware of any "final solution" of the Jewish people. The crime started in 1981 when the editor of Germany's Stern magazine agreed to buy 27 volumes of what he was assured was Hitler's personal diary, via a staff journalist, Gerd Heidemann, who was secretive about his source, but who advised that he could secure the rights to the diaries for approx US\$2 million. The source was actually an experienced forger, Konrad Kujau who made a living by faking Nazi memorabilia. The journalist, and the forger initially benefited considerably from suitcases of cash given by the editor in order to obtain the diaries. The German magazine were not the only ones to be taken in by the forgeries, as the British Sunday Times also bought the rights and began serialising the diaries in 1983, along with Paris Match and America's Newsweek. In both cases the publications had been examined by experts in both hand writing and history. Nevertheless many were not convinced and the West German police subjected the diaries to a full-scale forensic analysis. Instead of checking the handwriting, the police studied paper and ink. This revealed that the documents were written on paper containing a whitening agent called blankophor, which came into use after 1954. Threads attached to the seals were made of viscose and polyester, artificial fabrics that were not used in Hitler's time. Chromatography identified four different ink types in the diaries. None of these had apparently been available when Hitler was alive. Further ink analysis - measuring the slow evaporation of chloride from the ink - suggested that the writing was less than a year old! Both journalist and forger were imprisoned and each sentenced to four and a half years in prison.

Country: Germany, UK

Key date: 1983 (so called Hitler diaries shown to be forgeries)

Glico-Morinaga

In the 1980's in Japan, a group known as "The Monster with 21 Faces" captured the Japanese public's imagination and many commentators refer to this incident as a turning point in Japanese society, in which the image of a crime-free and safe Japan was dispelled. The Monster with 21 Faces tried to extort 2 Japanese industrial confectioneries Ezaki Glico and Morinaga, over a period of 17 months which started with the initial kidnapping of the President of Glico. In 1984, two masked men wearing caps and armed with a pistol and rifle broke into the home of Katsuhisa Ezaki, the President of Glico. Prior to entering Ezaki's house, the two men had first forced their way into the neighboring home of Ezaki's mother, bound her and took the key to the President's house. Using the key to enter the main house, they then tied up Ezaki's wife and

daughter. Believing the two men were ordinary robbers, Ezaki's wife attempted to negotiate with them for their freedom in exchange for money, but this didn't work. The two men then cut the telephone lines and stormed the bathroom, where Ezaki and his other two children were hiding. Ezaki panicked and cried for help, but was threatened that he would be killed unless he calmed down. The two men abducted Ezaki and held him captive in a warehouse. The next morning, they called the director of the company in Takatsuki city and issued a ransom demand for 1 billion yen and 100 kilograms in gold bullion. However, three days later, Ezaki managed to escape from the warehouse in Osaka.

The kidnapping itself was a crime that was unknown in post-war Japan and shocked Japanese society. The extortion attempts against Glico did not end with the escape of Ezaki. Soon afterwards, vehicles in the parking lot of the Ezaki Glico headquarters were set on fire. Then followed letters from the group calling itself "The Monster with 21 Faces" claiming that they had laced their candies with a potassium cyanide soda. When Glico pulled its products off the shelves at great expense, the "Monster with 21 Faces" threatened to place the tampered products in stores.

The Monster with 21 Faces regularly taunted the police and issued ultimatums to the Media. Eventually, the "Monster" stopped contacting Glico, issuing a letter saying "We Forgive Glico!". However, the "Monster" then turned its extortion campaign on Morinaga and the food companies Marudai Ham and House Foods Corporation. Probably due to the pressure placed on the Police, constantly taunted by the Monster and due to a lack of success to identify and bring them to justice, the local Police Chief, Superintendent Yamamoto killed himself by self-immolation. Five days after the death of Yamamoto, the "Monster with 21 Faces" sent its last message to the media, including the following statement, "No-career Yamamoto died like a man. So we decided to give our condolence. We decided to forget about torturing food-making companies. If anyone blackmails any of the food-making companies, it's not us but someone copying us. We are bad guys. That means we've got more to do other than bullying companies. It's fun to lead a bad man's life. Monster with 21 Faces." Following this message, the Monster with 21 Faces disappeared.

Whilst the case remains officially unsolved, The Tokyo Metropolitan Police suspected that various Yakuza groups had a hand in the Glico-Morinaga case. The end of the blackmail campaign occurred around the time of the Yama-ichi war, the war between the Yamaguchi-gumi and the Ichiba-kai. In addition, Japanese National

Public Safety Commission investigated extreme left-wing and right-wing groups as possible suspects. In 2000, there were rumors in the Japanese media of North Korean involvement in the Glico-Morinaga case.

Country: Japan

Key date: 1984 (Japanese Company President Kidnapped starting a campaign of extortion against confectionary companies in Japan)

Special Focus 18 Northern Bank / IRA

The robbery, one of the largest ever in the UK was of cash and from The Northern Bank headquarters in Belfast, Northern Ireland, believed by the Police and the British and Irish Governments as being the work of the Irish Republican Army (IRA). The claims of IRA involvement are based on the timing, the complexity and organisational professionalism employed but no IRA involvement has been proved and apart from one conviction for laundering some of the stolen cash none of the robbers have been brought to justice. The IRA and their political wing have denied involvement.

The haul included £10mio of uncirculated Northern Bank sterling banknotes, £5.5mio of used Northern Bank sterling notes, £4.5mio of circulated sterling notes issued by other banks, and small amounts of other currencies, largely Euros and US Dollars

Interviewed after the raid, several experts said that taking the Northern Bank notes was foolish, as apart from some tourist destinations, they were essentially useless outside of Northern Ireland and Scotland, and that anyone attempting to pass them in Northern Ireland would quickly arouse suspicion. Following the raid, Northern Bank announced that it would recall all £300mio worth of its banknotes in denominations of £10 or more, and reissue them in different colours with a new logo and new serial numbers. The first of these new notes entered circulation on 11 March 2005.

The operation itself involved the use of the technique known as "Tiger Kidnapping."

On the night of Sunday 19 December 2004 groups of armed men arrived at the homes of two bank officials of the Northern Bank. The gangs identified themselves as Northern Irish police officers and once inside the homes

held the officials and their families at gunpoint. The following day both officials were instructed to report for work at the bank's head office as normal but with specific instructions to assist the gang in carrying out the raid, not to inform anyone else otherwise harm would come to their families. The Bank Officials remained in the office after work, and later in the evening they gave entry to members of the gang. Who then made their way to the bank's cash handling and storage facility. This held an unusually large amount of cash in preparation for distribution to automated teller machines for the busy Christmas shopping season. Cash was transferred to vehicles parked outside in the Street. The gang then fled and later that evening the families were released unharmed.

Whilst some of the monies stolen have since been recovered the bulk of the money remains missing, for example assumed to be a decoy, £50,000 unused Northern Bank notes were found in five packages at a Police Social Club. Only one conviction has been secured in the case though a number of prosecutions were brought. Ted Cunningham an independent Irish Financial Adviser operating via Chesterton Finance a money lending and investment firm and his son Timothy was found guilty in a County Cork courthouse of attempted money laundering. Irish police searching the basement at the Cunningham family home in 2005 found six holdalls and one plastic bag stuffed with cash, £2.3mio to be exact and identified as being from the Northern Bank raid. The authorities believed that Cunningham was given £5mio in 2004 and whilst he looked like a respectable financier, he led a double life as a money launderer for the IRA.

Penalty: found guilty of money laundering
Actions: bank robbery using tiger kidnap technique
Country: Northern Ireland
Key date: 2004 (date of robbery)

Special Focus 19

Ingrid Betancourt

Ingrid Betancourt a Colombian politician, former senator and anti-corruption activist, and Presidential candidate was kidnapped by the Revolutionary Armed Forces of Colombia (FARC) on 23 February 2002 and was rescued by Colombian security forces six and a half years later

on 2 July 2008. The rescue operation, dubbed Operation Jaque, rescued Betancourt along with 14 other hostages (three Americans and eleven Colombian

policemen and soldiers). In all, she was held captive for 2,321 days after being taken while campaigning for the Colombian presidency as a Green. She had decided to campaign in the former demilitarised zone, after the military operation "Tatatos" was launched, and after the zone was declared free of guerrillas by the government. Her kidnapping received worldwide coverage, particularly in France, because of her dual French-Colombian citizenship.

She has received multiple international awards, such as the Légion d'honneur. She was also nominated to the Nobel Peace Prize in 2008.

Most candidates for political office in Colombia in and around 2002 and particularly Presidential hopefuls visited the former DMZ. When Betancourt announced her trip, the government initially confirmed that a security escort would accompany her and she would be transported in a military helicopter, however this offer was soon retracted, and at the same time her body guards received the order to cancel their mission. Not dissuaded, she headed into the DMZ via ground transport, together with Clara Rojas, her campaign manager who was later named running-mate for the 2002 election, and a handful of political aides. According to her kidnapper, the later captured Nolberto Uni Vega, Betancourt ended up at a FARC checkpoint where she was kidnapped. Her kidnap was never planned beforehand, said the rebel. Ingrid still appeared on the ballot for the presidential elections; her husband promised to continue her campaign. She achieved less than 1% of the votes. Alfonso Uribe became President.

A day after Betancourt's kidnapping several non-governmental organisations were organised in the EU and around the world to establish an association or committee for the liberation of Ingrid Betancourt. The committee initially consisted of some 280 activists in 39 countries.

In July 2003 an operation to try to liberate Betancourt was launched but it failed. Whilst negotiated attempts to free Betancourt were regularly explored including exchange of prisoner offers no final agreement could be reached, with failure to reach a deal being blamed by one party each against the other.

In May 2007, a captured Colombian National Police officer John Frank Pinchao managed to escape from FARC captivity, claiming that Betancourt was being held in the same prison camp he had been in. On 18 May, President Alvaro Uribe reiterated his orders for the rescue by military means of Ingrid and other political figures.

Shortly after taking office in mid-May, French President Nicolas Sarkozy asked Uribe to release FARC's "chancellor" Rodrigo Granda in exchange for Betancourt.

On 4 June 2007 incarcerated members from the FARC

were liberated as a goodwill gesture by the government to pursue the liberation of Betancourt and others. However this did not result in her freedom.

With increasing concerns reported over her deteriorating health it was announced on 2 July 2008, that Betancourt and 14 others had been freed by Colombian national forces.

The operation that won their release, codenamed "Jaque" (Spanish for "check" as in checkmate), involved members of the Colombian military intelligence who infiltrated local FARC squads and the secretariat of FARC. The FARC members in charge of the hostages were persuaded to accept a request from headquarters to gather the hostages together, supposedly to be flown to FARC chief Alfonso Cano. Instead, they were flown by government personnel dressed as FARC members to a safe government location.

President Uribe stated that the rescue operation "was guided in every way by the light of the Holy Spirit, the protection of our Lord and the Virgin Mary." The hostages indicated that they had spent much time in captivity praying the rosary, and Betancourt, formerly a lapsed Catholic who prayed daily on a wooden rosary which she made while a hostage, stated "I am convinced this is a miracle."³²

On 21 July 2008, Betancourt and her family made a pilgrimage to Lourdes to give thanks and to pray for her captors and those who remained hostage.

In August 2008, Betancourt and her family were received by Pope Benedict XVI in a brief audience. The liberated Betancourt thanked the Colombian armed forces and President Álvaro Uribe and gave her approval to Uribe's third term as President. She urged neighbouring Presidents Hugo Chávez (Venezuela) and Correa (Ecuador) to help Colombia and seek the political transformations in her country by democratic means. And she stated that she will dedicate herself now to help those who are still held captive in the jungle. Some believe that the liberation of Betancourt caused a dramatic change of the political scene.

In an interview on French radio shortly after her return to France, Betancourt distanced herself from Uribe's approach, while accepting that his security policy had been successful. She said the situation was at a point where "the vocabulary has to change" arguing that "the way in which we talk about the other side is very important". She has also thanked President Hugo Chávez "for his help in recovering the freedom of many Colombian hostages" during a meeting in Caracas in 2010.³³

Sarkozy sent a French Air Force jet with Betancourt's children, her sister Astrid and her family, and accompanied by Foreign Minister Bernard Kouchner for a tearful reunion. After paying her respects at her father's

tomb she and the family boarded the jet and flew to France where she was greeted by Sarkozy and the First Lady Carla Bruni-Sarkozy. She gave speeches and urged the world not to forget and continue for the liberation of the rest of the hostages. She also spent several days in hospital.

On 9 July President Michelle Bachelet of Chile said she would nominate Betancourt for a Nobel Prize. Sarkozy announced that she would receive the Legion of Honor at the Bastille Day celebrations.

On 4 July 2008, Radio Suisse Romande reported that unnamed "reliable sources" had told it the rescue took place after a payment of US\$20mio was made. According to Le Monde, the French Foreign Ministry denied the payment of any ransom by France. Frederick Blassel, the author of the Radio Suisse Romande story, told Colombia's W Radio that, according to his source, the release wasn't negotiated directly with FARC but with César, one of the two guerrillas captured during the operation, who would have received the payment of US\$20mio.

The Colombian Minister of Defence Juan Manuel Santos, and Vice President Francisco Santos, in response to these claims, denied any payment. "That information is absolutely false. It has no basis. We don't know where it comes from and why its being said". He also added with a touch of irony that "Actually, it would have been a cheap offer, because we were willing to give up to US\$100mio. We would be the first to inform publicly, because it is part of our rewards system policy, and besides, it would speak much worse about the FARC." According to Colombia's El Tiempo and W Radio, General Freddy Padilla de León, Commander of the Colombian Armed Forces, denied the existence of any payment by the Colombian government. General Padilla argued that if any payment had been made, it would have been better to make it publicly known, to use it as an incentive and to cause confusion within FARC's ranks. Recent documents made public through WikiLeaks tend to demonstrate that FARC commander Cesar, captured during Operation Jaque and extradited to the US, had offered—prior to the rescue operation—to release Betancourt in exchange for money and protection.

The History Men

A UK based gang dubbed the "History Men" were responsible for creating and selling fake identities to illegal immigrants in the UK. The criminal gang dealt in fake passports with the necessary visas, false National Insurance cards and even forged safety certificates for skilled jobs on building sites.

Realistic-looking utility bills were also part of the detailed "history" produced by the forgers to enable illegal immigrants to find work in the UK and to avoid deportation. The gang charged approx £1,250 for a "history" including a fake foreign passport, National Insurance card, and utility bills that could be shown as proof of address. The histories worked in country, though would not work for airline travel.

Knowledge of the details of the immigration system were important for success for the gang. For example, for a fake Indian passports, residence permits would be included, stamped by immigration officials. Also fake passports may include border stamps from for example, Amritsar in India and Heathrow Airport in the UK as if the holder had returned to his homeland previously to add to the authenticity.

Perhaps more worryingly, the offering can also include certificates such as a fake Construction Plant Competence Scheme card, which list the holder as a "trained operator" for 360-degree excavators. The real nine-day course to learn how to safely operate an excavator and take the necessary theory and practical exams can cost more than £1,500, which can be avoided with a fake certificate. The imposter though could pose a serious threat to workers on sites with potentially dangerous equipment such as diggers.

Following an investigation and prosecution the leader of the History Men gang, Bhavin Shah was jailed for four years nine months in 2012.

Kiyoshi Takayama

The second most powerful gangster in Japan, and for several years the de facto head of the Yamaguchi-gumi, Japan's largest mafia group (39,000 members), was sentenced in 2013 to six years in prison for extortion by a Kyoto District Court. Kiyoshi Takayama was in de facto control of the Yamaguchi-gumi after its boss Kenichi Shinoda (also known as Shinobu Tsukasa) was imprisoned in 2005, on violations of gun control laws. Shinoda was released in 2011. Kiyoshi Takayama, 65, chairman of the Yamaguchi-gumi Kodo-kai faction, was convicted of extorting cash totaling more than JPY40,000,000 (approximately US\$422,000) from a 67-year-old President of a construction industry in Kyoto under the pretext of "protection money." According to court documents, Kiyoshi Takayama teamed up with Yoshiyuki Takayama (no relation), head of the Yamaguchi-gumi Omi group based in Otsu, Shiga Prefecture, to blackmail the Kyoto businessman on three separate occasions between 2005 and 2006.

The court concluded that Takayama demanded the

businessman work together with the Yakuza, stating at a meeting, "I want you to be on good terms (with Yoshiyuki Takayama) and work together." "Good terms" in the Yakuza world usually means paying protection money or giving in to Yakuza demands. Such extortion is commonplace in Japan where companies are subjected to demands from organised crime syndicates such as for extortion of money.

According to a survey in 2012 by the National Police Agency, 18.4% of company's acquiesced. The figure was almost the same level as a similar survey conducted in 2010 in which 21.8% of companies that received unreasonable demands complied with them. The NPA calls on companies to consult with police when they are troubled by gangsters. The NPA, the Japan Federation of Bar Associations and other organisations conducted a recent survey, targeting 10,000 companies nationwide. The survey asked whether they had received unreasonable demands from organised crime syndicates in the past five years. Among 2,885 companies that responded to the survey, 337, or 11.7%, said they had received such demands from organised crime syndicates. Of the 337 companies, 185 had received such demands within the past year. About 71.8% of the demands pressed companies to pay money, give product discounts or buy items to settle quarrels for which pretexts had been fabricated. Sixty-two of the 337 companies accepted either part or all of the demands. Five companies paid more than 5 million yen, the survey said.

Market Abusers

The Tulip Bubble -1634

At the end of the 16th century, the tulip was first introduced from Turkey and soon became a popular flower throughout Europe. In Holland, particularly, the tulip rose to prominence when wealthy Dutchmen coveted them as status symbols. Following a virus the tulip began producing colorful variations in the next generation's petals. Demand increased astronomically and Dutch flower producers and merchants found it difficult to keep up with orders. Dutch merchants tried to control the supply of the new tulips, cornering the tulip market and holding some back, resulting in prices rocketing.

By 1634 speculation in tulip bulbs was rife and a bubble had developed. The most common tulip was the Gouda, which doubled in value to three florins; a craftsman would earn this in about a week. The Centen rose from forty to three hundred and fifty florins; the value of a

small house, and the rare Semper Augustus rose to 6000 florins, the equivalent today of about US\$820,000. With speculators riding the coattails of increasing prices brokers travelled the country from village to village selling a variety of tulip investments to local people, who would often pawn their family heirlooms or mortgage their farms to buy in at current stratospheric prices. By the end of 1636, it seems that the Dutch population had gone tulip crazy, believing that what had previously risen would continue to rise, even though prices bore no relationship to the real worth of a tulip bulb.

With the mania at its height, in 1637 the Dutch government stepped in to dampen the market, believing that the wild speculation was a threat to the economy, which sparked a turn in prices. The Dutch merchants decided that it was time they realized some of their profits and began to sell off their stockpiles of tulip bulbs and within two days, the bubble burst and the market in tulip bulbs crashed. Fortunes were lost as panic now replaced speculation and the country entered into an economic depression

Country: Netherlands

Key date: 1637 (Tulip Mania ended by government intervention, popping the bubble and prices for tulips sent crashing)

South Sea Company - 1720

The South Sea Company was a British company that traded in South America during the 18th century. Founded in 1711, the company was granted a monopoly to trade in South America as part of a treaty during the War of Spanish Succession. However, the areas in question were Spanish colonies, and Great Britain was still at war with Spain. Even once a peace treaty had been signed (The Treaty of Utrecht of 1713), the South Sea Company was allowed to send only one ship per year to Spain's American colonies, carrying a cargo of not more than 500 tons. Additionally, it had the right to transport slaves, although steep import duties made the slave trade entirely unprofitable.

The company did not undertake a trading voyage to South America until 1717 and made little actual profit. Furthermore, when ties between Spain and Britain deteriorated in 1718 the short-term prospects of the company were very poor. Nonetheless, the company continued to argue that its longer-term future would be extremely profitable.

In 1719 the company then began talking up its own stock with "the most extravagant rumours" of the value of its potential trade in the New World which was

followed by a wave of "speculating frenzy". The share price rose from an already lofty £128 in January 1720, to £175 in February, £330 in March and to £550 at the end of May. Shares in the company were "sold" to politicians and senior public figures including the King's mistress at the current market price, however, rather than paying for the shares, these recipients simply held on to what shares they had been offered, with the option of selling them back to the company when and as they chose, receiving as "profit" the increase in market price. This method had the advantage of building support for the Company and in publicizing the names of their elite stockholders, the Company managed to clothe itself in an aura of legitimacy, which attracted and kept others buying and pushing up the stock. Riding the wave of speculation, one Company to go public in 1720 was famously advertised as "a company for carrying out an undertaking of great advantage, but nobody to know what it is" The investment frenzy over the South Sea stock finally led to a price being reached of £1,000 in early August.

The stock would then come crashing down. In August 1720 cash calls were made by the Company on investors who had been allowed to buy shares and pay later. Whilst this scheme had fueled the rise in the shares, the cash call forced many to start to sell the shares to avoid making these payments and to capture profits. As a result of significant sales orders being placed the stock began to fall. Furthermore, "bubbles" were also ending in Amsterdam and Paris which caused a general liquidity crisis and again this pushed South Sea shares down. Once selling gathered sufficient momentum and investors realized the Company's true worth, the price started to fall heavily. By the end of September the stock had fallen to £150 ending up at one hundred pounds per share before the year was out, triggering widespread panic and bankruptcies amongst those who had bought on credit. Company failures now extended to banks and goldsmiths as they could not collect loans made on the stock, and thousands of individuals were ruined, including many members of the aristocracy.

With investors outraged, Parliament was recalled in December and an investigation began. Reporting in 1721, it revealed widespread fraud amongst the company directors and corruption in the Cabinet. Among those implicated were John Aislabie (the Chancellor of the Exchequer), James Craggs the Elder (the Postmaster General), James Craggs the Younger (the Southern Secretary), and even Lord Stanhope and Lord Sunderland (the heads of the Ministry). Craggs the Elder and Craggs the Younger both died in disgrace; the remainder were impeached for their corruption. Aislabie was imprisoned. The newly appointed First Lord of

the Treasury, Robert Walpole was forced to introduce a series of measures to restore public confidence. Under the guidance of Walpole, Parliament attempted to deal with the financial crisis. The estates of the directors of the Company were confiscated and used to relieve the suffering of the victims, and the stock of the South Sea Company was divided between the Bank of England and the East India Company. A resolution was proposed in parliament that bankers be tied up in sacks filled with snakes and tipped into the murky Thames.

Key date: 1720 (South Sea Company share price bubble was popped)

William Duer

William Duer was born in England in 1743, the son of a very successful West Indian planter. Educated at Eton, Duer settled in New York in 1773. Duer was an important man in the city and he also took an interest in politics, supporting the colonists grievances against Britain, and at his wedding in 1779 his bride, the daughter of war general William Alexander, was given away by none other than, George Washington. Duer became a member of the Continental Congress, a New York judge, and a signer of the Articles of Confederation. He was also appointed as an assistant secretary to the Treasury (appointed by the first US Treasury Secretary and good friend, Alexander Hamilton), though he would resign not long thereafter, but not before making extensive contacts and ensuring afterwards that he would continue to be kept informed of banking developments. Duer had made his fortune in land and speculating on the Revolutionary debt. Duer established his own firm with a friend, Daniel Parker. Parker & Duer became a funnel to channel foreign investment to American securities. When Alexander Hamilton sought to strengthen the nations finances through a central bank, Duer was keen to capitalize on the impending opportunity.

Hamilton established the First Bank of the US (BUS) in February of 1791 and the new institution was successful in raising financing mainly from foreign investors, also with Duer's help. Later though Duer in an attempt to corner the market, assembled a group of speculators with the intention of purchasing as many BUS shares and securities as possible. Establishing a group called the "Six Percent Club" with partner Alexander Macomb, the goal was to monopolize the market by buying up to 6% of the government bonds and securities.

In an attempt to manipulate the markets, Duer and his associates started rumors of the creation of a new bank that was to merge with the Bank of the US and

with the Bank of New York. Targeting the taverns and coffee houses, New York soon started to buzz about the potential merger and stock prices rose as a result. The rumors encouraged more speculation and the establishment of two new Banks, successfully driving the New York stock market into a frenzy. But by March of 1792, Duer had not taken his profits and instead rumors began to spread that the bank mergers were not going to happen and the market began to decline. Quickly falling into debt, the decline of the market had a snowball effect, with Duer not only losing his own money, but also the money of those that invested with him. Unable to pay his debts, Duer's creditors had him arrested and placed in debtor's prison.

When news of Duer's financial troubles reached the public, and the fact that many financiers and investors would lose very large amounts the story caught fire, quickly spreading throughout the city. This led to panic and to the stock market crash, which became known as The Panic of 1792. With Duer owing more than US\$750,000 himself, the total losses ran as high as US\$3mio, an enormous sum at the time, representing the savings of nearly every citizen in New York. Many prominent merchants were ruined, adversely affecting trading opportunities and further damaging the New York economy.

On the night of 18 April 1792, a stone-throwing crowd of hundreds descended upon Duer's prison. Threatening the speculator, the prison walls were in fact the only thing keeping Duer safe. With a financial meltdown on his hands, Alexander Hamilton stepped in to resuscitate the damaged economy. Ordering the Treasury to purchase large amounts of government securities, the government intervention helped to stabilize the falling prices. Because Duer often traded on insider information, he earned the distinction of being the first to do so, and has the dishonorable title of being America's first insider trader.

Hamilton, appalled at Duer's speculative activities wrote in 1792. "Tis time, there must be a line of separation between honest men & knaves, between respectable stockholders and dealers in the funds, and mere unprincipled gamblers."

Following the Panic of 1792, those brokers left considered self regulation an imperative. The remaining twenty four brokers created the Buttonwood Agreement, following a meeting under a Buttonwood Tree, in Southern Manhattan in May 1792. The Agreement stipulated in writing that brokers had to be mutually recognised to trade with each other, helping to restrain the infiltration of unethical speculators into the

market. additionally, the agreement would outlaw old trading practices, moving business from environments such as coffee houses to a central location so that dealings could be better controlled and better records kept. The location of that Buttonwood Tree is today 68 Wall Street. In 1817 the Buttonwood Group evolved into a more formal organisation known as the New York Stock and Exchange, which would then become the New York Stock Exchange in 1863. Hamilton tried to intervene on Duer's behalf but was only able to obtain a short reprieve. Duer soon ended up back in prison and he died there in 1799.

London Stock Exchange Hoaxers of 1814

On 21 February 1814, a man in a British military uniform showed up in an inn on the coast of the English channel and pronounced that Napoleon had been killed and the Napoleonic Wars were now over. Word spread quickly and people began celebrating, this in turn led to the driving up the price of stocks on the London Stock Exchange. Lord Thomas Cochrane was suspected as the culprit, but he was later pardoned by the King after it was determined that he was not involved. The true culprit was never found, though it was still suspected that whoever did start the hoax profited from the increases in stock prices.

NY State Senator Kimble - 1840s

When one of New York's early railroads, the Harlem Railroad, began trading publicly, a state Senator Kimble pushed through a Bill calling for its enlargement. Investors realized that enlargement meant being diluted of their current shareholdings, which led to the process of the stock falling. Kimble and his associates had considered this and had prior to calling for enlargement tried to corner the stock by selling the stock short in significant amounts, making significant profits for himself and his associates at investors expense.

Key date: 1840 (market manipulation by attempting to corner the market with others in railroad stock)

Daniel Drew & Others

Jay Gould and Jim Fisk - 1860s onwards - US

The mid 1800s in the US saw the emergence of powerful businessmen and manipulators who would make fortunes for themselves and help transform America into the worlds leading Industrial superpower.

By the turn of the century, these powerful men became referred by Americans as Robber Barons. The term was used to attack these powerful and rich businessmen who had used questionable practices to become wealthy. The term combined the sense of criminal ("robber") with illegitimate social standing ("baron").

The original robber barons were medieval noblemen whose castles overlooked the Rhine. In theory, only the Holy Roman Emperor could set toll rates along Europe's great commercial artery. But the Raubritter, the Robber Barons, exacted unauthorized payments from all passing vessels. In so doing, they added no value to the commerce; no wealth was created by their extortion. Merchants passed the costs on to customers in the form of higher prices. The Raubritter got rich, while everyone else was left a little poorer. US political and economic commentator Matthew Josephson popularized the term during the Great Depression in a 1934 book by the same title. Josephson alleged that American big businessmen amassed huge fortunes immorally, unethically, and unjustly. The theme was popular during the Great Depression amid public scorn for big business. An alternative view however has been advocated by their supporters who acknowledge their ruthlessness and that their standards of behavior would no longer be acceptable in business, but they drove Americas Industrial transformation and they created real and enduring wealth. Moreover, the wealth they created benefited all Americans, they introduced new products, they discovered great efficiencies and they launched businesses that created millions of new jobs. Whatever the view, it is certainly true that the so called Robber Barrons were each very different people with different skills and they were operating at a time when the rules of modern American business were just being written.

They all had, however, some important similarities, with ruthlessness an important trait. Many created fortunes through the emergence of the railroad and its financing, with others involved in the energy that would power Americas Industrial surge. One common theme amongst these powerful men of the Industrial age, was their willingness and abilities as financial manipulators. For example, taking the railroad as an example, some of the Robber Barons fortunes were made by acquiring ownership or control of a railroad and then cashing in by selling railroad securities to a bullish public. In order to acquire ownership and or control the worst kinds of market abuse were practiced. In many cases, they also resorted to bribing government officials to gain favorable contracts or protection from governmental interference. As one would explain in 1877. If you have to pay money [to a politician] to have the right thing done, it is only just and fair to do it.... If a [politician] has the power to do great evil and won't do right unless he is bribed to do it, I think... it is a man's duty to go up and bribe.

Daniel Drew, Jay Gould and Jim Fisk could be considered the original Robber Barons. They manipulated stocks, caused “bear runs” to collapse stock prices and cornered markets. They could get control of companies, pilfer them internally, and then sell out at inflated prices. They spent no time in jail, partly from bribing judges and politicians, but mainly because there were few laws dealing with corporations and markets that could be broken. Gould and Fisk for example attempted to corner the gold market; Treasury Secretary George Boutwell released gold from the federal stock, foiling their plans. After that, Gould bribed judges to void contracts he broke. Jay Gould considered himself to be the most hated man in late-19th century America. He was vilified by the press as a reckless speculator and brutal strike breaker. To many late 19th century Americans, he personified the unscrupulous, greedy Robber Baron. In an age of scandal and corruption, Jay Gould was regarded as a master of bribery and insider stock manipulation. But Gould was much more than a robber baron. At a time when the rules of modern American business were just being written, he was one of the architects of a consolidated national railroad and communication system. One of his major achievements was to lead Western Union to a place of dominance in the telegraph industry. Still he is responsible for trying to corner the gold market, during the presidency of Civil War hero Ulysses S Grant, whose popularity slipped as his Presidency progressed and scandals, particularly the one involving Gould damaged his reputation. On 24 September 1869 the US Gold market collapsed, a day that became known as Black Friday. When the dust had settled at the root of the scandal was Jay Gould. Gould and his associates had tried to corner the Gold Market by buying up as much Gold as they could. Their scheme though was premised on the US government holding on to its Gold reserves because if the government sold it would reduce the effect of their corner and significantly depress prices. Gould had paid off President Grant’s brother-in-law to learn the President’s intentions about government gold sales. Grant, however, learnt of the ruse and eventually ordered the immediate sale of US\$4mio in government gold. Within minutes, the price of gold plummeted, and investors scrambled to sell their holdings in a panic. Many investors had obtained loans to buy gold as the price rose. With no money to repay the loans, they were ruined. Among those who lost big on Black Friday were a number of Goulds’ associates. Gould escaped disaster however by selling his gold before the market began to fall.

Key Date: 1860's onwards (the original US robber barons, active in US industry and markets)

Special Focus 20

Stock Market Crash of 1929

For some investors during the 1920s, a financial panic was not a totally new experience. The stock market had shut down for nearly two weeks in 1873, and many could recall when JP Morgan almost single-handedly halted the panic of 1907. Also, the sharp 46% drop between 1919 and 1920 had not been forgotten. But almost everyone agreed that the 1920s were very different. This was the new age of the consumer. Radios, air conditioners, washing machines, and automobiles were all being purchased with “buy-now-and-pay-later” plans. By 1929, consumer credit was helping the average family enjoy the prosperity of the day. Business was good, profits were up, and stocks, which were also being purchased on credit, were soaring. Even though stock prices were reflecting investor optimism, as they normally do, there were also several behind-the-scenes factors that contributed to the high equity valuations and to the vulnerability of the stock market in late 1929. Stocks could be bought on 10% margin in 1929. Any investor could purchase shares having a market value of US\$10,000 with only US\$1,000 of capital. When stocks advanced, the profits generated were being used to purchase additional shares. This leverage, investors soon learned, worked very much in their favour when stocks were rising and, greatly to their detriment, when prices were falling. Perhaps most surprising was the magnitude of the change in stock market credit. In January 1928, total brokers’ loans had reached US\$3.8bio. A year later, the figure had risen to US\$5.3bio, and it continued soaring to a peak of US\$6.8bio in early October 1929.

The late 1920s saw notorious stock price manipulation. Much activity that was considered legal then is no longer permitted today. In 1929, investor “pools” were formed to trade stocks. The pool would buy the shares, use media contacts to spread favourable news or rumours, and then “paint the tape” with large, meaningless trades among themselves. This would draw attention to the stock, allowing the pool to sell the shares, usually at much higher prices, to an unsuspecting public. “Preferred list” sales of new securities at discount prices before the public issues were the norm. Stock pools existed, syndicates established by investment bankers and brokers to manipulate stock price. At this time, prices of at least 100 stocks were openly rigged. Information was considered a private matter, which

allowed companies to manipulate, misrepresent and conceal information.

Michael J Meehan

One of the most infamous manipulations of the time was the RCA pool headed by broker-specialist Michael J Meehan. The pool managed to push up RCA’s stock price by almost 50% between 8 and 17 March 1929. Then, on the very next day, 18 March, the pool sold its entire holdings and divided the profits, about US\$100mio by today’s standards. The first panic occurred on 24 October, Black Thursday. Prices continued down: from a peak of 386 the Dow tumbled to 41 in 1933. The market had no credibility with the public. From 1929 to 1932 11,000 banks failed, gross national product (GNP) declined 10% annually, steel production fell to 12% of capacity, and unemployment hit 25%. In 1929 New York’s two greatest Banks, the Chase and the National City, suffered severely in the aftermath of the Stock Market Crash

Albert H Wiggin

Mr Wiggin was Chairman of Chase National Bank and he was an inveterate speculator and opportunist. In 1929 and in the years preceding the crash he received US\$275,000 in compensation from the Bank. At the same time as leading Chase he was the director of nearly 60 utility, industrial insurance and other company’s, many of whom were clients of Chase and prospective borrowers and from each he received additional compensation. Not satisfied with these extensive interests Mr Wiggin had set up a number of private holding companies in which Wiggin took an interest in stock market transactions, notably profiting famously to the tune of US\$890,000 in transactions in Sinclair Consolidated Oil Company after partnering with a Harry Sinclair who had unique information. However the most noteworthy transaction was probably Mr Wiggin’s transactions in Chase National Bank itself. In one perfectly timed operation he sold short Chase stock and then bought the shares back once the stock price had fallen, benefiting significantly from the crash. Astonishingly these transactions were financed by the Bank itself. The profit was over US\$4mio.

Charles Mitchell

Charles Mitchell was the Chairman at the National City Bank. Prior to the crash Mr Mitchell had been considered a leading prophet of the new era of stock market growth. In 1929 Mitchell was completing the merger of his own Bank with the Corn Exchange Bank but before this could be completed the crash occurred and with it the stock value of his Bank and the currency for the merger went down. In order to save the deal, he borrowed cash from JP Morgan & Co and together with his own money, Mitchell started buying National City stock hoping to support the stock and to see its value rise. With market sentiment still very negative the share support operation failed. Mitchell

would resign later and would be arrested but acquitted on tax evasion charges relating to his shareholdings.

Richard Witney

By the 1930s the political elite and in particular starting in 1932 in the Senate Banking Committee, investigations commenced into questionable stock market practices. Its first witness was Richard Witney, President of the New York Stock Exchange.

Witney’s evidence largely angered the Senators, with Witney accepting no evidence of wrongdoing by stock exchange participants, explaining little about short selling, syndicates and inside information. He also took exception to one Senator’s depiction of the market as a “gambling hell which should be padlocked” and “an invention of the devil”. Further witnesses included Ben “sell em big Ben Smith, Harry Sinclair, Percy Rockefeller and other market operators who had all engaged in large scale market and stock rigging and reprehensible as these activities then seemed only 3 years before they had been regarded with admiration.

It wasn’t until 1938 that Richard Witney would finally be taken down when he was arrested and convicted on charges related to share support activities from 1933-1938 and fraud as he had pledged other people’s stock, custodied with his firm to secure loans used in a share support scheme. Whilst the Senate was very critical of many involved in reprehensible market and share practices, few flagrant breaches of laws or rules were identified.

Those being criticised included America’s leading financier and many of America’s richest and most powerful people. In 1933, US Senate Banking Committee counsel Ferdinand Pecora exposed how JP Morgan & Co used inside information to provide guaranteed profits to former President Calvin Coolidge, Franklin Delano Roosevelt’s sitting treasury secretary, the chairman of the Republican and Democratic national committees, and the CEOs of General Electric, AT&T, and Standard Oil, among others. Pecora’s investigators turned up a ‘preferred list’ of highly placed Americans allowed to buy low and sell high on insider information.

Before the Great Crash of 1929, there was little support for federal regulation of the US securities markets. The scandals that were realised and the longevity and depth of the Depression that followed enabled President Franklin D Roosevelt to make good on his promise of financial reform. Congress, during the peak year of the Depression passed the Securities Act of 1933, following up with the 1933 Banking Act (Glass Steagall Act), followed by the 1934 Securities Exchange Act, which created the SEC, and the Commodity Exchange Act 1936. All these Acts together were designed to restore investor confidence in American capital markets by providing investors and the markets with more reliable information and clear rules of honest dealing.

The Hunt Brothers

Nelson and William Hunt were already billionaires and one of the Wealthiest families in America when they tried to corner the global silver market in the late 1970s. As a way to hedge themselves against inflation the Hunts decided to accumulate large amounts of precious metals. Since there were restrictions on private citizens holding gold at that time the Hunt brothers focused on silver. In 1979 working with several Saudi Arabian business partners, the brothers bought up huge quantities of Silver. Before too long, they had amassed over 200 million ounces of silver which was about half of the world's supply. Prices soon started to appreciate. When they started, the price of silver was below US\$5 ounce. By late 1979/early 1980 prices had increased tenfold and were trading near US\$55/oz. During this rise in prices, the COMEX and Chicago Board of Trade (CBOT) only had about 120 million ounces of silver between them. As prices went higher and new buyers got into the market, the exchanges became increasingly fearful of defaulting. As the Hunts owned 77% of the world's silver, either in physical form or futures contracts, the market had been cornered.

Still things were about to change for the worse for the Hunt brothers. Paul Volker was named Chairman of the Federal Reserve. Volker was determined to get inflation under control by raising interest rates. At the same time changes in trading rules at the CBOT and COMEX were introduced, effectively halting silver from going higher. For example, the CBOT set limits on the amount of silver any one entity could hold and raised margins. Not surprisingly prices came down significantly quickly and trading went near to US\$10 by the end-March 1980. It was in late-March 1980 that "Silver Thursday", a day where the price of silver went from roughly US\$20/oz to US\$10/oz, a loss of over 50% occurred. The precipitous drop in prices meant huge losses for many speculators and ultimately forced the Hunt brothers into bankruptcy. By the mid-80s, the Hunt brothers had more than a US\$1bio in liabilities they could not meet. At their peak, the Hunt brothers had held over US\$4.5bio in silver on their US\$1bio investment. On 25 March 1980, the Hunt brothers couldn't meet their US\$135mio margin call, forcing the Hunt brothers to 'shut it down'. The Hunt brothers filed for Chapter 11 bankruptcy in 1988, unable to bear the cost of the legal battles related to their silver scheme. They also paid more than US\$10mio in separate settlements with the Internal Revenue Service and the Commodity Futures Trading Commission (CFTC) and were convicted of conspiring to manipulate the market.

Country: US
Key date: 1980 (Silver Thursday when the price of Silver halved and the cornering scheme fell apart)

Special Focus 21 Michael Milken

Almost no financier in recent times has divided opinion as much as Michael Milken, the "junk bond king" of Drexel Burnham Lambert. His critics cited him as the epitome of Wall Street greed in the 1980s.

Supporters see him as key source behind long term economic gains as he took "the vast sums trapped in old-line businesses and put them back into the markets". Completing an MBA at Wharton, Milken first joined Drexels in 1969 initially on a summer job and then full time as director of low-grade bond research. Whilst at Wharton Milken had been influenced by a research study that showed a diversified portfolio of non-investment grade bonds offered better risk-adjusted returns than a portfolio of high grade bonds. On joining Drexel, Milken was given some capital and allowed to trade. Legend has it he was such a workaholic that he wore a miner's helmet whilst commuting on the bus so he could read company prospectuses in the dark.

In the early 1970s Milken persuaded his boss to let him start a high-yield bond trading department. This was an area that did not receive much attention from the major Wall Street firms, who tended to focus on high grade and frequent borrowers. Milken's team became highly successful and by 1976 his income was estimated at US\$5mio a year.

In 1978 he moved his entire operation one weekend to Los Angeles and eventually opening Drexel's famous Beverly Hills office. There, seated at a vast X-shaped desk with his head trader to his right and his head of sales opposite, Milken built his operation. By the mid 1980s he had established an unparalleled network of high yield bond issuers, buyers and investors. This allowed him to raise large sums at very short notice in the capital markets for lower grade borrowers. CFOs and CEOs from small and medium sized companies beat a path to his door. Many successful entrepreneurs and companies of the 1980s owed their success to Milken's capital raising ability: as he once remarked "there is no shortage of capital; there is only a shortage of management talent". Milken's clients included McCaw Cellular, Time Warner, Viacom, Safeway and

MGM. Milken was also particularly instrumental in the rapid growth of Nevada and Las Vegas helping to finance casinos and house-builders. In short Drexels (through Milken's team) was to all intents and purposes the major underwriter and trader of high yield bonds throughout the 1980s.

More controversially the rapid development of the high yield bond market was the life-blood of the leveraged buyout (LBO) market and so called 'green-mailers'. Those who have watched the film Wall Street will have seen in action at least a form of a fictional LBO. Armed with a "highly confident" letter from Drexels (i.e. Drexels promised to raise the necessary debt to fulfil the buyer's obligations) LBO firms could profit merely by threatening a buy-out of a large blue-chip company in which they had built up an equity position. Milken and Drexel's job was made easier as, at least for a long while, top-tier Wall Street firms were reluctant to compete for fear of jeopardizing their long and rewarding relationships with many of the 'target' blue chip companies.

Although there were suggestions Milken had been under almost continuous scrutiny since the late '70s things got serious when in 1986 the SEC prosecuted Ivan Boesky, a prominent arbitrageur and a possible model for Gordon Gekko in the film Wall Street, for insider trading. In settling his case Boesky implicated Milken in his circle of insider traders. Both the SEC and Rudy Giuliani, the then US Attorney for the Southern District of Manhattan, commenced formal and aggressive investigations of Drexels and Milken.

For 2 years Drexel denied wrong doing claiming the SEC case was based entirely on the statements of an admitted felon (Boesky) looking to reduce his sentence. Nevertheless, in 1988 the SEC sued Drexel for insider trading, stock manipulation and stock parking (buying stocks for the benefit of another). All of the transactions involved Milken and his department.

Around the same time Giuliani began seriously considering indicting Drexel under RICO. This was potentially disastrous as it would require Drexel to put up a performance bond of up to US\$1bio in lieu of having its assets frozen. In early 1989 with literally minutes to go before being indicted (one source indicates the Grand Jury was actually in the process of voting on the indictment) Drexel agreed to plead no contest to 3 counts of stock parking and 3 counts of stock manipulation. It also agreed to pay a fine of US\$650mio and agreed that Milken would leave the firm if he was himself indicted. Drexel was now a convicted felon.

In April 1989 Drexel settled with the SEC agreeing to stricter safeguards on its oversight procedures.

Milken was eventually indicted in March 1989 on an astonishing 98 counts of racketeering and securities fraud under the Racketeering Influenced and Corrupt Organisations Act (RICO) and left Drexel. Perhaps even more astonishing to those on Wall Street was the revelation that Milken's income in 1987 alone was US\$550mio. He eventually settled and pled guilty to 5 relatively minor charges: two related to aiding tax evasion in transactions executed for a client and three related to helping Boesky conceal the real owner of a stock. He was fined and sentenced to 10 years imprisonment, subsequently reduced to 2 years and of which he served 22 months.

Since his release Milken has focused mainly on charitable and philanthropic work and in 2010 still appeared in the top 500 on Forbes list of the world's wealthiest billionaires.

Drexel survived its annus horribilis of 1989. However with business slow and an unexpected crash of the junk bond market, Drexel's found it increasingly difficult to generate profits and finance its operations. Without a large parent Drexel in particular found it nearly impossible to re-borrow under its commercial paper programmes. In early February 1990 it was obvious Drexel was headed for collapse and without a Government bail out on 13 February 1990 Drexel officially filed for Chapter 11 Bankruptcy Protection.

With the benefit of hindsight it seems that the revenue generating capability of Milken and his department became so large within Drexel's overall business that the fate of both became almost inexplicably intertwined. From the earliest negotiations with Giuliani the Government's insistence that any settlement had to include the removal of Milken from the firm was a huge sticking point and an unacceptable step too far for Drexel's management.

Also with the benefit of hindsight one cannot help wondering the extent to which Milken's department based as it was on the West Coast of the US formed, in effect, its own 'firm within a firm' removed from the oversight and governance processes that might apply elsewhere.

Some have noted that Drexel adopted a highly "meritocratic" and aggressive business culture. It is also perhaps noteworthy that Drexel had little ability to bring in outside capital and relied very significantly

on its ability to raise money through wholesale funding including, in particular, its commercial paper programme. It seems that its inability to continue to finance itself through the wholesale markets was the final trigger which led to Drexel's filing for Chapter 11 Bankruptcy Protection.

The zeal and aggression with which the authorities pursued Milken particularly but also Drexel's was astonishing and even at that time caused some disquiet amongst certain commentators and academics. For example, Milken's brother, Lowell was threatened with indictment despite having little obvious connection with the matters under investigation other than increasing the pressure on Milken to settle. Federal investigators also questioned Milken family members including his aging grandfather about their investment activities. The use of the draconian powers available under RICO was largely unprecedented. The wrongdoing to which Milken eventually agreed to plead guilty had never before and has never since been dealt with as a serious criminal matter.

The penalties levied on Milken were ultimately huge and arguably out of all proportion to the crimes for which he was convicted. At trial the judge estimated that the injury for all counts to which Milken plead guilty combined together was US\$318,000. In addition to the 22 months he served in prison Milken accepted a lifetime ban from the securities industry, agreed to pay US\$200mio in fines, and agreed to a settlement with the SEC in which he paid US\$400mio to investors who had been hurt by his actions. In a related civil lawsuit he agreed to pay US\$500mio into a fund to compensate Drexel's investors. In total Milken paid US\$1.1bio for all lawsuits related to his actions while working at Drexel.

Penalty: US\$1.1bio in all fines and penalties and served 22 months in prison

Actions: freewheeling junk bond sales led to downfall of Drexel Burnham Lambert

Country: US

Key date 1989 (Milken indicted on securities fraud charges)

John Kaweske

John J Kaweske ("Kaweske"), a former senior vice president and portfolio manager with the Invesco complex of mutual funds, was fined US\$115,000 in 1995. Kaweske served as portfolio manager for Invesco's Health Sciences Portfolio of Invesco's Financial Strategic Portfolios and the Global Health Sciences Fund. The Commission's complaint alleged that Kaweske defrauded investors by failing to disclose to Invesco

and the funds he managed that he had two conflicts of interest. The first was that he had arranged that commissions would be paid to his son based upon investments being made by Invesco funds under his management. The second was that he was a founder, director, and shareholder of a Canadian company in whose subsidiary he caused Invesco funds to invest. The complaint also alleged that Kaweske failed to report certain personal securities transactions to Invesco and was suspected of front running.

Country: US

Key date: 1995 (Invesco fund manager fined by SEC for conflict of interests and front running)

The Flaming Ferraris

The Flaming Ferraris were a 5 man trading team at Credit Suisse in London who became famous for a short time in 1998. The team led by David Crasanti, a former wrestler from Princeton University in the US, included Harvard-educated Adrian Ezra, who was six times Indian squash champion, and James Archer son of Jeffrey Archer, bestselling author but perhaps more tellingly investigated for insider dealing himself as well as imprisoned for lying in court. James Archer, schooled at Eton, studied chemistry at Oxford was reported to be earning between £100,000 a year plus bonus. The group were named after their favourite rum-and-Grand Marnier cocktail served at the Nam Long Vietnamese restaurant in Knightsbridge, where the traders drank on Fridays after work. They were for a time dubbed by the press, the world's most successful share traders, being lauded for allegedly having made money on all but 12 days in 1998, an extraordinary achievement given the economic turmoil of that year. The five would, it was said, bet up to £3bio a time on a deal, made over US\$100mio for Credit Suisse and now expected to share large US\$mio bonuses.

In fact the five based their reputation on a simple publicity stunt, which involved a public relations consultant and the city editor of the Sunday Telegraph newspaper. The plan was to create a legend around the five, enabling them to claim bigger bonuses and perhaps be head-hunted by a competitor firm. For example, whilst they claimed they were ambushed by the media as they stepped out of their 10-seater stretch limousine outside Nobu, an expensive Japanese restaurant on Park Lane, the reality was that this was an orchestrated publicity stunt. In fact the five were part of a broader group across Credit Suisse including at least 15 other arbitrage traders, taking advantage of anomalies in stock markets worldwide and it is believed that they made far less profit than the £100mio they had claimed. Also the £3bio they bragged of betting on each deal was more

the total gross amount of all the trades carried each year. It wouldn't be long however before the Flaming Ferraris would feel the heat and Credit Suisse and UK regulators would put the brakes on their activities. It started with 24 year old James Archer's (who had only started with CS 4 months earlier) trading heavily in the shares of Enso Stora, one of the world oldest and the biggest paper companies, on 29 December on the Swedish Stock Exchange. Archer had attempted to manipulate the price of Stora, which was in the process of merging with another company. To aid his deception, Mr Archer traded from his mobile phone rather than his recorded phone line at work as he placed orders designed to force the price of the share downwards. If he could force the price down, he knew he could make a profit for his book and help boost his bonus.

The Swedish stock exchange's authorities noticed almost immediately and started an investigation. Credit Suisse fired Archer and his two superiors Ezra and Crasanti for covering up for Archer when questioned about the trading. The UK regulator found Archer guilty but did not feel Ezra or Crasanti were involved in the attempt to manipulate the Swedish market. All three admitted however that they had lied and been deceitful. Each was banned from the Industry. Archer and Ezra had to pay £50,000 while Mr Crisanti had to pay £100,000. Credit Suisse later received a fine from the Swedish authorities for market manipulation violations.

Key date: 1998 (Credit Suisse team of traders disbanded after market manipulation allegations led UK FSA to take action)

California Electricity Crisis

The California electricity crisis also known as the Western US Energy Crisis of 2000 and 2001 was a situation in which California had a shortage of electricity caused by market manipulations and illegal shutdowns of pipelines by Texas energy consortiums, including Enron.

The state suffered from multiple large-scale blackouts, one of the state's largest energy companies collapsed, and the economic fall-out greatly harmed Governor Gray Davis's standing. Drought and delays in approval of new power plants and market manipulation decreased supply, with manipulation responsible for most of the supply squeeze. This caused 800% increases in wholesale prices from April 2000 to December 2000. In addition, rolling blackouts adversely affected many businesses dependent upon a reliable supply of electricity, and inconvenienced a large number of retail consumers. California had an installed generating capacity of 45GW, but at the time of the blackouts demand was 28GW. A demand-supply gap was created by energy

companies, mainly Enron, in order to create an artificial shortage. Energy traders took power plants offline for maintenance in days of peak demand to increase the price. Traders were thus able to sell power at premium prices, sometimes up to a factor of 20 times its normal value. Because the state government had a cap on retail electricity charges, this market manipulation squeezed the industry's revenue margins, causing the bankruptcy of Pacific Gas and Electric Company (PG&E) and near bankruptcy of Southern California Edison in early 2001. The crisis cost US\$40 to US\$45bio.

The California energy market allowed for energy companies to charge higher prices for electricity produced out-of-state. It was therefore advantageous to make it appear that electricity was being generated somewhere other than California. After an extensive investigation The Federal Energy Regulatory Commission (FERC) reporting in 2003³⁴ stated that "...supply-demand imbalance, flawed market design and inconsistent rules made possible significant market manipulation." .. "...many trading strategies employed by Enron and other companies violated the law". Manipulation strategies were known to energy traders under names such as "Fat Boy", "Death Star", "Forney Perpetual Loop", "Ricochet", "Ping Pong", "Black Widow", "Big Foot", "Red Congo", "Cong Catcher" and "Get Shorty". Enron were also accused of "Megawatt Laundering" which is analogous to money laundering, coined to describe the process of obscuring the true origins of specific quantities of electricity being sold on the energy market. Enron CEO Ken Lay mocked the efforts by the California State government to thwart the practices of the energy wholesalers, saying, in 2000, "In the final analysis, it doesn't matter what you crazy people in California do, because I got smart guys who can always figure out how to make money."

S. David Freeman, who was appointed Chair of the California Power Authority in the midst of the crisis, made the following statements about Enron's involvement in testimony submitted before the Subcommittee on Consumer Affairs, Foreign Commerce and Tourism of the Senate Committee on Commerce, Science and Transportation on 15 May 2002: "There is one fundamental lesson we must learn from this experience: electricity is really different from everything else. It cannot be stored, it cannot be seen, and we cannot do without it, which makes opportunities to take advantage of a deregulated market endless. It is a public good that must be protected from private abuse. If Murphy's Law were written for a market approach to electricity, then the law would state 'any system that can be gamed, will be gamed, and at the worst possible time.' And a market approach for electricity is inherently gameable. Never again can we allow private interests to create artificial or even real shortages and to be in control. Enron stood for secrecy and a lack of responsibility. In electric power, we must have openness and companies that are responsible for keeping the lights on. We need to go back to companies

that own power plants with clear responsibilities for selling real power under long-term contracts. There is no place for companies like Enron that own the equivalent of an electronic telephone book and game the system to extract an unnecessary middleman's profits. Companies with power plants can compete for contracts to provide the bulk of our power at reasonable prices that reflect costs.

People say that Governor Davis has been vindicated by the Enron confession." Enron eventually went bankrupt, and signed a US\$1.52bio settlement with a group of California agencies and private utilities on 16 July 2005. However, due to its other bankruptcy obligations, only US\$202mio of this was expected to be paid. Ken Lay was convicted of multiple criminal charges unrelated to the California energy crisis on 25 May 2006, but he died due to a heart attack on 5 July of that year before he could be sentenced. Because Lay died while his case was on federal appeal, his record was expunged and his family was allowed to retain all his property. Enron traded in energy derivatives specifically exempted from regulation by the Commodity Futures Trading Commission. At a Senate hearing in January 2002, Vincent Viola, chairman of the New York Mercantile Exchange, the largest forum for energy contract trading and clearing, urged that Enron-like companies, which don't operate in trading "pits" and don't have the same government regulations, be given the same requirements for "compliance, disclosure, and oversight." He asked the committee to enforce "greater transparency" for the records of companies like Enron.

Shell

In early 2004, Shell announced that it was writing down 25% of its hydrocarbon reserves, causing a £2.9bio drop in its market capitalisation. Following an investigation by the SEC and the UK FSA they found that Shell had misled investors about the size of its reserves since at least 1998 and that it failed to act quickly enough when evidence that the reserves were materially different from those published came to the attention of senior management. Executives had been aware of the problems at least four years previously. The SEC fined Shell US\$120mio (£66mio) and the UK FSA levied penalties of £17mio for market abuse. The UK fine set a record penalty for Market Abuse.

Country: UK, Netherlands

Key date: 2004 (Shell misled investors about the size of its oil reserves and fined by SEC and UK FSA US\$120mio and £17mio respectively for market abuse)

Ken Mahaffey & Others

Ken Mahaffey, (Merryl & Citi), Tim O'Connell (Merryl), Ralph Casbarro (Citi) & David Ghysels (Lehman) were charged with crimes arising from their participation in a "front-running" securities fraud scheme that generated over US\$600,000 in illegal trading profits between January 2002 and December 2003. Front-running occurs when stock brokers inform traders outside the brokerage firm, such as day traders, that a customer of the brokerage firm has placed a large order to buy or sell a particular stock. This information enables the day traders to trade in the same stock before the customer's order is executed, in anticipation of the movement in price that the customer's order is likely to cause. As a result, the firm's customers may not obtain as favourable a price for the stock as they would have absent the front-running. The stock brokers provided the information in violation of fiduciary and other duties owed to their brokerage firms and customers of the brokerage firms. Between January 2002 and December 2003, the brokers routinely provided day traders at two New York City based day trading firms, A.B. Watley, Inc. ("A B Watley") and Millennium Brokerage, LLC ("Millennium"), with material, non-public customer order information, which was disseminated through internal speaker systems at Merrill, Citigroup and Lehman known as "squawk boxes." The brokers placed telephone calls to the day traders and left the telephones off the hook next to squawk boxes at their respective brokerage firms so that the day traders were able to hear the customer orders that were being broadcast. In exchange for access to the squawk box information, the day traders paid substantial amounts of money to the defendants in the form of commissions from "wash trades" (simultaneously buying and selling the same amount of a security at the same price for the sole purpose of generating commissions) that were generated through brokerage accounts that the day traders opened with the defendants at Merrill, Citigroup and Lehman. Some of the defendants also accepted cash bribes from the day traders in exchange for squawk box access. The indictment alleged that the day traders profited from the scheme by trading in front of the large orders that were broadcast through the squawk boxes. For example, when the squawk boxes disseminated information concerning a large buy order for a particular stock, the day traders would purchase shares of the same stock before the larger order was executed. Alternatively, when the squawk boxes disseminated information concerning a large sell order for a particular stock, the day traders would "short sell" the same securities before the larger order was executed. In either circumstance, the day traders profited from the subsequent movement in price that the large customer order caused. The day traders generated profits of over US\$600,000 by engaging in this illicit trading activity through proprietary accounts at A B Watley and Millennium.

Country: US

Key date: 2005 (guilty pleas entered for front running)

Simon Eagle

Simon Eagle was responsible for a complex and prolonged abusive scheme that deliberately set out to ramp up the share price of Fundamental-E Investments (FEI) for his own benefit. In 2003 Eagle agreed to buy 85% of FEI, an Alternative Investment Market (AIM) listed stock, from its two principal shareholders. He intended to keep 10% of the stock and needed to find buyers for the remaining 75%. Eagle purchased SP Bell Limited, an agency-only stockbroker and became its controller and CEO. He also introduced a number of new clients to the firm, despite knowing that some of the clients had insufficient funds to trade. Eagle's intention was to use SP Bell to sell FEI shares to its clients, generating demand for the stock and pushing its price up. Eagle instructed SP Bell staff to sell FEI shares to clients, many of whom were unaware that the shares were being bought and sold on their behalf.

In order to defer clients having to pay for the shares, many of the trades were rolled over from client to client without being settled. These rollover trades which were carried out by the market maker, Winterflood, breached London Stock Exchange (LSE) rules. The trades carried out by SP Bell and the increases in the bid/offer spread for FEI shares by Winterflood, at the request of Eagle, led to an artificial increase in the share price and gave a misleading impression of demand for the shares. The share price rose from 2.5p in May 2003 to 11.75p in July 2004. The scheme enabled Eagle to secure control of FEI and acquire 10% of its stock. He was also paid a commission of £1.2mio by FEI's original shareholders.

The Financial Services Authority fined Simon Eagle £2.8mio and banned him from working in financial services. The FSA stated that "Eagle deliberately set out to create a scheme to artificially inflate the price of FEI shares. He involved others in his activities and exposed individual clients to serious financial debts of over £9mio.

His conduct breached the LSE's rules, caused significant disruption to share dealing in FEI shares, and damaged confidence in the AIM market. This scheme was rotten throughout and at the core was Simon Eagle. He showed a breathtaking disregard for his clients, for his duty as an approved person and chief executive and for the effect of his scheme on markets. He has played procedural games in an attempt to avoid being held accountable for his actions and this tough action shows that we are determined to keep dishonest cheats, like Simon Eagle, out of financial services."

Trading in FEI shares was suspended in July 2004 leaving over £9mio of unsettled trades which neither SP Bell nor its clients could meet. SP Bell ceased trading and went into administration. The FSA fined Winterflood £4mio in 2008 - one of the biggest fines ever handed out. For details see Part 2, Section 8, below.

Country: UK

Key date: 2008 (UK FSA fined Eagle £2.8 mio and banned from the Industry for market manipulation)

Christopher McQuoid

Christopher McQuoid was the first criminal prosecution for insider dealing brought by the UK authorities in 2008. McQuoid was a solicitor, employed as general counsel at TTP Communications. In May 2006, he was told confidentially that Motorola was planning a takeover bid for TTP. He passed that information to his father-in-law, James Melbourne, and two days before the deal was publicly announced, Melbourne bought shares at 13p each. The takeover price was 45p a share and Melbourne's profit was close to £50,000. Three months later, he gave a cheque for exactly half the gain to McQuoid.

Melbourne's trade was spotted as being suspicious and reported to the FSA. It prosecuted, and McQuoid was sentenced to eight months. Melbourne, aged 75, was given the same sentence, but suspended for 12 months.

Country: UK

Key date: 2008 (first UK criminal conviction for insider dealing)

Dipak Patel & Others

Dipak Patel, a portfolio manager for the US-based Passport Capital, along with Kanaiyalal Baldev Patel, Anandkumar Baldev Patel and Bhoomi Industries, profited by placing and executing orders before the orders of Passport India clients, i.e. front running. The modus operandi was as follows. KB Patel knew when Dipak Patel of Passport India would place his orders and for how much and bought and sold the same shares, timed with Passport's trades. For example, on 26 March 2008, KB Patel placed buy orders at 10.04am for shares of Ansal Properties while Passport India put its buying orders at 11.06am. During the same time, the price moved up from Rs151.95 to Rs155. A minute after Passport bought, KB Patel offloaded his shares, making a profit of Rs1.87 lakh from this move.

The same modus operandi was followed in the synchronised buying and selling of many other shares. During the trading hours, Dipak Patel received or made 40 calls to and from AB Patel and eight calls to and from KB Patel. On 33 instances, the calls with AB Patel were around the time that the synchronised trading was taking place. In five out of eight, the calls were at the time during which buying and selling orders were placed by either KB Patel or Passport India. Amazingly, on many occasions, the front-running and synchronised trades generated tiny profits like Rs6,546. In one case, Gujarat NRE Coke was bought at Rs23 and sold at Rs23.10 for a profit of Rs12,093 while Maharashtra Seamless was sold at Rs270 and bought at Rs268. Nevertheless, SEBI has documented ample evidence to prove that KB Patel was front-running the trades of Passport India.

In another example, on 31 January 2008, KB Patel

bought 63,518 shares of Financial Technologies (FT) and sold the same number of shares when Passport bought 70,897 shares. Dipak Patel and the dealers of Karry Stock Broking Private Ltd were talking about this transaction which SEBI traced to the Bloomberg transcripts. Karry dealers wondered where the supply of FT shares was coming from. Dipak Patel replied: "I know exactly where they are coming from." SEBI's conclusion: "From the above, it can be *prima facie* inferred that Dipak Patel had masterminded both sets of transactions in such a manner that KB Patel benefits from the trades placed before those of Passport India."

The sale proceeds from the transactions between KB Patel and Passport India were deposited in KB Patel's Kotak Mahindra Bank and were subsequently transferred to various other accounts or connected entities of KB Patel. Dipak Patel was found to have remitted funds from his NRE account with Kotak Mahindra Bank to KB Patel's account with Kotak Mahindra Bank in Kadi, Gujarat. The amounts received by KB Patel from Dipak Patel were subsequently transferred to Bhoomi Industries and withdrawn. The mailing address provided to Kotak Mahindra Bank by Dipak Patel in Gujarat is the same as that of KB Patel. Interestingly, KB Patel was authorised by Dipak Patel to operate his account as a mandate holder in the account opening form. Bhoomi Industries is a partnership of KB Patel and AB Patel. Bhoomi has two accounts with Shree Kadi Sahakari Bank Ltd, Gujarat - a current account and a hypothecation account. In the current account of Bhoomi, high cash transactions were seen including withdrawal of Rs41,90,000 on 20 February 2009 and Rs14,00,000 on 25 February 2009. The outflow of funds from Bhoomi Industries provides ample evidence of money laundering in these transactions, according to SEBI.

Country: India
Key date: 2009 (Patel fired for front running in India)

David Mason

David Mason was sentenced in the UK to two years in prison after pleading guilty to 13 counts of unauthorized financial activity, one count of making false or misleading statements or promises, and three counts of money laundering.

Mason operated a Boiler Room, organizing pressurized cold calling focusing on pushing investors to purchase shares in EduVest Plc between November 2008 and May 2009. During that time, he used bogus stockbrokers to defraud 32 people out of £270,000 in the belief EduVest would be listing on the PLUS stock exchange. In fact in 2008, Mason had set up EduVest as an investment vehicle himself, and the vehicle had no business activities.

Boiler Rooms refer to a busy centre of activity, usually selling speculative, questionable, worthless or non-existent securities traditionally by telephone, where a group

of salesmen work using unfair, dishonest high pressure sales tactics, sometimes selling penny stocks, operating schemes such as pump and dump or short and distort or committing outright fraud. The term "Boiler Room" is likely to have originated from the cheap, hastily arranged office space used by such firms, often just a few desks in the basement or utility room of an existing office building or by the high pressure tactics used and equated with high pressure heating appliance or a combination of the two. Whilst many consider boiler rooms a fictional relic of a bygone era, for example many disappeared in the 1990s following the burst of the "dot com bubble," many boiler rooms still operate across the world. Advances in telecommunication technology mean that a company can viably operate from long distances targeting unsuspecting prospective investors. Also the Internet has led to this medium being abused for securities frauds by mimicking traditional telephone scams, and leveraging the internet to provide increased anonymity and increased targeting of investors. Boiler Rooms operate in one country while calling prospective investors in another. The advantage of such an operation is that a company can operate without fear of prosecution from the investor's native legal system.

For example, many boiler rooms contacting prospective investors in the UK will operate from Spanish cities such as Barcelona and Valencia. Mason organised cold calling to sell shares in a company EduVest which he had set up himself and was worthless, taking £270,000 from 32 investors. Another example of Boiler Room activity was Stratton Oakmont a New York, brokerage house founded by [Jordan Belfort](#) that was shut down in the late 1990s, following numerous complaints. His story has recently been turned into a movie starring Leonardo DiCaprio called the "Wolf of Wall Street"

Country: UK

Key date: 2011 (first UK criminal conviction for boiler room fraud)

Christopher Pia

Christopher Pia a former head trader at US hedge fund Moore Capital agreed to pay US\$1mio to settle civil allegations by the US Commodity Futures Trading Commission following allegations that he systematically attempted to manipulate prices of platinum and palladium. Moore paid a US\$25mio fine to settle separate CFTC claims of attempted manipulation and supervisory violations.³⁵ At Moore Capital, Mr Pia revelled in his modest upbringing in the New York borough of Queens, complaining about some hedge-fund managers he considered elitist, according to reports from other traders. Callers to his cell-phone heard the Batman theme song, and he drove an orange Lamborghini. He and Moore founder Louis Bacon would go duck hunting together on a 145-acre island Mr. Bacon bought off Long Island. The CFTC alleged that he tried to artificially move futures prices near the very end of daily trading in a scheme called "banging or marking the close," which involves inundating the market with

trading orders.

Prices in the futures markets for commodities help determine how much consumers pay for everything from a carton of orange juice to a gallon of gas. Closing prices in futures markets are set differently than they are in the stock market, where they are determined by the last trade each day, at 4 pm. In the futures market, the "settlement," or closing price, is the weighted average of all trades during the last few minutes of trading. For palladium, for example, the "closing period" is from 12:58 to 1pm, and for platinum it is 1:03 to 1:05pm. Traders can therefore only seek to manipulate settlement prices around by inundating the market with orders during the last two minutes of trading. Trying to push prices higher in that way is known as "banging the close," and is considered market manipulation under US commodities laws. Manipulation in this way would, if successful, allow traders to potentially profit before prices fall. Mr Pia engaged in banging the close frequently during the seven-month period involved in his case.

The CFTC said Pia, frequently either directly or through a Moore execution clerk, would place buy orders in platinum and palladium at the closing. Such trading can have a big impact in markets such as platinum and palladium, which are thinly traded. In one case for example, Mr Pia told a trader in the platinum and palladium market he wanted to buy futures contracts just before the close. In an instant message, Mr Pia told a clerk his aim was to 'push settlement prices higher.' Mr Pia's orders were executed in the last 10 seconds of trading, constituting a large percentage of trading in the contracts, 'in an attempt to manipulate upward' the prices. Under the CFTC settlement, the 45-year-old Mr Pia, also agreed to a permanent ban in trading CFTC-regulated products in platinum and palladium, such as futures contracts. He also is banned from trading instruments regulated by the CFTC during the closing period, the final few minutes of trading when settlement prices are determined.

Country: US

Key date: 2011 (Pia paid US\$25mio to CFTC to settle civil charges regarding attempted price manipulation of platinum and palladium)

Traffickers Illicit Arms Traffickers

Basil Zaharoff

Known variously as the "super salesman of death", the "mystery man of Europe" the "Monte Cristo of our Time" Zaharoff was the world's first larger than life arms dealer, that many have since attempted to emulate. Basil Zaharoff was the world's first flamboyantly high-living arms dealer, "godfather of the modern BAE", a man who once boasted of starting wars in Africa so he could sell weapons to both sides, who helped arm the great powers culminating in the First World War.

Zaharoff was the model for George Bernard Shaw's Andrew Undershaft, "a profiteer in mutilation and murder" in Major Barbara, and was famed for the size of the bribes he paid to secure business.

Basil Zaharoff was born in Turkey, from an exiled Russian Family in 1849. Apparently his first job was as a guide for tourists and then as an arsonist for the Constantinople firefighters, who reputedly set fires alight so as to extinguish them only after being paid a healthy commission from desperate wealthy families watching their belongings going up in smoke. He then got his first break as an arms salesman, when a friend recommended that Zaharoff succeed him, working for a Swedish arms manufacturer. The then political and military conflicts involving the Balkan states, Turkey and Russia provided an excellent opportunity for the young salesman. Each state was ready to spend to cope with the perceived aggressive intentions of its neighbours.

As a salesman for the Swedish inventor Thorsten Nordenfelt, Zaharoff was known for aggressive and corrupt business tactics. These included selling arms to both sides of conflicts, selling fake or faulty machinery and sabotaging demonstrations. Zaharoff sold munitions to many of the leading nations of the time, including Great Britain, Germany, the Russian Empire, the Ottoman Empire, Greece, Spain, Japan, and the US. Although very little could be proved, Zaharoff was viewed as using large bribes to gain business.

Despite his reputation for corruption, he helped popularise a number of famous weapons and vehicles, such as the Maxim gun (one of the first fully automatic machine guns) and the first true submarine. His relationship with and success enjoyed as a result of his association with the Maxim gun and its inventor, Maxim, led Zaharoff to leave his Swedish employer and take up with Maxim. With Zaharoff's abilities the gun was bought by UK arms manufacturer, Vickers, one of the then giants of the industry.

Zaharoff received cash and shares in Vickers itself and

soon joined the Board of Directors of the Company, that would later become British Aerospace and the BAE of today. Of course the turn of the century and the decade to follow was a time for many European armies to rebuild and modernize. Germany and the UK both saw the need to strengthen and equip their armies with new equipment, including large procurements for the Army and Navy. Vickers and Zaharoff were there, willing and able to accommodate both sides.

After its disastrous defeat by Japan in 1905, Russia too had a need to rebuild its armed forces and looked to Vickers and Zaharoff. With the onset of World War 1, Vickers and Zaharoff, would make their fortunes. Vickers would sell, 4 battleships, 3 cruisers, 53 submarines, 3 auxiliary vessels, 62 light vessels, 2,328 cannon, 8,000,000 tonnes of steel ordnance, 90,000 mines, 22,000 torpedoes, 5,500 airplanes and 100,000 machine guns, supplying both sides. In the post war period, Zaharoff continued selling arms, with conflicts in Greece and Turkey, requiring supplies, but he also remarkably involved himself in two additional ventures, that would prove his eye for an opportunity would not be limited to arms sales.

In 1920 he invested in oil, taking a stake in a new venture that would become British Petroleum, now BP, believing their to be a great future in the oil business and he would invest in the debt-ridden Société des Bains de Mer which ran Monte Carlo's famed but failing casino, making the casino profitable again, and adding to his already considerable fortune.

Country: Turkey, Russia, Europe
Key date: 1914 (greatest achievement and opportunity to sell arms to both sides in WWI)

Adnan Khashoggi

Born in 1935 in Saudi Arabia, Adnan Khashoggi's father was the personal physician to King Abdul Aziz ibn Saud, of Saudi Arabia. Once considered the richest man in the world (worth about US\$40billion in the early 1980s), generated from his activities the world's most successful arms dealer. Khashoggi rubbed shoulders with celebrities, royal families and high society. He was renowned for extravagance, including his yacht, private jets, high priced prostitutes, notorious parties and estates all around the world. Rock band Queen even wrote a song about him, called "Khashoggi's Ship".

In the 1970s he was working with Lockheed, receiving anywhere between 2.5% to 15% commissions on sales of Arms into the Gulf as the Middle East began arming and tensions in the region rose. His other main clients were US Arms companies, Northrop and Raytheon which generated many millions in commissions for himself. Much of the dealings by these Companies became the subject of US Senate Hearings on bribery of foreign officials in the 1970s which would lead to the passing of the Foreign Corrupt Practices Act (FCPA) in 1977.

Khashoggi was also the named arms dealer in the Iran Contra scandal, where the US sold arms to Iran via Israel in violation of an arms embargo to secure hostages, and in addition, finance Nicaraguan Contras.

In 1989, Khashoggi was extradited to the US for allegedly helping the Marcos family steal more than US\$100mio by hiding Mrs Marcos' assets, including ownership of four buildings in Manhattan and a collection of paintings. Khashoggi was acquitted and now lives in Monaco. He is still the subject of a British court order to pay £7mio owed to creditors.

Country: Saudi Arabia, US
Key date: 1989 (extradicted to the US)

Leonid Minin

Leonid Minin was born in Odessa in the Ukraine and in the 1990's and was thought to be one of the Ukrainian Mafia's (Odessa Neftemafija) most important members involved in the lucrative Oil and Gas business around this important Black Sea port. He made his fortune not only in leading one mafia faction profiting from Oil and Gas but also he was allegedly involved in international arms and drug trafficking, money laundering, extortion and other offences. For example, in 1998 through contacts he met with Liberian Dictator Charles Taylor and agreed to supply arms to the Revolutionary United Front militants in Sierra Leone. In one case Minin delivered by Plane, 68 tons of ammunition and weapons which cost about US\$1.5mio, sourced from Russia and the Ukraine. The weapons would be used in the brutal attack known as "Operation No Living Thing" carried out in January 1999, where in less than 2 weeks, at least 6,000 innocent people were murdered and thousands more injured and maimed for life. These shipments would be followed by further bigger shipments over the next 18 months.

In August 2000, while celebrating his recent sales to Liberia, Leonid Minin was arrested by Italian Police. He was found in bed with 4 prostitutes in a hotel in Balsamo, passing around a drug vial, after a tip off, though they did not know he was at this time one of the world's most dangerous arms smugglers. As the room was searched, the Police discovered, US\$500,000 worth of diamonds and US\$35,000 worth in different currencies. The most valuable items however came from Minin's briefcase, as 1,500 pages linked him to the illegal supply of weapons and would lead to his arrest, prosecution and conviction. He was sentenced to two years in prison in Italy. Minin's personal legal problems and his extensive drug use made him an erratic and unreliable partner for the Liberians going forward, but they knew of another who was said to be able to deliver anything to anywhere, having some Planes registered under the Liberian Flag. His name was Viktor Bout.

Country: Ukraine
Key date: 2000 (arrested in Italy and sentenced to 2 years in prison)

Simon Mann

The 2004 Equatorial Guinea coup d'état attempt, also known as the Wonga coup, was a coup attempt against the government of Equatorial Guinea in order to replace President Teodoro Obiang Nguema Mbasogo with exiled opposition politician Severo Moto, carried out by mercenaries and organised by mainly British financiers. Equatorial Guinea has vast oil and gas reserves. Prosecutors alleged Equatorial Guinea's opposition leader, Severo Moto, was to be installed as the new President in return for preferential oil rights to corporations affiliated to those involved with the coup. It received international media attention after the reported involvement of Sir Mark Thatcher in funding the coup.

In March 2004 Zimbabwean police in Harare airport impounded a plane which flew in from South Africa with 67 alleged mercenaries on board. On March 9, 2004 Nick du Toit and 14 other South African and Armenian men were arrested in Equatorial Guinea on suspicion of being the mercenaries' vanguard. The alleged plot leader ex-UK Special Air Service (SAS) officer Simon Mann, was arrested with two colleagues near the runway while waiting for arms to be loaded onto Boeing 727, carrying three crew and 64 former soldiers recruited in South Africa. The majority of those alleged to have been the mercenaries planning to carry out the coup are based in South Africa and ex-members of the 32 Buffalo Battalion, a special force unit that fought for the South African apartheid regime. The marketing manager of Zimbabwe Defence Industries, Hope Mutize, said in court that Simon Mann had paid him a deposit on weapons worth US\$180,000 (£100,000) in February 2004 and indirectly linked Mr Mann to the alleged plot by saying he was accompanied by a South African, Nick du Toit, the leader of the 14 men arrested in Equatorial Guinea. But news of the coup apparently leaked to the South African authorities, who tipped off Zimbabwean intelligence.

Their arms requisition included 20 machine guns, 61 AK-47 assault rifles, 150 hand grenades, 10 rocket-propelled grenade launchers (and 100 RPG shells), and 75,000 rounds of ammunition. Mr Mann, 51, said he wanted the rifles, mortars and ammunition to guard JFPI Corporation-owned diamond mines in volatile parts of the Democratic Republic of Congo. It was alleged that those arrested in Zimbabwe made a stopover in Harare city to buy weapons and expected to join a team in Equatorial Guinea to overthrow President Obiang.

Nick du Toit said at his trial in Equatorial Guinea that he was recruited by Simon Mann and that he was helping with recruitment, acquiring weapons and logistics. He says he was told they were trying to install an exiled opposition politician, Severo Moto, as the new President. In a letter from prison on 31 March Simon Mann told his wife, Amanda, and his legal team: "Our situation is not good and it is very URGENT. They

[the lawyers] get no reply from Smelly and Scratcher [who] asked them to ring back after the Grand Prix race was over!.....We need heavy influence of the sort that ... Smelly, Scratcher ... David Hart and it needs to be used heavily and now. Once we get into a real trial scenario we are fxxxxd." David Hart was ex-prime minister Margaret Thatcher's unofficial adviser during the miners' strike and served as special adviser to Michael Portillo and Malcolm Rifkind in subsequent Conservative administrations. "Scratcher" is thought to be Sir Mark Thatcher and "Smelly" Ely Calil. On 25 August 2004, Mark Thatcher, the son of the former Prime Minister of the UK, was arrested under anti-mercenary laws in South Africa after being accused of helping to finance the coup to remove President Obiang.

Crause Steyl was one of the pilots picked to fly the key planners of the coup in a chartered King 200 twin turbo prop aircraft, registered ZS-NB, who later turned prosecution witness in South Africa. Crause Steyl testified that, "I met Mark (Thatcher) three or four times. He was a partner in the venture. He put in about US\$250,000. The money was wired to my company account in various installments. The helicopters cost about US\$600 an hour plus US\$5,000 each for the pilots and US\$10,000 a month for special insurance." Thatcher has admitted putting money into Steyl's company, Triple A Aviation, but he has said it was to cover the cost of an air ambulance project. Steyl dismissed this explanation. "He knew what was going on," he said. On 13 January 2005, Mark Thatcher, in a South African court, pleaded guilty to helping finance a coup plot in Equatorial Guinea. South African police were able to prove that Mr Thatcher had transferred about US\$285,000 to the mercenaries that were to execute the operation and had met and talked frequently to them prior to the coup attempt. After pleading guilty, he was given a four-year suspended sentence and a fine of about US\$560,000.

Simon Mann paid US\$500,000 towards the plot, according to the South African police. Ely Calil, the Chelsea-based Lebanese oil billionaire who is being sued in London by the Equatorial Guinea regime, is alleged to have raised another US\$750,000 though this is strenuously denied. Mr Calil's solicitor said that he did not wish to respond to the claim that he had raised money for the plotters. But he denied any knowledge of the plot. Karim Fallaha was a Lebanese associate of Mr Calil. He is a director of Asian Trading and Investment in Beirut, which signed a contract with Simon Mann to invest US\$5mio in West African projects. Other than the appearance of his name on a financiers list, there is nothing to suggest he had any involvement in the coup. David Tremain, a South Africa-based British businessman, is alleged to have raised US\$500,000. Mr Tremain is alleged to have been "fronting" for a syndicate of South African and other minor investors. Tremain denies any involvement in the coup.

Jeffrey Archer allegedly made a payment of US\$134,000 (£74,000) into Simon Mann's firm logo logistics account in the days before the failed coup attempt. Lord Archer initially issued a statement through his lawyers stating that he had "no prior knowledge" of the alleged coup and that he had not spoken to Sir Mark for "approximately 10 years". In January, on the same day the plotters were meeting at Sandton, outside Johannesburg, Ely Calil called Lord Archer and the pair apparently spoke for 15 minutes. Other calls followed in the run-up to the coup attempt. A lawyer for the Equatorial Guinea government said in London that telephone records showed four calls between Ely Calil and Lord Archer in the run-up to the coup attempt in March.

Prosecutors said Equatorial Guinea's opposition leader, Severo Moto, based in Spain, offered the group US\$1.8mio and oil rights to overthrow the government. President Obiang accused the US and UK and Spain of backing the plot. The Pentagon denied supporting it, though there appears to be some evidence of some form of prior warning or information being received by American and British Intelligence with little being done to stop the attempted coup. For example it is claimed that Foreign Secretary Jack Straw and minister for Africa Chris Mullin were personally told of the plot on Friday 30 January. After receiving news of the coup, Jack Straw allegedly ordered a change to evacuation plans for British citizens in Equatorial Guinea. Jack Straw had told parliament that the Foreign and Commonwealth Office did investigate if there were any British companies involved in the plot after receiving confidential reports, but failed to find any evidence. British officials, and Jack Straw, were forced to apologise after categorically denying they had prior knowledge of the coup plot.

President Obiang also accused the Spanish government of supporting the plot. The allegation could explain the coincidental position of two Spanish warships off the coast of Equatorial Guinea, at the time of the arrests of the alleged plotters. Miguel Mifuno, special adviser to Equatorial Guinea's President, accused the Spanish government of funding opposition groups in exile and supporting the coup directly.

Country: Equatorial Guinea
Key date: 2004 (failed coup attempt)

Mohamed al-Kassar

Mohamed al-Kassar, alongside his older brother, Ghassan, both of Syrian origin and with close links to the Syrian regime of then President Hafez al-Assad, became notorious arms dealers, starting in the "early 1970s", when the government of Yemen asked him to buy guns and rifles for them. Their modus operandi was to sell drugs, both heroin and hashish and then with the proceeds buy arms to sell on the black market. He settled in Spain after arrests in Copenhagen and

in London, but through his continued arms deals developed a reputation as a wealthy, ostentatious businessman.

The European press soon began to call him "The Prince of Marbella". In 1985 he was the subject of a profile in the French magazine Paris Match, which wrote, "in a few years, this Syrian merchant became one of the most powerful businessmen in the world." The Spanish government alleges that in 1985, al-Kassar sold arms to the hijackers of the Achille Lauro cruise ship, and that afterwards he flew the hijackers' leader, Abu Abbas, to safety in one of his private airplanes. Al-Kassar denied the charge. In fact in 1992, the Spanish government arrested him for his involvement and whilst he spent more than a year in jail once the trial was heard in 1995 he was found not guilty.

In 1987, investigations into the Iran-Contra scandal found that al-Kassar had been paid £1.5mio by someone in the US government to sell arms to Nicaraguan Contras. According to an article in The New Yorker, the money came from "a Swiss bank account controlled by Oliver North and his co-conspirators." In 1992, al-Kassar sold arms to Croatia, Bosnia and Somalia, violating UN arms embargoes affecting all three countries. By July 2006, and after a lifetime involved in shady arms deals, the government of Iraq placed him on their "most wanted" list, calling him "one of the main sources of financial and logistics support" for the Iraqi insurgency. His dealings in Iraq brought him to the attention of the US authorities, who decided to put together a sting to trap al-Kassar, code-named "Operation Legacy". They enlisted a 69-year-old Palestinian former member of the Black September organisation, referred to publicly only as "Samir", who was then being held in a US prison. Samir spent much of 2006 trying to arrange a meeting with al-Kassar, and was finally able to do so in December 2006. By February 2007, Samir had arranged a meeting between al-Kassar and two Guatemalan informants posing as FARC insurgents who claimed they wanted to purchase weapons to use against American military forces. The group met several more times, and at later meetings the informants were wearing hidden video cameras, which recorded al-Kassar agreeing to the terms of the deal. The informants, then convinced him to fly to Madrid to collect his payment, but when he arrived he was arrested and charged with conspiring to kill Americans, supplying terrorists, obtaining anti-aircraft missiles and money laundering. He was then extradited to the US and convicted on five charges, among them money laundering and conspiring to sell arms to suppliers for FARC. He was sentenced to thirty years' imprisonment. His brother was suspected as also involved in the drug and arms trade and died of natural causes in 2009.

Country: Syria, Spain and elsewhere
Key date: 2007 (arrested and extradited to the US)

Tomislav Damnjanovic

Tomislav Damnjanovic is a Serbian businessman and according to the UN not only an arms dealer but an illegal arms smuggler. A former employee of Yugoslavia's national airline, Damnjanovic founded his own company transporting supplies of goods aboard an Ilyushin Il-76 freight carrier, building his air transportation business in the process. Like the more infamous Victor Bout, Damnjanovic has chartered planes throughout Africa, the Middle East and Eastern Europe, supplying everything from humanitarian aid to hand grenades. He has chartered flights and run operations using aircraft based in Sharjah, UAE as did Victor Bout, and but unlike the world's most notorious arms smuggler, he has largely avoided media attention, or arrest.

He is thought to have built his business and honed his skills following the imposition of UN Sanctions placed on Yugoslavia during the Presidency of Slobodan Milosevic during the so called Balkan War's, where he helped secure goods and weapons for the regime, helped ship cash out of the country and helped with the mass cigarette smuggling operation designed to make money for the regime and in so doing helped to defraud the EU of billions in tax revenues and break the Sanctions imposed by the UN. For example, In 1994 Damnjanovic and his Serbian partner Tomislav Miskovic re-located to Cyprus, which was being used by the Milosevic regime to launder millions in hard currency reserves. Flights from Belgrade to Nicosia with bags full of Deutschmarks and US dollars were commonplace. Money was deposited and transferred to a variety of bank accounts in order to purchase arms, oil and other commodities from businesses in Greece, Albania, Panama and Israel. Purchases were made through dozens of shell companies established by regime supporters in Cyprus.

He gained notoriety in 2002 when, while contracted to deliver "millions of rounds of ammunition, guns, grenades and mortars" to aid the US military during the US led Wars In Iraq and in Afghanistan, evidence emerged that he had more than just a chequered past. In fact he had a 15 year history of weapons deals with Libyan, Liberian and the Republic of the Congo officials as well as Al-Qaeda-linked Islamist groups in Somalia in addition to his smuggling for the former Milosevic regime.

In 2007, a UN case study on Damnjanovic referred to him as an "invisible arms trafficker", claiming that he "worked outside the law, transporting weapons for US companies and weapons manufacturers such as General Dynamics and Kellogg, Brown and Root based in America while at the same time using chartered flights

in Africa and the Middle East to illegally supply, among others, Saddam Hussein, Charles Taylor, the Myanmar military junta, Muammar Gaddafi and Islamic militants in Somalia. Not surprisingly Damnjanovic was also linked to other arms dealers such as Victor Bout. Tomislav Damnjanovic is still in business, organizing flights of aircraft to Africa and the Middle East in much the same way he has always done.

Country: Serbia

Key date: 2007 (UN call him an invisible arms trafficker)

Pierre Falcone

The secret arms sale to Angola, dubbed Angolagate during the 1990s, is one of France's worst political scandals. During an arms embargo by the UN on both the Angolan ruling party (MLPA) and the UNITA rebels, the French government facilitated the illegal sale of over US\$790mio in arms to the MLPA including 12 helicopters, 6 warship, 150,000 howitzers, 450 armoured vehicles and 170,000 landmines. Ravaged by decades of conflict and civil war, the illegal arms prolonged the conflict, sustained grand scale corruption, further devastated the economy and infrastructure and led to additional killings of tens of thousands of people. The key facilitator in supplying the arms to the MLPA was French businessman Pierre Falcone, engaged by Angolan President José Eduardo Dos Santos. Falcone and his partner, Russian-born Israeli billionaire Arcadi Gaydamak were part of Santos' inner circle. Falcone especially was hailed a national hero for helping Angola exercise its sovereign right to defend itself against the UNITA rebels. He was given Angolan citizenship and to the dismay of the world, was elected as Angolan's ambassador to UNESCO in 2003.

Falcone sourced the arms from Soviet stockpiles, made funds available for the weapons and arranged bribes to officials and politicians in positions of influence. He reportedly transferred the money via suitcases, offshore bank accounts and intermediaries to Angolan and French officials as well as close associates. He also used different bank accounts using in his company, Brenco Trading Limited to achieve this. It is reported that 70 transfers totalling US\$54mio in illegal bribes were paid to officials and more than US\$21mio was received by Angolan high-level officials, passing through banks in Portugal, Luxemburg, the UK and Switzerland. Falcone reportedly circulated at least US\$60mio through 29 bank accounts with Bank of America. The Angolan money was deposited in the accounts of several French companies in Paris, Geneva and Tel Aviv, and then forwarded to tax havens in the Virgin Islands or Monaco.

In 2007, the French government indicted 42 individuals over the scandal including former politicians and businessmen including the former French Interior Minister, Charles Pasqua, former presidential adviser Jacques Attali and son of former French President Charles Mitterrand, as well as Falcone and Gaydamek for tax evasion, money laundering, selling weapons or taking payment to influence and facilitate the sales.

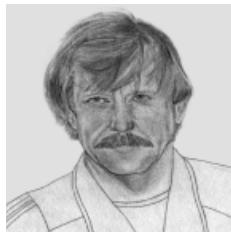

In 2009, 39 of the 42 individuals were convicted of various crimes. However 21 appealed and a number of charges were dropped, including those against Mitterand and Pasqua.

Country: France, Angola, Russia

Key date: 2007 (french indictments for involvement in sanctions busting arms deals)

Special Focus 22

Viktor Bout

Viktor Bout is a former Soviet military translator who made his money through multiple air freight companies which operated in Africa and the Middle East during the 1990s and early 2000s. These companies flew cargo of all kinds including flowers, frozen

chickens, and refrigerators, as well as UN peacekeepers, French soldiers and African heads of state. However Bout is alleged to have presided over the world's biggest private arms dealing network, making hundreds of millions of dollars supplying weapons into conflict zones in Afghanistan, Angola, the Democratic Republic of Congo, Iraq, Rwanda, Sierra Leone and Sudan using his fleet of around 50 aircraft. He was eventually captured in a sting operation organised by the US Drug Enforcement Administration ("DEA") in 2008.

Viktor Anatolyevich Bout was born in Dushanbe, the capital of the then Tajik Soviet Socialist Republic. He joined the Komsomol, the Communist Union of Youth, went on to complete a special training programme with Soviet military intelligence, and then later attended the Military Institute of Foreign Languages in Moscow. Bout is fluent in at least six languages. He has always denied that he was a KGB agent although there is evidence to suggest that he received substantial financial and logistical support from former Russian intelligence

operatives, at least at the beginning of his career.

In the late 1980s, the Soviet army sent Bout to Mozambique and Angola to work as a military translator. At the time Mozambique was a Soviet client state in the cold war against the US. While he was in Mozambique, Bout reportedly met Igor Sechin, who later became Vladimir Putin's chief of staff during his time as deputy mayor of St Petersburg and followed him into the FSB when Putin was appointed its head in 1988. Sechin is currently the President of the Russian oil and gas company Rosneft and appears to have been a powerful source of support for Bout over the years.

Bout was discharged from the military in 1991 with the rank of lieutenant colonel. Shortly after that, the Soviet Union collapsed, providing Bout with an opportunity to start in business. Bout was able to buy up unused planes and unsold weapons at heavily discounted prices. It is alleged for example that, with the help of Russian military intelligence, he acquired three Antonov cargo planes for approximately US\$40k each, a substantial discount to their true value. Using his contacts he was also able to secure access to vast stockpiles of ex-Soviet weapons. Many of the weapons arsenals had been virtually abandoned with the collapse of the Soviet Union and had airstrips inside their compounds making loading easy. With a ready supply of weapons and the means to deliver them, Bout embarked on his arms dealing businesses finding clients in many war torn parts of the world. Bout paid part of the charter money he received from his air freight services to his Russian military intelligence contacts.

Bout had soon managed to acquire a fleet of around 50 aircraft, registering them in jurisdictions such as Equatorial Guinea ("Air Cess") and the Central African Republic ("Central African Airlines") to benefit from their lax regulations. To obtain permission to fly internationally an aircraft must be registered in a country where its maintenance records and air worthiness are certified. By repeatedly registering planes in different countries, Bout was able to avoid local aviation rules, inspection and oversight.

In 1993 Bout moved his fleet to Sharjah in the United Arab Emirates, a hub for flights to and from the former Soviet bloc, the Middle East, Central Asia and Africa. There he met Richard Chichakli, a Syrian born US citizen who became his business partner and long time friend. Chichakli went on to use his expertise as a certified accountant and certified fraud examiner to play a significant part in setting up and managing Bout's companies as well as managing Bout's financial affairs.

Bout does not appear to have had any qualms about dealing directly with warlords and rebels in many of the most dangerous conflict zones. For instance he was happy to deal directly with Jonas Savimbi, the leader of the UNITA rebel group in Angola, supplying him with arms in return for diamonds. Additionally, in the mid 1990s Bout reportedly became instrumental in the supply of weapons to Charles Taylor, a rebel leader who had recently taken power in Liberia and was stoking civil war in neighbouring Sierra Leone. Taylor became notorious for the conscription of child soldiers and the hacking off of limbs. Bout acquired a property in the Liberian capital, Monrovia, from which he attended regular meetings with Taylor at which he negotiated arms sales and was paid in kind with blood diamonds. Bout allegedly employed the services of his own gemstone expert to validate the diamonds as being genuine. Taylor was later extradited in 2006 to the Hague to stand trial on charges of crimes against humanity at the International Criminal Court.

Bout was forced to leave his home in Belgium in 2002 when the authorities there issued an arrest warrant for him. After that he is believed to have travelled to the United Arab Emirates and South Africa and then to Russia. In 2003, Peter Hain, then the British Foreign Minister, coined the nickname "merchant of death", stating that Bout is "the principal conduit for planes and supply routes that take arms....from East Europe, principally Bulgaria, Moldova and Ukraine, to Liberia and Angola".

At around the same time the US government entered into a contract with a company owned by Bout called Irbis Air, an air freight company registered in Kazakhstan. It is not clear whether the US government was aware Bout was the owner of this company. The Irbis Air aircraft were leased to US Air Mobility Command and the defence contractor KBR (which is owned by the Halliburton group) and reportedly completed at least 1,000 flights to Iraq in 2003 and 2004 at a cost to the US tax payer of around US\$60mio.

As Bout's contract became public and the possible implications of continuing to deal with him were explained by the US Treasury Department, the US air force revoked his government contract and placed pressure on private companies using his services to do the same. However, it appears that Bout continued flights for KBR well into late 2005.

In April 2005, new US economic sanctions came into effect against 30 companies which were associated with Bout and these restrictions were adopted by the

UN Security Council eight months later. This should have had the effect of closing Bout's arms trafficking activities but Bout simply incorporated new companies in Moldova and other jurisdictions in Eastern Europe and continued to apply for contracts with the US government, thereby exploiting the tension between the military need to deploy personnel and equipment and the need to conduct due diligence on the firms with whom they were contracting.

The US government placed Bout on a sanctions list in 2006 which had the effect of limiting his freedom of movement. Thereafter Bout stayed in Russia, making only a handful of trips abroad.

Chichakli claimed that he ceased having any business connection with Bout after 2004 but a UN report suggested otherwise and in 2005 he was subject to UN, EU and US sanctions, prompting the US authorities to seize his US\$1.5mio Texas estate and his two Mercedes sports cars. His bank accounts were frozen and his name added to a UN list of arms embargo breakers. Additionally, Bout's brother, Sergei, who is also alleged to have been involved in illegal arms trading was listed as a designated national by OFAC in 2005 and his bank accounts frozen.

One of the interesting features of Bout's activities is that he was prepared to supply arms to both sides in conflict zones. For example, in Afghanistan he initially supplied the Northern Alliance until one of his planes was downed by the Taliban and its crew taken hostage. After negotiations to secure the release of the crew, Bout appears to have started supplying the Taliban with arms using Ariana Airlines (the then official Afghan airline).

The Viktor Bout story also brings into sharp relief the human consequences of the unfettered and unregulated supply of arms around the world. Human Rights Groups and charitable organisations such as Oxfam have campaigned widely for the need to regulate the supply of arms and have complained that UN efforts to establish a global arms trade treaty have been unsuccessful due to opposition from countries which are major arms exporters.

In a sting operation co-ordinated by the Royal Thai Police and the US Drug Enforcement Administration ("DEA"), Bout was arrested in Bangkok on 6 March 2008. Bout had allegedly offered to supply 700 missiles, 5,000 assault rifles, and millions of rounds of ammunition as well as land mines and explosives to people he thought were representatives of the Revolutionary Armed Forces of Colombia ("FARC").

Bout then fought a request from the US government to extradite him and a Thai criminal court ruled in his favour on the 11 August 2009 deciding that the request from the US was politically motivated. This decision was appealed by the US government and on 20 August 2010 a higher Thai court ruled that Bout could in fact be extradited.

Despite protest from the Russian Government Bout was subsequently extradited to the US on 16 November 2010. He was charged by the US Department of Justice with conspiracy to provide material support or resources to a designated foreign terrorist organisation, conspiring to kill Americans, conspiring to acquire and use an anti aircraft missile, illegal purchase of an aircraft, wire fraud and money laundering.

Bout claimed that the US case against him was politically motivated but was convicted by a jury at a court in Manhattan on 2 November 2011 and sentenced to 25 years in prison.³⁶

The chief DEA agent who organised the sting operation told CBS News in a 2010 interview that Bout is "one of the most dangerous men on the face of the earth".

Penalty: 25 years in prison on charges including terrorist charges
Actions: notorious arms dealer known as the "Merchant of Death"
Country: Russia, UAE
Key date: 2008 (Bout arrested in Thailand and extradited to the US)

Drug Traffickers (Organised Crime)

The French Connection

From the 1930s to the early 1970s, the so-called French Connection supplied the majority of US demand for Heroin.

Whilst during the Vietnam War, drug lords such as Ike Atkinson smuggled hundreds of kilos of heroin to the US in coffins of dead American soldiers, it was the so called French Connection which enabled most of the heroin sourced from Indochina, smuggled from Turkey to France and then to Market including the rest of Europe and the US. Whilst the operation started in the 1930s it reached its peak in the late 1960s and early 1970s.

For years, the Corsican Mafia, who controlled the Port of Marseille also controlled the operation. These French traffickers would by 1969 be supplying the Italian American

Mafia in the US with 80 to 90% of its heroin for domestic distribution.

In the early 1970s US law enforcement finally went into action, together with French authorities effectively shutting down the operation and arresting many of its leaders and major participants. The groups involved would either suffer at the hands of the authorities or now weakened would be taken out by now stronger rivals.

The French Connection investigation demonstrated that international trafficking networks were best disabled by the combined efforts of drug enforcement agencies from multiple countries. In this case, agents from the US, Canada, Italy and France had worked together to achieve success.

Country: US, France, SE Asia
Key date: 1970's (US and French Investigators shut down heroin trafficking organisation)

Special Focus 23 Pizza Connection

For those who enjoy a slice of Pizza, Al Dente's Pizzeria located in Queens, New York City is worth a visit. Over 30 years ago, however, this busy Pizzeria was the centre of an international Mafia-controlled drug ring that smuggled 1,650 lbs. of heroin (street value: US\$1.65bio) into the US since 1979 using pizza parlors including Al Dente's as fronts.

Sicilian crime boss and one of the heads of the Mafia worldwide, Badalamenti (the 'boss of bosses' of the Sicilian mafia) purchased opium from Pakistan and Afghanistan, oversaw its production into heroin, then exported it to the US to the New York based Bonanno crime family. Salvatore Catalano a leader of the Bonanno crime family, owned the Al Dente pizzeria and used it as a frequent meeting place for lieutenants in his faction and to make and receive calls concerned with the drug shipments using pizza code where Shipments of heroin were called "cheese" or "tomatoes."

Joseph Pistone, the FBI special agent who famously infiltrated the Bonanno crime family using the alias Donnie Brasco, learned of the operation while undercover and brought it to the attention of the FBI and provided key testimony supplementing evidence obtained by wiretapping over related 300 telephone conversations. Italian Police also discovered cash at the Palermo international airport in Sicily in a suitcase shipped from New York City. The cash was wrapped in pizzeria aprons. These investigations coordinated between New York and Palermo led to the arrest of Badalamenti and Catalano and 30 plus others key organised-crime

figures. Others involved in the case making their names included then US Attorney Rudolph Giuliani says the bust was part of a larger assault on the Mafia. "We can substantially crush organised crime" and led prosecutor, future FBI director Louis Freeh who secured the convictions in a trial lasting from October 1985 to March 1987 of 18 men, including Badalamenti and Catalano. The US government called it the biggest drug and mafia case ever to come to trial in the US. The press called the trial the Pizza Connection.

Starting in the 1960s, the mafia got into the pizza business. In 1968, the Eagle Cheese company opened, which was the first heroin distribution centre. Later, the pizza business provided an ingenious cover for heroin trafficking, and in fact, the mafia came to dominate the pizza business vertically. Many illegal Sicilian aliens worked in these pizza parlors. During this period, huge amounts of narcotics were being laundered through pizza parlor and pizza supply companies. The Sicilian mobsters including Badalamenti dominated the heroin trade, while the American mobsters received a cut for allowing the Sicilians to operate in their territory.

Two nephews of Gaetano Badalamenti operated pizzerias in the US and used them to distribute heroin, not only in Al Dente's Pizzeria in New York City but also out of small mid-western towns, for example, Alfano's Pizza and Spaghetti Restaurant in tiny Oregon, Ill. (pop. 3,800). The friendly Sicilian owner, Pietro ("Pete") Alfano, often tied on an apron and made the pizza himself when he wasn't acting as a "main contact point in the US" for the international drug-trafficking ring.

The Sicilians manufactured and exported cheese, olive oil and tomatoes into the US using also these exports as cover for smuggling drugs alongside. Joe Pistone, aka Donnie Brasco at trial quoted one Bonanno mobster; 'The zips are Sicilians brought into this country to distribute heroin. They set up pizza parlors, where they received and distributed heroin, laundered money. The zips were clannish and secretive...the meanest killers in the business.'

At the end of the Pizza Connection Trial, Gaetano Badalamenti was sentenced to a term of 45 years. He was remanded to the federal penitentiary in Marion, Illinois, a tomblike underground facility known as the worst prison in the US system and died in 2004 aged 80.

"The Pizza Connection trial was indicative of recent prosecutorial approaches to dealing with the Mob. Rather than hunting down an individual capo (boss) or underboss, who would quickly be replaced by the next in line, they would seek to dismantle entire chains of command. This is what they did in the Pizza Connection and would continue to do later for example when they targeted John Joseph Gotti Jr. The "thon don" and Capo of the Gambino crime family, who in 1992 was found guilty and sent also to Marion, Illinois, where he was held in virtual solitary confinement. On 10 June 2002, Gotti died of throat cancer at age 61. In the wake of his conviction, the assistant director of the FBI's New York office, James Fox, was quoted as saying, "The don

is covered in Velcro, and every charge stuck."

These groups don't limit themselves to drug running, though. They're also involved in illegal gambling, political corruption, extortion, kidnapping, fraud, counterfeiting, infiltration of legitimate businesses, murders, bombings, and weapons trafficking.

One area of particular interest for the Italian American Mafia was labour racketeering taking over effective control of some labour unions, providing a rich source for organised criminal groups to exploit. There are approximately 75,000 union locals in the US, and many of them maintain their own benefit funds. Labour racketeers attempt to control health, welfare, and pension plans by offering "sweetheart" contracts, peaceful labour relations, and relaxed work rules to companies, or by rigging union elections. In the mid-1980s, the Teamsters, a 1.4 million-member union, controlled more than 1,000 funds with total assets of more than US\$9bio.

For decades, the Teamsters has been substantially controlled by La Cosa Nostra. In recent years, four of eight Teamster presidents were indicted, yet the union continued to be controlled by organised crime elements, with persistence the government has been fairly successful at removing the extensive criminal influence at the Teamsters.

Penalty: Gaetano Badalamenti, mafia don, sentenced to 45 years imprisonment

Actions: Pizza Houses used as fronts for mafia to launder money

Country: US

Key date: 1985 (trial started to convict Italian Mafia following undercover work of Joe Pistone, aka Donny Brasco)

La Mina/Operation Polar Cap

In 1989, details of Operation Polar Cap was revealed, it being the largest money laundering investigation in the US at that time.

The operation targeted "La Mina", or "the Mine" an enterprise that handled illegal drug profits belonging to the Medellin cartel of Pablo Escobar. La Mina was organised in Los Angeles by a money launderer named Raoul Vivas, acting on behalf of the Colombian drug cartel in Medellin, he would take 5 % commission on all transactions.

Vivas owned a gold refinery in Argentina and another in Los Angeles called Rose Marie Refiners and used his knowledge of the precious metals and jewellery business to launder almost US\$1.2bio in drug proceeds in only 2 years. In one scheme he recruited several existing gold dealers and jewellery companies, who whilst established and legitimate within months, all but abandoned their real businesses and immersed themselves in laundering for Vivas. Two of these Companies, Ropex Corporation and Andonian Brothers Manufacturing Company, were located in the Los Angeles Jewellery Mart. These jewellery businesses each acted to launder enormous sums generated from the sales of drugs,

essential acting as “fronts” for the drug traffickers. Cash deliveries to the “fronts” were boxed and shipped cross-country via armored car with one such shipment of US\$4.8mio being seized as the operation was rolled up. Large shipments of cash had been commonplace over a 2 to 3 year period totaling hundreds of millions of dollars from purported gold and jewellery businesses located in Los Angeles, New York and Houston as payment for fictitious gold and jewellery sales.

In another scheme, Trend Precious Metals and Saccoccia Coin Company, two East Coast precious metals and jewellery Companies, owned by Steven Saccoccia would receive large volumes of cash which would be delivered by courier from New York City, shipped by armored car or private vehicle, to either of these two companies on Rhode Island. Once in Rhode Island, the money would be counted on an automatic counting machine and sorted. Pursuant to Saccoccia’s instructions, it would then be taken to area banks and used to purchase cashier’s or treasurer’s cheques. These transactions were frequently “structured” so that the amounts were less than US\$10,000 – a device designed to avoid the filing of a Currency Transaction Report. On other occasions, when the purchases exceeded that amount, the defendants caused false reports (or no reports at all) to be filed. The cheques were made payable to Trend or other dummy companies controlled by Saccoccia businesses ostensibly engaged in such trades as gold or jewellery that would be expected to generate large quantities of cash. cheques would be deposited in those companies’ accounts, and the funds later transferred to a central account maintained by Trend at a Providence bank. From there, the money would be wired to bank accounts in Colombia and elsewhere, including Europe. In this scheme Vivas imported gold-plated lead bars from Uruguay. The gold plating fooled customs, as the entire bars were described as gold bars, which justified Vivas overpaying massively for the goods, effectively moving drug proceeds from the US offshore. The lead was sold on invoiced as gold still to US based established jewellery companies that were happy to help as part of this laundering operation and from numerous paper shell companies. The 10% that was really gold was sold to responsible precious metals dealers that were none the wiser and saw these transactions as entirely legitimate, providing Vivas though with much needed credibility in the industry. The Cash coming into Vivas was sent by armored car in cardboard boxes. They were labeled scrap jewellery but they were actually stuffed with US\$50,000 to US\$300,000 in dollar bills. Once received they would then deposit the funds in banks, who were told these were the proceeds of legitimate sales of gold and jewellery which could be evidenced by the invoices issued. Once banked, funds would then be wired to the house bank, Banco Occidente, a Colombian Bank, with branches in numerous locations including in Panama.

Another scheme involved Ronel Refining in Florida , which refined precious metal scrap. Vivas contacted Ronal in 1986 with the offer of refining scrap gold material from Uruguay. Ronal was having difficulty making money and so jumped at this new business opportunity.

Ronal should have been suspicious as Uruguay does not have any Gold mines, nor is it noted for its Gold exports. Instead of importing the Gold as proposed, Vivas used the proceeds from drug sales to buy fine gold from dealers in the US. He mixed the Gold with 10% silver and shipped it to Ronal. Vivas could show Ferris that the material was from Uruguay with the import documentation from the gold plated lead bars (see above). As requested Ronal refined the gold and sold it on, paying Vivas, directly into his Banco Occidente accounts, allowing Vivas to effectively launder the drug monies.

Very soon volumes increased, with initial volumes of 10 kilos a day soon thereafter to 80 kilos and then to 300 kilos within two years. As the volumes increased the costs of transportation of the gold from LA to Miami also increased and so in order to reduce costs, Ronal suggested the use of Pooled accounts. The pool account mechanism let Vivas generate all the volume he needed without the cost of moving gold from LA to Miami and back. Vivas opened a metals account with an LA based metals trader. Vivas would pay cash to the Metals trader in LA, and then buy gold from a dealer for Vivas with the cash. Vivas would then release the Gold to Ronal who also held a metals account with the Metals trader. Ronal then sold the Gold to the trader and paid the funds again to started as a depository account at Prosegur’s Los Angeles vault. Vivas would deposit cash into Prosegur. Prosegur would count it, file the Cash Transaction Reports, and remit the funds to a dealer to pay for Vivas’ gold purchases. Vivas would then release the gold to Ronal. Ronal sold the gold to the dealer and remitted the proceeds to Banco Occidente. It was a continual loop where no physical gold even changed hands, the purpose simply being to launder the original drug proceeds and Ronal and the LA metals trader, being the conduits and taking a fee for their support.

Operation Polar Cap led to the first conviction of a foreign financial institution, Banco de Occidente/Panama, for violating US money laundering laws. As a result of this operation, over 100 people were arrested, and more than US\$105mio in assets, including currency, bank accounts, real estate, jewellery, gold, and vehicles were seized. US\$7mio forfeited by the Banco de Occidente/Panama was shared with other governments, including Canada and Switzerland, which each received US\$1mio.

Country: US, Colombia

Key date: 1989 (details of Pablo Escobar’s drug trafficking and money laundering operation revealed)

Special Focus 24

Lucy Edwards and Peter Berlin

It was the early 1990s and BoNY saw an opportunity to expand its business in the emerging Russian market following the collapse of the Soviet Union. In order to do this, it created an Eastern European Division (EED) that was staffed mostly with Russian émigrés, including Lucy Edwards. It was headed by

Natasha Gurfinkel Kagalovsky who was married to Konstantin Kagalovsky; who was a politically connected Russian financier who had been an advisor to Yeltsin and in the early 1990s was Russia’s IMF representative and who then moved to the once-powerful Menatep Bank in Moscow.

BoNY’s quick thinking paid off and they earned a leading position among US banks in handling correspondent accounts for Russian banks. According to US Authorities, “By the late 1990s, the EED was generating more than \$40 million in annual revenues for BoNY and Russia had become the single largest producer of funds transfer revenues among BNy’s foreign operations.” Much of this success was aided by a proprietary electronic banking software product that BoNY acquired from Irving Trust through a hostile takeover during the 1990s and renamed “Micro/CA\$H-Register”; [although similar products were available from all major commercial banks at that time].

BoNY’s software allowed customers (with an apparent business need) to effect wire transfers by themselves (direct access), without the assistance, control or supervision of BoNY employees. Obviously, the software created enhanced risks for money laundering but there were no AML policies or procedures at the time that restricted who could use the product or that required enhanced monitoring on accounts that used the software.

In late 1995, a then 37-year old Edwards was approached by Russian bankers and they worked out an agreement that her husband, fellow Russian émigré, 41-year old Peter Berlin would open up an account at BoNY and obtain the Micro/CA\$H software so that they could make wire transfers to the bank themselves. In 1996, Berlin opened accounts at the One Wall Street retail branch of BoNY in the names of Benex International Co., Inc. (Benex) and BECS International LLC (BECS). The same address was listed on the accounts at BoNY: 118-21 Queens Boulevard, Suite 612, Forest Hills, New York. This was an office that was occupied by an entity named Torfinex Corp. (Torfinex) that was run

by Volkov and became known as the “Queens Office”.

It was a good arrangement as Torfinex was also transmitting questionable money on an unlicensed basis and even applied to the NY State Banking Department for a license in November 1997, a month after they had been ordered by the Department to cease and desist transmitting money. Shortly after establishing the accounts, Berlin obtained the Micro/CA\$H software to facilitate wire transfers and Edwards installed it at the Queens Office. For their efforts, Edwards and Berlin would receive a percentage of the money transferred or commissions, which ultimately totalled US\$1.8mio. Shortly after the operation was set-up, Edwards was transferred to BoNY’s London office in 1996 and they started to pay a BoNY administrative assistant, Kudryavtsev, US\$500 a month to make sure the operation continued to run smoothly.

Benex, BECS and Torfinex were front companies for Depozitarno Klirinogovy Bank (DKB) a Russian bank, whose principal owners were MDM (Moscow World Business Bank) and SobiBank. The accounts were part of an underground unlicensed money transfer business that was operated between DKB from Moscow and the Queens Office. In addition to not being licensed as a money transmitter, the Queens Office was not even licensed as a branch or agency of a foreign bank. These facts would be some of the things that Berlin and Edwards would plead guilty to among others.

For three and a half years starting in February 1996, approximately US\$7bio flowed through the Benex and BECS accounts at BoNY. Hundreds of international wire transfers would be processed daily. More than 150,000 wire transfers were sent during this period and these accounts were the most active at the One Wall Street branch where they brought in wire transfer revenues of approximately US\$1mio. The ordering parties for most of the incoming transfers were from “banks” located in jurisdictions identified by FATF as having a high risk of money laundering activity. The most frequent ordering party was “Sinex Bank Inc.”, which was named as the ordering party on more than US\$3bio of wire transfers during the same 3+ year period. As a result of the investigation, BoNY learned that Sinex Bank was a shell bank registered in Nauru and not surprisingly one of its directors was Volkov. It was controlled by the principals of DKB and created exclusively to assist their illegal money transfer business. The money would then be transferred out of BoNY to multiple third party beneficiaries in offshore banking jurisdictions or to jurisdictions identified by FATF as having a high risk of money laundering activity.

Edwards and Berlin were finally sentenced in July of 2006 to five years’ probation and six months in home detention in New Jersey. They also had to make restitution of US\$685,000 to the Internal Revenue Service and pay fines of US\$20,000 each. Four years earlier, Kudryavtsev was sentenced to two weeks in prison and house arrest for five and a half months. Edwards’ supervisor, Natasha Gurfinkel Kagalovsky, was suspended by BoNY in 1999. She subse-

quently resigned from BoNY and moved to London and was never charged with anything.

Penalty: convicted on money laundering charges
Actions: laundering of US\$bioms in Russian money laundered

Country: US, Russia

Speed Joyeros

Speed Joyeros and Argento Vivo were both related Companies in the business of selling gold and silver jewellery and precious metals to many retail and business customers throughout Central and South America as well as also in Europe and the Middle East. They were based in Colon, the Panama free trading zone is the world's second-largest free port, after Hong Kong which, on the edge of the Panama Canal, is home to around 1,600 companies. The 1.5-square-mile zone is home to a multitude of global traders: Arabs, Chinese, Indians, and others and more than US\$6bio of merchandise passes through the Zone each year with as much as a quarter of it, say some in Law Enforcement, financed by drug money. Speed Joyeros was for a time very successful, with revenues of US\$150mio in 1998 and US\$105mio in 1999.

The Companies acted as de facto intermediaries for the Colombian drug cartels, receiving regularly at least US\$10mio via any means, by wire or cheques or even physical cash from the drug traffickers relating to sales of drugs in the US and converting that cash and exchanging it for gold, both in ingot and bar form, jewellery and even scrap. The precious goods were then delivered to the Colombians offshore at their direction, who then resold the goods and the subsequent sale produced cash, which was unconnected with the original drug proceeds. According to US law enforcement this gold trade had become "the money laundering mechanism of choice," and was being used to wash "staggering amounts" of dirty money. US authorities prosecuted the owners of these Panamanian Jewellers in 2002 for money laundering which resulted in forfeiture to the US government of more than US\$40mio worth of gold, silver and other jewellery.

Country: Panama, US

Key date: 2002 (start of US prosecution for money laundering)

Beacon Hill

Beacon Hill Service Corporation was an unlicensed money services business based in NYC, with 12 employees. The US government has warned that Money Services Businesses are commonly used by money launderers. A Money Services Business in the US may collect several transmittal orders for small amounts from different individuals wanting to send money to relatives abroad. The Money Services Business then bundles them into a single transmittal order to a US bank as part of a transmittal of funds to a foreign Money Services Business. The single transmittal order does not identify all transmitters or recipients of the underlying order.

The US bank simply sends the single transmittal order to the foreign bank which then pays the foreign Money Services Business which then pays the foreign recipients based on the separate transmittal orders received directly from the US Money Services Business and vice versa.

From 1997-2003, Beacon Hill moved US\$6.5bio by wire transfers through numerous accounts it maintained at amongst others, J.P. Morgan Chase in Manhattan that ignored numerous red flags for money laundering, according to the Manhattan D.A.'s office. Beacon Hill moved money for clients who clearly preferred to operate clandestinely or under the radar.

Beacon Hill's client base included numerous offshore shell corporations and doleiros, or exchange houses, in Brazil and Uruguay, with most money coming from Latin America and transiting to the US or to third countries for example records show that Beacon Hill transmitted US\$31.5mio to accounts in Pakistan, Lebanon, Jordan, Dubai, Saudi Arabia and elsewhere in the Middle East. Wire transfer documents often identified the ultimate beneficiaries of transfers only as a "customer", one transfer of US\$100mio was attributed only to a "valued customer."

A large portion of Beacon Hill's business was run out of a pooled account that served many customers, making it impossible to link deposits with transfers out of the account. Despite concerns, that transfers could be linked to drug trafficking, only one such transaction valued at US\$25mio was identified.

Country: US

Key date: 2004 (convicted of operating as a money remitter without a licence)

Lespan

During the investigation of Beacon Hill (see above for more details) by the Manhattan District Attorney's Office concern over Lespan SA ("Lespan"), a money transmitter in Uruguay since 1976 arose, and in particular its connections to multiple Brazilian money service businesses transferring billions of US Dollars through Lespan's account at one of Bank of America's ("BoA") Manhattan branches.

The US investigation was conducted over two years, in which it was revealed that from May 2002 to April 2004, over US\$3bio flowed through Lespan's account at BoA. The case was a collaborative effort between US and Brazilian authorities. In the US, a joint investigation with ICE (Immigrations and Customs Enforcement), New York State Banking Department and Manhattan District Attorney's office led to the indictment of 34 people and 16 British Virgin Island companies for conducting illegal money transfer businesses in New York. Brazilian Federal Police executed over 121 arrest warrants and 215 search-and-seizure warrants in Brazil for money laundering and related tax evasion crimes.

Money exchange houses, or doleiros as they are known in Brazil, were able to exchange foreign currency but were

prohibited to send funds abroad. Lespan facilitated money transfers without proper documentation or registry with Brazil's central bank. For additional fees, Brazilian clients were able to move money in and out of Brazil without reporting to the government, by simply utilising services provided by doleiros. The illegal transfer services provided by the doleiros, allowed clients to have undeclared assets transferred without any reporting to Brazilian tax authorities. The elaborate scheme required the doleiros to have complex corporate structures whereby they had various related offshore accounts in the Caribbean and used Lespan to transfer clients' money anonymously. Similar to Beacon Hill, the Lespan accounts were utilised to facilitate payments to the Middle East via the Tri-Border region of Argentina, Brazil, and Paraguay. Historically, this area of South America has a strong connection to the Middle East due to a large concentration of its population of Middle Eastern origin. Billions of dollars are known to have flowed through the region and some of the monies may have gone to potentially fund terrorist activities.

Due to poor record keeping; it is difficult to really assess the potential impact that it may have had in funding terrorist activities around the world though it is unlikely to be substantial and in fact there was no specific evidence in this direction. Investigators noted too often it encountered cases where the money trail ceased and the ultimate recipient of the funds were never identified. Lespan, through its vast network of accounts at various banking institutions, kept its client identities to a minimum. Since the corresponding banks did not question the flow of funds, it simply remained undetected for years.

Key date: 2004 (actions announced over Uruguayan money transmitter making US\$3bio)

Special Focus 25 **Pedro Alatorre**

Casa de Cambio Puebla was founded in 1985 and licensed by Mexican banking regulators. It had 17 branch offices throughout Mexico and employed 240 people. In order to process transactions it maintained 46 correspondent accounts at Wachovia (now part of Wells Fargo) branches in Miami and New York. One of the larger branches of Casa de Cambio Puebla operated out of the Mexico City Airport and was run by Pedro Alatorre. Alatorre used the Branch to launder drug monies for the Mexican "Pacific Cartel" headed by notorious fugitive Joaquin "el Chapo" Guzman Loera (see Mexican Gangs Part 2, Section 5 above), for whom Alatorre worked.

It is believed that couriers carrying clear plastic bags stuffed with cash went to the Airport branch. Alatorre then arranged for monies to be deposited into accounts opened at HSBC in Mexico. These accounts had been set up by Alatorre using the stolen identities of 74 people. Once in the HSBC accounts in the names of Companies controlled by Alatorre, for example Grupo ETPB SA and Grupo Ráhero SC, the monies could be used by the drug traffickers to finance their operations, for example by purchasing planes in the US to be used for air transporting cocaine from Latin America into Mexico before being moved overland into the US.

One such purchase was of a DC-9 in early 2006 sold by US Oklahoma City Aircraft broker, US Aircraft Titles Inc. Funds controlled by Alatorre in Mexico were wired to the correspondent account of Casa de Cambio Puebla at Wachovia in Miami and from their Wachovia wired the funds (approx US\$300,000) at the instruction of Alatorre to an account at Bank of America from which the sale was concluded. The link to the Wachovia accounts and the link to the Casa de Cambio Puebla, came from a 2006 cocaine seizure in Mexico. On 5 April 2006, a pilot working for mexican drug traffickers flew the same DC - 9 aircraft from Florida to Caracas in Venezuela, picking up 5.7 tons of cocaine. The drugs were packed into 128 black suitcases and valued at US\$100mio. The drugs were then to be flown to Mexico, where they would be collected and then smuggled into the US overland. On 10 April Mexican authorities seized the plane once it landed in Ciudad del Carmen in Mexico, 500 miles east of Mexico City. Once the drugs were seized and destroyed and those caught in the smuggling operation arrested and charged, investigators began looking at how the aircraft was owned and how its purchase had been financed in order to try to net additional suspects involved and connected with the drug trafficking operation. Working backwards it was then that the links to Wachovia and Puebla and Alatorre were established.

On 16 May 2007, DEA agents conducted a raid of Wachovia's international banking offices in Miami, with orders to seize Puebla's accounts. With Puebla's Wachovia accounts seized, Alatorre and his partners shifted their laundering scheme to HSBC in Mexico. In the three weeks after the DEA raided Wachovia, Grupo ETPB SA and Grupo Ráhero SC, made 12 cash deposits totalling US\$1 mio at an HSBC Mexican branch. The funds financed a Beechcraft King Air 200 plane that police seized on 29 December 2007, in Cuernavaca, 50 miles south of Mexico City. Mexican Authorities would seize two more airplanes by following the money trail left by Casa de Cambio Puebla via Wachovia. Each of Casa de Cambio Puebla, Alatorre and three other employees were indicted in Miami in February 2008 for drug trafficking and money laundering. In May 2008, the extradition of the suspect was sought alleging they used shell firms to launder US\$720mio through US banks. Alatorre has been in a Mexican jail for 2 1/2 years.

Penalty: Imprisonment in a Mexican Jail
Actions: laundered Mexican drug cartel cash via position as head of Mexican Casa de Cambio branch)

Country: Mexico, US
Key date: 2006 (Cocaine seizure by US authorities then led to link to the MSB, Wachovia and HSBC)

Goods Traffickers

Operation Pangea and Others

In the last few years, Interpol has spearheaded Operations to combat the trafficking of counterfeit and pirated goods, in particular; Operation Pangea (2009); Operation Jupiter V (2010); Operation Atlantique (2010); Operation Opson (2011); and Operation Maya (2010).

Operation Pangea

Operation Pangea was an international week of action tackling the online sale of counterfeit and illicit medicines and highlighting the dangers of buying medicines online. The annual operation brought together customs, health regulators, national police and the private sector from countries around the world. Activities targeted the three principal components used by illegal websites to conduct their trade – the Internet Service Provider (ISP), payment systems and the delivery service.

The operation gained significant momentum since its launch in 2008. The first phase of the operation brought together 10 countries, with the number rising to 100 in 2012. In 2012, 3.75 million illicit and counterfeit pills were confiscated at an estimated value of US\$10.5mio. More than 18,000 websites were shut down. Some 133,000 packages were inspected by regulators and customs authorities, of which around 6,700 were confiscated. Eighty individuals were under investigation or under arrest for a range of offences, including operating a clandestine laboratory producing counterfeit medicines; membership of a criminal group selling illicit medicine online; and operating websites selling illicit medicines.

Country: Australia, Canada, Germany, Ireland, Israel, New Zealand, Singapore, Switzerland, UK and US of America and many more.

Key date: 2008-2012 (annually)

Operation Jupiter V

Launched in 2004, Operation Jupiter expanded in scope every year. Each phase of the operation targeted an increasingly wide range of counterfeit and illicit goods, in more distribution channels and in more countries. Operation Jupiter V (2010) resulted in the seizure of nearly 8 million counterfeit products worth more than US\$200mio and led to nearly 1,000 arrests.

Seizures have highlighted the dangers that counterfeit products pose to public safety. Car parts, motor oil and construction materials, such as powders to make concrete and glue, were examples of new commodities seized under Jupiter V. These unregulated goods were generally sub-standard and so constituted a major risk to the population at large. Other types of goods recovered included sports clothes and shoes, sunglasses, mobile phones, books, car parts, computer software and alcohol. Goods were recovered from a range of locations including markets, commercial shopping centres and from street vendors, and in a number of cases social networking sites were also identified as distribution channels for counterfeit products.

Ilicit goods infiltrated well-known shopping centres while luxury items appeared for sale on Internet social networks. Operation Jupiter focused on these goods in a variety of outlets including at sea, to detect the routes used by boats smuggling illegal goods. Operation Jupiter was led by Interpol in partnership with the World Customs Organisation (WCO).

Country: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, France (French Guyana), Panama, Paraguay, Peru, Suriname, Uruguay and Venezuela

Key date: 2010

Operation Atlantique

Operation Atlantique was an Interpol led initiative to combat counterfeiting and all types of illicit trade across Western Africa. The action in 2011 resulted in 16 arrests and the seizure of fake products worth more than US\$1.5mio. In addition to conducting raids on wholesalers and markets in the city centres of Lomé, Togo and Accra, Ghana, officers also carried out checks and seizures at the seaport of Tema in Ghana, one of the key entry points for merchandise in Western Africa. Recovered products included soup cubes, computer supplies, African fabrics, plastic packaging used for food and water, cigarettes and CDs.

Country: Benin, Burkina Faso, Ghana, Nigeria and Togo.

Key date: 2011

Operation Opson

Hundreds of tonnes of fake and substandard food and drink including champagne, cheese, olive oil and coffee were seized in an Interpol/Europol coordinated operation across 10 countries, effectively disrupting the organised criminal gangs behind this high profit-low risk activity which undermines legitimate business and puts the safety of consumers at risk. Operation

Opson (meaning food in ancient Greek) resulted in the recovery of more than 13,000 bottles of substandard olive oil, 30 tonnes of fake tomato sauce, around 77,000 kg of counterfeit cheese, more than 12,000 bottles of substandard wine worth EUR 300,000, five tonnes of substandard fish and seafood and nearly 30,000 counterfeit candy bars. The sale of fake/substandard caviar via the internet was also under investigation. The operation saw checks carried out in airports, seaports, shops and flea markets across the 10 participating countries. Consumers buying these goods, either knowingly or unknowingly, are putting their health at risk as the counterfeit food and drink are not subject to any manufacturing quality controls and are transported or stored without proper regard to hygiene standards.

Country: Bulgaria, Denmark, France, Hungary, Italy, The Netherlands, Romania, Spain, Turkey and the UK.

Key date: 2011

Operation Maya

Operation Maya saw more than 1,000 interventions and more than a million items recovered by Authorities in the Americas at key locations such as land, sea and airport border control points in addition to markets, shops and street vendors. Two hundred individuals were arrested or were under investigation for related criminal offences. Fake goods including toys, computer software, clothing, beauty products, engine oil and cigarettes worth nearly US\$30mio were seized in this Interpol-coordinated operation. The operation also revealed increasingly elaborate efforts by criminals to avoid detection, with items smuggled into a country via one route, while counterfeit trademark materials including stickers for computers, batteries, mobile phones and even car emblems were sent separately to be used later to 'brand' the products. Operation Maya again showed that there is no product which is not being counterfeited and criminals are using every means available to traffic fake and illicit goods.

The operation has again shown the importance of cooperation and coordination among police, customs, prosecutors and the private sector to combat organised crime in all participating countries.

Country: Belize, Canada, Colombia, Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama and US.

Key date: 2012

Human Traffickers

Robert Mikelsons

Robert Mikelsons a Dutch national was sentenced to 12 years in prison for abusing more than 60 children, some just a few months old, in two Amsterdam nurseries and homes where he worked. Mikelsons, took explicit pictures and shared these with other pedophiles on the Internet. US and Dutch police cooperation using Interpol tools broke the case. US Immigration and Custom Enforcement (ICE) and Homeland Security Investigations (HSI) shared seized child sexual abuse images with specialist investigators worldwide via Interpol who added the images of the sexual abuse of an 18-month-old to Interpol's International Child Sexual Exploitation (ICSE) database. As a result a specialist Dutch police officer who is a member of Interpol's Victim Identification Network in the Netherlands, identified a stuffed bunny in the photo as 'Miffy', a character in Dutch children's books. The toy, in addition to other elements in the image, enabled the KPLD Dutch National Police to identify the Netherlands as the location where the photos of the child sexual abuse had been taken. A public appeal by the Dutch police on national television resulted in the identification and arrest of Robert Mikelsons.

Subsequent investigations around the world have so far led to the arrest of nearly 40 sex offenders from every region of the world, many of them abusing multiple victims. To date, the number of children removed from harm as a result of this one operation stands at more than 140.

According to Ron Noble, the Head of Interpol, "This is exactly why we created the Interpol International Child Sexual Exploitation database. It is a vital weapon for law enforcement officers in bringing dangerous criminals to justice, and should be the first port of call for any investigation into child sexual abuse." Managed by Interpol's Crimes Against Children specialist unit at its headquarters in Lyon, France, the ICSE database, backed by the G8 and funded by the European Commission, is accessible to victim identification specialists through Interpol's secure I-24/7 global police communications system, and uses sophisticated image comparison software to make connections between victims and places. The database contains images relating to nearly 2,500 identified victims of sexual exploitation from 41 countries, and in addition to providing vital assistance in locating offenders, is also an important tool in avoiding duplication of effort by police trying to identify victims who have already been rescued.

Country: Netherlands and elsewhere

Key date: 2012 (child sex abuser jailed, leading to rolling up on international sex ring)

Operation Bia and Others

In the last few years, Interpol has spearheaded Operations to combat child abuse in Africa, in particular;

Operation Bia (2009); Operation Cascades (2010); Operation Bana (2010); and Operation Bia II (2011);

Operation Bia

54 suspected child trafficking victims from 7 different countries were identified and taken into care and 8 individuals arrested following an operation led by police in Côte d'Ivoire in cooperation with Interpol, in the first ever police operation targeting child trafficking in West Africa. Police simultaneously targeted a selection of plantations believed to be using illegal child labour. In addition, vehicles travelling on the main roads leading from Ghana were systematically checked for potential child victims. Codenamed 'BIA' after the river which separates Ghana from Côte d'Ivoire. The 54 children had been bought by plantation owners needing cheap labour to harvest the cocoa and palm plantations. They were discovered working under extreme conditions, forced to carry massive loads seriously jeopardizing their health. Aged between 11 and 16, children told investigators they would regularly work 12 hours a day and receive no salary or education. Girls were usually purchased as house maids and would work a seven-day week all year round, often in addition to their duties in the plantations.

With Ghana and Côte d'Ivoire producing around three quarters of the world's cocoa, it is believed that hundreds of thousands of children are working illegally in the plantations across these two countries alone. The trafficking of children is often camouflaged by the cultural practice of placing young children with families of wealthier relatives to receive an education or learn a trade. In reality, they are often sold and their rights to education, health and protection denied.

Country: Côte d'Ivoire

Key date: 2009 (54 trafficked/abused children rescued in police operation supported by Interpol)

Operation Cascades

More than 100 suspected child trafficking victims were identified and taken into care and 11 individuals arrested following an operation led by police in Burkina Faso and supported by Interpol. Dozens more children have also now been returned to their families following child labour investigations. Involving nearly 100 police officers, Operation Cascades took place across Burkina Faso's western Cascades region and in the capital Ouagadougou, and also included customs and environmental officers, non-governmental organisations, officials from the Ministries of Health and Social Affairs, and prosecutors. During a three-day operation, police officers checked highways linking Burkina Faso's capital to other regions in the country and to adjoining

countries, and also raided illegally-operated gold mining quarries in the Cascades region. Authorities took 177 children into their charge, of which 103 suspected trafficked children were taken into care by social services, while another 74 were returned to their families as part of an awareness campaign against child labour. The initiative in Burkina Faso followed Operation Bia in Côte d'Ivoire which also targeted illegal child labour and resulted in the rescue of 54 children.

Country: Burkino Faso

Key date: 2010 (177 trafficked/abused children rescued in police operation supported by Interpol)

Operation Bana

140 victims of child trafficking and labour were rescued in the Gabon in an Interpol co-ordinated operation code-named Bana. The children from 10 different countries were forced to work as labour in local markets. During the operation, teams of officials carried out checks at market stalls in the capital city Libreville, where children as young as six years old were working in a variety of roles, from carrying heavy goods, to selling products. The children were taken into care and 44 people were arrested as a result.

Country: Gabon

Key date: 2010 (140 trafficked/abused children rescued in police operation supported by Interpol)

Operation Bia II

116 suspected child trafficking victims were identified and taken into care in Ghana being rescued from forced labour in the fishing industry along the country's Volta Lake area, in an operation coordinated by Interpol which also resulted in 28 arrests and convictions. The rescued children were aged between 5 and 17. Ghanaian Police teams along with Interpol agents simultaneously targeted selected fishing communities believed to be using illegal child labour. The 28 individuals arrested during the operation were sentenced to 16 months imprisonment each after the accused pleaded guilty to exposing children to danger and engaging minors in hazardous activities. The operation revealed that 15 of the rescued children had been trafficked from other regions of Ghana. A separate operation across Accra City also saw officers from a variety of law enforcement agencies interview 120 sex workers to determine if they were part of a wider human trafficking network operating in Ghana. As a result 29 of these were found to be minors who were being sexually exploited and were taken to shelters and housed by the authorities.

Country: Ghana

Key date: 2011 (116 trafficked/abused children

rescued in police operation supported by Interpol)

Operation Tuy

Nearly 400 suspected child trafficking victims were identified and taken into care and 73 individuals arrested following an operation led by police in Burkina Faso and supported by Interpol. Operation Tuy which targeted sites in Ougadougou, Houndé and Bobo Dioulasso, resulting in 387 children being discovered working under extreme conditions, lowered into narrow, airless mining holes up to 70 metres in depth, receiving no salary or education, with young girls often also subjected to sexual abuse. The victims have now been returned to their families or taken into care.

Country: Burkino Faso

Key date: 2011 (400 trafficked/abused children rescued in police operation supported by Interpol)

Terrorism Financiers

International Islamic Relief Organisation (IIRO) - Philippine and Indonesian branches

The IIRO is a Wahhabi sponsored charity. Established in 1978, it has branch offices throughout the world, including 36 in Africa, 24 in Asia, 10 in Europe and 10 in Latin America, the Caribbean and North America. The bulk of its financial contributions come from private donations in Saudi Arabia. This includes a long standing endowment fund (Sanabil al-Khair) established to generate a stable income to finance its various activities. The IIRO continues to be closely associated to the Muslim World League with which it participates in many joint activities. Many prominent Middle East figures and financiers have supported this mainstream Islamic charity. But, the IIRO has also, it is claimed, been used to channel funds to Al-Qaeda. According to a CIA report, funds raised through the IIRO were used to support at least six Al-Qaeda training camps in Afghanistan prior to 9/11. Evidence produced in Canadian Court proceedings also linked the IIRO directly to groups responsible for the 1998 bombings of the American Embassies in Dar es Salaam and Nairobi. The former head of the IIRO office in the Philippines, Muhammad Jamal Khalifa, was also accused of links to Al-Qaeda and terrorist activities. In 2006 US Treasury designated the Philippine and Indonesian branches only as supporters of terrorism.

Country: Saudi Arabia, Philippines

Key date: 1990s (contact with Al-Qaeda by a senior officer at IIRO affecting Philippine and Indonesian branches)

Special Focus 26 **Holy Land Foundation**

The Holy Land Foundation was the largest Islamic charity in the US. Established in California in 1989 and later in 1992 headquartered in Texas. It had offices in California, New Jersey, and Illinois, and individual representatives scattered throughout the US, the West Bank, and Gaza. It was originally known as Occupied Land Fund. In 2007, US federal prosecutors brought charges against the organisation for funding Hamas and other "Islamic terrorist organisations".

The 2008 trial of the charity leaders was dubbed the "largest terrorism financing prosecution in American history." In 2009, the founders of the organisation were given life sentences for "funnelling US\$2mio to Hamas. The organisation's website stated: "Our mission is to find and implement practical solutions for human suffering through humanitarian programmes that impact the lives of the disadvantaged, disinherited, and displaced peoples suffering from man-made and natural disasters." Their primary area of focus was with the Palestinian refugees in Jordan, Lebanon, and the Palestinian Territories. They also provided support to victims after disasters and wars in Bosnia, Kosovo, Turkey, and the US (after Iowa floods, Texas tornadoes, and the Oklahoma City bombing).

Among the founders of the Holy Land Foundation was Mousa Mohammed Abu Marzook, a political leader of Hamas, who provided substantial funds to the Holy Land Foundation in the early 1990s. In 1994, Marzook (who was named a Specially Designated Terrorist by the Treasury Department in 1995) designated HLF as the primary fund-raising entity for Hamas in the US. He was deported from the US to Jordan in 1997. Marzook was indicted on 20 August 2004, by a US federal grand jury in Chicago. He and two other individuals were charged with a 15-year conspiracy to raise funds for terrorist attacks against Israel. In the year 2000 alone, HLF raised over US\$13mio.

According to the US Department of Treasury, HLF supported Hamas activities through direct fund transfers to its offices in the West Bank and Gaza that are affiliated with Hamas, and transfers of funds to Islamic charity committees ("Zakat Committees") and other charitable organisations that are part of Hamas or controlled by Hamas members. The Department of Treasury also reported that HLF funds were used by Hamas to support schools that served Hamas' ends by encouraging children to become suicide bombers and to recruit suicide

bombers by offering support to their families. Edward Abington, former US Consul General in Jerusalem, acted as a defence witness and testified that during his daily CIA briefings he had never been informed that Hamas controlled the Palestinian charity groups mentioned.

In December 2001, the assets of the organisation were frozen by the FBI and Treasury agents. Treasury officials conceded that whilst a "substantial amount" of the money raised went to worthy causes, but insisted that Holy Land's primary purpose had been to subsidise Hamas. Repeated appeals to the courts by the Holy Land Foundation to have the freeze lifted failed.

On 27 July 2004, a federal grand jury in Dallas, Texas, returned a 42-count indictment against the Holy Land Foundation. Charges included: conspiracy, providing material support to a foreign terrorist organisation, tax evasion, and money laundering. The indictment alleged that the Holy Land Foundation provided more than US\$12.4mio to individuals and organisations linked to Hamas from 1995 to 2001, when their assets were frozen. The indictment also named specific seven top officers of the Holy Land Foundation: Five of the seven were arrested, the remaining two have not been found, and are considered fugitives. In December 2004, a federal judge in Chicago ruled that the Holy Land Foundation (along with the Islamic Association of Palestine and the Quranic Literacy Institute) was liable in a US\$156mio lawsuit for aiding and abetting the militant group Hamas in the death of a 17-year-old American citizen named David Boim.

A Holy Land Foundation criminal trial began on 23 July 2007, in Dallas, Texas. It was claimed during the 2007 trial that the Justice Department fabricated quotes and modified transcripts. Critics faulted much of the evidence given during the trial. The New York Times said Israeli agents using pseudonyms testified for the prosecution. The government did not allege that the foundation paid directly for suicide bombings, but instead that the foundation supported terrorism by sending more than US\$12mio to charitable groups, known as Zakat Committees, which build hospitals and feed the poor. The prosecution said the committees were controlled by Hamas, and contributed to terrorism by helping Hamas spread its ideology and recruit supporters. Some of these charitable committees were still receiving US funding through the USAID programme as late as 2006.

After 19 days of deliberations, the 2007 jury was unable to come to a definitive conclusion and the case ended in a mistrial. While 200 charges were filed against the defendants, the jurors had acquitted on some counts and were deadlocked on charges ranging from tax violations to providing material support for terrorists. One defendant was acquitted of most of the 32 charges against him. The federal government began a retrial on August 18, 2008.

On 24 November 2008, the government obtained guilty verdicts against the Holy Land Foundation and five individual defendants in the retrial.³⁷ Holy Land was found guilty of giving more than US\$12mio to support the Palestinian militant group Hamas, which the US designated as a terrorist organisation in 1995, and made supporting the group illegal. Two of the guilty received each 65 years imprisonment. The jury found against the Holy Land Foundation on all 108 charges. The charges included conspiracy to provide material support to a foreign terrorist organisation, providing material support to a foreign terrorist, and conspiracy to commit money laundering. "Today's verdicts are important milestones in America's efforts against financiers of terrorism", Patrick Rowan, Assistant Attorney General for National Security, said after the trial. "This prosecution demonstrates our resolve to ensure that humanitarian relief efforts are not used as a mechanism to disguise and enable support for terrorist groups."

Country: US, Palestinian Territories
Key date: 2001 (assets frozen and later conviction secured for providing material support (US\$12mio) to Hamas)

The Benevolence International Foundation (BIF)
The Benevolence International Foundation is another Saudi umbrella charity organisation that has served as an important funding source for Al-Qaeda. BIF was established in the late 1980's as two separate organisations. One, the Islamic Benevolence Committee was established as a charity based in Peshawar, Pakistan and Jeddah, Saudi Arabia. Its titular founder was Sheikh Adil Abdul Batarjee.

Its sister organisation, Benevolence International Corporation was set up as an import export business in the Philippines by Mohammed Jamal Khalifa, who also headed the Philippines IIRO office.

Both organisations were engaged in raising funds to support the mujahideen in Afghanistan. The two organisations appeared to work separately until the early 1990s. In 1992 they became the Benevolence International Foundation and opened new branches throughout Southeast Asia as well as in Europe and America.

The US Treasury Department took action in December 2001 to designate BIF as financiers of terrorism. The US subsequently called upon the Security Council to add BIF to its consolidated list of entities associated with Al-Qaeda. The Treasury Department charged that BIF and its chief executive officer, Enaam Arnaout were involved in funding Al-Qaeda activities including "the purchase of rockets, mortars, rifles and offensive and defensive bombs, and ... (distributing) them to various mujahideen camps, including camps operated by Al-Qaeda." The Treasury document also cited direct links between Arnaout and bin Laden, and with Mamdouh Mahmud Salim, a bin Laden lieutenant.

Country: Saudi Arabia, Pakistan, Philippines
Key date: 2001 (US Treasury designate as terror financing charity)

Muwafaq Foundation or "Blessed Relief"
Muwafaq Foundation or "Blessed Relief" charity was established in 1991 by Yassim al-Qadi. The stated purpose of the charity was to "relieve disease, hunger and ignorance." The Charity was active in Bosnia during the Balkan wars and was closed in 1998 following allegations of fundraising and transferring of funds on behalf of Al-Qaeda and other terrorist organisations. The foundation's principal benefactor was Khalid Bin Mahfouz. Al-Qadi was subsequently designated by the US Treasury Department on October 12, 2001 as well as the UN, the EU and others. Yassim al-Qadi has always protested his innocence and challenged his listing which has been accepted and he has been removed from the UN, EU and some other lists though not the US.

Country: Saudi Arabia, Bosnia
Key date: 2001 (Al-Qadi designated by US and others as a terrorist financier, later designation lifted except by US)

Al-Rashid Trust
The Al-Rashid Trust (ART) was founded by Mufti Mohammed Rashid in 1996, in Karachi, Pakistan, which coincided with the Taliban coming to power in neighboring Afghanistan. The Trust gradually grew to operate 21 branches across Pakistan but also in Afghanistan.

Described as a 'welfare organisation', one of its original charters was to carry out welfare projects within Pakistan, with financial resources provided by public donations. Overtime, the ART expanded its mandate to carry out 'relief activities' for Muslims in Chechnya, Kosovo and Afghanistan.

The ART shares a similar religious ideology with that of the Taliban and has promoted "jihad" at times, for example with statements in ART booklets such as "the holy war is an essential element of Islam," and "any Muslim must carry the weapons, even with the mosque, if the need would be felt to make fire on a non-Moslem."

ART literature also denounces the US for its policies toward Israel, Iraq and Saudi Arabia and praises Islamist terrorists. Among the other ART objectives is providing assistance to 'illegally jailed' Muslim prisoners.³⁸

The trust runs many madrassas and mosques in Pakistan including the largest Arabia-Islamia in Mansehra.

The network of ART aided madrassas in Pakistan reportedly act as recruiting centres for Jihadis. It also runs a hospital in Muzaffarabad in Pakistan occupied Kashmir (PoK) for the treatment of injured terrorists.

Mufti Rashid has been reported to have had direct

access to Osama bin Laden and the Taliban. The Al-Rashid Trust is also closely linked with Jaish-e-Mohammed and other terrorist outfits active in India's Jammu and Kashmir.

Al-Rashid documents indicate that the Trust secures most of its finances from zakat (annual alms) and overseas donations, particularly from the Middle East and Pakistan, but also from a network in South Africa. However, the sources of donation are kept secret.

The trust was one of a number of groups and organisations listed by the US State Department on September 22, 2001, for involvement in financing and supporting a network of international Islamist terrorist groups, a claim denied by the trust.

Country: Pakistan, Afghanistan
Key date: 2001

The Rabita Trust
The Rabita Trust was established in Pakistan in 1988 ostensibly to repatriate and rehabilitate stranded Pakistanis from Bangladesh. Its stated aims included the dissemination of Dawah (culture), to expound the teachings of Islam, "and to 'defend' Islamic causes in a manner that safeguards the interests and aspirations of Muslims. Most of its funding was secured from Saudi businessmen.

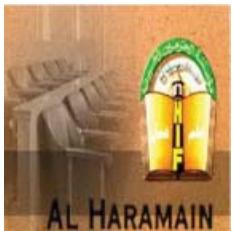

Funds from the trust were reportedly used for a number of Al-Qaeda related activities, including recruitment and training in Afghanistan, Pakistan and elsewhere. The Rabita Trust was run by Wael Hamza Julaidan, who the US Treasury Department charged was an associate of bin Laden and Ayman al-Zawahiri. He was designated by the US and the UN as an Al-Qaeda associate in late 2002.

The US administration has pointed out that the Rabita Trust is part of a web of charities funding Islamist terrorist movements such as bin Laden's Al Qaeda network. Whilst disputed by those running the Trust and by those also designated as terrorist fundraisers by the US including Pakistani based Al-Akhtar Trust, and the Al-Rashid Trust.

Country: Pakistan, Saudi Arabia
Key date: 2002 (Julaidan designated by US and UN as terrorist financiers)

Special Focus 27

Al Haramain Islamic Foundation (Bosnian & Somalian offices)

Charity forms a very important part of Muslim law and tradition. There is a recognised religious duty in the Muslim world to provide a set portion of ones earnings or assets for religious or charitable purposes (Zakat), and otherwise to support charitable works through voluntary deeds or contributions (Sadaqah). In countries like Saudi Arabia or the United Arab Emirates that have no established income tax system, the Zakat substitutes as the principal source of funding for religious, social and humanitarian organisations and activities. The funds are collected by the Government, or though local mosques and religious centres. Sadaqah contributions are also made directly to established Islamic charities.

As both Zakat and Sadaqah are viewed as personal religious responsibilities there has traditionally been little or no government oversight of these activities. Donations in large measure remain anonymous. Al-Qaeda and other terrorist Groups have taken full advantage of this lack of oversight to open its own front charities and to solicit funds through collection boxes at mosques and Islamic centres. It has also placed operatives in key positions within established charities that are able to do its bidding.

Funds raised or allocated by or for Al-Qaeda are co-mingled, maintained and transferred with funds designated for legitimate relief Al-Qaeda and developmental activities. Their ultimate use to support Al-Qaeda activities can only become known when the moneys are transferred or diverted to Al-Qaeda-related recipients.

The Al Haramain Islamic Foundation based in Jeddah, is one of Saudi Arabia's most active charities in spreading Islamic teachings. Al Haramain reportedly funded some 3000 Wahhabi missionaries and concentrated heavily in establishing new Wahhabi Mosques in Southeast Asia, the Balkans, and Africa. Since 9/11, Al Haramain has come under close international scrutiny as a possible conduit for Al-Qaeda funding. According to its web site, Al Haramain operates in some 49 countries. It raises some US\$30mio per year drawing its funding largely from Saudi donors. Its founding general manager Sheikh Aqeel al-Aqeel maintained a close relationship

with the Saudi Ministry of Islamic Affairs, and the Saudi government was considered one of its principal benefactors. On 11 March 2002, the US and Saudi Arabia jointly designated the Bosnia and Herzegovina and Somalia offices of Al-Haramain as an Al-Qaeda funding source.

Al-Haramain Somalia had funneled money to Al-Ittihad al-Islami, a designated terrorist group, by disguising the funds as contributions for an orphanage project and for Islamic school and mosque construction. The Bosnia office was linked to Al-Jemaah al-Islamiyah al-Masriyah and to bin Laden. Further investigations also implicated branches in Albania, Croatia, Ehtiopia, Kenya, Kosovo, Indonesia, Pakistan, and Tanzania. The Russian government has also complained to Saudi Arabia regarding alleged Al Haramain funding for Chechen rebels. The Saudi government has removed Sheikh Al-Aqeel as Al Haramain's General Manager and ordered the closing of 15 branches outside Saudi Arabia. Sheikh Aqeel al-Aqeel was designated by the US Treasury in June 2004 and his name was added to the UN's Al-Qaeda associate list.

Country: Saudi Arabia, Bosnia, Somalia
Key date: 2002 (Saudi and US jointly designate Bosnian and Somalian offices as Al-Qaeda funding sources)

The Afghan Support Committee/Revival of Islamic Heritage Society

The Afghan Support Committee (ASC) was a non-governmental organisation based in Afghanistan, established by bin Laden and affiliated with the Revival of Islamic Heritage Society, both raised money for Al-Qaeda from local Arab non-governmental organisations by claiming the funds were for orphans and widows. Both were listed by the UN in 2002 for participating in the financing and planning, as well as assisting in the facilitation of terrorist acts.

Country: Afghanistan
Key date: 2002

Global Relief Foundation, Taibah International and Al Furqan

The Global Relief Foundation (GRF) initially operated in Bosnia and Herzegovina as a non governmental organisation under the umbrella of Taibah International, but then in 1996, Taibah broke with GRF, but continued to share the same office in Sarajevo, Bosnia and Herzegovina, as did another non governmental organisation, Al Furqan. The groups were listed between 2002 and 2004 by the UN as having close ties to Al-Qaeda and to the Bosnian branch of Al-Haramain Foundation.

Country: Bosnia and Herzegovina
Key date: 2002-2004

Special Focus 28

Interpal & Others

On 22 August 2003 the US Treasury announced the designation of five alleged Hamas related charities and six senior Hamas leaders as Specially Designated Global Terrorists (SDGTs),³⁸ freezing any assets in the US and prohibiting transactions with US nationals. This followed

on from a spring and summer terror rampage in 2003 by Hamas who took responsibility for ten different terrorist attacks that occurred in Israel between 27 March 2002 and 19 August 2003. The attacks included killings of civilians in suicide bombings and shootings in Israel during this time. "By claiming responsibility for the despicable act of terror on 19 August, Hamas reaffirmed that it is a terrorist organisation committed to violence against Israelis and to undermining progress toward peace between Israel and the Palestinian people," President Bush stated. "Hamas' leaders and those who provide their funding again have the blood of innocents on their hands," US Treasury Secretary John Snow stated. "Empty words cannot wash them clean. As they resist the road map for peace, Hamas is devastating the dreams of the Palestinian people for freedom, prosperity, and an independent state."

The US Treasury then listed a number of individuals and the following charities that they claim provide support to Hamas and form part of its funding network in Europe: Comité de Bienfaisance et de Secours aux Palestiniens (CBSP), of France, the Association de Secour Palestiniens (ASP), of Switzerland. (An organisation related to CBSP), the Palestinian Relief and Development Fund, or Interpal, headquartered in the UK, the Palestinian Association in Austria, PVOE and the Sanabal Association for Relief and Development, based in the Lebanon. The US Treasury stated that: "today's action follows several actions taken against Hamas previously, including the designation of several entities that formed part of the Hamas network such as Holy Land Foundation for Relief and Development and the Al Aqsa Foundation, key sources of financial support for Hamas."

Following these designations a number of lawsuits followed from those injured or those related to victims of Hamas terrorist acts. These civil liability claims seek treble damages under the US Anti Terrorism Act of 1992 ('ATA'). The ATA has extra territorial jurisdiction and so there is no need for there to be a connection to the US in relation to the alleged criminal acts or the financial transactions: It is sufficient for a claim to be made if the

Plaintiffs are US nationals, or the heirs or survivors of US nationals. It is not material also if transactions are other than in US\$. Nat West (now part of Royal Bank of Scotland Group) is a UK based financial institution with offices around the world and including in the US. The Complaint alleges that for more than 9 years Nat West knowingly maintained numerous accounts in dollars, euros and pounds for the charity Interpal (Interpal was first suspected of channelling money to Hamas in 1996; (Israel designated it a terrorist organisation in 1998 and the US designated it in 2003). For more details see Part 1, Section 3, Sanctions and Embargoes above. The Complaint further alleges that Nat West transferred and received money between these Interpal accounts and various alleged terrorist organisations with links to Hamas, namely the Jenin Committee, Tulkarem Committee, Holy Land Foundation and Al-Aqsa Foundation. The Complaint alleges 6 specific occasions on which Nat West supposedly accepted deposits or made transfers on behalf of Interpal involving alleged terrorist organisations. The plaintiffs further allege that Hamas receives most of its funding through donations coordinated by a global network of charities known as the Union of Good operated by the Muslim Brotherhood. The Union of Good is comprised of more than 50 Islamic charitable foundations worldwide including the Palestinian Relief and Development Fund ('Interpal').

At a hearing of the bank's petition to dismiss the lawsuit the Judge granted the dismissal in relation to one claim that the bank had aided and abetted the murder, attempted murder and serious bodily injury of American nationals, but denied the dismissal in respect of the other two claims that the bank knowingly provided material support or resources to foundations including the Al Aqsa Foundation, a key source of financial support for Hamas.

On 28 March 2013 the Eastern District Court granted summary judgment to NatWest finding that the plaintiffs had failed to establish sufficient evidence to prove that NatWest either "had actual knowledge" that Interpal was funding Hamas" or had acted with "exhibited deliberate indifference." In assessing the banks state of mind, the Judge noted the banks compliance with foreign banking laws. This decision has been appealed.

Carnival French Ice-Cream

Carnival French Ice Cream Supermarket based in Brooklyn, New York and owned by a nationalised Yemenite, looked to many as a straightforward ice cream parlor. Tax records showed Carnival had average annual receipts at approximately US\$185,000 per annum. In fact prosecutors believed it took in approx US\$22mio between 1996 and 2003 with the monies flowing through the Carnival accounts in favour of Islamic causes. Abad Elfgehl began informally sending money for family and friends to Yemen for a fee in 1995. He claimed he intended to get a license but never got around to it. His unregulated money transfer business then expanded to service amongst others locals

who frequented his local Brooklyn Mosque (Al Farook Mosque - which was also the place of worship for the men involved in the 2003 WTC bombing). The locals would fund the Carnival business account with regular wire transfers from accounts established by them and styled as small business accounts. All feeder payments were below the US currency transaction reporting limit of US\$10,000. Once the funds were received in the Carnival account, and consolidated, the majority of the funds were wire transferred to individuals, companies and Banks in Saudi Arabia, Yemen, the UAE, Thailand, China and Canada. Initially Abad Elfgeeh was arrested in late 2003 for laundering money for Islamic Terrorism, not it appears from any alert or suspicious activity report filed by the bank handling the monies but following the arrest and interrogation of Al - Moyayad, where monies received by Al-Moyayad in Yemen were traced back via Carnival and to the Mosque. In early 2006 Elfgeeh was convicted of illegally transferring money overseas, but the terror link was dropped as prosecutors realised they could not prove a terror connection. He was nevertheless imprisoned for 15 years.

Country: US, Yemen and elsewhere

Key date: 2003 (arrested and charged with terror offences)

al-Aqsa Foundation

The al-Aqsa Foundation was an international charity, which described itself as an Islamic social aid institution financially supporting various organisations in Israel, the West Bank and the Gaza Strip involved in humanitarian emergencies, with its head office located in Germany with branch offices in the Netherlands, Denmark, Belgium, Sweden, Pakistan, South Africa, Yemen and elsewhere. In May 2003 the al-Aqsa Foundation was effectively shut down, first designated by the US as a terrorist entity and soon afterwards by other nations, including the Netherlands, Germany, Denmark, the United Kingdom, Luxembourg and Switzerland, freezing funds and financial assets in the foundation, because (according to the US it was a "critical part of Hamas' transnational terrorist support infrastructure" and that it "uses humanitarian relief as cover to provide support to the Hamas terrorist organisation." Hamas is known to raise at least tens of millions of dollars per year throughout the world using charitable fundraising as cover.

Country: Europe, Israel/Palestinian Territories
Key date: 2003

Al-Akhtar Trust

The Al-Akhtar Trust (AAT) was formed in Karachi, Pakistan in November 2000 to provide financial assistance for Islamist extremists, including the Taliban and to feed, clothe and educate the children of religious "martyrs." The AAT is reportedly linked to Al-Qaeda, and to Jaish-e-Mohammed, Lashkar-e-Toiba and Lashkar-e-Jhangvi. The AAT, which runs medical centers in Karachi, Pakistan, and Spin Boldak in Afghanistan

is accused of providing financial and logistical support as well as arranging travel for many Islamist extremists and of carrying on the activities of the previously designated Al Rashid Trust. According to the US, the AAT treated Al-Qaeda terrorists injured during fighting in Afghanistan and Pakistan in 2001. It is also accused of being involved in financing and supporting a network of international Islamist terrorist groups and bin Laden's followers in Afghanistan, raising money for Islamist extremists trying to infiltrate Iraq and maintaining links with an individual believed to have been involved in the abduction and murder of Wall Street Journal reporter Daniel Pearl. The AAT, which runs medical centers in Karachi, Pakistan, and Spin Boldak in Afghanistan, has offices in Bawalnagar, Gilgit, Mirpur Khas, Islamabad and other Pakistani cities. During a custodial interview in early 2003, according to the US Treasury Department, a senior Al-Qaeda detainee related that the Al Akhtar Trust and Al-Rashid Trust were the primary relief agencies that Al-Qaeda used to move supplies into Kandahar in Afghanistan. In 2002, the Al-Rashid Trust and Al Akhtar Trust decided to start a drive to collect donations from the business/industrial circles of Pakistan. Mullah Izzatullah, an Al-Qaeda official living in Chaman, Pakistan, was associated with both Al-Rashid Trust and Al Akhtar Trust. Al-Rashid Trust was designated by the U.S. on September 23, 2001 and by the United Nations (UN) 1267 Sanctions Committee on October 6, 2001. The U.S. Government has indicated that, as of mid-March 2002, Al Akhtar Trust was conducting all activities of the former Al-Rashid Trust.

According to the US Treasury Department, during a custodial interview in mid-April 2003, a senior Al-Qaeda detainee stated that the Al-Rashid Trust and Al Akhtar Trust provided donations to Al-Qaeda. While Al Qaeda was based in Kandahar, Afghanistan, these organisations provided donations in the form of blankets and clothing to Al Qaeda cadres. When Al-Qaeda operatives fled from Kandahar in late 2001, these organisations provided the families of Al-Qaeda operatives with financial assistance.

Country: Pakistan, Afghanistan

Key date: 2003 (Designated as a terrorist financier by US in 2003)

Sanabal Charitable Committee

The Sanabal Charitable Committee also known as the Sanabel Relief Agency Limited (SRA) was a charity operating in the UK which raised money for the Libyan Islamic Fighting Group, which was suspected of connections with Al-Qaeda. Sanabal was banned worldwide, and its assets frozen in 2006 by the UN. The SRA was formed in 1999 and had an office under the Taliban regime in Afghanistan.

Country: UK, Libya

Key date: 2006

WMD Proliferation Financiers/Sanctions

Ummah Tameer-e-Nau

Ummah Tameer e-Nau (UTN), also known as Reconstruction of the Muslim Ummah, UTN, Foundation for Construction, Nation Building, Reconstruction Foundation was a right-wing militant organisation founded in 2000 and founded by Pakistani nuclear scientists with close ties to bin Laden and the Taliban in neighboring Afghanistan.

UTN provided bin Laden and the Taliban with information about chemical, biological and nuclear weapons. UTN's members included prominent ex Pakistani scientists, retired military officers, and industrialists.

The stated purpose of UTN was to rebuild Afghanistan's infrastructure and raise money to develop the Taliban-held areas of Afghanistan. UTN reportedly had the personal support of Mullah Omar and close ties to the Taliban regime.

The UN declared Ummah Tameer-e-Nau a terrorist group after a search of the group's offices in the Afghan capital, Kabul, in 2001, unearthed documents referencing plans to kidnap a U.S. diplomat and outlining basic physics related to nuclear weapons. Documents also showed that there was a plan to mine Uranium inside Afghanistan.

Country: Afghanistan

Key date: 2001 (UN designated as a terrorist group)

Special Focus 29 Abdulrahman Alamoudi

Born in 1952 in Asmara, Ethiopia, in what is now Eritrea, Alamoudi earned a bachelor's degree in pharmacy from Cairo University and then moved to the US in 1979. Alamoudi earned a master's in business administration in 1988 from Southeastern

University in Washington and was the founder in 1990 of the American Muslim Council and American Muslim Foundation. The AMC has been described as a de facto front of the Muslim Brotherhood.

Throughout the 1990's Alamoudi showed his credentials as an outspoken Islamist assailing the US government's case against Mohammed Salameh who was arrested ten days after the first World Trade Centre bombings in

February: "All their [law enforcement] facts are – they are flimsy. We don't think that any of those facts that they have against him, or the fact that they searched his home and they found a few wires here or there – are not enough." Salameh was convicted in the bombing plot and is currently serving a life sentence in prison.

Later Alamoudi complained that the judge picked on the 1993 World Trade Centre bombers because of their religion: "I believe that the judge went out of his way to punish the defendants harshly and with vengeance, and to a large extent, because they were Muslim." later he began a public defence of Hamas: "Hamas is not a terrorist group ... I have followed the good work of Hamas...they have a wing that is a violent wing. They had to resort to some kind of violence." He later continued his Hamas defence, arguing that "Hamas is not a terrorist organisation. The issue for us (the American Muslim Council) is to be conscious of where to give our money, but not to be dictated to where we send our money."

On the positive side Alamoudi created the American Muslim Armed Forces and Veterans Affairs Council (AMAFVAC). Its purpose: to "certify Muslim chaplains hired by the US military."

In December 1993, Alamoudi attended the swearing-in ceremony of Army Capt. Abdul Rasheed Muhammad (formerly Myron Maxwell), the first Muslim chaplain in the US military, and pinned the crescent moon badge on the captain's uniform. "The American Muslim Council chose and endorsed Muhammad." The US Department of Defence certified AMAFVAC as one of two organisations to vet and endorse Muslim chaplains and in 1995 Alamoudi carried out a tour of naval installations in Florida to assess the needs of Muslims in the US Navy.

In 1996, Alamoudi spoke out in response to the arrest at New York's JFK Airport of his admitted friend, Hamas political bureau leader Mousa Abu Marzook. Months after the arrest, Alamoudi blamed Hamas suicide bombings of Israeli citizens on Marzook's detention: "If he was there things would not have gone in this bad way. He is known to be a moderate and there is no doubt these events would not have happened if he was still in the picture." He continued to defend Marzook: "Yes, I am honored to be a member of the committee that is defending Musa Abu Marzook in America. This is a mark of distinction on my chest ... I have known Musa Abu Marzook before and I really consider him to be from among the best people in the Islamic movement, Hamas – in the Palestinian movement in general – and I work together with him." In 2000

Alamoudi publicly embraced not only Hamas but Hezbollah.

At a videotaped protest in front of the White House, Alamoudi shouted, "Anybody who is a supporter of Hamas here? Hear that Bill Clinton. We are all supporters of Hamas. I wish they added that I am also a supporter of Hezbollah. Anybody who supports Hezbollah here?"

Alamoudi described a two-track political approach, advocating prayer for the destruction of the US, but counseled that while working within the US, his allies should try to change policy: "I think if we are outside this country, we can say oh, Allah, destroy America, but once we are here, our mission in this country is to change it. In 2001 Alamoudi attended a conference in Beirut with leaders of terrorist organisations, including Al-Qaeda.

In 2002, Federal agents raided Alamoudi's American Muslim Foundation during Operation Green Quest, as well as several other organisations which Alamoudi had led, staffed, or otherwise been affiliated, though the organisations were not closed down. Alamoudi then modified his tone on Hamas: Writing in the Orlando Sentinel in 2002, Alamoudi explained, "Hamas may be on the State Department's list of terrorist organisations, and may deserve that designation for some of its actions – such as unconscionable bombings of civilians – but this is not the 'Hamas' I support. What I support is the legal military defense of Palestine, and the political and humanitarian work of Hamas to provide representation to the occupied territories as well as medical, educational and other desperately needed social services to the Palestinian people."

Somehow despite all the above public statements, the Pentagon found fit for Alamoudi to start and effectively run the Muslim military chaplains programme, the State Department saw Alamoudi as an appealing representative of the US in its public diplomacy activities, making him a "goodwill ambassador" to Jordan, Kuwait, Lebanon, Oman, Pakistan, Syria, the United Arab Emirates, Yemen and elsewhere, as part of the USINFO programme.

The FBI announced that Director Robert Mueller would address the AMC's second annual national lobbying conference and the FBI called the AMC "the most mainstream Muslim group in the US." Even President Bush stood side by side with Alamoudi at a prayer breakfast on 14 September 2001.

In 2003 however the wheels started to come off for

Alamoudi and for AMC and its affiliates. Alamoudi was arrested by US federal agents as he returned from a trip to Libya, Syria and other Arab countries, via the UK. Alamoudi's first contact with the Libyans came in 1997. That was when he approached the country's Ambassador to the UN asking for help in financing the struggling American Muslim Foundation and in exchange offered help to try to unfreeze Libyan assets that the US government had frozen as part of its sanctions. Libya was still on US sanction lists in 2003 though and would only come off a year later. US citizens were not allowed to visit Libya or conduct many financial transactions with or connected to Libya. The arrest would lead to Alamoudi's imprisonment and the closure of his organisations.

The arrest would also blow open a secret plot by Libya's former President Gaddafi to assassinate the de facto Saudi Ruler Crown Prince Abdullah and Alamoudi bizarrely was at its centre. Gaddafi and Abdullah were attending a March 2003 meeting of the Arab League in Sharm el Sheikh, Egypt. Gaddafi severely criticised the Prince on live TV in open session for allowing US troops to remain on Saudi and Arab soil. Abdullah angrily replied shaking his right fist, "Your lies precede you, while the grave is ahead of you."

It was following this exchange that Gaddafi decided the Saudi leader should meet his own grave first. Twelve days after the Sharm el Sheikh confrontation, Alamoudi travelled to Libya. Alamoudi met regularly with Libyan officials and during one Tripoli visit Alamoudi met privately with Gaddafi himself. That's when Alamoudi learned that the Libyans were plotting to assassinate Prince Abdullah. Gaddafi told Alamoudi to tell his contacts among Saudi dissidents to arrange the killing of the Saudi Prince. Funding would be supplied by the Libyans. Funding generally in the form of cash began to flow and from May to June 2003, Libyan agents gave Alamoudi US\$250,000 as he continued his trips to Libya.

The plot started to unravel in August 2003, when Alamoudi received another "large quantity of cash" from the Libyans, some of which he delivered to Saudi dissidents. Then on the morning of 13 August 2003, someone speaking Arabic in a Libyan accent called Alamoudi's room at the Hilton London Metropole hotel in London, informing Alamoudi he had "something" for him. The individual arrived at his door, handed Alamoudi a small "Samsonite-style briefcase" filled with cash and left.

He put the money into his own carry-on baggage and, three days later, left the briefcase in the room

and headed to London's Heathrow airport to catch a flight to Damascus, Syria. During a routine baggage screening, UK customs officers found US\$336,900 in 34 bundles of sequentially numbered US\$100 bills. UK agents seized the money and detained and questioned Alamoudi. UK police though released him not realising the full significance of the findings.

Alamoudi then continued his travel to the Middle East. Later, a further US\$69,400 (£37,100) was seized from a property in Colindale, north London. Police said Alamoudi had left this cash with an unsuspecting friend who had no idea of its possible purpose.

UK agents informed their US counterparts of what they had found including details from his electronic address book. The next month, in September 2003, Alamoudi met again with Gaddafi telling him he'd arranged things in Saudi Arabia including with those prepared to kill Prince Abdullah. Libya then gave him US\$500,000 to pay the Saudi dissidents. Alamoudi kept US\$230,000 as a commission, which he handed off to a third party on his return to the US in London.

On 28 September 2003, Alamoudi arrived back in the US at Washington Dulles International Airport and falsely omitted from his customs form that he'd been in Libya. US agents then arrested him.

On 15 October 2004, Alamoudi pleaded guilty and was sentenced to 23 years in prison for violating economic sanctions against Libya when he accepted and transported the US\$340,000, making false statements in his application for citizenship and a tax offense for actions that included not reporting his overseas bank accounts. In the course of negotiating a plea with prosecutors, Alamoudi disclosed the Libyan assassination plot.³⁹

**Penalty: sentenced in US to 23 years in prison
Actions: American muslim leader supporting Hamas and involved in Libyan assassination plot against Saudi Arabia's crown prince.**

**Country: US, Libya, Saudi Arabia
Key date: 2003 (arrested by US following trip to Libya)**

Special Focus 30 Abdul Qadeer Khan

Pakistan's atomic weapons research programme started on 20 January 1972, when Zulfikar Ali Bhutto, the then Chief Martial Law Administrator, chaired a secret meeting of academic scientists just two years before Indian Premier Indira Gandhi

gave verbal authorisation to Indian scientists to conduct a test of a device that they had built. This was only three years after Pakistan's humiliating defeat in the 1971 Indo-Pak Winter war which had put Pakistan's existence in great danger.

During this time, Dr Abdul Qadeer Khan was working in a weapons grade centrifuge production facility in the Netherlands as senior scientist. As he learned the news, Dr Abdul Qadeer Khan went to the Pakistan Embassy in Amsterdam and approached Pakistan government officials where he offered to help and after an investigation he was accepted into Pakistan's nuclear deterrence programme.

In December 1974, Abdul Qadeer Khan met with Zulfikar Bhutto, as well as other senior advisers. During the meeting, Dr Abdul Qadeer Khan explained the importance to focus on a Uranium-based device, whereas others were convinced of a continuation of the current plutonium focus. Bhutto eventually saw the advantage of mounting a parallel effort.

It was the the uranium stream under AQ Khan that ultimately led to the first successful detonation of Pakistan's first nuclear devices on 28 May 1998, under the codename Chagai-I. Khan stated that eye-witnessing the nuclear tests, and the emergence of Pakistan as a nuclear power, was the happiest, finest, and glorified day of his life.

Abdul Qadeer Khan then established an administrative proliferation network with Friedrich Tinner and Peter Finke, in Europe through Dubai to smuggle nuclear technology establishing companies to transfer technology to Pakistan, Libya, and Iran. However, the cover was blown by British MI-6, and Finke, along with an unnamed Pakistan Intelligence (ISI) officer.

In 2003, Libya gave up nuclear weapons-related material including the centrifuges that were acquired from AQ Khan's nuclear "black market".

Pakistan is one of few countries to have diplomatic relations with North Korea, first established during the Zulfikar Ali Bhutto's regime, a socialist democratic regime in Pakistan. In 1990, it was reported that the highly sensitive centrifuge technology was being exported to North Korea in exchange for missile technologies. Khan, along with Benazir Bhutto, paid a state visit to North Korea and downloaded secret information on uranium enrichment to give to North Korea in exchange for information on developing ballistic missiles. Khan again paid a visit to North Korea with a senior army general to buy shoulder-launched missiles.

As early as 1989, Dr. Khan had offered to sell sensitive designs of centrifuge technology to Iran. Following the revelation, the Iranian government came under intense pressure from the US and the EU to fully disclose its nuclear programme. In October 2003, Iran finally agreed to accept tougher inspections from the IAEA at that time. The IAEA reported that Iran had established a large uranium enrichment facility using gas centrifuges based on designs, which had been obtained "from a foreign intermediary in 1989". The intermediary was not named but many diplomats and analysts pointed to Khan, who was said to have visited Iran in 1989. The Iranians turned over the names of their suppliers and the international inspectors quickly identified the Iranian gas centrifuges as Pak-1's, the model that Khan developed in the early 1980s.

In May 1998, the Newsweek magazine alleged that Khan had sent designs of centrifuges to Iraq, an allegation that he denied. UN arms inspectors apparently discovered documents discussing Khan's purported offer in Iraq. Iraqi officials said the documents were authentic but that they had not agreed to work with Khan, fearing a sting operation. During this time, Iraq and Pakistan had strained relations, and Iraq feared that an ISI sting operation might take place. During this time, Pakistan, through ISI, passed solid evidence to Mossad, whose [Pakistan] scientists had helped in building the nuclear programme in Libya. Also, Iraq had received a large amount of chemical stockpile from Dr Carlos Cardoen, another weapons scientist and metallurgical engineer.

In 2003, the US and IAEA successfully dismantled the Libyan nuclear programme and convinced Libya to give up its nuclear weapons-related material, including the centrifuges that were acquired from Khan's nuclear

"black market". The Libyans also turned over the names of their suppliers and A.Q. Khan was one of them.

The Bush administration investigated the centrifuge's nuclear proliferation in 2001 and 2002, focusing on Khan's personal role. In December 2002 it renewed its allegation that an unidentified agent, supposedly acting on Khan's behalf, had offered centrifuge expertise to Iraq in the mid-1990s. Khan strongly denied this allegation and the Pakistan Government declared the evidence to be "fraudulent". The US had responded by imposing sanctions in the 1990s. However, after Pakistan's contribution against terrorism and as a key ally of the US in the War on Terror, the US had removed the ban on technological cooperation between the US and Pakistan.

By the time the evidence against Khan had surfaced, Khan had become widely known in the country and held the most prestigious science role, the Science Adviser to the President.

On 31 January 2004, Khan was dismissed from his post and the Pakistan Government launched a full-fledged investigation into Khan to ostensibly "allow a fair investigation" of the allegations. Although he was not arrested, Khan was summoned for a "debriefing". In December 2003, Libya announced that it had agreed to abandon its undisclosed nuclear programme. Libyan government officials were quoted as saying that Libya had bought nuclear components from various black market dealers, including Pakistan's. US officials who visited the Libyan uranium enrichment plants reported that the gas centrifuges used there were very similar to the Iranian machines. The IAEA officials also visited the Libyan nuclear plant where they found models of Pak-1. Interpol arrested three Swiss nuclear scientists who were Khan's close associates.

The Pakistan government's blanket denials became untenable as evidence mounted of illicit nuclear weapons technology transfers. In early February 2004, the Government of Pakistan reported that Khan had signed a confession indicating that he had provided Iran, Libya, and North Korea with designs and centrifuge technology to aid in nuclear weapons programmes, and said that the government had not been complicit in the proliferation activities.

The Pakistan Government officials who made the announcement said that Khan had admitted to transferring centrifuge technology and information to Iran between 1989 and 1991, to North Korea and Libya between 1991 and 1997 (US officials at the time maintained that transfers had continued with Libya

until 2003), and additional technology to North Korea up until 2000. On 4 February 2004, Khan appeared on State controlled Pakistan Television (PTV) and confessed to running a proliferation ring where his confession was on-air by Pakistan's state and private television stations all over the country.

On 5 February 2004, the day after Khan's televised confession, President Musharraf pardoned him as he feared an extreme reaction would otherwise be the result. However, Musharraf wanted to avoid international pressure, particularly from the US. Therefore, Khan remained under continuous house arrest.

Following his confession, Khan became a major international symbol of proliferation. In February 2005, he was featured on the front cover of Time magazine as the "Merchant of Menace", labeled "the world's most dangerous nuclear trafficker," and in November 2005, the Atlantic Monthly ran "The Wrath of Khan", featuring a picture of a mushroom cloud behind Khan's head on the cover.

Still, Abdul Qadeer Khan remained extremely popular in Pakistan and was seen as a national hero of Pakistan. Science in Pakistan served as Pakistan's extreme national pride, and Khan's long association with science bought Khan a tremendous popularity. Khan's downfall affected the military regime of General Pervez Musharraf, as he was called the "Pro-American Leader". People in Pakistan openly blamed the US for Khan's house arrest. Journalists and the mainstream media came to support Khan and expressed their sympathies for him.

In May 2006, the US House of Representatives Sub-committee on International Terrorism and Non-Proliferation held a hearing titled, "The A.Q. Khan Network: Case Closed?" Legislators and experts demanded that Pakistan turn Khan over to the US and further Pakistan efforts to curb proliferation. When the news reached Pakistan, Chairman of Senate Secretariat M.M. Suomrow called a meeting to discuss the US demands. In June 2006, a Pakistan Senate sub-committee issued a unanimous resolution criticising the US Committee, stating that Pakistan would not turn Khan over to the US authorities at any given cost. In February 2009, two senior government officials announced that restrictions on Khan had been removed, allowing him to meet friends and relatives either at his home or elsewhere in Pakistan. The officials said that a security detail continued to observe his movements.

Penalty: house arrest and pardoned by Pakistan Govt
Action: clear proliferation to Iran, Libya and North

Korea

Country: Pakistan, Iran, Libya, North Korea
Key date: 2004 (confession on nuclear proliferation)

Karl Lee

Karl Lee - Li Fang Wei (aka Karl Lee), a Chinese citizen, and his company were charged with sanctions violations in supplying Iran with goods needed for its nuclear and WMD development. The Manhattan District Attorney's Office, working closely with OFAC, charged Lee with misuse of US banks and the proliferation of illicit missile and nuclear technology to Iran.

The Chinese company, known as LIMMT (aka Dalian Sunny Industries), was a major supplier of banned weapons material to the Iranian military. It sold high strength metals and sophisticated military materials, many of which were banned exports to Iran under international agreements, to subsidiary agencies of the Iranian Defence Industries Organisation (DIO).

In June 2006, OFAC designated LIMMT for its support of and role in the proliferation of WMD to Iran. The indictment charged that during the period from November 2006 through September 2008, LIMMT sent and received dozens of illegal payments through US banks by using aliases and shell companies. In all of LIMMT's transactions, the wire payments were sent to and from a limited number of Chinese banks that handled the accounts of LIMMT's front companies.

The investigation revealed that after OFAC designated LIMMT, LIMMT used aliases to continue sending banned missile, nuclear and dual use materials to subsidiary organisations of the DIO. The investigation identified subsidiary organisations set up by the DIO to procure and produce high-tech weapons systems, including: Amin Industrial Group, Khorasan Metallurgy Industries, Shahid Sayyade Shirazi Industries, and Yazd Metallurgy Industries. Some of the materials shipped from LIMMT to the DIO included specialized aluminum alloy used in long range missile production, graphite cylinders used for banned electrical discharge machines, tungsten-copper plates, tungsten-copper alloy hollow cylinders, metal powder, steel rods, tungsten metal powder 24,500 kilograms of maraging steel rods, furnace electrodes, and high carbon ferro-manganese. In addition, LIMMT and the DIO engaged in negotiations to have LIMMT send the DIO 400 Gyroscopes, 600 Accelerometers, and 100 pieces of Tantalum. Gyroscopes and Accelerometers are crucial technology for Iran's development of long range missiles. In 2011, the US State Department designated Li Wang Fei and LIMMT for more sanctions under the Iran, North Korea, and Syria Nonproliferation Act.⁴⁰

Outlook Cases /2014 and beyond	

Introduction

You could certainly be forgiven for thinking that there may be a real problem in Bank Compliance with Anti-Money Laundering Laws and Regulations, based on the regular announcement of fines and penalties, particularly in recent times. Before so concluding however, a few arguments in defense of financial institutions and some observations that deserve consideration.

Whilst the number of enforcement cases has increased over the last 25 years, the increase in the number of cases itself is not that dramatic, when this is placed in the context of the size of the entire financial industry, though the penalties and the consequences certainly are with those predominantly but not exclusively being levied by Governmental Agencies in the US and to a lesser extent the UK.

Fines for sanctions breaches hit a recent record with the fines in 2012 of US\$667mio against Standard Chartered and for money laundering breaches which also included sanctions breaches of US\$1.96bio for HSBC and in 2013, against the Hedge Fund SAC Capital for US\$1.8bio for insider dealing. This following other notable fines or settlements for allegations of Fraud, against Goldman Sachs in 2010 of US\$591.5mio against UBS in 2009 for aiding tax evasion paying US\$780mio aggregated fines for conflicts in issuing US research (2003 - US\$1.4bio), US market timing and late trading (2003 - US\$3bio+) and ongoing Libor bid rigging (2012 onwards - US\$2.5bio so far).

This trend of increasing penalties can also be seen outside the Banking world, for example, GlaxoSmithKline fined US\$3bio for corrupt actions and BP for damage to the environment, currently incurring fines of US\$4.5bio (on top of costs in aggregate US\$42-65bio). Still whilst these figures for fines are staggering, large fines, at least in the US, (e.g. those in the 1980s and 1990s) have

been seen before, for example: in 1989 Drexel Burnham Lambert forfeited US\$650mio; in 1991 BCCI US\$560mio; Salomon Bros US\$290mio; and in 1996 Daiwa US\$340mio.

Whilst recognising there have been individual failings, it is of most concern, that some of the best known and most respected Financial Institutions have been fined for material weaknesses and in some cases employees wilful acts.

Top FI Penalties (>US\$100mio)		US\$

Without condoning or commenting on individual cases the following may be important to note: Financial Institutions are large complex organisations employing many people in many cases all over the world. They seek to

control the activities of their employees and of course to avoid the regulatory, financial and reputation risks and costs associated with such failings but there is no risk free environment in which to operate.

Financial institutions also operate in an area subject to numerous laws and regulations, often complex, sometimes internationally producing conflicts, regularly being revised, with standards and expectations being raised without notice through inspections and as a result of greater insights, particularly changing risks and threat assessments and priorities relating to AML.

Financial institutions actively seek to identify weaknesses and continuously upgrade their frameworks and controls, and where weaknesses are material and fines and penalties are imposed quickly remediate the instant problems and at further substantial additional cost to themselves.

Whilst any case where a material fine or censure is applied to a financial institution is assumed to be a very serious case, there could be reasons and or mitigating circumstances that are rarely known or at least publicized.

Whilst there clearly are cases where employees within Banks have shown wilful disregard for complying with the law and or regulations there may be other cases where the actions or lack of them are more arguable and less clear of adjudication. It is almost impossible for a Financial Institution to disagree with the final conclusions of either regulators or other government agencies in any particular case.

The incentives to accept and consent to a fine and censure, versus fighting the case are substantial and almost always significantly outweigh any benefit in doing so. In consenting, the authorities in practise publicize their case, the case for the prosecution, whilst the Bank usually stays silent, not even offering any mitigating circumstances. Of course in some cases there may be none.

Financial Institutions have been rightly co-opted into the fight against money laundering, though that fight is principally a responsibility of Countries and governments, with Financial Institutions supporting. The standards that are applied to and the penalties levied for weaknesses found and incidents occurring are not proportionate, certainly no such similar action is taken towards Countries that have been found to be less than compliant with FATF recommendations, nor to Governments or governmental agencies directly responsible for combatting crime and for acting upon information and the much good work provided by Financial Institu-

tions in the form of Suspicious Activity Reports. A finding that a Bank failed to comply with AML laws or a regulations quite naturally, leads to legitimate questions about the Bank in question. However, the regulatory bar is set at such a high level and set to be raised even further, moving towards applying in effect strict requirements on all business lines, all accounts held and all transactions processed, requiring full compliance for millions of accounts and in many cases hundreds of millions of transactions. Some might say this is unrealistic. In criticizing Financial Institutions there is little consideration taken of the prior good work and contribution made by that institution, in coming to a conclusion on an individual matter.

Financial Institutions do not have limitless resources. Resources are already stretched and expertise is finite. Whilst the so called "risk based approach," is intended to provide flexibility to Financial Institutions to allocate resources sensibly to areas of greatest risk, this is meant to mean money laundering risk but instead the first priority is recognised by many as regulatory risk.

In particular, failing to attain required standards but also standards that continuously get tougher as good practice as a minimum standard gives way to best practice and regulatory risk increases. Financial institutions may be held accountable where a bank has not succeeded in preventing or detecting all criminal proceeds flowing into or passing through the organisation.

With these caveats and thoughts in mind here follows, the most important Bank enforcement cases, as understood from published and available sources.

Understanding what led to these censures, fines and penalties can only assist others in avoiding similar fates and improving money laundering prevention programmes.

Note: see Outlook Cases and Breaking News for further Enforcement Cases from Page 738 onwards.

Chronology of FI Major Enforcement Cases over last 25 years

1989

Drexel Burnham Lambert fined US\$650mio for market abuse leading also to its closure

1991

BCCI fined US\$10mio as well as forfeiting all American assets (US\$550mio) after pleading guilty to charges of criminal conspiracy through financial fraud

Salomon Brothers (now part of Citi) fined US\$290mio for submitting false bids for T bonds

1996

Daiwa fined US\$340mio arising out of the losses as a result of fraudulent trading by Toshihide Iguchi

1997

NatWest Markets fined £420,000 (US\$684,000) following losses by rogue trader Kyriacos Papouis

Deutsche Morgan Grenfell fined £3mio (US\$4.89mio) in connection with the actions of Peter Young

1998

Sumitomo fined US\$150mio for actions of rogue trader Yasua Hamanaka

2002

Broadway Nat Bank fined US\$4mio for AML failures

2003

Global US Settlement of 10 firms for conflicts of interest between Research and Inv Banking for US\$1.4bio

NY AG case against Canary Capital & Others fined US\$2-3bio+ (Market Timing/Late Trading)

GLG Partners fined £750,000 (US\$1.2mio) for market abuse

2004

Amsouth fined US\$50mio for AML weaknesses

Riggs Bank fined US\$25mio for AML weaknesses, quickly losing its independence and sold to PNC Bank

UBS fined US\$100mio for violating the terms of its FED Banknotes ECI agreement

Citi Japan ordered to shut its private banking operations in Japan due to AML weaknesses

Citi UK fined by UK FSA in connection with Dr Evil market trades £14mio (US\$19mio)

2005

Arab Bank fined US\$24mio for AML weaknesses

BoNY fined US\$38mio for AML weaknesses and paid US\$14mio for additional Russian claims

2006

Israel Discount Bank of New York was fined US\$12mio for AML weaknesses

Bank Atlantic fined US\$10mio for AML weaknesses

Foster Bank fined US\$2mio for AML weaknesses

2007

AMEX Bank Int fined US\$65mio for AML weaknesses

Bank of America fined US\$10.5mio for AML weaknesses

Union Bank of California was fined US\$21.6mio for AML weaknesses

2008

Sigur Corp, a NY based MSB, forfeited US\$15mio (satisfying US\$12mio penalty) for AML weaknesses

ETrade fined US\$1mio for AML weaknesses

United Bank of Africa fined US\$15.5mio

Soc Gen fined US\$6.3mio in connection with losses incurred by rogue trader Kerviel

2009

UBS fined US\$780mio for aiding clients evade US taxes

Doha Bank fined US\$5mio for AML weaknesses

CS fined US\$536mio for US sanctions violations

Aon Group fined £5.25mio (US\$8mio) by UK FSA for corruption control weaknesses

Lloyds fined US\$350mio for US sanctions violations

Amaranth Advisers fined US\$7.5mio in connection with losses of US\$6.6bio

Stanford Bank shut down

ANZ fined US\$5.75mio for US sanctions violations

2010

ABN Amro fined US\$580mio (US\$80mio/2005 and US\$500mio/2010) and 2 criminal charges for violating US Sanctions (latter fine paid by RBS)

Goldman Sachs pays in aggregate US\$591.5mio in connection with alleged fraudulent Abacus deals

RBS fined £5.6mio (US\$8.5mio) for sanction weaknesses

Wachovia fined US\$160mio for AML weaknesses later sold to Wells Fargo

Barclays fined US\$298mio for violating US sanctions

Pamrapo Savings Bank fine US\$6mio and pleads guilty to AML violations

Deutsche Bank fined US\$553.6mio for selling fraudulent US tax shelters

2011

JP Morgan Chase Bank fined US\$88.3mio for violations of US sanctions regulations

Merrill Lynch fined US\$10mio for market abuse and misuse of information

Pacific National Bank fined US\$7mio for AML weaknesses

Zions National Bank fined US\$8mio for AML weaknesses

Ocean Bank fined US\$10.9mio for AML weaknesses

Lebanese Commercial Bank forfeits US\$102mio to US government for Hezbollah contacts

2012

Coutts & Co (a subsidiary of RBS) fined £8.75mio (US\$13.25mio) for AML weaknesses

HSBC fined US\$1.98bio (US\$1.92bio by US Regulators/US\$41.8mio by Mexican Regulators and US\$21mio by Argentinian Regulators) for AML weaknesses and violating of US sanctions

ING fined US\$619mio for US sanctions violations

Standard Chartered fined US\$667mio for US sanctions violations

UBS fined £29.7mio (US\$47.6mio) in connection with Adeboji's rogue trading

First Bank of Delaware fined US\$15mio for AML weaknesses

Allianz fined US\$12.3mio for corruption failures

Barclays, RBS & UBS fined re Libor (ICAP and Rabo Bank 2013) in total US\$3.7bio (and by EU Commission US\$2.33bio also with SocGen, Citibank, JP Morgan and Deutsche Bank)

2013

Swiss Bank, Wegelin fined US\$58mio and ceases business after aiding US clients evade US taxes

Hedge Fund, SAC Capital agrees to pay US\$1.8bio to settle civil and criminal insider dealing charges

UBS fined US\$14mio in France for inadequate tax fraud controls

HSBC Argentina fined US\$21mio over 3 years for AML weaknesses

EFG Private Bank fined in UK £4.2mio (US\$6.4mio) for AML weaknesses

BTMU fined US\$258.5 mio for violations of US sanctions

Barclays fined US\$487.9mio for market manipulation in the energy markets

AMEX fined US\$5.2mio for US sanctions violations

Oppenheimer & Co Inc fined US\$1.42mio for Penny Stock compliance violations

Panther Energy Trading fined US\$5.8mio for market manipulation

JP Morgan fined US\$410mio for market manipulation in the energy markets

JP Morgan fined US\$920mio for lax controls over London "Whale"

RBS fined US\$100mio for US sanctions violations

JLT Specialty fined £1.8mio by UK FCA for anti-bribery weaknesses

Enforcement Cases

Nugan Hand Bank

1980 - collapsed¹

Agencies: N/A

The Nugan Hand Bank was a merchant bank created in Australia in 1973 by its two principals, Frank Nugan and Mike Hand. The bank had branches outside Australia, including the Cayman Islands, Washington DC, Manila, Hawaii, Cape Town, Hong Kong, Taiwan and the inauspicious destination of Chang Mai, the centre of the opium trade in South East Asia. Nugan was an Australian lawyer, while Hand was a former US military man. Nugan was purportedly an expert in money laundering and tax fraud while Hand was based in Hong Kong and focussed on drug trafficking and importation.

To establish a veil of legitimacy, Nugan Hand Bank cultivated connections to the US military services, with ex-military men serving in prominent positions in the Bank. It has also been alleged, although never proven, that the Bank was the bank of choice for the CIA throughout the 1970's. During this time the Chaing Mai branch was considered to be a central player in facilitating the money laundering associated with drug trafficking in South East Asia.

The Bank unravelled at the death of Nugan by a gunshot wound in 1980. Following this, Hand destroyed files and fled, supposedly to Fiji and thereafter Canada. The collapse of Nugan Hand Bank caused the State Government of New South Wales to institute a Royal Commission. The Commissions findings were that the Bank was a corrupt and criminal entity, prior to any real anti-money laundering regulation or supervisory oversight by banking regulators, the principals embarked on an unfettered series of criminal schemes and facilitated the laundering proceeds for individuals as diverse as Abe Saffron, the 'Mr Sin' of Australian criminal life throughout the 1960's and 1970's and even the now known kleptocrat, the former president of the Philippines, Ferdinand Marcos. Nugan Hand was also central in the 'bottom of the harbour' tax evasion schemes, which operated in Australia at this time. These schemes essentially involved asset stripping from companies that had tax liabilities and transferring those assets to 'phoenix' corporate entities in order to defraud tax authorities.

Banco Ambrosiano
1982 - collapsed²
Agencies: N/A

The body of Roberto Calvi, an Italian banker, was found in 1988 hanging from scaffolding beneath Blackfriars Bridge in the financial district of London. Calvi, director of Banco Ambrosiano (BA), allegedly hanged himself following the fraudulent bankruptcy of the bank. Calvi's clothing was stuffed with building bricks, and he was carrying around US\$15,000 of cash in three different currencies.

Calvi, dubbed by the press as "God's Banker" due to his close association with the Vatican, had gone missing on June 10. In 2003 RAI state television said prosecutors believed the Mafia killed Roberto Calvi because he lost their money and knew too much about their operations.

In 2005 a trial began for 5 people in the murder of Calvi. In 2007 however a jury acquitted all 5 defendants charged. Following a two year trial of executive employees at BA, on the 16th of April 1992 the Criminal Court of Milan found guilty all 33 defendants charged with causing the collapse of their financial institution.

BA famously collapsed with US\$1.3bio of un-refunded loans. Significantly a total sum of US\$1.1bio in loans was made to dummy companies in Panama, set up by the Vatican bank Instituto d'Opere Religiose (IOR). US\$200mio was also lent directly to the IOR. Chief among those executives responsible for the mismanagement and subsequent collapse of BA was Roberto Calvi, who was Chairman to Banco Ambrosiano Overseas Limited (BAOL), one of BA's foreign subsidiaries. However Calvi also established Banco Ambrosiano Andino (BAA) as a holding company. Loan agreements would be partly made in Milan, to be processed later in Luxembourg for tax reasons, a lawful transaction sequence, but one that allowed Calvi to administer his business outside the oversight of Banco Ambrosiano SpA (Italy) (BI). For instance in October 1979 IOR accepted two deposits worth US\$134.2mio in total from BA's Peruvian subsidiary, which it subsequently lent to a Panamanian company. This Panamanian company, (owned by IOR) later bought BA stock with the funds it had borrowed. In this manner Calvi effectively facilitated the buying of BA stock by IOR using BA's own funds. The covert affair was intended to prevent what Calvi would deem a hostile takeover of BA, placing stock in the friendly hands of the Vatican Bank IOR. As it was these loans played a crucial part in the bank's financial collapse, and only a day prior to his death Calvi was stripped of his position as Chairman.

Special Focus 1 Drexel Burnham Lambert

1989 - US\$650mio³

Agencies: DOJ, SEC

With the benefit of hindsight it seems that the revenue generating capability of star banker Michael Milken and his department became so large within Drexel's overall business that the fate of both became almost inexplicably intertwined. From the earliest negotiations with Giuliani the Government's insistence that any settlement had to include the removal of Milken from the firm was a huge sticking point and an unacceptable step too far for Drexel's management.

Also with the benefit of hindsight one cannot help wondering the extent to which Milken's department based as it was on the West Coast of the US formed, in effect, its own 'firm within a firm' removed from the oversight and governance processes that might apply elsewhere.

Some have noted that Drexel adopted a highly "meritocratic" and aggressive business culture. It is also perhaps noteworthy that Drexel had little ability to bring in outside capital and relied very significantly on its ability to raise money through wholesale funding including, in particular, its commercial paper programme. It seems that its inability to continue to finance itself through the wholesale markets was the final trigger which led to Drexel's filing for Chapter 11 Bankruptcy Protection.

The zeal and aggression with which the authorities pursued Milken in particular but also Drexel was astonishing and even at that time caused some disquiet amongst certain commentators and academics. For example, Milken's brother, Lowell was threatened with indictment despite having little obvious connection with the matters under investigation other than increasing the pressure on Milken to settle. Federal investigators also questioned Milken family members including his aging grandfather about their investment activities. The use of the draconian powers available under RICO was largely unprecedented. The wrongdoing to which Milken eventually agreed to plead guilty had never before and had never since been dealt with as a criminal matter.

The penalties levied on Milken were ultimately huge

and arguably out of all proportion to the crimes for which he was convicted. At trial the judge estimated that the injury for all counts to which Milken pled guilty combined together was US\$318,000. In addition to the 22 months he served in prison, Milken accepted a lifetime ban from the securities industry, agreed to pay US\$200mio in fines, and agreed to a settlement with the SEC in which he paid US\$400mio to investors who had been hurt by his actions. In a related civil lawsuit he agreed to pay US\$500mio into a fund to compensate Drexel's investors. In total Milken paid US\$1.1bio for all lawsuits related to his actions while working at Drexel. Drexel was fined US\$650mio in January 1989 prior to its continued downfall and filing for bankruptcy in February 1990.

Special Focus 2 BCCI

1991 - US\$10mio fine and forfeiture US\$550mio / forced shutdown^{4/5/6}

Agencies: DOJ, BofE

The Bank of Credit and Commerce International (BCCI) was founded in 1972 and pursued an aggressive expansion programme which saw it grow from a network of 19 branches to one of 108 branches by 1976. Its assets grew during the same period from US\$200mio to US\$1.6bio and it continued to be the subject of considerable press speculation that it suffered from a lack of adequate oversight and control which had undermined its capital stability. The Bank was split into two separate operating companies, BCCI SA (Luxembourg) and BCCI (Grand Cayman) each located in a jurisdiction where, at the time at least, banking supervision was considered to be less stringent. In addition, all the 248 managers and general managers reported to the two main directors giving them an unusual ability to direct and control operations as well as leading to a lack of clarity within the company about its overall direction and financial standing. In addition, the complex nature and number of its corporate entities and structures made it possible to evade legal restrictions on the movement of capital and goods as well as confusing auditors and confusing external investigators.

There was also considerable concern at the lending practices at BCCI which frequently involved activities in areas where banking services were less extensive and with individuals who either had close personal connections with the senior management of the bank or whose source of wealth was the result of questionable activity.

One example was the BCCI relationship with the Gokal family, a prominent family involved in the shipping industry with connections to Agha Abedi, the bank's founder, that was extensive and dated back to his employment at a previous financial institution. Rather than route these transactions through the normal commercial lending teams, Abedi handled this relationship personally often allegedly failing to complete the requisite loan documentation or securing appropriate collateral. At one point, the value of loans extended to this family was more than three times the entire capital of BCCI at that time a position that far exceeded usual regulatory guidelines.

In addition, subsequent investigations revealed that it had undertaken significant transactions with and on behalf of clients such as Saddam Hussein and Manuel Noriega. It was also alleged to have maintained accounts on behalf of the Medellin Cartel and the Abu Nidal Organisation.

Perhaps an indication that it was willing to offer accounts to anyone with funds to dispense without asking questions, the CIA allegedly held multiple accounts with the institution which were used to finance and support its clandestine operations in a number of jurisdictions according to William von Raab the former US Commissioner of Customs.

By 1998 the bank had been implicated in a scheme to launder drug related proceeds through an operation in Tampa (the so-called C-Chase case). It eventually pleaded guilty to the charges and was forced by Florida regulators to pull out of the state but the Federal regulators took no action. They were, however, keen to ensure that BCCI was unable to establish a significant banking operation within the US which resulted in the Bank taking considerable steps to disguise its involvement in the subsequent takeover of an American based institution.

Despite these obstacles BCCI, using a set of front companies and US persons, eventually acquired a total of four US financial institutions with operations in seven States. The preferred method was to make the purchases through nominees and ensuring that it had an active network of lawyers and publicity agents whose activities further dissuaded investigators from exploring its true ownership and business activities. In addition, BCCI had been using two different auditing firms to ensure that no single overview of the business was possible and this situation was further compounded by discovery of the fact that the bank had been making loans and other financial benefits to some of its auditors a practice which, at the very least, created an impression

of impropriety.

In 1988 and 1989 the Bank of England, concerned at ongoing speculation about BCCI's alleged involvement in the laundering of drug money and financing of terrorism undertook additional and limited supervisory action. Then, in the spring of 1991, the external auditors, Price Waterhouse, submitted a report to the Bank of England stating that they had uncovered evidence of poor banking practices including the provision of improper loans and indicators that fraud had been taking place. Sections of this report (known as the Sandstorm report) were subsequently leaked to the British Media and included allegations that the Abu Nidal terrorist group had maintained accounts with the bank as well as details of letters of credit valued at millions of dollars which had been used to facilitate the purchase of arms for Iraq.

At this point, BCCI had moved its headquarters to Abu Dhabi and, through a process of restructuring was attempting to regularize its affairs, a process that would have seen it rebranded as the "Oasis Bank" but regulators had already concluded that the bank's situation was so dire that the only option was to take action to shut it down.

Working in a coordinated manner, regulators in five different jurisdictions took action in July 1991 to liquidate the company entering BCCI offices around the world and shutting them down, action which immediately impacted around a million depositors. A few weeks after this action, the New York District Attorney announced that a grand jury had indicted BCCI and its two main officers on charges of fraud, money laundering and larceny following a two year investigation. It claimed jurisdiction on the basis that millions of dollars that had flowed through the bank had all passed through Manhattan.

Shortly afterwards, BCCI pleaded guilty to all charges and agreed to pay US\$10mio in fines as well as forfeiting all its American assets (US\$550mio) which were partially used to repay US investors.

The British Government also undertook an independent investigation (the Bingham enquiry) which made a number of critical comments about the actions undertaken by the Bank of England. Following its publication, thousands of creditors sued the Bank of England claiming that it had failed to oversee BCCI to a satisfactory standard although the case was later to collapse.

Special Focus 3 Salomon Brothers

1991 - US\$290mio⁷

Agencies: US DOT, CMP

Salomon Brothers was a bulge bracket, Wall Street investment bank. Founded in 1910 by three brothers (Arthur, Herbert and Percy) along with a clerk named Ben Levy, it remained a partnership until the early 1980s, when it was acquired by the commodity trading firm Phibro Corporation and then became Salomon Inc. Eventually Salomon was acquired by Travellers Group in 1998, and following the latter's merger with Citicorp that same year, Salomon became part of Citigroup. Although the Salomon name carried on as Salomon Smith Barney, which were the investment banking operations of Citigroup, the name was ultimately abandoned in October 2003 after a series of financial scandals that tarnished the bank's reputation.

The most infamous of which was the US government bond bid rigging scandal that threatened Salomon's existence in 1991. Salomon was run at the time by its then CEO the legendary John Gutfreund who had risen through the firm to become CEO in 1978.

During the 1980s, Salomon was noted for its innovation in the bond market, selling the first mortgage-backed security.

Salomon purchased home mortgages from thrifts throughout the US and packaged them into mortgage-backed securities, which it sold to local and international investors. Later, it moved away from traditional investment banking (helping companies raise funds in the capital market and negotiating mergers and acquisitions) to almost exclusively proprietary trading (the buying and selling of stocks, bonds, options, etc. for the profit of the company). Salomon largely focussed on fixed income securities and trading based on daily changes in the bond market and was led by John Gutfreund.

Gutfreund was a fabled gruff-talking, cigar-chomping bond trader. According to Liar's Poker, a 1989 best seller by Michael Lewis that described Salomon as a sort of financial Animal House, Gutfreund exhorted traders to come to work each morning "ready to bite the ass off a bear." When the traders were not executing centimillion-dollar deals, they delighted in such pranks as dumping garbage on one another's desks and replacing the contents of a male colleague's suitcase with

lingerie.

For decades, the government securities market was considered the world's safest haven for investors. Unlike stocks which had been plagued by a series of insider-trading cases during the 1980s, the US\$2.2 trillion market for US Treasury instruments was thought to be too big to rig. Regulations prohibited any one bidder from buying more than 35% of a single issue at a Treasury auction. The rule was designed to prevent price-fixing in the Treasury market. Pensions, life insurance and mutual funds depend on the price of US Treasury securities, as do taxes, interest on mortgages and the debt burden of private companies so ensuring this market is not artificially driven up or down is critical.

Salomon trader, Paul Mozer had been submitting false bids in an attempt to purchase more Treasury bonds than permitted under the 35% rule during the period between December 1990 and May 1991. In an elaborate form of hazing, Mozer had persuaded a Salomon customer to submit a bogus US\$1bio order for 30-year Treasury bonds, to shock a novice trader who received the order. As it turned out however the deal went through, and the unauthorized purchase landed on Salomon's books. This led Mozer to continue the practise and by using clients' names he was able to secretly exceed the 35% limit on control of a single issue and to artificially drive up the price of those securities.

Salomon rigged bids to exceed the 35% trading ceiling in at least three Treasury auctions during a nine month period. In December 1990 for example the firm bought 35% of a US\$8.5bio, four-year-note sale and also submitted a US\$1bio bid that was ostensibly for a customer but was really for its own account. The combined transactions gave Salomon a 46% share of the overall deal.

Complaints from investors who lost an estimated US\$50mio to US\$200mio in one May 1991 Treasury auction prompted a federal investigation. In the US\$12.26bio May auction, Salomon is believed to have gained control of 85% of the issue by bidding under customers' names.

Some investors, who took "short" positions on that issue, essentially betting the prices of the May notes would fall, lost because of the increases in prices that followed.

Whilst Salomon senior management, including Gutfreund, Strauss and Merriweather already learned of these breaches, being notified by the Company's

General Counsel, they did not act to inform the US Treasury, only doing so following the initiation of the Federal investigation. The firm announced that they had failed to report the violation "due to a lack of sufficient attention" to the matter. When eventually notified the US Treasury Department was infuriated.

The Treasury Department, in an attempt to restore confidence in the market, immediately barred Salomon from bidding at further auctions and began an investigation. There was even consideration given to bringing criminal charges against the firm. Instead the firm was fined US\$290mio, the largest fine ever levied on an investment bank at the time. CEO John Gutfreund was forced out of the company leaving in August 1991, taking a personal fine for failures to supervise of US\$100,000 and he was barred for life from serving as a chief executive of a brokerage firm.

The decision to ban Salomon from the T bill auctions was more serious however, with Salomon, one of only 40 firms designated as primary dealers in T-bonds and T-bills, this was not a problem for the US Treasury but with dealing in US government securities accounting for about 25% of Salomons business, it was a major risk to Salomon's existence.

In stepped Warren Buffet, a man who was at the time a 16% owner of Salomon's preferred stock and who had a legendary reputation for investing. He took over as interim Chairman and CEO following John Gutfreund's departure. In a series of telephone calls with Treasury Secretary Nicholas Brady, Buffet successfully lobbied for leniency. Salomon was permitted to trade, but for its own account only, not on behalf of clients. The firm thus survived. As one of his first actions as interim CEO, Buffet wrote a letter to all his managers, providing them with his home phone number in Omaha and telling them if they saw anything unethical, to give him a call. The firm rehabilitated its reputation under Buffet's leadership but was still undoubtedly weakened by the scandal. The firm was bought out by Travellers Group, under CEO, Sandy Weil which would later merge with Citigroup.

The combined investment banking operations became known as "Salomon Smith Barney" for a time but the name Salomon was eventually retired in favour of "Citigroup Global Markets."

The scandal was then documented in the 1993 book *Nightmare on Wall Street*. Two members of the Salomon Brothers' bond arbitrage team, John Meriwether and Myron Scholes, later became a founder and a consultant for Long-Term Capital Management,

a hedge fund that collapsed in 1998. The firm's top bond traders called themselves "Big Swinging Dicks," and were the inspiration for the book *The Bonfire of the Vanities*, by Tom Wolfe. Salomon Brothers' success and decline in the 1980s is documented in Michael Lewis' 1989 book, *Liar's Poker*. Lewis went through Salomon's training programme and then became a bond salesman at Salomon Brothers in London.

Barings Bank

1995 - collapsed and insolvent⁸

Agency: Monetary Authority of Singapore

On 17 January 1995 a massive earthquake shook the Japanese city of Kobe, as well as shaking one of the oldest of Britain's financial institutions, Barings Bank, which would be brought down by Rogue Trader, Nick Leeson who had bet heavily on a rise in the Japanese stock exchange. Losses eventually reached US\$1.4bio, twice the Banks available capital, leading to the insolvency of this venerable institution. For more details see the case of Nick Leeson in Part 2, Section 7, Criminal Cases, Rogue Traders.

Daiwa Securities

1996 - US\$340mio^{9/10}

Agencies: US DOJ, US FED

On 13 July 1995 Toshehide Iguchi, then Executive Vice President of Daiwa's New York Branch and head of its Securities Custody Department sent a personal letter to "Mr. Fujita," the President of Daiwa Bank Ltd, at Daiwa headquarters in Osaka, Japan. In the letter, Iguchi would confess that in trying to cover up a US\$70,000 loss made in 1983, he had caused a US\$1.1bio loss from unauthorised proprietary trading and unauthorised sales of client's holdings in US Treasury Bonds. Iguchi further stated that he believed Daiwa should "keep the secret until the bank and possibly the Japanese authorities can take appropriate measures." For more details see Part 2, Section 7, Criminal Cases above.

Whilst the losses were shocking what came next compounded the problems for Daiwa and would lead to the US authorities forcing Daiwa to close their business in the US. Daiwa management in Japan and in New York conspired to conceal the losses. Instead of reporting the fraud to the authorities as they were legally compelled to do, the management went to incredible lengths to cover up the losses. Daiwa, at Iguchi's suggestion, agreed to try to use its large capital reserves to replace the losses to clients by continuing to trade, hoping to make profits and to replace the losses. Using fraudulent documentation, making false disclosures, pretending that Iguchi was on annual leave, so that an audit had to be postponed and even

disguising the nature of his trading department, in order that it appeared as a back office function, Daiwa acted appallingly. It was only after it became apparent that the additional trading was producing continued losses and that this would be unsustainable that they instructed Iguchi to confess his crime to the US authorities. In November 1995, Federal prosecutors in NY unveiled a criminal indictment and ordered Daiwa to shut down all operating in the US within 90 days. Daiwa initially pled not-guilty but by February 1996 they changed that plea to guilty and were fined US\$340mio. In 1996 Daiwa closed down its 15 US offices, selling US\$3.3bio of assets to rival Sumitomo Bank in the process. The effect on the bank was more lasting though with a revision to a deposit taking institution and a drastic reduction of their global presence. As a result of the losses, but more importantly, Daiwa's attempt to cover them up and not to directly inform regulators, what was once a sizeable institution with a global presence had been reduced to little more than a medium sized national bank.

Deutsche Morgan Grenfell

1997: £3 mio¹¹

Agency: IMRO (UK regulator, one of the predecessor regulators prior to UK FSA)

IMRO, the Investment Management Regulatory Organisation fined DMG £2mio handing down the largest fine ever imposed under the UK Financial Services Act, for the mishandling of investors' funds by its former star manager Peter Young which was almost three times higher than the previous record. Additional costs of over £1mio were also levied to cover the investment management regulator's costs.

Phillip Thorpe, Imro chief executive, said: "The mismanagement of these funds has caused unnecessary concern to an enormous number of investors. The firm has paid dearly as a consequence of inadequate management control. This affair plainly illustrates the dangers of ignoring clear and repeated warnings." The fine came eight months after Morgan Grenfell fired Mr Young for breaking regulations by investing too much of three funds' assets in unlisted shares. Five other executives, including his supervisor, Mr Percy, were ousted for failing to monitor his dealings. Mr Young had invested in dozens of hi-tech companies, breaching the 10% limit in unlisted assets that can be held by unit trusts. He concealed the investments in part through a complicated web of holding companies based in Luxembourg. IMRO said Morgan Grenfell International Fund Management "did not organise and control its internal affairs to ensure its funds were properly managed" and said it "did not act with due skill, care and diligence when it failed to prevent the funds from making inappropriate investments".

NatWest Markets

1997: £420,000 fine^{12/13}

Agency: UK SFA (predecessor to UK FSA)

In 1997, NatWest Markets (NWM), the corporate and investment banking arm of one of the UK's largest banks, National Westminster Bank now part of the Royal Bank of Scotland Group revealed that a £50mio loss had been discovered in its interest rate options and swaptions trading books. The loss figure escalated to £90.5mio after further investigations and the trader involved was Kyriacos Papouis. The regulator imposed a penalty of £420,000 on NWM, and fined and reprimanded Papouis as well as his supervisor, Neil Dodgson for breaches of SFA principles. But the real damage was to the reputation of National Westminster Bank itself, and with confidence undermined, the Bank fell in a hostile takeover soon after.

Sumitomo Corporation

1998: US\$150 mio¹⁴

Agency: US CFTC

Sumitomo Corporation agreed to pay US\$150mio in fines and restitution, arising out of charges that its lead copper trader Yasuo Hamanaka, manipulated the copper market in 1995 and 1996. The CFTC order explained how Hamanaka, tried to drive up the price of copper, beginning in late 1993. Nearly all the buying took place on the London Metal Exchange. "During the summer of 1995 and through the fourth quarter of 1995," the commission's order said, "Sumitomo's copper trader and the U.S. copper merchant plotted and executed their scheme to push copper prices to an artificially high level and then exit the joint operation by liquidating" their large positions. "The focus of these operations ultimately was the acquisition of all of the stocks of deliverable copper in L.M.E. warehouses," it said. By 24 November 1995, according to the commission, Sumitomo owned 93% of all London Metal Exchange warehouse copper through one brokerage house, and together with the American operation had all the copper. One might think that would have left Sumitomo in a great position to force up the price. But by then the copper price was heading down. Copper for delivery in the next month was then priced at US\$1.3145 a pound, down from a peak of US\$1.461 on 13 July. In the end, Sumitomo's purchases did a fine job of running up the price. The spot price of the metal, which was low as 72 cents a pound in the fall of 1993, when the commission says Mr Hamanaka began talking about driving up the price, had more than doubled by the time it reached its peak. The rise came as Sumitomo was accumulating more and more copper. In cornering a market, one or more conspirators acquire all that is available of a given item, forcing short-sellers who had bet against the rise to pay high prices when they buy the item to cover their

short positions. But the trick is in then selling the rest of the position still at a high price. High prices tend to discourage consumption and to increase production.

Still, Sumitomo still had large positions when the conspiracy unraveled in the spring of 1996, ending with a loss of US\$2.6bio. One of the most significant aspect of the CFTC order was the way the commission asserted it had jurisdiction over the case. There was some trading in the US, and the London Metal Exchange has a warehouse in California. Either might have been a sufficient basis to establish jurisdiction. But the commission went further, asserting it had jurisdiction because the conspiracy drove up prices on the Comex in New York, where copper futures are traded. Given that commodity markets around the world reflect similar prices, the CFTC action implies that manipulation of any commodity traded in the USA country could be the subject of a CFTC action, even if no acts were committed in the US.

Broadway National Bank
2002 - US\$4mio CMP^{15/16}
Agencies: US Customs / IRS

Broadway National Bank was found guilty in Manhattan on three criminal charges for failing to file suspicious-activity reports on US\$123mio in cash deposits and failing to establish a programme to curb money laundering and fined US\$4mio.

From 1996 to 1998, the bank failed to report hundreds of bulk cash deposits totalling more than US\$46mio and thousands of transfers structured to avoid disclosure laws. Once the cash was deposited, sometimes in large duffel bags dropped off in the teller area, it was quickly wired to bank accounts abroad. US\$20mio was established in accounts maintained by members or associates of the Fares family, five of whose members have been convicted of laundering drug money. One client told bankers he was in the electronics business, deposited US\$46mio into nine accounts, sometimes in cash installments as large as US\$660,000. This client pleaded guilty to laundering money on behalf of a Colombian Drug Cartel. Bankers made no effort to visit the clients listed place of business, which was a few blocks from one branch. Had they done so, they may have noticed that it was vacant.

"This bank had become the bank of choice for criminal organisations because it didn't ask questions and didn't want to know where the money came from," said a spokesman for the Customs Service, which investigated the bank with the US IRS.

Special Focus 4 Global Analyst Research Settlement

2003 - US\$1.4bio^{17/18}

Agencies: NYAG (Spitzer), SEC

In August 1991 Tim Berners-Lee, a CERN researcher, first posted details of his creation - the "World Wide Web" - on the internet and invited the world to download his software and create their own websites. Four months later Paul Kunz, a Stanford scientist, launched the first US website. By 1993, the internet had over a million computers attached to it and according to a 1994 Time article was "growing faster than OJ Simpson's legal bills". But (and it was big 'but') the internet was run by the US government: a user had to agree to use it for "research and education" only. The idea of making money through commerce on the internet was in its infancy. After consultation, the US government formally ceased running the internet on 30 April 1995 and handed it over to private enterprise. The starting gun was fired in the race for commercial development of the internet.

Over the next 6 years, with increasing momentum, the dot-com boom gathered pace across mainly US and European markets. Despite occasional hiccups, the frenzy of activity was driven and fuelled by media hype, floods of money from venture capitalists and other investors, a benign macro-economic policy and a belief that the internet and e-commerce represented a new paradigm for commercial opportunity and success. Household names such as Amazon and Yahoo! were born and survived. Many others crashed and burned. Even the survivors traded at times on eye-watering multiples when compared with traditional valuations for companies. In late 1999 with its stock price at over US\$500 Yahoo! was valued at over US\$131bio - 2,154 times its 1999 earnings and more than Walt Disney and News Corporation combined.

After initial financing, the first real goal for many start-up companies rushing to secure a place in the promised land of e-commerce was to complete an initial public offering (IPO). In this the company would sell its shares to - hopefully enthusiastic - public investors for the first time and in the process make the company's founders and original shareholders (often venture capital firms) very wealthy. The IPO process is organised and run by investment banks, who charge a healthy fee (then in the US up to 7% of the IPO proceeds) for doing

so. Traditionally, a start up company would trade for a number of years and establish a track record of being a sound and profitable business before even considering an IPO. With the dot-com boom, all that changed. New start ups rushed to the public markets with astonishing haste. In some cases, these IPO candidates were little more than a catchy name and a business plan.

A couple of examples amongst many: in early 1996, CyberCash went public issuing 2mio shares at US\$17. In a week the shares had risen to US\$50 - even though in the 17 months between its incorporation and going public CyberCash had lost US\$10mio and had total revenues of - zero. As an S&P analyst in refusing to recommend the shares noted "the lack of any sales was a major negative in our rating." In late 1998, EarthWeb - an on-line publishing company - went public, selling 2.1mio shares. On the first day of trading its stock jumped from US\$14 to US\$48. Its founders - two brothers from Brooklyn - were worth on paper at least US\$65mio each - despite in the first half of 1998 EarthWeb managing to lose US\$5.3mio on total revenues of just US\$1.9mio.

The University of Michigan Business School even started a course entitled "From idea to IPO in 14 Weeks". One UBS compliance officer recalls attending - in all seriousness - a commitments committee (not at UBS) and discussing a start up's idea to put small web cameras on jockeys during horse races and streaming live pictures over the internet from "your horse" to gamblers for a fee. The proposal was rejected - amongst other concerns it was thought the main view would simply be of the backs of the horses' ears. In March and April 2000 the bubble finally burst and the party was over. Many internet companies' share prices fell like a stone - true to an old London Stock Exchange adage comparing shares to fireworks: "up like a rocket, down like the stick".

Many companies ultimately disappeared without a trace: either closing down or finally using up all their available cash. Investors - including many private investors - lost large sums of money. Inevitably people began to cast around for those to blame. Whilst there were many contributing factors and many cheerleaders for the dot-com boom, particular focus started to alight on the role of internet research analysts and their relationship with the Investment Banking Departments at major Wall Street firms.

Many firms had earned huge investment banking fees during the internet boom. Firms had significantly built up their internet research coverage with "star" analysts such as Henry Blodget at Merrill Lynch, Jack

Grubman at Salomon Smith Barney and Mary Meeker at Morgan Stanley to the fore. In particular, there were concerns that the traditional separation between Investment Banking and Research had been eroded and that far from offering sober and independent analysis of companies, analysts had become far too close to investment bankers and their clients.

Beginning with Merrill Lynch, Eliot Spitzer the New York Attorney General began aggressively investigating Wall Street firms for evidence of fraud and malpractice in connection with their research activities. Ultimately this investigation led to a Global Analyst Research Settlement between 10 firms and US regulators. Under this court-sanctioned settlement, the firms paid a total of over US\$1.4bio in penalties. In addition the firms agreed to fundamental reform of their research practices including structural reforms entirely separating Research and Investment Banking, greatly enhanced disclosures in research reports, the requirement to buy and offer to customers independent research and payments into an investor education fund. The separation and disclosure requirements broadly survive to this day.

Spitzer's main initial target was Merrill Lynch and their Head of Internet Research, Henry Blodget. During the course of his investigation Spitzer found evidence of widespread bias and distortion in Merrill's research ratings. Merrill had a five category stock rating system (buy, accumulate, neutral, reduce, sell). Between Spring 1999 and Autumn 2001 Merrill never published a single reduce or sell rating on any stock covered by the Internet group. He also found that at the same time that analysts had positive published ratings on a company their Internet analysts were privately disparaging that very same company. Emails showed stocks on which analysts had buy or accumulate ratings being privately described by analysts as a "piece of junk" (InfoSpace), a "piece of shit" (24/7 Media) or "such a piece of crap" (Excite@Home). Emails also showed that the Internet Research Group was not independent to the Investment Banking Department. Within weeks of joining Merrill, Blodget as Head of the Internet Research Group sent around a memo entitled "Managing the banking calendar for internet research". The memo unapologetically described his expectation that at least half his and his team's time would be allocated to investment banking matters and described Blodget's work schedule for one week as being divided "85% banking, 15% research". Indeed Merrill's research management itself acknowledged at one point that "we are off base on how we rate stocks and how much we bend backwards to accommodate banking". Spitzer's investigation also found that in some cases proposed ratings were discussed and agreed

with investment bankers and indeed on occasion the covered company itself in breach of internal Merrill policy. Research analysts' remuneration was also at least partly determined by investment bankers. In Autumn 2000, the Co-head of Global Equity Research informed all equity analysts "we are once again surveying your contributions to investment banking please provide complete details on your involvement in the transaction paying particular attention to the degree that your research cover played a role in origination, execution and follow up. Please note your involvement in advisory work on mergers or acquisitions especially where your coverage played a role in securing the assignment". In response, Blodget confirmed his group had been involved in over 52 completed or potential transactions which had earned US\$115mio for Merrill. Identified services his analysts provided to investment banking included pitching to the client, marketing the offering and initiation and follow on research coverage. In publishing a recommendation on GoTo.com in January 2001 an institutional investor asked Blodget what was interesting about the company except banking fees. Blodget replied "nothin". Of course such intertwining of Research and investment banking led to tensions and conflicts and in late 2000, for example, Blodget threatened to start to rate stocks honestly, no matter what the investment banking consequences were. His ultimatum was prompted by a long time private client broker who felt his clients were being burned by late downgrades of covered stocks and an email from Research management about downgrades. Blodget wrote an email threatening they would "just start calling the stocks like we see them no matter what the ancillary business consequences are". To conclude the investigations of Merrill Lynch's conduct - which was characterised by Spitzer as a "shocking betrayal of trust" - the firm settled with a penalty of US\$100mio. The star analyst Blodget was censured, permanently barred from the industry and fined US\$2mio.

Jack B Grubman was the star technology analyst at Salomon Smith Barney (SSB) - then part of Citigroup - through the height of the internet and technology boom. Rated 1# on the Institutional Investor All America Research team his views on companies were highly influential. His coverage universe included a host of technology companies including AT&T, Worldcom and Global Crossing. As a 2002 Money Magazine article (with the catchy title 'Is Jack Grubman the worst analyst ever?') observed "he was at the heart of the telecom debacle (and) at about US\$20mio a year... Wall Street's highest-paid analyst ever". Inevitably Grubman, as with Blodget, was enmired in the same conflict of interest issues. As a 2002 FT article had it, "to critics he embodied the untenable conflicts of

interest that characterised the boom years. He tried to bridge the traditional gulf between investment banking and equity analysis - between being a confidential adviser to corporate chieftains and an independent commentator on their companies". Grubman of course may have rationalised things differently. "What used to be a conflict is now a synergy" he told Business Week in 2000 "Objective? The other word for it is uninformed".

In the bursting of the bubble two companies that both SSB and Grubman were particularly close to - WorldCom and Global Crossing - went bankrupt. SSB, Citigroup and Grubman were part of Spitzer's investigations and the Global Analyst Research Settlement. In addition they were deluged with litigation and class action lawsuits filed on behalf of aggrieved investors who had lost huge amounts of money - notably in WorldCom and Global Crossing. Whilst these were generally settled out of court, the various actions and investigations unearthed the usual (and unusual). Reaching to the very top of Citigroup it was suggested Grubman had produced positive research on AT&T to curry favour with the company for Citigroup's bankers - Sandy Weill (Citigroup's Chairman) was forced to admit that he had personally suggested Grubman "take another look" in his research at AT&T despite earlier maintaining he never interfered in research. Grubman also confided to a friend that he changed his research outlook on AT&T as a quid pro quo for Weill helping to get Grubman's twin kids into the 92nd Street Y - a prestigious local children's school. As Weill clarified "I tried to help Mr Grubman because he was an important employee who asked for my help". Around the same time Citigroup Foundation made a US\$1mio donation to the 92nd Street Y.

Retrieved emails also found considerable evidence of the inevitable conflict of interest issues and institutional and management failure to deal with them. Ahead of a dinner with the Head of Research and some senior bankers Grubman wrote, "See you at dinner. If (a banker) starts up I will lace into him... most of our banking clients are going to zero and you know I wanted to downgrade them months ago but got huge pushback from banking". As with Blodget also found were discrepancies between published ratings on companies and the analysts private views. For example in early 2001 Grubman published a Buy recommendation on Focal Communications (a broadband telecoms provider) despite privately believing the company was "a pig". When he heard Focal had complained that his research was not positive enough Grubman wrote to two SSB bankers "I hear company complained about our note. I did too. I screamed at (the analyst) for saying 'reiterate buy'. If I hear one more

fucking peep out of them we will put the proper rating (i.e. underperform not even neutral) on this stock which every single smart buysider feels is going to zero".

There were also inevitable tensions and conflicts with SSB's large retail brokerage operation. In both 2000 and 2001, Grubman was ranked dead last of all SSB analysts by SSB's retail brokers. appraisal style comments from retail brokers included "investment banker or research analyst? He should be fired" and "how can an analyst be so wrong and still keep his job?" and "Grubman has made fortune for himself and for the investment banking division. However his investment recommendations have impoverished the portfolio of my clients".

Under the Global Analyst Research Settlement Grubman was censured, permanently barred from the industry and paid US\$15mio in fines and disgorgement for alleged violation of federal securities laws and regulations.

A number of aspects characterised the Spitzer investigation. Traditionally, the domain of securities regulators (e.g. the SEC) and self regulatory organisations (SROs) Spitzer asserted jurisdiction via a 1921 New York business law - the Martin Act which allowed him to investigate financial fraud in the state with sweeping powers and almost complete carte blanche in the conduct of the investigation. He pursued the matters aggressively, in particular subpoenaing huge amounts of emails from Wall Street firms and inevitably finding 'smoking guns' amongst the hundreds of thousands of documents. Spitzer pursued the investigation with zeal including using the media and publicly disclosing 'smoking gun' emails and bad facts. It is important to remember that such investigations are conducted not by impartial fact-gatherers but by prosecutors who will use every lawful means to build and win their case; and "winning the case" may not mean preparing to argue the facts before a jury, but to place such pressure on a firm and its executives that they will simply agree to settle.

Almost all of the facts relied upon in the evidence underlying the global settlement agreement and throughout the Spitzer investigation stems directly from emails and is often simply quoted verbatim. This underscores the need for great care in writing and sending emails. Email represents an almost permanent record, emails can be produced and reviewed in their thousands - and often years later - by those seeking evidence of crimes.

Merrill had policies and procedures which ostensibly

sought to separate Investment Banking and Research and ensure the independence of the latter. It seems clear with hindsight and from the email evidence produced in the investigation that in practice such policies and procedures were either poorly understood or simply not followed. It also seems evident that from time to time management was concerned about the inevitable tensions that were thrown up by the steady drift over time of aspects of research to servicing investment bankers and their lucrative clients. Although it seems that little practically was done to address the obvious tensions and conflicts created.

Finally, in testifying before a US Senate committee hearing on Corporate Governance in 2002 Spitzer commented: "remarkably, throughout our investigation (of Merrill Lynch) which has now led us to examine documents of a significant number of companies there is absolutely no evidence that any compliance department ever took action to stop behaviour that clearly violated internal rules and state and federal law. The failure of the industry's much vaunted compliance structure is appalling.

Special Focus 5 Mutual Fund Scandal

2003 - US\$3bio+¹⁹
Agencies: NYAG, SEC

On 3 September 2003, New York Attorney General Elliot Spitzer, flushed with success in the Dot-Com Research cases (see above) turned his attention to US mutual funds and to certain practices he thought were outlawed. The September 2003 action was targeted at Edward J. Stern ("Stern")

and his investment vehicle Canary Capital Partners, LLC ("Canary"). The complaint alleged that from 1999 to 2003, Canary had engaged in two fraudulent schemes – namely, late trading of mutual fund shares, and market timing of mutual fund shares, generating benefits to the tune of tens of millions of dollars.

The complaint held that these schemes required the knowledge, support and cooperation of certain mutual fund companies owned or operated by well known financial services organisations – specifically, Bank of America, Bank One, Janus and Strong Capital Management. Spitzer's cen-

tral contentions were that the fund management and related companies had reached agreements with Canary to make possible two forms of abuse by Canary – “late trading” of mutual fund shares and short term “timing” trading within mutual funds.

Mutual funds are investment portfolios run in bulk form for and on behalf of a population of underlying investors. As such they are also known as “collective investment schemes”. In the US they are governed by the Investment Companies Act, and their managers by the Investment Advisers Act, both dating back to the fall out from the Great Depression. Interests in these investment portfolios are represented by shares. Such shares are not bought and sold continuously but may only be acquired and disposed of typically daily, on the basis of a set reference price deriving from a valuation of the portfolio as of a specific date and time. To prevent abuse, the time by when an order must be received should precede the valuation point, normally by 2 hours or so. Accepting orders after the valuation point gives the investor the chance to factor in market data not available to others lodging an order by the earlier cut-off point – this information advantage could, for particular circumstances and markets, lead to close to “sure thing” profits. Late trading is contrary to the fund prospectuses and is also illegal.

Mutual funds are typically intended to provide exposure to a particular investment market over a period of time i.e. a “buy and hold” strategy - and are described as such in prospectuses. To generate substantial trading revenues through late trading and other means, higher frequency buying and selling is required. Such buying and selling is inconsistent with the profile of the typical mutual fund investor. It generates transaction and other costs, and is generally distracting in relation to the core investment management activity. Prospectuses typically noted that funds were not intended for such timing strategies and managers typically had the power to reject timers’ orders.

The banks behind the fund management companies were allegedly motivated to strengthen what they saw as an important relationship. In some cases they allegedly participated in trading profits arising. The mutual funds enjoyed greater assets under management and levied higher fees as a result.

Stern was the son of billionaire Leonard Stern, owner of the pet supply giant Hartz Mountain Inc. and was assigned the job of overseeing the family’s money. With this role, he ran Canary, a “hedge fund” type enterprise. Stern, while recognised as extremely bright, was educated as an arts major, not an obvious training ground for such a business role. However his mutual fund timing and late trading strategies were an astounding “success”. According to Spitzer’s complaint, Canary engaged with several institutions to agree the basis

on which it could execute market timing and late trading strategies within their mutual fund ranges. These arrangements included waiving short term redemption fees and agreeing to accept orders after the trade cut-off. Considerable lengths were pursued to provide administrative support – for example installing Bank of America’s trading system at Canary’s offices. There were some offers made in return – for example Canary agreed to leave “sticky” assets elsewhere within Bank of America. The complaint is littered with examples indicating a confused philosophy and approach to this activity. Timers were recognised as discouraged but allowances made for this “special relationship”. In making these allowances the impact on the other mutual fund investors was not usually front and centre, if it existed at all. The considerations were mostly to balance the administrative effort with the overall benefit of the relationship to the banks. Whilst the key point – the impact on other fund shareholders – was identified by some, most of the players cited in the complaint generally seemed to have missed the point completely.

Complicity was not confined to broader relationship points. In one case – Strong Capital – Canary agreed to pay increased management fees as well as a share of Canary’s trading profits. The content of the fund prospectuses run through Spitzer’s complaint. These correctly identify the risks of higher frequency traders and provide powers to reject or expel timers, charge additional levies and so forth. Canary’s trading strategies extended in the falling markets in the early 2000s to synthetically creating shorting strategies for mutual funds. These could only be effected through the manager providing a level of transparency to Canary in terms of positions held within the fund. Such information was not available to other investors, another breach of the basic principle of acting in the collective interests of the investors as a whole.

Spitzer sought to convert civil proceedings and settlements into criminal prosecutions. However his attempt to convince a jury in the case of Theodore Sipholt III, a broker with Bank of America who introduced Canary to the bank, failed and no further cases went to trial. The 3 September 2003 complaint was followed by a long litany of related actions taken by Spitzer, often in conjunction with the SEC, against the “great and the good” of the US mutual funds industry, including (in addition to the parties cited in the Canary case) Invesco, Putnam, CIBC, and Bear Sterns. The campaign generated over US\$3bio in fines and disgorgement of profits, secured from a wide range of institutions over a period of several years. Administratively expensive processes were also imposed to deliver investor compensation.

Spitzer’s market timing campaign was remarkable in terms of the intensity of the spotlight directed at the failure of the

industry to live and breathe fiduciary and similar obligations owed to the underlying mutual fund investors. It is striking that the implications for other mutual fund investors of excessive short term trading – in addition to the illegal late trading - were clearly understood, since fund prospectuses dealt specifically with these aspects. There were, for example, provisions to levy special redemption penalties for short term redemptions, designed to offset the costs involved to facilitate acquisition and liquidation of the underlying mutual fund securities. To facilitate effective trading results, the banks overlooked or disapplicated these protections. For example, redemption fees were waived.

The transcripts cited in the Spitzer complaint illustrate the level of institutional confusion and the inability to focus sufficiently on the duties owed, and rights accruing to, the long term buy and hold investors for whom the funds were designed and run. For example “...we won’t actively seek timers, but when pressed and when we believe allowing a limited/ controlled amount of timing activity will be in [bank’s] best interests (increased profitability to the firm) we will make exceptions under these parameters”.

The specific changes in industry governance that ensued from it were significant and included the requirement for mutual fund boards to be comprised of 75% independent directors, and to appoint a chief compliance officer, answerable to the mutual fund board. However, the fundamental refocusing of the industry on its fiduciary obligations was profound, consistent with the extent of the practice – or poor performance in policing it – that had developed in the US mutual fund industry.

As David D. Brown IV, chief of the investment protection bureau for the New York Attorney General remarked at an early stage post the Canary case breaking, “We continue to be surprised by the depth and breadth of this scandal as well as the amount of money that is involved”.

GLG Partners
2003 - £750,000²⁰
Agency: UK FSA

GLG Partners LP (GLG) and Mr Philippe Jabre were each fined £750,000 for market abuse and breaching FSA principles. Mr Jabre, a managing director of GLG, was given confidential information but breached this restriction by trading on the basis of this information. The FSA found that “GLG is also responsible for Mr Jabre’s market abuse. Firms are accountable for the behaviour of their employees, particularly if they are at a senior level.” For more details see the case of Philippe Jabre in Part 2, Section 7, Criminal Cases above.

Citigroup Japan
2004 - closure of PB Operations^{21/22}
Agency: JFSA

On 17 September 2004, Citigroup was ordered to shut its private banking operations in Japan for breaking banking laws. Their License was revoked for a series of “serious violations,” including manipulative sales practices and a failure to screen out money laundering. Its closure was one of the harshest punishments issued to a foreign financial firm in Japan. The bank apologised, saying six staff including three managing directors had been fired and a further eight reprimanded and asked to leave. Citigroup also ousted three top New York executives over the scandal, including its Vice Chairman, Deryck Maughan. Citigroup boss Charles Prince made a personal and public apology in October repeated by Mr. Peterson, Citigroup’s Japan chief executive. Mr. Peterson told a parliamentary finance committee that lax corporate governance and an “aggressive sales culture” were the cause of the abuses. “What’s very important now is that we learn from those mistakes,” he said. Japanese lawmakers grilled Mr. Peterson over the failure of Citigroup’s internal controls and one committee member suggested the bank should have been slapped with criminal penalties. Under a clean-up plan submitted to Japan’s Financial Services Agency (FSA), the bank pledged tighter integration and local control of its Japanese units. The FSA stated that “it also allowed transactions which “could be suspected of being associated with money laundering”, and “In a management environment in which profits are given undue importance by the bank’s headquarters, a law evading sales system that disregards the laws and regulations of Japan was constructed”. Bank staff and managers, it added, had “obstructed inspectors”, while responses to official inquiries “differed from the truth.”

Citigroup UK
2004 - £14mio (US\$19mio)²³
Agency: UK FSA

In August 2004, the banking giant Citigroup did something that was both very clever and also very stupid. Its European bond trading group executed a short sale on Eurozone government bonds. That sounds simple enough, but this particular market play targeted 119 different bonds across 11 trading platforms. The bank used a computer programme, known to its traders as “Dr Evil”, to stun the market with 188 simultaneous sell orders. The idea was to drive down the price of the bonds, and then buy them back when they were cheaper. The strategy worked and the bank made €15mio. The bank had made money but in the process, a certain amount of panic was caused in the markets. Regulators - and criminal authorities - across Europe looked

at what the bank had done. The UK's FSA described the failings as "very serious" and hit it with a fine. The bank's chief executive, Charles Prince, used more direct language - the traders had been "knuckleheaded", he said. Citi's business was affected, for example, even two years later, Citi had arranged only 2.3% of the debt sold by European Governments down from 10.1% at the time of the Dr Evil trades. The FSA led the regulatory action against Citigroup, because the questionable trades took place in London. It found that the bank had failed to conduct its business with due skill, care and diligence, and failed to exercise proper controls over its London-based bond trading team. Citigroup had failed to achieve the high standards expected from a bank of its size, the FSA said. It had also failed to put adequate risk management systems in place. However, the regulator stopped short of finding Citigroup guilty of the much more serious offence of market manipulation and made no findings against any individuals. The market authorities across Europe conducted their own investigations into what Citigroup had done. Regulators in France, Spain, Ireland and Greece decided to take no disciplinary action. The Italian and German regulators considered that there was a potential case to answer for market manipulation, which was a crime in both jurisdictions. But neither had the power to take criminal proceedings and referred the matter to their local criminal prosecutors.

AmSouth

2004 - US\$50mio (US\$40mio DPA forfeiture; US\$10mio CMP)^{24/25}

Agencies: DoJ – DPA; FinCEN and Federal Reserve Board – concurrent CMP; concurrent C&D from FRB and Alabama Superintendent of Banks

In 2004, a US bank based in Birmingham, Alabama, AmSouth Bank, was cited for wilful violation of the anti-money laundering programme and filing of suspicious activity report (SAR) requirements of the Bank Secrecy Act (BSA). The US Department of the Treasury's Financial Crimes Enforcement Network (FinCEN) found the Bank's AML programme lacked adequate board and management oversight; had deficient internal controls that lacked sufficient policies and procedures across the Bank to provide for appropriate due diligence and capture of suspicious activity; lacked adequate training to ensure compliance; and had a materially deficient internal audit process that failed to detect these inadequacies. The failure to include in policies and procedures information about identification of suspicious activity and the procedures to be followed when such an event was identified led to several employees operating under the misconception that suspicious activity reports did not have to be filed unless there was a loss to the Bank. In one such case, as sighted by FinCEN's Assessment

of Civil Money Penalty, the CFO of an AmSouth corporate customer embezzled several million dollars from the corporation over three years using forged and improperly authorised cheques. Although Bank employees noticed that the CFO was conducting a number of highly suspicious transactions, the Bank did not file a SAR because it suffered no loss. Absence of adequate board and management oversight led to a defunct system of communication between departments related to suspicious activity. The legal department had no system in place to alert BSA compliance personnel to subpoenas; litigation activity correlating to suspicious activity; and information requests it received from law enforcement. Further, the Bank ignored red flags, including concerns communicated to Bank management by several employees at various Bank branches indicating accounts were being used in furtherance of a Ponzi scheme. Despite such warnings, the Bank failed to file a SAR until two years after it knew about the suspicious nature of the activity, which led to customers at the Bank losing millions of dollars and eventually the Bank paying tens of millions of dollars in forfeitures. Due to the wilful violation of and the systemic deficiencies in the AML programme, the Bank paid US\$50mio in asset forfeitures and fines to US regulators and the Federal Reserve and entered into a three year Deferred Prosecution Agreement (DPA) with the US Department of Justice (DoJ). This was one of the first cases where the DoJ got involved alongside regulators and started DPAs for banks as well as the issuance of large fines. Not only were severe monetary penalties levied on the Bank but AmSouth's ambitious expansion plan to open 64 new branches had to be delayed for approximately one year because the Federal Reserve restricted the bank's expansion activities until AmSouth complied with AML laws. In May 2006, AmSouth announced they were merging with Regions Bank, which was completed in October 2006.

Special Focus 6

Riggs Bank

2004 - US\$25mio²⁶

Agencies: FinCEN, OCC, FRB – C&D

The first incarnation of Riggs Bank ("Riggs") was in 1836 when William Wilson Corcoran opened a small brokerage house. It expanded in 1840, when Corcoran and George Washington Riggs formed "Corcoran and Riggs", which offered checking and depositing services. Based in Washington, D.C., Riggs was the oldest bank in Washington and was the banker to President Abraham Lincoln. It financed Samuel Morse's invention

of the telegraph in 1845 and also lent US\$16mio to the US government to pay for the Mexican-American War in 1847. In 1868, it provided US\$7.2mio in gold towards the purchase of Alaska and helped finance the expansion of the Capitol Building in the 1860s. Riggs continued to be a prominent financial presence in Washington, known for its esteemed Embassy Banking business, and as of 31 December 2003, Riggs had assets of approximately US\$6bio, deposits of US\$4.29bio, and stockholder's equity of US\$472.2mio.

To associate money laundering and foreign corruption with such an institution seemed incredulous but that is exactly what happened in May 2004 when Riggs was fined US\$25mio by the US Department of the Treasury for willful violations of the Bank Secrecy Act of 1970 ("BSA"). The day after this fine, the Federal Reserve Board issued a cease and desist order to stop deficient anti-money laundering ("AML") practices and Riggs consented to the issuance of the order. On 16 May 2005, the Riggs name was officially retired when it was acquired by PNC Financial Services. PNC phased out the troubled Embassy Banking business that was once home to most embassies in Washington.

Investigations by bank regulators led by the Office of the Comptroller of the Currency ("OCC"), Riggs' primary federal supervisory agency, and hearings held by the US Senate Permanent Subcommittee on Investigations of the Committee on Governmental Affairs determined that Riggs wilfully violated the suspicious activity, currency transaction reporting and anti-money laundering programme requirements of the BSA and its implementing regulations.

The investigation revealed significant deficiencies in Riggs' AML programme. Riggs Bank in Washington DC was cited for wilful violation of the suspicious activity and currency transaction reporting, as well as the AML programme requirements of the BSA and its regulations. Specific problems listed included: Internal controls that were inadequate to ensure ongoing compliance with the BSA across business lines. They were not designed for the high-risk customers, products, services and international reach of the bank's business; Risk matrices used in some of Riggs' divisions contained similar criteria (not tailored to line of business on a risk-graded basis); The bank's customer due diligence programme was not implemented in all areas consistently. The bank consequently failed to identify a large number of accounts associated with two foreign governments. Enhanced due diligence was inadequate in some high-risk areas, such as: Pay on ID wire transfers; Dealings with cheque cashers and money remitters; International private banking;

Embassy banking; and Banking with politically exposed persons and non-resident aliens. Controls inadequate to identify suspicious transactions or to ensure timely filing of complete SARs; Failure to ensure that subpoenas and other government requests were referred for investigation potential suspicious activity; Failure to effectively manage its largest banking relationship, which involved a foreign government's accounts and politically exposed persons, and companies owned by those persons, in spite of warnings; Failure to have effective independent testing of the bank's BSA compliance since internal audit could not verify the effectiveness or timeliness of management's corrective actions for identified deficiencies and the scope of audit omitted areas of money laundering vulnerabilities, BSA compliance or SAR process; BSA management was ineffective in day-to-day oversight, development and application of measures for compliance; Inadequate training on monitoring and detecting suspicious activity; Failure to make timely filing of 33 SARs covering US\$98mio in suspicious transactions. Some SAR filings were delayed two or three years because subpoenas and other matters were not referred for investigation. Other late SARs related to failure to detect regular structuring of cash deposits and money order purchases; when SARs were finally filed, they were deficient; Failure to detect and report suspicious cash, monetary instrument and wire activity by the governments of two foreign countries, their politically-exposed persons, and their companies. In one case, the bank's relationship manager had signature authority on two accounts within the relationship. This manager was inadequately supervised by the bank and as a result the manager engaged in suspicious transactions himself, including the alteration of a cheque, and over US\$1mio in wire transfers into the manager's private investment corporation account at another bank; Filing of CTRs on transactions of two markets under incorrect names, involving 142 CTRs covering US\$7.3mio dollars; Filing of CTRs on accounts of a business owned by a politically exposed person with an incorrect line of business, including transactions totaling US\$11.5mio.

These included an inability to compile information on all of the accounts related to a specific client, inadequate information on client backgrounds and the source of wealth in client accounts, a failure to identify high risk accounts, inadequate monitoring of client transactions, inadequate systems for reporting suspicious activity to law enforcement, weak supervision of account managers, and weak leadership within the bank concerning the importance of AML efforts. These deficiencies led to the mishandling of accounts held by prominent foreign government officials all while the bank shared the same prestigious street address as the

White House and the Department of the Treasury. The more egregious conduct was found in Riggs' handling of accounts for Augusto Pinochet and government officials for Equatorial Guinea.

The investigation determined that Riggs served as the long-standing private bank for Augusto Pinochet, former President of Chile, and deliberately assisted him in the concealment and movement of his funds while he was under investigation and the subject of a world-wide court order freezing his assets. The Pinochet accounts were the fourth largest in Riggs' International Private Banking Department.

After taking power in a 1973 coup, Pinochet served as President of Chile until 1990 and as Commander-in-Chief of the Chilean army until 1998. After stepping down from the army, he became a "Senator for life." Since the first days of his regime, Pinochet was accused of human rights violations, torture, assassinations, death squads, drug trafficking, arms sales, and corruption, but was never convicted in a court of law. Since 1996, he has been the subject of repeated litigation in Spain, the UK, Chile, and other countries for crimes committed during his presidency. In each case to date, he has been found by the presiding court to be unavailable, unfit, or immune to prosecution.

Between 1994 and 2002, Pinochet maintained accounts with Riggs with assets ranging from US\$4-8mio. Riggs opened multiple accounts and accepted millions of dollars in deposits from Pinochet with no serious inquiry into his source of his wealth. The more egregious conduct centred on Riggs' active measures to assist Pinochet in concealing his ownership/control over his funds, and in the movement of his funds. These efforts included: establishment of offshore shell corporations, and then the opening of accounts for said entities; after a media report that Pinochet had over US\$1mio in an account at Riggs, the names on the personal account controlled by Pinochet in the US, were changed from "Augusto Pinochet Ugarte & Lucia Hiriart de Pinochet" to "L. Hiriart &/or A. Ugarte." Thus, Riggs ensured that any manual or electronic search for the name "Pinochet" would not identify any accounts at the bank; transferred US\$1.6mio from a London account to the US while Pinochet was in detention and the subject of a court order freezing his accounts; conducted transactions through Riggs' own accounts; and issuing eight, sequentially numbered, cashier's cheques payable to Augusto Pinochet, each in the amount of US\$50,000. Riggs then sent a banker to Chile to hand deliver the cheques to Pinochet. Riggs repeated these actions, ultimately transferring US\$1.9mio to Pinochet in Chile through cashier's

cheques.

Contrary to Riggs' policy statements requiring detailed "know your customer" ("KYC") information for its client accounts, Riggs did not conduct thorough due diligence to ensure that Pinochet had accumulated his wealth through legitimate means nor did the bank obtain information from him. While Riggs did have KYC documentation for some accounts, the provided information was brief, incomplete, and, at times, misleading. One of the client profiles prepared for the offshore shell corporations listed the beneficial owner's name as "Kept in Vault."

It was also determined that Riggs failed to identify or report suspicious account activity and concealed the existence of the Pinochet accounts from OCC bank examiners for two years. Moreover, Riggs omitted the Pinochet accounts from the OCC in response to a request for a list of accounts controlled by foreign political figures. Even after examiners found some Pinochet accounts through a random sampling of KYC data, Riggs failed to disclose that Pinochet was the beneficial owner. During a subsequent exam, the OCC finally discovered the Pinochet accounts. Riggs was one of more than two dozen banks chosen to undergo this targeted examination. It was during this examination that OCC examiners came across coded references in a Riggs' log of cashier's cheques, asked Riggs for an explanation, and learned of the Pinochet accounts.

In 2002, after a detailed examination, the OCC presented its findings on the Pinochet accounts to the Riggs Board of Directors and Riggs finally closed the Pinochet accounts. It is worth noting that the OCC "examiner in charge" (EIC) of Riggs from 1998 to 2002, the years regulators and federal law enforcement officials at Treasury say the bank repeatedly violated anti-money laundering rules, left the government in 2002 to join Riggs Bank as a vice president. A review was launched at the OCC in 2004 to determine why the years-long abuses at Riggs went uncorrected for so long as well as to probe issues surrounding the EIC's conduct to determine whether the bank exerted "inappropriate influence" on regulators and when the bank offered the EIC employment. In February 2005, the bank and the Allbritton family agreed to pay US\$9mio to Pinochet victims for concealing and illegally facilitating movement of Pinochet money out of Britain.

The disclosure of the Pinochet accounts and the actions he took to conceal his funds led to a re-examination of criminal charges. Pinochet was found competent to face charges, but died before any trial. In September 2007, however, Pinochet's widow and five children were

charged by a Chilean court on charges that included embezzlement.

Investigations into Riggs Bank also found that, from 1995 to 2004, Riggs Bank administered more than 60 accounts and certificates of deposit for the government of Equatorial Guinea (E.G.), E.G. government officials, or their family members. The E.G. accounts represented the largest relationship at Riggs Bank, with aggregate deposits ranging from US\$400-700mio at a time. It was revealed that Riggs Bank serviced the E.G. accounts with little or no attention to the bank's AML obligations. Despite evidence suggesting that Riggs was handling the proceeds of foreign corruption, Riggs allowed numerous suspicious transactions to take place without notifying law enforcement.

Riggs opened multiple personal accounts for the President of E.G., Teodoro Obiang, his wife, and other relatives; helped establish offshore shell corporations for the E.G. President and his sons; and over the course of three years, facilitated nearly US\$13mio in cash deposits into Riggs accounts controlled by the E.G. President and his wife. In addition, Riggs opened an account for the E.G. government to receive funds from oil companies doing business in E.G., under terms allowing withdrawals with two signatures, one from the E.G. President and the other from either his son or his nephew. Riggs subsequently allowed wire transfers withdrawing more than US\$35mio from the E.G. government account, wiring the funds to two companies which were unknown to the bank and had accounts in jurisdictions with bank secrecy laws. Riggs failed to report any suspicious activity in the E.G. accounts.

Riggs' violations of the BSA were systemic and its AML programme had long-standing major deficiencies. Riggs' failures resulted in irreparable franchise damage because of its actions of being the bank for corrupt foreign political officials. The rules underlying the handling of politically exposed persons or PEP relationships were reinforced and served as an important lesson for their regulatory justifications as a means of deterring public corruption. In effect, Riggs Bank became the model in how not to handle PEP relationships. By failing to properly conduct requisite enhanced due diligence, and its concealment efforts, it undermined Riggs' ability to conduct meaningful surveillance on high risk accounts and was unable to fulfill its SAR filing obligations.

Further, the flaws in Riggs' AML programme were repeatedly identified in regulatory examinations and internal audits, and Riggs repeatedly promised to correct them, but failed to do so. Thus underscoring the need to ensure such serious issues are tracked for corrective

actions by a control function such as audit.

Oppenheimer & Company

2005 - US\$2.8mio³¹

Agencies: FinCEN, New York Stock Exchange (examining authority)

Oppenheimer is a securities broker dealer in New York. It was cited for deficiencies in its anti-money laundering programme and resulting failure to identify and report suspicious transactions, during the period from April 2002 through 2004. Specific problems listed included: inadequate internal controls for ensuring compliance with the BSA and implementing regulations, especially those requiring SARs; failure to detect and report suspicious journal transactions and wire transfers in one of Oppenheimer's foreign offices and a Florida office; failure to aggregate wire transfers by customer, account, office or destination to see a true picture of total money movements; failure to review accounts with post office addresses, including a large number of apparently unrelated persons showing the same home or business address (post office boxes or "care of" addresses in Florida); failure to provide for independent testing of BSA compliance, and permitting Internal Audit to play a supervisory role in reporting suspicious activity; failure to adequately staff for coordination and monitoring of BSA compliance. One officer and one analyst, both with other duties, were assigned to this role, when Oppenheimer had 1,600 registered representatives at over 100 branch offices serving 360,000 customers; failure to have a BSA compliance training programme tailored to job responsibilities; failure to timely file SARs involving several million dollars in transactions in 2003; and filing incomplete SARs involving a foreign branch.

Special Focus 7

UBS

2004 - US\$100mio CMP^{27/28/29}

Agencies: US FED

When US marines entered the Central Bank in Iraq shortly after taking the capital city Baghdad by force, they found hundreds of millions of US dollars bundled and bound as if fresh from the US Federal Reserve. This was odd as Iraq had been subject to years of US Sanctions and was blacklisted from much of the international banking system; so how did Iraq acquire these pristine US dollars? Whilst the answer to this question remains likely known to only a few, the find triggered a major response at the Federal Reserve. The FED after being informed and after receiving the serial numbers on the US dollar bills being reasonably freshly cut should be able to identify to whom they supplied these banknotes

from their records and then start to piece together how the freshly cut US dollar banknotes ended up in the vault in the Iraqi Central Bank in Baghdad. In order to ease the introduction and circulation of new US dollar banknotes and to retire old ones, the FED operated a network of relationships with major private sector banks around the world under what is known as the FEDs Extended Custodial Inventory Programme. The FED would establish offshore depots of US dollars with the foreign banks and as a condition, participants in the ECI Programme undertook not to deliver, accept or deposit US dollar banknotes into or out of the NY FED depot to or from clients in countries facing US trade restrictions.

As a result of its enquiries with ECI Programme participants, UBS notified the FED that some deliveries to UBS had been received into the NY FED depot and then taken into UBS possession and then part onward delivered to and/or received from numerous banks in countries such as Yugoslavia, Iran, Libya and Cuba, but not Iraq! UBS also informed that former employees had submitted false reports, covering up the transactions in question. How the US dollars got to Iraq remains in public at least a mystery. As a result, UBS decided to end its banknotes trading business with counterparties in countries outside Switzerland. The Federal Reserve Board and the Swiss Federal Banking Commission also reprimanded UBS. The FED and UBS agreed to a civil liability penalty of US\$100mio for violating the terms of the ECI agreement. There were no findings that UBS actions breached US other Sanctions. Peter Wuffli, then Chief Executive Officer, said: "UBS recognises that very serious mistakes were made. We accept the sanctions, take full responsibility, and would like to express our regret."

Following this incident civil litigation was brought against UBS by terror victims in US courts. For more details see Part 1, Section 3, Sanctions and Embargoes, Rothstein v UBS.

ABN AMRO Bank 2005 - US\$80mio; DPA

Agencies: FinCEN, Federal Reserve System, OFAC, DoJ, NY State Banking Department, Illinois Department of Financial and Professional Regulation, De Nederlandse Bank N.V.

For more details, see Special Focus 17 – Royal Bank of Scotland (former ABN Amro Bank).

City National Bank 2005 - US\$750,000³⁰ **Agency:** OCC

City National Bank in Beverly Hills was cited for failure to comply with BSA compliance programme requirements relating to internal controls and an independent audit function; failure to apply required enhanced due diligence policies, procedures, and controls to detect and report money laundering through private banking accounts of non-US persons, and to detect and report transactions deriving from foreign corruption and involving private banking accounts of politically exposed persons; and failure to make timely SAR filings.

Banco de Chile, New York & Miami Branches 2005 - US\$3mio^{32/33/34}

Agencies: OCC C&D and CMP (New York Branch), FinCEN concurrent CMP (NY and Miami Branches), FED C&D (Miami Branch)

Banco de Chile is headquartered in Santiago, Chile. The New York Branch and Miami Branch of Banco de Chile were cited by FinCEN in October 2005 for failing to establish and maintain an adequate system of internal controls and failing to designate a person, or persons, to adequately ensure compliance with the Bank Secrecy Act (BSA). In addition they also failed to conduct adequate independent testing for compliance with the BSA. All of these failures, along with an inappropriate level of due diligence led to failures by both branches to identify, monitor and report in a timely manner suspicious activity related to prominent Chilean PEPs. FinCEN issued a CMP for US\$3mio to be concurrent with the OCC CMP below. Previously, in February 2005, the New York Branch consented to a Cease and Desist Order with the OCC and the Miami Branch consented to the issuance of a Cease and Desist Order by the Federal Reserve Bank.

The OCC C&D Order required the restructuring of the management and compliance operations at the New York Branch due to the discovery by the OCC that former branch personnel had concealed accounts of Augusto Pinochet, former Chilean dictator, under the names of nominees and others acting under Pinochet's direction. The OCC also identified serious deficiencies in the branch's compliance with the BSA and AML laws and regulations. The branch improperly opened and maintained accounts in contravention of internal policies and procedures and failed to classify and monitor high risk accounts and accounts of PEPs. The OCC discovered that the branch opened accounts without determining the source of funds and failed to scrutinize the purpose of the transactions. Former representatives of the branch allowed millions of dollars in deposits and credits from internal and external transfers

to accounts controlled by persons acting under Pinochet's direction or authorization. These often included circular transactions with no disclosed or apparent legitimate business purpose and without suspicious activity reporting by the branch. The OCC issued a CMP for US\$3mio in October 2005. The FED C&D issued to the Miami Branch referenced many of the same BSA/AML programme deficiencies and focused on the methodology for assigning risk levels to their customer base and enhanced due diligence on higher risk clients and transactions. Significant deficiencies were found in the Miami Branch's policies and procedures for customer due diligence, identification and reporting of suspicious activity, and risk management associated with customer accounts and transactions, as they relate to PEPs.

Pacific National Bank (Banco del Pacifico) 2005 US\$7mio CMP (2010)^{35/36/37}

Agencies: FinCEN CMP, OCC C&D and concurrent CMP

Pacific National Bank, a Miami-based bank that is a subsidiary of Banco del Pacifico S.A., which is owned by the Ecuadorian central bank, paid a US\$7mio civil penalty to Treasury Department agencies in March 2011 for violating a 2005 consent order to beef up its money laundering compliance measures. The OCC and FinCEN jointly assessed the penalty, which was satisfied by one US\$7mio payment to the Treasury Department. Pacific did not admit or deny the allegations, but consented to the payment.

In 2005, Pacific received a consent order to improve its programme as a result of its high risk customer base (85% are from Ecuador), and while the OCC said it "took some necessary steps" to improve, they weren't enough to satisfy the requirements of the order. Specifically, the Bank failed to (i) adequately identify, monitor, and report suspicious activities; (ii) adequately monitor its foreign correspondent bank accounts; (iii) conduct sufficient due diligence; and (iv) adequately audit its high risk areas and the transactions conducted in those areas. "Banks must devote appropriate resources commensurate with their risk profile and must take prompt and necessary steps to comply with the OCC enforcement actions to ensure compliance with the Bank Secrecy Act and the USA Patriot Act," said John Walsh, acting Comptroller of the Currency, in a statement.

FinCEN determined that the Bank failed to implement adequate internal controls and independent testing at a level of consistency necessary to assure compliance with BSA anti-money laundering programme and suspicious activity reporting requirements. The Bank lacked reasonably complete due diligence information for numerous customers, necessary to effectively monitor transactions and report suspicious activity in a timely manner. The Bank violated BSA suspicious activity reporting requirements

by filing numerous suspicious activity reports on a delayed or incomplete basis. "Financial institutions choose their customer base and the geographic areas they wish to serve; those choices drive their regulatory compliance obligations," noted FinCEN Director James H. Freis, Jr. "Regulators must coordinate efforts, as in this case of concurrent actions by FinCEN and the OCC, to address compliance deficiencies and delayed and incomplete reporting pursuant to the BSA."

New York Stock Exchange

2005 - US\$20mio³⁸

Agencies: SEC

The SEC brought enforcement actions against NYSE specialist firms and the NYSE itself in connection with violations of securities laws and NYSE rules which prohibit specialists from "inter-positioning" and "trading ahead" of customer orders. Specifically, the SEC found that from 1999 through 2003, NYSE specialists repeatedly engaged in unlawful proprietary trading, resulting in more than US\$158mio in improper gains. The improper trading took various forms, including "inter-positioning" the firms' dealer accounts between customer orders and "trading ahead" for their own accounts in front of executable customer orders. The NYSE was criticised for failing to adequately monitor and police specialist trading activity, allowing the vast majority of this unlawful conduct to continue. The illegal trading went largely undetected because the NYSE's regulatory programme was deficient in surveilling, investigating and disciplining the specialists' trading violations. The NYSE agreed to several significant remedial measures designed to strengthen the NYSE's oversight of specialists and other floor members. The NYSE agreed to an undertaking of US\$20mio to fund regulatory audits of the NYSE's regulatory programme every two years through the year 2011 and to improve their monitoring and surveillance.

Arab Bank

2005 - US\$24mio CMP – shutdown US\$ wire transfer business and Insured Bank³⁹⁻⁴⁴

Agencies: FinCEN CMP, OCC concurrent CMP

In 2005, the Financial Crimes Enforcement Network and the Office of the Comptroller of the Currency determined that the New York Branch of Arab Bank had inadequate programmes to prevent money laundering and terrorist financing, and therefore, failed to comply with the Bank Secrecy Act. The US authorities also found that Arab Bank failed to meet the reporting requirements of the Bank Secrecy Act. As a result the two US agencies each assessed a US\$24mio CMP against the New York Branch of Arab Bank that would be satisfied with a single US\$24mio pay-

ment to the US Department of the Treasury.

In 2004, suicide bombing victims and their families filed a lawsuit against the Jordan-based Arab Bank, alleging that the bank had processed donations from the Saudi Committee in Support of the Al Quds Intifada to militant Palestinian groups, including Hamas and Islamic Jihad. The case is known as Linde v Arab Bank and for more details see Part 1, Section 3, Sanctions and Embargoes above.

Special Focus 8 Banco Delta Asia

2005 - US Patriot Act Section 311 designation effectively limits ability to operate US\$ accounts/ transactions⁴⁵

Agency: FinCEN

Banco Delta Asia (BDA) was the 10th largest bank in the Chinese gambling enclave of Macao founded in 1935 and owned and controlled by Macau businessman, Stanley Au, with eight branches and 150 employees. In September 2005, the US accused BDA of links to the government of North Korea, and warned of the impending imposition of Sanctions against the Bank, which not only triggered a run on the bank but also led to an investigation by the Macau Government into the affair. The US claimed that the bank had provided financial services, including operating bank accounts and helping front companies by facilitating wire transfers, for more than 20 years to multiple North Korean-related individuals and entities that were engaged in illicit activities, without providing details of what such illicit activities were. It claimed that the entities paid a fee to BDA for their access to the bank. It is speculated that the US believed that BDA had long handled trade and financial transactions, including sales of gold bullion, for a range of North Korean government companies and entities (none of which would have been illegal in Macau) but of more concern that BDA was a "willing pawn" in North Korean money laundering and counterfeit-currency trafficking.

Since the end of the Korean War, the US has been inventive in applying pressure on North Korea. It has imposed an arms embargo, economic sanctions, restrictions on trade and travel, bans on dealing with North Korean companies and even a ban on US citizens owning or operating ships flying North Korean flags. Most of these measures have led to some pain, but nothing stung as much as the 2005 action against BDA. The Macau government invoked a banking law to replace BDA's board by government appointees and

after identifying several North Korean companies which had accounts with BDA, froze their accounts affecting US\$25mio. It was well known that North Korean companies banked in Macau with many of the Macau Banks as well as in Mainland China. It was also well known that Kim Jong Nam, the eldest son of North Korea's then leader Kim Jong Il, lived in Macau since 2004.

Stanley Au the owner and Chairman, first learned that his bank was being charged as a bank engaged in "illicit activities" when he saw a report in the Asian Wall Street Journal in September 2005 that his bank was a candidate for a US money laundering blacklist. This "news came as a bolt out of the blue" he would say as BDA had never been informed by the US that its practices were a cause of any money laundering concern. In fact according to Stanley Au, he had only had good relations with the US to this date for example in June 1994 he had provided the US with vital information on North Korea and its counterfeiting US dollars and was told it was okay to continue to do business with the North Koreans at that time. Stanley Au at all times pleaded his and BDA's innocence. Stanley Au maintains that BDA did not charge a fee for its services nor did it conduct illicit services for North Korea or any other customer.

The Bank was only one of the banks in Macau that did business with North Korea. The business his bank had with North Korea began in the mid 1970s and was to assist North Korea with its foreign trade transactions. Also Au described North Korea as a gold producing country and that in the late 1990s BDA had acted as a "gold bullion trader on behalf of the North Koreans". Also BDA bought or sold foreign currency notes for North Korea, including US dollars, because North Korea had a limited banking system and so it couldn't do such transactions itself. Stanley Au petitioned the US challenging the findings against BDA suggesting that BDA was targeted not because of any "voluminous" evidence of money laundering but "because it was an easy target in the sense that it was not so large that its failure would bring down the financial system."

Following the Macau governments intervention into BDA, they found no illegal activity, no criminal charges were filed and BDA was returned to previous management by owner Stanley Au in 2007. Furthermore, an audit by Ernst & Young commissioned by the Macao government found no evidence that BDA had facilitated money laundering.

Notwithstanding this, BDA remains blacklisted by the

US with the 2005 allegations being formalised and a Final Rule of the designation occurring in 2007.

David Ascher, who had been the coordinator for the Bush Administration working group on North Korea and a senior adviser in East Asian affairs in the State Department, in testimony to the US House Foreign Affairs Subcommittee on Terrorism, Nonproliferation, and Trade on 18 April 2007, explained why BDA was chosen to be blacklisted from the international banking system. "Banco Delta was a symbolic target. We were trying to kill the chicken to scare the monkeys. And the monkeys were big Chinese banks doing business in North Korea...and we're not talking about tens of millions, we're talking hundreds of millions."

Whilst the action against BDA made headlines, and no doubt led to greater isolation for North Korea, particularly with Banks that needed to operate internationally, the action also became a major disruption in the so called "six party talks" which were trying to find a way to address the North Korean nuclear weapons programme. The North Koreans were adamant that they wanted their US\$25mio back that was frozen at BDA. North Korea said that the denuclearization and other aspects of the six-party talks can only go forward when the BDA situation is resolved. "To make the money transfer possible freely just like before has been our demand...from the beginning," a spokesperson from North Korea said. The US State Department stated that, "We all want to see the BDA issue resolved, obviously resolved within the laws and regulations of the US as well as the international financial system, and we'd like to move on and get back to the business of the six-party talks, which is really focused on the issue of denuclearizing the Korean Peninsula."

In the end the US, under pressure, agreed to find a way to return the monies frozen with the Macau government and authorized Wachovia Bank in the US as correspondent Bank to BDA to transfer equivalent funds from the BDA correspondent account to North Korea.

The move against BDA demonstrated the power of financial sanctions and of the use of S.311 of the US Patriot Act. Section 311 allows the US to rule that foreign banks, jurisdictions, transactions or accounts are of "primary money laundering concern" and require American financial institutions to take protective measures, including cutting ties with these entities. Non-American Banks often follow such announcements in cutting ties as well.

"Not only did North Korea lose access to this particular financial institution," said Marcus Noland, an authority on the North Korean economy at the Washington-based Peterson Institute of International Economics, "other financial institutions began severing their ties with North Korea, not wanting to risk entanglement in North Korean illicit activities and possible expulsion from US financial markets."

"As a consequence of both these direct and indirect effects," he said, "North Korea has encountered increasing difficulty executing international financial transactions."

The action against BDA has resulted in it being effectively shut out of international banking, without any formal charges being issued or details being provided, without a hearing and despite findings in Macau that there was nothing BDA had done which could be considered illegal.

Special Focus 9 Bank Of New York

2005 - US\$38mio penalties and victim compensation; US\$14mio settlement with Russia Federal Customs Service⁴⁶⁻⁵⁰

Agencies: FED, NY State Banking Department, DoJ NPA

Russian émigrés...money laundering...inside operatives...US\$7.5bio laundered... sounds like a plot from a James Bond movie but unfortunately it was the media headlines that first appeared in August 1999 associated with the US' oldest bank, the Bank of New York (BoNY). This was not the type of press this global financial institution that was established in 1784 by Alexander Hamilton was used to. At the time, BoNY had assets of around US\$67bio and was the 17th largest bank in the country. As the news unfolded over the following weeks and months, it was reported that billions of dollars were channeled through BoNY by Russian organised crime through a major money laundering operation. BoNY ultimately survived this scandal but merged with Mellon Financial Corporation and is now known as The Bank of New York Mellon.

Although a federal grand jury indicted former BoNY vice president Lucy Edwards (born Lyudmila Pritzker) her husband, Peter Berlin, and Aleksey Volkov, along with three unlicensed money transfer companies in September 1999 as part of the 14-month investigation, it was not until February 2000 that the real facts of

the case started emerging. A second former BoNY employee Svetlana Kudryautsev also was indicted for lying to FBI agents. A glimpse at the AML programme enhancements needed at BoNY were revealed when BoNY executed an 8-page Written Agreement with the Federal Reserve Bank of New York (Fed) and the New York State Banking Department in 2005 where it also agreed to a total of US\$38mio in penalties to avoid prosecution for its involvement in this case. BoNY agreed to strengthen its AML policies and procedures and customer due diligence practices in addition to reporting quarterly to the Fed and state regulators on its progress and also about transactions of customers it has identified as potential money launderers. It also agreed to strengthen other areas including risk management, AML oversight, internal audit and automated monitoring to detect suspicious activity. Although the Bank Secrecy Act (BSA) and Suspicious Activity Reports (SAR) existed in 2000, the comprehensive AML Programme regulations introduced by the USA PATRIOT Act were still two years away from becoming effective so the customer due diligence standards and other procedures that we take for granted now did not exist then.

The week following the execution of the Written Agreement, Lucy Edwards and Peter Berlin pleaded guilty to a series of federal crimes, including money laundering, conspiracy to evade income taxes, and bribery of a bank official, and agreed to cooperate with investigators in a plea bargain, in addition to forfeiting over US\$1mio from their personal accounts.

The companies they controlled forfeited around US\$6mio. During their almost 2-hour court appearance, the husband and wife described how between February 1996 and July 1999 more than US\$7bio was sent from Russia illegally and was funneled through network of front company accounts held at BoNY and controlled by Berlin before being transferred to offshore accounts.

As one would expect from a plea bargain, the investigation was far from over as more details were disclosed by Edwards and Berlin and more suspects and money trails were revealed. It was not until November 2005 that this investigation would formally close with BoNY settling with federal regulators for US\$38mio in penalties and victim compensation, and the prosecution of at least nine individuals. BoNY agreed to make what prosecutors described as "sweeping internal reforms to ensure compliance with its antifraud and money laundering obligations." Authorities said that the bank had "accepted responsibility for its criminal conduct" and that it would not be prosecuted as long

as it complied with the terms of the deal for three years. BoNY also agreed to allow an independent examiner to monitor its operations. The Non-Prosecution Agreement (NPA) and financial penalties and compensation also covered an investigation related to the execution of sham escrow agreements by a BoNY branch. For the time being, BoNY had escaped prosecution...at least by the US government. Then in May 2007, Russia filed a US\$22.5bio lawsuit against the bank for money laundering. The suit was subsequently settled for US\$14mio. It's also worth mentioning that in addition to these criminal proceedings, the activity also exposed BoNY to civil liability and a class action suit was filed by its shareholders in August 2000. In addition, a US\$1bio lawsuit was filed by depositors of the defunct Russian bank Inkombank alleging that BoNY helped Inkombank senior managers steal hundreds of millions of dollars by serving as their correspondent bank. These cases were settled for US\$14mio. For more details of this case see Part 2, Section 7, Criminal Cases, Lucy Edwards and Peter Berlin above.

Beach Bank, Miami

2006 - US\$800,000 CMP⁵¹

Agencies: FinCEN, FDIC, Florida Office of Financial Regulation

Beach Bank Miami ("the Bank") agreed to a fine for the failure to implement adequate internal controls to ensure compliance with BSA and manage risks of money laundering. Specific problems listed included: failure to fully investigate activity of three of its 40 MSB customers to determine if it was suspicious. The three collectively withdrew over US\$615mio in cash over 18 months; the Bank received federal subpoenas, so it had knowledge customers were being investigated; the Bank knew of cash activity, because it filed CTRs on it; the Bank failed to review available audits of its MSB customers to monitor risk of potential money laundering in those accounts; Bank failed to monitor its more than 200 identified high risk accounts, in spite of policy to do so; lack of controls to monitor funds transfers for suspicious activity. There was over US\$1bio transferred over 21 months. One telecommunications company moved US\$100mio in two months, but the Bank had no file documents to back up that level of phone card sales and telecom services; and failed to timely file suspicious activity reports. Because of inadequate anti-money laundering procedures, the Bank failed to detect and report on a timely basis on at least 67 cases related to over US\$1.6bio in suspicious activity.

The Foster Bank, Chicago

2006 - US\$2mio CMP⁵²

Agency: FinCEN

The Foster Bank, Chicago agreed to the imposition of the CMP, without an admission of guilt. It was cited for a failure to implement adequate internal controls to ensure compliance with BSA and manage risks of money laundering. Specific problems listed included: the bank issued US\$130mio in cashier's cheques in eight months of 2002, without adequate AML procedures and controls; the bank is located in both a High Intensity Drug Trafficking Area (HIDTA) and a High Risk Money Laundering and Related Financial Crimes Area (HIFCA); the bank failed to have a customer due diligence programme to identify expected or reasonable customer activity; the bank failed to use its large currency transaction log to identify structuring over multiple-day periods; the bank incorrectly exempted two MSBs for at least 18 months. This resulted in the late filing of at least 674 CTRs totalling over US\$35mio in transactions; the bank's independent review of its BSA programme was not adequate. Two outside firms failed to identify the bank's monitoring weaknesses; the scope of the independent BSA review was inadequate, given the high volume of funds transfers to "Jurisdictions of Primary Concern" for money laundering, and the large volume of monetary instrument transactions at the bank; the bank failed at least 12 times to make timely SAR filings. One customer operating a sportswear business structured nearly US\$10mio in cash transactions from April 1999 - November 2002. Another customer routinely made cash deposits of US\$9,900 up to four times a day, with no apparent business purpose. Other customers made large currency transactions of US\$300,000-US\$600,000 per month, some apparently structured, with no apparent legitimate reason; the bank filed SARs that omitted significant relevant information. In one case, the bank failed to include pre-1999 activity involving wires to Pakistan, India, and United Arab Emirates, understating overall dollar volume by US\$22mio. In another, the bank omitted information on daily structuring activity in other customer accounts and the former bank president structured US\$419,000 in bank transactions on behalf of his son's business and US\$122,000 on behalf of a former bank director.

Israel Discount Bank of New York

2006 - US\$12mio⁵³

Agencies: FinCEN, FDIC, NY State Banking Department

Israel Discount Bank Of New York, which is the US subsidiary of Israel Discount Bank Ltd. (Israel), agreed to the imposition of the CMP, without an admission of guilt. The bank was cited for failure to implement adequate internal controls to ensure compliance with BSA and manage risks

of money laundering, and failure to conduct adequate independent testing of its BSA programme, and to adequately staff the compliance function. Specific problems listed included: Deficient documentation of customer information to adequately assess risk for money laundering; failure to link customer accounts with common ownership to facilitate detection of suspicious activity; failure to adequately review documentation for high-risk foreign accounts, such as non-bank financial institutions in Latin America; lack of adequate systems and controls to monitor wire transfers for money laundering or other suspicious activity. In one year, there were 181,000 wires totaling US\$35.4bio, with originators or beneficiaries with money laundering characteristics. In addition, there was a failure to follow up on alerts from an inadequate automated monitoring system; failure to have adequate controls and monitoring procedures over activity in accounts of its own subsidiary, DBLA; independent testing programme was inadequate; Failure to adequately staff its compliance function with persons responsible for monitoring day-to-day compliance with BSA; failure to make timely SAR filings, and failure to monitor on-going activity in accounts it had filed SARs on; filing of incomplete or inaccurate SARs.

Liberty Bank of New York

2006 - US\$600,000 CMP⁵⁴⁻⁵⁷

Agencies: FinCEN, FDIC, NY State Banking Department

In May 2006, the Financial Crimes Enforcement Network (FinCEN), Federal Deposit Insurance Corporation (FDIC), and New York State Banking Department (NYSBD) announced the assessment of civil money penalties totaling \$600,000 against Liberty Bank of New York for violations of federal and state anti-money laundering laws and regulations. Liberty Bank, without admitting or denying the allegations, consented to payment of the civil money penalties.

In taking these actions, FinCEN, FDIC, and NYSBD determined that Liberty Bank failed to implement an adequate BSA/AML programme, with internal controls and appropriate measures to detect and report money laundering and other suspicious activity in a timely manner. They failed to designate anyone to coordinate and monitor day-to-day BSA compliance. There was a lack of adequate policies, procedures and controls for detection and reporting of suspicious transaction as well as a failure to describe responsibility for detecting, evaluating and reporting of suspicious activity. In addition, there was a patchwork and undocumented process for monitoring transaction activity and a failure to obtain enough information on customers, especially those in cash-intensive businesses. All of this in turn led to a failure to make timely SAR filings and a failure to include adequate narrative information in filed SARs.

The agencies also found that systemic defects in Liberty Bank's anti-money laundering programme resulted in a failure to comply with information sharing requests from law enforcement under section 314(a) of the USA PATRIOT Act.

BankAtlantic

2006 - US\$10mio CMP/Forfeiture⁵⁸⁻⁶⁰

Agencies: FinCEN, OTS (C&D), DOJ (DPA)

In April 2006, Florida-based BankAtlantic entered into a deferred prosecution agreement with the US DoJ and forfeited US\$10mio to resolve charges of failing to maintain an anti-money laundering programme. Concurrently, the Office of Thrift Supervision and the Financial Crimes Enforcement Network each assessed a US\$10mio civil penalty against BankAtlantic for violations of the BSA, and both were deemed satisfied by the payment of the US\$10mio forfeiture. The charge filed against BankAtlantic arose out of transactions conducted by and through BankAtlantic between July 1997 and April 2004. During this time, more than US\$50mio in suspicious transactions were conducted through accounts at BankAtlantic, including transactions involving more than US\$10mio of identified drug proceeds. BankAtlantic failed to detect, identify and report the suspicious transactions in the accounts, as required by the BSA. Specifically, an undercover operation by the Drug Enforcement Agency into the laundering of drug proceeds led to the finding that suspected drug money was wire transferred to a handful of accounts at BankAtlantic, managed by a branch manager. Further investigation led to the discovery of other BankAtlantic accounts that were suspected of being used to launder drug money. BankAtlantic admitted that it did not identify and report the suspicious activity occurring in these accounts.

The list of specific problems included: lack of adequate policies, procedures and controls for compliance with BSA and to manage money laundering risk, including the detection and reporting of suspicious transactions; failure to monitor for suspicious activity by not: 1) having adequate systems to monitor wire transfers, 2) ensuring review of subpoenaed accounts, and 3) having systems for detection and reporting of multi-day cash structuring; a branch of the bank catered to high income/net worth individuals, without effective customer due diligence or transaction controls and monitoring; employees were able to initiate large dollar wire transfers without oversight; failure to detect/report suspicious activity by foreign unlicensed MSBs; lack of risk analysis on high-risk clients that included non-resident aliens, offshore businesses, consulates and PEPs; lack of oversight for pouch activity deposits; deficient programme for independent testing of BSA programme, and failure of audit and management to follow up on significant identified deficiencies; failure of the bank's designated BSA com-

pliance officer to monitor and coordinate compliance on an enterprise-wide basis; inadequate job-specific training to ensure BSA compliance; and failure to make timely SAR filings, which impaired the usefulness of those SARs that were filed late. More than 360 SARs were delinquent, covering over US\$189mio in suspicious transactions.

Special Focus 10 American Express Bank International

2007 - US\$65mio CMP/Forfeiture⁶⁴⁻⁶⁶

Agencies: FinCEN CMP, FRB C&D and CMP and DoJ DPA

American Express Bank International (AEBI) is owned by American Express Bank Ltd. (AEB), a New York corporation. AEBI offers private banking services, primarily to high net worth customers in Latin America. American Express Travel Related Services Company (AETRSC) is an MSB. On August 3, 2007, the Federal Reserve Board issued a Cease and Desist Order and a CMP of US\$20mio against AEBI, and FinCEN issued a CMP against AEBI of US\$20mio and against AETRSC of US\$5mio. There is a related Deferred Prosecution Agreement (DPA) and US\$55mio forfeiture order by the Department of Justice (DOJ) against AEBI. Cross-order payment agreements make the total effective charges, including the forfeiture, US\$65mio.

The DOJ in collaboration with the Drug Enforcement Agency (DEA) found that from 1999 through 2004, the bank which primarily offered private banking services to Latin American clients allowed South American customers to use their accounts to process parallel currency exchange market transactions which in many instances turned out to be Black Market Peso Exchanges (BMPE).

According to the DPA, transactions of note were dozens, sometimes hundreds of incoming funds from persons and entities unrelated to the account holder and in many of the cases, the transactions were not consistent with the nature of the client's business. Additionally, as part of the DEA investigation, drug proceeds were transferred to AEBI accounts directly from law enforcement agents, who in an undercover capacity were "working for" Colombian money brokers and drug traffickers.

One of the examples sighted in the DPA was an account controlled by a Colombian national, but held in the

name of an offshore bearer share corporation, which in turn was controlled by three other bearer share corporations, which in turn had given the Colombian national a power of attorney, authorizing him to control the financial affairs and bank accounts of the original bearer share corporation. The individual processed millions of dollars in what appeared to be BMPE transactions through the bank, allowing money brokers access to the funds.

Despite the bank operating in a High Intensity Drug Trafficking Area and providing private banking services to a region known as a source for illegal narcotics, they failed to implement a dynamic AML programme which should have established the true beneficial owner of accounts and risk weight the client population as well as apply increased monitoring scrutiny to those client types or geographic areas which posed heightened risk. These factors coupled with compliance personnel's sole reliance on the private bank relationship manager's explanation of transactions to clear cases led to the breakdown.

Financial institutions can take measures to identify BMPE payments by scrutinizing the remitter of funds used to settle a US transaction as they are usually sent by a third party unrelated to the customer receiving the goods in South America. Indicators of BMPE dollar payments can involve bulk cash deposits, structured money orders, traveller's cheques, cashier's cheques or bank notes under US\$10,000 in value or cheques drawn on US institutions from persons or entities unrelated to the US exporter's client.

In addition to the 2007 DPA, AEBI entered into a settlement agreement with the DOJ in 1994 stemming from an indictment and conviction of two AEBI employees as a result of a US Customs investigation into Juan Garcia Abrego (leader of the Mexican Gulf Cartel). AEBI agreed to penalties and forfeitures of funds in addition to spending no less than US\$3mio on BSA development. In late 2007 AMEX announced the sale of AEBI to Standard Chartered PLC.

Specific findings included: failure to adopt and implement comprehensive customer due diligence and enhanced due diligence processes, particularly regarding high risk customers; failure to maintain effective control measures for bearer share and other PICs; failure to adhere to bank's own written policies requiring periodic reviews of high risk accounts; the bank's transaction monitoring system continued to be inadequate to the task, due to data integrity and other problems. System-identified potentially suspicious activity was not properly resolved, so the bank could not identify, monitor and report suspicious activity; AEBI

did not perform satisfactory independent testing of its BSA/AML programme. In particular, the bank's internal audit function did not review implementation of the bank's automated transaction monitoring system; failure to provide for adequate oversight of and accountability for the BSA/AML compliance programme by management of AEBI and by its parent company, AEB, which had agreed to provide oversight.

The bank agreed to make improvements to its transaction monitoring system and also agreed to an independent review of account and transaction activity for the first half of 2007 to determine whether suspicious activity was properly identified and reported. The order specifically required that the review be completed notwithstanding any agreement to sell AEB or AEBI to an unaffiliated third party.

Union Bank of California

2007 - US\$10mio CMP, US\$21.6mio Forfeiture⁶¹⁻⁶³

Agencies: FinCEN CMP, OCC CMP & C&D and DoJ DPA

Union Bank of California, N.A., is a national bank headquartered in San Francisco. It is a subsidiary of UnionBanCal Corporation, based in San Francisco, which in turn is a majority-owned subsidiary of Mitsubishi UFJ Financial Group, Inc., of Tokyo, Japan. According to the OCC's findings, Union Bank failed to adequately monitor its casa de cambio (Mexican currency exchange) accounts for suspicious activity. Beginning in 2003 and through 2005, the bank failed to timely file hundreds of SARs, which permitted the undetected laundering of millions of dollars of suspected drug trafficking proceeds. On 23 March 2005, Union Bank entered into a Memorandum of Understanding (MOU) with the OCC, requiring implementation of a bank-wide BSA compliance programme, improved internal controls for monitoring high risk accounts and transactions, enhanced training and audit, and enhanced due diligence procedures, particularly regarding private banking customer accounts. In the bank's 2006 BSA compliance exam, the OCC determined that Union Bank had not achieved compliance with the terms of the MOU. The bank's FIU proved ineffective in detecting and reporting suspicious activity because of inadequately trained staff and ineffective oversight. Due diligence controls were insufficient for an effective SAR process. In addition, Fin CEN reported that a review of SARs filed by Union Bank in the 12 months ending January 2006 revealed over 1,000 cases of reporting fields in SAR forms left blank or incorrectly completed. In September 2007, the OCC levied a US\$10mio Civil Money Penalty (CMP) on Union Bank, and issued a C&D replacing its 2005 MOU. FinCEN assessed a separate US\$10mio CMP, but waived collection if the OCC penalty is paid. In a related criminal investigation, the Department of Justice (DoJ) issued a Deferred Prosecution Agreement

and a US\$21.6mio forfeiture order against the bank. DoJ agreed to recommend that its case against the bank be dismissed with prejudice in 12 months, if the bank "fully implements significant anti-money laundering measures required by the agreement." The DPA was terminated in October 2008.

Bank Of America

2007 - US\$10.5mio (US\$3mio CMP (2007) & US\$7.5mio (2006)^{67/68}

Agencies: NY AG, NASD

During the investigation of Beacon Hill Service Corporation and Lespan (see above in Part 2, Section 7, Criminal Cases) by the Manhattan District Attorney's Office, the latter being a money transmitter in Uruguay, focus turned to the transfers by money service businesses (MSBs) of billions of US Dollars through accounts at one of Bank of America's ("BoA") Manhattan branches.

The US investigation was conducted over two years, in which it was revealed that from May 2002 to April 2004, over US\$3bio flowed through Lespan's account at BoA. The case was a collaborative effort between US and Brazilian authorities. In the US, a joint investigation with ICE (Immigrations and Customs Enforcement), New York State Banking Department and Manhattan District Attorney's office led to the indictment of 34 people and 16 British Virgin Island companies for conducting illegal money transfer businesses in New York. Brazilian Federal Police executed over 121 arrest warrants and 215 search-and-seizure warrants in Brazil for money laundering and related tax evasion crimes. Money exchange houses, or doleiros as they are known in Brazil, were able to exchange foreign currency but were prohibited to send funds abroad. Lespan facilitated money transfers without proper documentation or registry with Brazil's central bank. For additional fees, Brazilian clients were able to move money in and out of Brazil without reporting to the government, by simply utilising services provided by doleiros. The illegal transfer services provided by the doleiros, allowed clients to have undeclared assets transferred without any reporting to Brazilian tax authorities. The elaborate scheme required the doleiros to have complex corporate structures whereby they had various related offshore accounts in the Caribbean and used Lespan to transfer clients' money anonymously.

Similar to Beacon Hill, the Lespan accounts were utilised to facilitate payments to the Middle East via the Tri-Border region of Argentina, Brazil, and Paraguay. Historically, this area of South America has a strong connection to the Middle East due to a large concentration of its population of Middle Eastern

origin. Billions of dollars are known to have flowed through the region and some of the monies may have gone to potentially fund terrorist activities. Due to poor recordkeeping; it is difficult to really assess the potential impact that it may have had in funding terrorist activities around the world. Investigators noted too often it encountered cases where the money trail ceased and the ultimate recipient of the funds were never identified. Lespan, through its vast network of accounts at various banking institutions, kept its client identity to a minimum. Since the corresponding banks did not question the flow of funds, it simply remained undetected for years. For its failure in not capturing and reporting the illegal activities of Lespan, BoA was fined US\$6mio to be paid to the City and State of New York; as well as, an additional US\$1.5mio to cover the costs of the investigation. As part of the settlement, BoA recognised its failure to verify and validate information provided by their Latin American MSB clients. By this acknowledgement, it agreed that its internal AML controls were deficient. Furthermore, as part of the agreement, BoA revealed it had taken steps to revise its AML policies, systems and controls and was committed to escalate any new discoveries to Manhattan District Attorney's office and federal regulators.

In a separate concurrent matter, the NASD announced four months after the above-referenced US\$7.5mio settlement that it fined Banc of America Investment Services (BAI) US\$3mio in connection with BAI's "failure to obtain customer information for certain high-risk accounts and for failing to have adequate communication with its parent bank to ensure that BAI's independent suspicious activity report (SAR) filing obligations were met." The penalty was the largest imposed by a US securities regulator for anti-money laundering violations at the time. NASD stated that BAI failed to conform to its own established AML procedures with respect to 34 high-risk accounts involving trust and private investment corporations apparently linked to one family and domiciled in the Isle of Man (noted for its acceptance of offshore banking). While the NASD did not identify the family, the accounts are identical to the Wyly accounts (billionaire Sam Wyly and his brother Charles) as described in an August 2006 report, "Tax Haven Abuses: The Enablers, the Tools and Secrecy," by the US Senate Permanent Subcommittee on Investigations. These accounts engaged in multi-million-dollar international wire transfers. The NASD said the failures defeated the purpose of AML and terrorist financing laws, and came despite in-house warnings from its clearing firm, a senior lawyer and its risk committee to obtain beneficial owner names or to restrict activity if such names were not obtained. In addition, BAI

ignored notices from its clearing firm pointing out indicia of money laundering activity.

International Bank of Miami

2007 – US\$250,000⁶⁹

Agency: OCC

The International Bank of Miami, N.A., Coral Gables, Florida, is alleged to have violated the Bank Secrecy Act; to have engaged in unsafe and unsound practices when it failed to supervise adequately its Capital Markets Group (CMG); and to have failed to ensure that CMG's securities transactions were conducted safely, soundly, and legally.

Specifically, the OCC's order alleges that the bank: violated the BSA and 31 CFR 103.33(a) [records of loan transactions] by permitting CMG to maintain records that frequently failed to adequately identify a legitimate business purpose for loans, or fully and adequately describe the nature and purpose of loans (loans were described merely as being for "working capital"); failed to maintain a system of controls to monitor and report suspicious activity; failed to adequately identify and monitor accounts of politically-exposed persons (PEPs); failed to monitor loans accounts and payments for suspicious activity; did not have an adequate training programme on detecting and reporting suspicious activity; permitted CMG to make loans that did not conform to the bank's own lending policies, and to omit obtaining proper authorization for large credits; allowed CMG to provide incomplete or inadequate loan documentation and recordkeeping, not in accordance with bank policies; failed to do adequate customer due diligence, especially for high-risk customers; allowed CMG to maintain an inadequate record of its securities transactions; permitted OMG to engage in securities transactions in violation of OCC regulations; and allowed CMG to conduct securities transactions with high-risk countries without risk management procedures.

Israel Discount Bank

2008 - NIS 3.7mio CMP⁷⁰

Agency: Bank of Israel

Israel Discount Bank (IDB) is the third largest bank and a leading financial group in Israel. In October 2008, the Israeli Supervisor of Banks announced that it has imposed a fine of NIS 3.7mio on IDB. The AML-related fine was imposed on IDB for deficiencies found during a 2005-2006 Audit by the Bank of Israel.

The Audit findings indicated shortcomings in IDB's obligations with regard to the Anti Money Laundering Act, relating to reporting and documentation requirements for banking corporations, and in accordance with the Anti-Money Laundering regulations pertaining to both the tim-

ing and manner in which a banking corporation is required to report. Two main types of infringement were discovered during the inspection: (a) failure to record identification particulars of beneficiaries and controllers of holding interest, and (b) failure to submit reports or late submission of reports on unusual transactions by customers to the Prohibition of Money Laundering and Financing of Terrorism Authority (IMPA). However, the Banking Corporations Sanctions Committee took into account the fact that IDB acted swiftly to correct the faults revealed during the inspections. The following points were also made. The prohibition on money laundering and financing of terrorism is an intrinsic part of a banking corporation's system of risk management, and a bank must allocate sufficient resources, relative to its size, and the extent and complexity of its activity, to enable the compliance officer (responsible for the prohibition on money laundering) to act so as to ensure the banking corporation meets all its obligations; outsourcing operating functions does not absolve the banking corporation from its obligation to maintain proper oversight, nor does it absolve its management from the responsibility to understand and manage the corporation's risks; the agreement of the banking corporation to carry out customers' wishes that are inconsistent with the legal provisions regarding the prohibition on money laundering and financing of terrorism, even if accompanied by professional counselling, indicates the failure to internalize the issue of the prohibition on money laundering and financing of terrorism, and a defective culture of compliance; and a banking corporation must check whether the declarations by the holders of controlling interests in corporations, including nonprofit organisations, are reasonable.

Mizrahi Tefahot Bank

2008 – C&D; 2011 - US\$350,000 CMP^{71/72}

Agencies: FDIC & California Dept. of Financial Institutions

Mizrahi Tehahot Bank, Ltd., (Mizrahi) is a US branch of an Israeli financial institution, headquartered in Los Angeles. In August 2008, Mizrahi entered into an Order to Cease and Desist with the FDIC and the California Department of Financial Institutions (DFI). Mizrahi was ordered to cease and desist from (a) operating in violation of Bank Secrecy Act ("BSA"), to having an inadequate anti-money laundering programme, requiring improvements to Suspicious Activity Report ("SAR") procedures to identify, monitor, and report suspicious activities; for a lack of due diligence on foreign correspondent accounts. Mizrahi was also ordered to take all necessary steps to ensure future compliance with all applicable laws and regulations, including, but not limited to, Office of Foreign Assets Control ("OFAC") requirements; to provide for a system of internal controls to ensure compliance with the BSA; provide for independent testing of compliance with the BSA, all applicable rules and

regulations related to the BSA, and to have a BSA compliance programme managed by a qualified officer who has the required authority, responsibility, training, resources, and management reporting structure to ensure compliance with Mizrahi's programme requirements and BSA-related regulations; provide and document training by competent staff and/or independent contractors of all of Mizrahi's affected personnel, including, without limitation, senior management, tellers, customer service representatives, lending officers, private and personal banking officers and all other customer contact personnel, in all aspects of regulatory and internal policies and procedures related to the BSA, with a specific concentration on accurate recordkeeping, form completion and the detection and reporting of known and/or suspected criminal activity; review and revise Mizrahi's written customer due diligence programme; develop a programme for reviewing the files of account holders at Mizrahi who have been accorded "W-8" tax exempt status, but who appear to hold such accounts for the benefit of third parties and/or do not qualify for "W-8" tax exempt status; and ensure that it adheres to its existing policy prohibiting acceptance of customers that are Non-Banking Financial Institutions ("NBFI"), which include Money Services Businesses ("MSBs"), or revise its written procedures to include guidelines as to what type of NBFI customers Mizrahi accepts and does not accept and have specific procedures for each.

In January 2011, the FDIC and the DFI issued Mizrahi a US\$350,000 CMP Order, half to be paid to the US Treasury and half to the DFI. The Order stated that the agencies believe that from at least 2000 through 2009, Mizrahi lacked an adequate programme to monitor, analyze, and report suspicious activity. In addition, the FDIC and the DFI have determined that Mizrahi had failed to comply with the August 2008 Consent Order issued by them.

E*Trade

2008 - US\$1mio⁷³

Agency: SEC

E*Trade Clearing LLC and E*Trade Securities LLC (E*Trade) are wholly owned subsidiaries of E*Trade Financial Corporation, a Delaware corporation headquartered in New York. They are broker-dealers registered with the SEC. On July 31, 2008, the SEC published an order imposing remedial sanctions, penalties and a cease-and-desist order under the Securities Exchange Act of 1934. Each of the LLCs was ordered to pay US\$500k to the US Treasury within 30 days. In the Findings portion of the Order, the SEC stated that from October 2003 until June 2005, E*Trade failed to follow its own CIP and SEC regulations. Specifically, E*Trade failed to verify the identities of secondary accountholders in newly opened joint accounts. The SEC found E*Trade's failure to be systemic, due to a lack of a cohesive

organisational structure, the lack of adequate management oversight, and miscommunications between personnel in E*Trade business groups. When using a third party vendor for vetting new customer information, E*Trade failed to forward the names of secondary accountholders to the process, in spite of its own policies to the contrary, and in spite of internal reports to internal compliance officers that the second names were not being vetted. E*Trade was directed to engage an independent consultant to assess the adequacy of E*Trade's CIP policies and procedures and whether E*Trade is in substantial compliance with both its statutory obligations and the companies' own policies and procedures.

United Bank for Africa

2008 - US\$15mio (concurrent CMPs) (plus 2007 US\$500,000 fine and CMP)⁷⁴⁻⁷⁸

Agencies: FinCEN CMP & OCC C&D and CMP

UBA is headquartered in Lagos, Nigeria. In April 2008, the OCC and FinCEN issued orders for concurrent US\$15mio Civil Money Penalties (to be satisfied by a single US\$15mio payment) in connection with the OCC's February 2008 C&D order for violations of the Bank Secrecy Act (BSA).

In the joint press release announcing the orders, then FinCEN Director James J. Freis, Jr., said, "A financial institution that recklessly disregards its obligations under the Bank Secrecy Act and continues to operate without an effective anti-money laundering programme, despite repeated warnings and a business focus on areas of recognised high risk, should expect to be penalized. The severity of this joint enforcement action is reflective of just such conduct. This is not a case of interpretation of technical issues or about minor lapses in compliance." In January 2007, due to BSA programme deficiencies, the OCC issued a Cease & Desist Order (C&D), (and fined US\$500,000), by consent, to the bank. During an OCC targeted examination conducted in November 2007 to determine compliance with the 2007 C&D, OCC examiners determined that the bank had failed to comply with the terms of the C&D and that significant BSA programme deficiencies remained pervasive and systemic, including internal control and audit deficiencies, as well as the bank's continued failure to identify and report suspicious activities.

As a result of its examination findings, the OCC issued a second Cease and Desist Order, by consent, to the bank in February 2008. It required the bank to, among other things: cease and desist from processing wire transfers, dollar drafts, and pouch transactions; retain the services of a qualified, independent consultant to conduct a fourteen-month review (from January 1, 2007 through February 29, 2008) of the bank's wire transfer and dollar draft activities to ascertain the existence of any unusual or suspicious transactions

during this period; revise and implement the bank's written programme establishing a system of internal controls and processes; and to take other needed steps to ensure compliance with suspicious activity reporting requirements.

The OCC assessed the bank a US\$15mio civil money penalty and imposed a new C&D Order as a direct result of the bank's failure to comply with the OCC's 2007 C&D and the bank's failure to correct these BSA programme deficiencies. In assessing a US\$15mio civil money penalty, FinCEN determined that the bank failed to implement an adequate anti-money laundering programme reasonably designed to identify and report transactions that exhibited indicia of money laundering or other suspicious activity involving approximately US\$197mio in suspicious transactions.

Sigue Corporation

2008 - US\$12mio CMP; US\$15mio forfeiture^{79/80}

Agencies: FinCEN and DoJ DPA

Sigue Corporation and Sigue, LLC ("Sigue") operate a money services business headquartered in San Fernando, CA, with over 7,000 agent businesses throughout the country. Sigue agreed to the issuance of a US\$12mio CMP by FinCEN for violations of BSA. In addition, Sigue entered a deferred-prosecution agreement with the Justice Department on charges of failing to maintain an effective AML programme, and agreed to forfeit US\$15mio (payment of which will satisfy the FinCEN penalty).

According to the CMP Order, Sigue "failed to implement effective internal controls, designate compliance personnel and conduct effective independent testing and training to ensure compliance with the Bank Secrecy Act." After suspecting Sigue's compliance with US money laundering prevention laws were cursorily, the US government sent undercover investigators to a number of Sigue's delegates' businesses across the country in a government sting codenamed "Operation High Wire."

Undercover agents approached Sigue Corp delegates clearly stating that the currency they wanted to send was proceeds of drug trafficking and was being sent as payment to the "source of supply." The undercover agents informed the Sigue Corp delegates that they did not want law enforcement to learn of the transactions, and that they preferred not to provide any form of identification or address information.

When Sigue Corp delegates requested some form of identification from the undercover agents, the agents produced multiple forms of identification cards, all in different names and bearing obviously different likenesses. While many delegates turned the undercover agents away, at least 59 delegates in 22 states did not, with these

59 willingly helping the investigators structure transfers to avoid currency reporting requirements, suggesting the undercover agents use admittedly false names and generally facilitating what they believed to be an effort to move drug money to Mexico. The result was that a total of US\$500,000 was moved in these sting transactions to a group of seven individuals in Mexico City.

Subsequently it would emerge in the later prosecution of Sigue Corp that from 2003 to 2005, more than US\$24.7mio in suspicious transactions were conducted through Sigue Corp agents, including those conducted by undercover US law enforcement agents. Whilst Sigue Corp had filed some SARs, particularly SARs identifying structuring, the US authorities prosecuted Sigue for the willingness of some Sigue Corp delegates to facilitate the sting transactions and for the weaknesses in the oversight and surveillance of activity undertaken by Sigue Corp delegates.

As part of the settlement with the government, Sigue agreed that it would implement and maintain a transaction monitoring system for the purpose of performing risk-based trend analysis related to sender, beneficiary, originating authorized delegate, and paying location transactional activity, setting a new benchmark in level expected for compliance with AML rules for MSBs.

The Bank of Tokyo-Mitsubishi UFJ

2008 - 1.2 mio yuan (US\$190,000)⁸¹

Agency: People's Bank of China

In 2008 as Beijing came under mounting foreign pressure to curb money laundering, it was revealed that the central bank fined the Shenzhen branch of one of Japan's biggest lenders 1.2mio yuan for failing to report suspicious transactions.

The Bank of Tokyo-Mitsubishi UFJ was among 600 financial institutions fined a total of 56.3mio yuan by the People's Bank of China for money laundering violations in 2008. The central bank's centre for monitoring and analysing suspected money laundering said it reviewed suspect transactions worth about US\$10.8bio China Business News reported, citing official statistics.

No further details of the Japanese bank's business or the transactions were given. The report did not give the names of any other financial institutions required to pay fines.

Special Focus 11 Winterflood

2008 - £4mio CMP^{82/83}

Agency: UK FSA

The FSA fined Winterflood £4mio in 2008, one of the UK's biggest fines ever handed out, after it found that the firm (part of investment bank Close Brothers) and two of its traders, Stephen Sotiriou and Jason Robins, had "engaged in market abuse" in relation to a share ramping scheme involving Fundamental-E Investments, a computer screen company. Winterflood was a market-maker in FEI and executed many trades including orders from SP Bell, a now defunct stock-brokering firm controlled by Simon Eagle, a former commodities trader.

The Winterflood case was an important one because it tested the UK's unusually broad definition of market abuse and highlighted how one firm can be held responsible for another firm's market abuse even though that firm had no actual knowledge or intent. Unlike US insider trading laws, the UK market abuse rules say they can be violated unintentionally.

The Court of Appeal's judgment in 2010 in the FSA's favour supports the broader definition and in doing so dismissed Winterflood's appeal regarding its failure to spot share ramping.

Winterflood was accused of failing to notice warning signs or querying particular trades in FEI in 2004. However, there was no allegation by the FSA that Winterflood or the traders deliberately committed an offence. In a separate action, it was established that Simon Eagle and SP Bell had "embarked on a share ramping scheme, the effect of which was to inflate the price of FEI shares". The court however found that, "Accordingly the involvement of Winterflood, Mr Sotiriou and Mr Robins was critical to the success of the share ramping scheme."

Société Générale

2008: €4mio (US\$6.3mio)⁸⁴

Agency: French Banking Regulator

French regulators fined Société Générale about €4mio (US\$6.3mio) for "grave deficiencies" in the bank's internal controls that led to a €4.9billion loss, caused by rogue trader, Jerome Kerviel. The regulatory statement said: "The weaknesses brought to light, in particular the deficiencies in hierarchical controls, carried on over a long period, throughout 2007, without being detected

or rectified by the internal control systems." It also said that Société Générale's IT systems contained "significant weaknesses" and highlighted the lack of a gross trading limit for *Kerviel*. But the regulator did say that the bank had been swift to attempt to correct these problems once they were revealed. An internal investigation at Société Générale stated that *Kerviel* bypassed risk controls at the bank to build up a trading position worth €49billion - more than the bank's own stock market value. Following the scandal, Daniel Bouton, Société Générale's Executive Chairman, split his position, transferring some of his powers to Frederic Oudea. Jean-Pierre Mustier, the head of the bank's Investment Banking unit, was also replaced.

Special Focus 12 Aon Limited

2009 - £5.25mio^{85/86}

Agency: UK FSA

Aon Limited (Aon) was fined £5.25m by the Financial Services Authority in 2009 for failing to take reasonable care to establish and maintain effective systems and controls to counter the risks of bribery and corruption associated with making payments to overseas firms and individuals. Between 14 January 2005 and 30 September 2007, Aon Ltd failed to properly assess the risks involved in its dealings with overseas firms and individuals who helped it win business and failed to implement effective controls to mitigate those risks. As a result of Aon's weak control environment, the firm made various suspicious payments, amounting to approximately US\$7mio, to a number of overseas firms and individuals.

Whilst no bribery or corruption acts could be proved, the lack of documenting the due diligence undertaken was felt sufficient by the FSA to raise a case against Aon for failing to adhere to the FSA handbook's provision on systems and controls. It can also be supposed the FSA thought that bribes probably had though been paid. In addition, under the FCPA, companies can be found guilty of not maintaining adequate books and records. There is a similar requirement in the Companies Act 2006 in the UK. Margaret Cole, then Director of Enforcement, said, "This is the largest financial crime related fine imposed by the FSA to date. It sends a clear message to the UK financial services industry that it is completely unacceptable for firms to conduct business overseas without having in place appropriate anti-bribery and corruption systems and controls."

Doha Bank

2009 - US\$5mio⁸⁷⁻⁸⁹

Agencies: FinCEN CMP and OCC C&D and CMP

In April 2009, the New York Branch of Doha Bank,

headquartered in Doha, Qatar, was assessed civil money penalties of US\$5mio by both the OCC and FinCEN, for past violations of the BSA. The two US\$5mio assessments were satisfied by a single US\$5mio payment to the US Treasury.

This action was preceded by an OCC C&D order in September 2006, in which Doha was ordered to complete a look-back of wire transfers, demand drafts and pouch items covering the period from May 1, 2004 through January 16, 2007. That review was completed in January 2008.

According to a press release from FinCEN and the OCC, "the OCC based its assessment of a US\$5mio civil money penalty, and the issuance of the C&D Order, on the Branch's failure to maintain a compliance programme reasonably designed to assure and monitor compliance with the recordkeeping and reporting requirements of the BSA, and other related BSA compliance violations. Specifically, the Branch did not adequately identify, research, report, and monitor suspicious activities occurring through the Branch's funds transfers, pouch activity, demand draft services, and correspondent relationships, and did not adequately audit and independently test such activities. The Branch also failed to conduct sufficient due diligence on its foreign correspondents. The look-back mandated by the C&D Order confirmed the BSA programme deficiencies cited in the C&D Order." FinCEN's reasons for assessing its penalty were essentially identical. More telling was then FinCEN Director Fries' comment: "Despite the current economic and resource challenges that many banks may face, Bank Secrecy Act (BSA) compliance efforts must not be diminished. Timely, complete, and accurate Suspicious Activity Reports (SARs) are critical tools available to law enforcement as a means to deter and detect criminal activity. Used in conjunction with additional financial intelligence, SARs help law enforcement to ferret out criminal elements and combat fraud that threatens our financial system. As such, failure to follow BSA rules deprives law enforcement of valuable information in the investigation and prosecution of crime. FinCEN continues to collaboratively ensure that all financial institutions follow BSA rules which in turn serve to protect our financial system."

E*Trade

2009 - US\$1mio Fine

Agency: FINRA⁹⁰

FINRA announced on January 2, 2009 that it imposed a US\$1mio fine against E*Trade Securities, LLC and E*Trade Clearing, LLC, collectively, for failing to establish and implement AML policies and procedures that could reasonably be expected to detect and cause the reporting of suspicious securities transactions. "FINRA found that between Jan.1, 2003 and May 31, 2007, E*Trade did not have an adequate AML programme based upon its business

model. Because E*Trade did not have separate and distinct monitoring procedures for suspicious trading activity in the absence of money movement, its AML policies and procedures could not reasonably be expected to detect and cause the reporting of suspicious securities transactions. The firm relied on its analysts and other employees to manually monitor for and detect suspicious trading activity without providing them with sufficient automated tools. FINRA determined that this approach to suspicious activity detection was unreasonable given E*Trade's business model."

This penalty by the non-governmental regulator of securities firms is in addition to penalties imposed earlier by the SEC in July 2008 (see case above).

Special Focus 13 Credit Suisse

2009 - US\$536mio forfeiture^{91/92}

Agencies: DoJ, OFAC, DPA

Credit Suisse paid a US\$536mio fine to US authorities for processing hundreds of millions of payments through US banks in violation of US sanctions regulations. Two of the organisations that Credit Suisse facilitated transactions for were the Atomic Energy Organisation of Iran and the Aerospace Industries Organisation, both of which are designated as proliferators of weapons of mass destruction by the US Office of Foreign Assets Control.

Credit Suisse began helping customers evade sanctions in 1986 when US sanctions against Libya were imposed. It instituted an internal policy that payment orders of Libyan banks and government agencies destined to or through the US were to be executed without stating the name of the ordering party. By 1994, Credit Suisse issued an internal instruction that the phrase "by order of a client" could be used in place of the ordering party. In 1995, after the US imposed sanctions against Iran, Iranian banks requested that Credit Suisse omit their names and Bank Identification Codes from payment messages headed for US correspondent banks. Until 2004, Credit Suisse's use of "order of a customer" was a standard procedure for processing bank payment messages involving Iranian customers. Another approach was to populate transaction party fields with "Credit Suisse" or its BIC code.

Another Credit Suisse method of hiding references to sanctioned parties in payments destined for the US was the use of abbreviations. A 2003 internal email from Credit Suisse's Iran Desk stated:

[Entry to their account works when account number plus

[XXX] is stipulated as beneficiary. What is also important of course is that applicant give details of final beneficiary as reference for the beneficiary, then it should work.

Also in 2004, Credit Suisse opened a US\$ account for a client in the name of an abbreviation (first letter of each word constituting the bank's name).

Credit Suisse used its stripping procedures to market itself to sanctioned clients. The factual statement accompanying the DPA gives the following excerpt from Credit Suisse's marketing communications:

[I]t is absolutely impossible that one of your payment instructions will be effected without having it checked in advance by our specially designated payment team at Credit Suisse in Zurich.

When Credit Suisse outsourced its US dollar clearing activities to Bank of New York, Credit Suisse notified its Iranian clients and gave them a pamphlet entitled, "How to transfer USD payments" which contained instructions for formatting payments to evade US filters.

In a 1998 letter to an Iranian customer, explaining the transfer of its US dollar clearing services to Bank of New York, Credit Suisse wrote:

"In order to provide your esteemed institution with our clearing services in US\$, we have introduced a procedure to facilitate your US\$ payments through our clearing system. The change of our USD-clearer to Ban[k] of New York, New York, will not affect our mutual relationship on any clearing transaction in US Dollars as long as the established procedure will be followed."

Credit Suisse's payment system had warnings connected to client files: "Do not mention the name of the Iranian bank in payment orders."

The payment system warnings were replaced with instructions to use the MT202 message format as a cover for the underlying transfer. Because the MT202 format used for cover payments lacked space for information about the remitter, it was necessarily left off the message and the message could not be stopped by US filters.

Credit Suisse's use of cover payments to hide the identity of sanctioned clients began in 1995 in response to a client request. An Iranian bank client requested that Credit Suisse process all of its payments using an MT202 message format to hide the bank's identity. Credit Suisse stopped using MT 103 messages for Iranian customer's transfers and instead used the MT 202. According to the DPA Factual Statement, between March 2004 and November 2005, nearly

96% of customer payment messages relating to Iranian customers were made using cover payments. However, for non-sanctioned payment messages, a mere 60% were made using cover payments.

In August 2004, a proposed merger between Credit Suisse and CSFB prompted an examination into these practices. In 2005, Credit Suisse decided to discontinue business with US-sanctioned countries, with some private banking exceptions. The institution created a new sanctions compliance framework in 2006, cooperating with US authorities investigation.

Special Focus 14 Lloyds Banking Group

2009 - US\$ 350mio⁹³⁻⁹⁵

Agencies: DoJ DPA, NYDA

Lloyds is a UK financial institution with banking operations around the world, including two offices in the US. From the mid-1990's to January 2007, Lloyds employees assisted clients in evading US sanctions by engaging in a practice called "stripping".

This involved the removal of data from payment messages to avoid the transaction filters used by US depository institutions to detect transactions involving sanctioned parties. This practice caused Lloyds' US correspondent banks to process transactions that those banks otherwise could have stopped, blocked and reported in accordance with US sanctions regulations.

In 1995, in response to US sanctions against Iran, Lloyds' UK-based unit created a procedure to manually review messages from UK-based Iranian bank clients. These clients included Banks Sepah, Melli, Tejarat, Saderat and the Iranian Overseas Investment Bank. The review was to ensure references to Iran were removed before the messages were sent to or through the US.

An internal memorandum set forth the steps. First, a payment team member would remove the payment instruction so that it could be manually processed. Second, the payment instruction would be printed out. Third, the payment team would mark up the printed payment instruction to show what information should be changed, including crossing out references to Iranian banks. Fourth, the edited message would be returned to the repairers who would type the corrected information back into the system. The resulting message would give US banks no indication that an Iranian party was involved.

In 2002, Lloyds' UK payment unit raised concerns that this practice might violate US law. Lloyds business managers argued for the practice to continue, believing that the UK payment unit was operating outside of US jurisdiction. Lloyds decided to remove some risk by moving the responsibility for stripping from its payment unit to the clients. Lloyds representatives met with UK Iranian bank clients to instruct them on how to format, themselves, payment messages to avoid detection by US OFAC filters. Lloyds employees counseled these banks not to leave payment message fields blank, but to populate the originating bank fields with special characters, which prevented the system from populating the field with the originating bank name. Lloyds employees continued to manually strip payments caught in their filters.

In 2003, the issue of "stripping" was brought to the attention of Lloyds' Group Executive Committee, which decided to stop US\$ clearing for UK Iranian banks. Between 2002 and 2004, Lloyds had processed approximately US\$300mio for UK Iranian banks via US institutions or their branches, and another US\$20mio on behalf of Libyan customers by the time sanctions against Libya were lifted in 2004. However, Lloyds continued providing these services to Sudanese bank clients until 2007, processing more than US\$20mio on behalf of Sudanese bank customers between 2002 and 2007.

In 2007, US prosecutors informed Lloyds of their investigation of its stripping practices. The case against Lloyds grew out of an investigation into how money transfers through the American banking system might have been used to finance Iran's nuclear and missile programmes. The US investigation into potential sanctions violations would expand to involve nine European banks.

On 9 January 2009, Lloyds entered into a Deferred Prosecution Agreement with the New York County District Attorney's Office and the US Department of Justice, agreeing to pay US\$350mio and criminal charges that it had caused US depository institutions to process payments in violation of US sanctions regulations. In the DPA, US authorities charged that by formatting and stripping payments to evade US filters, Lloyds caused US institutions to process transactions in violation of US sanctions regulations.

Special Focus 15 Stanford Bank

2009 - Closure⁹⁶⁻⁹⁸

Agencies: SEC, FBI, DoJ

Allen Stanford a prominent former financier and cricket mogul, is currently serving prison time in the US after having been convicted on charges that his investment company was a fraudulent Ponzi scheme. Stanford was the Chairman of the now defunct Stanford Financial Group, which included companies in the Americas and the Caribbean.

Stanford became the subject of several fraud investigations, and on February 17, 2009, he was charged by the Securities and Exchange Commission (SEC) with fraud and multiple violations of US securities laws for his alleged fraudulent activities involving US\$8bio in certificates of deposits (CDs). The FBI raided three of Stanford's offices in the US, and on February 27, 2009, the SEC amended its complaint to describe Stanford's fraudulent activity as a Ponzi scheme. On March 6, 2012, Stanford was convicted on all charges, except single count of wire fraud for allegedly bribing an Antiguan regulator with US\$9,000 Super Bowl tickets.

In early February 2009, the SEC, the FBI, the Florida Office of Financial Regulation, and the Financial Industry Regulatory Authority (FINRA) launched an investigation of Stanford Financial Group, questioning the consistently higher-than-market returns that Stanford International Bank claimed to provide its depositors. SEC officials learned that Stanford presented hypothetical investment results as actual historical data in sales pitches to clients, and that he claimed that his CDs were as safe as, or safer than, US government-insured accounts.

A leaked cable from the US Embassy in the Bahamas in 2006 reported that companies under Stanford's control were thought to be engaging in bribery, money laundering, and political manipulation. As a result, when federal agents raided the offices of Stanford Financial in February 2009, they treated it as the equivalent of a crime scene and cautioned people not to leave fingerprints.

At the request of the SEC, on February 19, 2009, FBI agents located Stanford and served him with legal papers filed by the SEC. Stanford was not arrested until a month later. The SEC charged Stanford with fraud that

was centred on an US\$8bio investment scheme. They alleged that Stanford and his accomplices operated a Ponzi scheme, in which they misappropriated billions of dollars of investors' money and falsified the Stanford International Bank's record to cover up their fraud. Stanford denied any wrongdoing. He argued that his companies had been well-run until the SEC began investigating them. Stanford's assets, along with those of his companies, were frozen and placed into receivership by a US federal judge. The judge also required that Stanford surrender his passport.

Following the allegations, various governments took over Stanford's business operations. The Eastern Caribbean Central Bank (ECCB) took over the local operations of the Bank of Antigua, which was renamed the Eastern Caribbean Amalgamated Bank. The Venezuelan government took over Stanford Bank Venezuela, the Venezuelan branch of Stanford's bank. Stanford pleaded not guilty to charges of fraud, conspiracy, and obstruction.

Stanford's trial date was set for June 25, 2009, but this was delayed due to his poor health. In February 2011, Stanford issued a US\$7.2bio counter-claim against the FBI and the SEC. In May 2011, prosecutors dropped seven charges against Stanford, leaving 14 charges outstanding, including counts of fraud, money laundering, and obstructing an SEC investigation.

Stanford's trial began on 24 January 2012. Prosecutors claimed that Stanford stole billions of dollars from investors to fund his lavish lifestyle and held his customers' money in bank accounts in Switzerland, Canada, and the UK for his own use. Another account, the "Baby Mama Trust," was held in the Cook Islands, and it included proceeds from the sale of properties tied to one of Stanford's girlfriends who bore his children.

Prosecutors claim that Stanford used customer money to purchase these properties. Stanford has also been accused of misleading investors in marketing brochures by promising that their money would be invested in easy-to-trade assets, such as stocks and bonds, when instead, he used the money to buy two Caribbean newspapers, islands, and airplanes.

Stanford was ultimately convicted on 6 March 2012 by the jury as the leader of a Ponzi scheme worth US\$7bio operated through his Antiguan-based bank. He was sentenced in June 2012 to 110 years in federal prison. James M. Davis, the former Chief Financial Officer of Stanford Financial Group, pled guilty to charges of fraud and obstruction of Justice in August 2009 and testified against Stanford. On 22 January 2013,

Davis was sentenced to five years in jail, three years of supervised release and had a judgement of US\$1bio placed against him.

The jury ruled that Stanford should forfeit US\$330mio held in offshore accounts in order to fund payments to the thousands of victims of the Ponzi scheme. The court-appointed receiver for Stanford's businesses set aside US\$80mio for victims out of the US\$216mio collected from settlements and sales of his yachts and real estate.

In order to increase the victims' recovery, the receiver has sued the Libyan government, Stanford brokers, and others who took money out of the company

Furthermore, three former Stanford employees were tried and convicted for their roles in Stanford's Ponzi scheme. Laura Pendergest-Holt, Stanford's former Chief Investment Officer, pled guilty on June 2012 to obstructing the SEC investigation into Stanford International Bank. On 13 September 2012, Holt was sentenced to three years in prison, followed by three years of supervised probation. Stanford's ex-Chief Accounting Officer Gilbert Lopez, and former Global Controller Mark Kuhrt, were each found guilty in November 2012 of 9 of 10 wire fraud counts and one count of conspiracy to commit wire fraud. The men were sentenced to prison terms of 20 years when they were sentenced in February 2013.

A former Antiguan regulator, Leroy King, has also been charged for allegedly accepting bribes from Stanford to interfere with an SEC investigation, and in April 2012 filed his fourth appeal to bar his extradition to the US.

In addition to the fraud charges against Stanford, the US Court of Appeals for the Fifth Circuit, which affirmed most of a US Tax Court's ruling, determined that Stanford's wife under-reported their 1990 federal taxes by nearly US\$500,000.

It has also been suggested that Stanford may owe hundreds of millions of dollars in federal taxes. There are four federal tax liens from 2007 and 2008 against Stanford, which amount to more than US\$212mio.

Finally, the FBI and other agencies have been conducting an ongoing investigation of Stanford since 2008 for possible involvement in money laundering for Mexico's Gulf Cartel.

Special Focus 16 UBS

2009: US\$780mio CMP⁹⁹⁻¹⁰¹

Agencies: US DoJ DPA. IRS

In 2009 UBS entered into a Deferred Prosecution Agreement with the US Government avoiding indictment on criminal charges of aiding tax evasion. The Agreement entailed UBS paying US\$780mio in fines and initially turning over the names of about 250 US clients. The Swiss parliament later voted to approve a deal between the Department of Justice and UBS in which UBS agreed to turn over the names of 4,450 US citizens who held bank accounts at UBS. Under the DPA, UBS also agreed to exit the business of providing banking services to US clients with undeclared accounts. The case arose when Bradley Birkenfeld, a private banker who formerly worked for UBS, in Geneva Switzerland provided information to the US Government about his dealings with US clients located in the US, suspected of placing money offshore to evade US taxes.

Birkenfeld sought to benefit from the IRS's Whistleblower Reward Programme, from which he would ultimately benefit, but the case as was handled by the US Justice Department took the view that the IRS programme did not provide immunity from prosecution for criminal acts and Birkenfeld was charged and pleaded guilty in 2008 being convicted on fraud conspiracy grounds and sentenced in 2009 to 40 months in jail.

In 2012, whilst the IRS awarded Birkenfeld a reward of US\$140mio, he remained incarcerated.

The case against UBS went back to 2000, when Foreign Banks who entered into an agreement with the US IRS, called the QI Programme (Qualified Intermediary) then became obliged to report to the IRS income and other information for its US clients who held US securities in a UBS account, in order to enforce increased tax compliance by US citizens with offshore accounts. It was alleged that some employees and managers within UBS helped some US citizens to open new UBS accounts inserting for example a corporate vehicle or similar in between the individual and the bank account so that the US Citizen would not be identified as a beneficiary when reporting to the IRS was required by the Bank, effectively assisting those US citizens in evading these new reporting requirements, who in turn regularly filed false tax returns which omitted the

income earned on their Swiss bank accounts and failed to disclose the existence of those accounts to the IRS.

Further information about the US client private banking cross border business was also revealed in the investigation with allegations that UBS bankers routinely traveled to the US both prospecting for new clients and meeting existing clients. It was asserted that in 2004 alone, UBS bankers traveled to the US approximately 3,800 times to discuss their clients' Swiss bank accounts.

Whilst UBS admitted making mistakes it quickly co operated with the US investigation and provided crucial information and remediated the problems, sacking managers and introducing state of the art measures to control its broader cross border business.

In 2008, ex UBS Head of Wealth Management Raoul Weil was indicted and charged with conspiring to defraud the US for his alleged role in overseeing the US cross-border business. Declared a fugitive from US justice, he has since been arrested in Italy and extradited to the US.

ANZ (Australia and New Zealand Banking Group Ltd)

2009 – US\$5.75mio¹⁰²

Agency: OFAC

In August 2009, OFAC reached a settlement with Australia and New Zealand Banking Group, Ltd. (ANZ) over trade finance transactions subject to US economic sanctions. ANZ paid US\$5.75mio to settle allegations of violations of the Sudanese Sanctions Regulations and the Cuban Assets Control Regulations. The international trade finance and foreign currency exchange activities at issue in the settlement occurred from 2004 to 2006 and involved ANZ's processing of transactions through US correspondent accounts. ANZ actively manipulated the SWIFT messages related to the Sudanese transactions by removing references to Sudan or the names of entities subject to sanctions in the US, thereby concealing the identities of the targets of US sanctions and impeding the ability of US banks to detect these violations. The settlement covers 16 transactions in the aggregate amount of approximately US\$28mio alleged to have violated the Sudanese Sanctions Regulations, and 15 transactions in the aggregate amount of US\$78mio alleged to have violated the Cuban Assets Control Regulations. OFAC agreed to mitigate the penalty based on three predominant factors. First, although ANZ did not voluntarily disclose the violations, ANZ cooperated in conducting an extensive review of the transactions and

brought to OFAC's attention additional transactions of which OFAC was not aware and which ANZ did voluntarily disclose. Second, ANZ promptly initiated a remedial policy. ANZ re-engineered its operating model to enhance its ability to identify and resolve operational gaps and weaknesses. ANZ agreed to continually audit its compliance model to ensure that future transactions that would be in violation of OFAC's regulations are not processed by or through US financial institutions. The Australian Prudential Regulation Authority also agreed to monitor the results of ANZ's internal review. Third, ANZ had not been subject to an OFAC enforcement action in the five years preceding the transactions at issue.

Amaranth Advisors LLC

2009: US\$7.5mio^{103/104}

Agency: CFTC

Amaranth lost US\$6.6 billion betting on the price of natural gas. The Greenwich, Connecticut-based hedge fund that once controlled half of the gas market collapsed in 2006, following disastrous bets by trader Brian Hunter. Amaranth only began trading in energy in 2002 increasing its bets from 2004 following the arrival of Mr Hunter from Deutsche Bank, where he had left after being demoted and moved off the trading desk for making big bets resulting in big losses. At Amaranth his positions initially performed very well benefited heavily from Hurricane Katrina which sent gas prices higher. For 2005, Mr Hunter received a bonus of US\$113mio.

By 2006 he was trading billions of dollars worth of gas contracts and using 38% of Amaranth's available capital. He traded from a remote office in Calgary Canada, far from the firms Head office and its risk managers in Connecticut in the US. Still his trading continued to be profitable, earning the firm US\$320mio in Feb 2006 and US\$1.1bio in April before the tide turned. In May losses of US\$1.1bio were incurred, despite worst case loss estimates considered by the firm of US\$350 mio. Instead of trying to trade out of the positions, Mr Hunter instead doubled up and by the end of May 2006, 50% of the firms positions were invested in energy, holding almost as many gas contracts for January 2007 delivery as the entire American public were expected to use for that month. With rivals smelling blood and calling for increased margin to continue large trades as prices continued to go against him, the firm was forced to cut its losses and record losses of US\$6bio.

In August 2009, the company agreed to pay US\$7.5mio to end an action brought by the CFTC over price manipulation. The Hedge Fund also agreed to a

US\$77.1mio settlement by Amaranth to resolve a class action brought by traders. A fine levied by another US regulator, Federal Energy Regulatory Commission (FERC) against Hunter for US\$30mio was struck out on jurisdictional grounds. "Manipulation of natural gas futures contracts falls within the CFTC's exclusive jurisdiction," the court ruled.

Special Focus 17 Royal Bank of Scotland (former ABN Amro Bank)

2010 - US\$580mio Forfeiture - DPA (US\$80mio -

2005 / US\$500mio - 2010)¹⁰⁵⁻¹⁰⁸

Agencies: DoJ DPA, FBI

In 2004, senior management at ABN Amro ("ABN") discovered that from 1996 to 2004 some ABN offices, branches, subsidiaries and affiliates were employing ways to circumvent US sanctions filters. These groups created processes to assist clients in Libya, Sudan, Iran and Sudan to move hundreds of millions of dollars through the US financial system undetected at a time when these countries were sanctioned by the US Government.

As a service to its clients, ABN employees would alter payment messages headed to the US to evade US sanctions filters. Beginning in 1995, ABN was approached by an Iranian bank to process US dollar payments for it by cleansing the messages. External counsel had advised ABN in that year that accepting such an arrangement amounted to an evasion of the US embargo against Iran. US banks are barred from direct or indirect dealings with sanctioned parties and sanctioned countries. To comply, they use filters to screen names, addresses and text fields in electronic payment messages against sanctions lists and names of geographical locations in sanctioned countries.

Nevertheless, ABN's Dubai branch accepted the arrangement and developed stripping into a routine practice. The employees instructed sanctioned entities to use code words such as "spare" in their payment messages as a signal for ABN to segregate the message from normal payment processing. ABN employees would then manually remove any information from the message that could trigger US filters. In some instances, employees replaced information with "ABN Amro." Local ABN payment manuals contained "special conditions" sections instructing how information should be stripped. A specific instruction from this manual stated:

Payments by order of Iranian Banks [A&D] ... maintaining accounts with ABN, Dubai are to be handled with extra care to ensure the wordings "Iran" etc. are not mentioned in the payment due to OFAC regulations.

Similar procedures were devised for processing letters of credit, US dollar cheques and traveller's cheques.

ABN also used certain payment message formats to hide references to sanctioned parties.

Upon discovering these practices in 2005, ABN conducted an internal investigation, terminated the practices and reported them to US authorities, continuing to cooperate with the US government throughout its own investigation. ABN Amro was fined US\$80mio in 2005. On 4 May 2010, ABN agreed to two criminal charges and a fine of US\$500mio in exchange for a deferred prosecution agreement (DPA) with the US government.

ABN's systematic stripping of payments was most likely supported by the belief that US sanctions requirements had no effect on foreign persons acting outside the borders of the US. ABN had a US presence, but was considered a "foreign bank" under US law. However, the US Department of Justice took a different view. One of the charges to which ABN agreed as part of the DPA alleged that ABN violated Title 18, US Code, Section 371 by conspiring to violate US sanctions regulations and defraud the US by impeding OFAC in its application and enforcement of US sanctions and embargo regulations.

On 10 May 2010, the US Department of Justice announced that the former ABN AMRO Bank, N.V. (now the Royal Bank of Scotland, N.V.) agreed to forfeit US\$500mio to the US Treasury. The bank was charged with a single count of violating the Bank Secrecy Act and one count of conspiring to defraud the US and violated the International Emergency Economic Power Act (IEEPA) and the Trading with the Enemy Act (TWEA). The IEEPA and TWEA are two of several laws underlying the sanctions administered by the US Treasury's Office of Foreign Assets Control (OFAC). The forfeiture was part of a deferred prosecution agreement, also filed on 10 May 2010.

According to court documents, the bank stripped information from funds transfer instructions and other transactions to disguise involvement of OFAC-sanctioned parties or to facilitate OFAC-prohibited transactions, and deliberately ignored its [OFAC and BSA] compliance obligations. From approximately 1995 and continuing through December 2005, certain offices, branches, affiliates and subsidiaries of ABN removed or altered names and references to sanctioned countries

from payment messages. ABN implemented procedures and a special manual queue to flag payments involving sanctioned countries so that ABN could amend any problematic text and it added instructions to payment manuals on how to process transactions with these countries in order to circumvent the laws of the US. Despite the institution of improved controls by ABN and its subsidiaries and affiliates after 2005, a limited number of additional transactions involving sanctioned countries occurred from 2006 through 2007.

ABN AMRO used similar stripping procedures when processing US dollar cheques, traveller's cheques, letters of credit and foreign exchange transactions related to sanctioned countries. ABN and the sanctioned entities knew and discussed the fact that, without such alterations, amendments and code words, the automated OFAC filters at banks in the US would likely halt the payment messages and other transactions, and, in many cases, the banks would reject or block the sanctions-related transactions and report the same to OFAC. By removing or altering material information, these payments and other transactions would pass undetected through filters at US financial institutions. This scheme allowed US sanctioned countries and entities to move hundreds of millions of dollars through the US financial system.

The BSA violations involved the failure of the New York branch of ABN to maintain adequate AML procedures and processes. According to court documents, beginning as early as January 1998 and continuing until approximately December 2005, ABN's New York branch office wilfully failed to establish an adequate AML programme. The office did not have adequate staffing, training and oversight, which permitted multiple high-risk shell companies and foreign financial institutions to use the bank to launder money through the US. More than US\$3.2bio involving shell companies and high risk transactions with foreign financial institutions flowed through ABN's New York branch. ABN also admitted it failed to maintain proper documentation regarding its customers or maintain readily available documentation about its high risk clients.

The DoJ has recommended dismissal of the criminal information filing after one year, based on the bank's remedial actions since 2005, previous penalties and consent agreements (see information on a 2005 ABN Amro penalty, earlier). The DPA was extended to December 31, 2011 to allow RBS more time to comply with the obligations and then the DPA was ended on that same date.

Special Focus 18 Wachovia Bank

2010 - US\$160mio (US\$110mio Forfeiture/CMP; US\$50mio CMP; C&D)¹⁰⁹⁻¹¹²

Agencies: FinCEN, DoJ, OC

Wachovia, founded in 1879, was the sixth-largest American bank in 2008. Facing US\$26bio in losses from subprime mortgage loans, it was acquired by San Francisco-based Wells Fargo, which dates back even further to 1852, for US\$12.7bio, creating the largest network of bank branches in the US. Not only did Wells Fargo have to clean up Wachovia's battered balance sheet but it also had to clean up Wachovia's business with Mexican money changes and improve its money laundering compliance.

In March of 2010, Wachovia agreed to a Deferred Prosecution Agreement with forfeiture (US\$110mio in identified Mexican drug monies) and penalties (US\$50mio Federal penalties) totaling US\$160mio. From May 1, 2004 - May 31, 2007, US\$373bio in wire transfers were received from the currency exchanges destined for Wachovia accounts, with more than US\$4bio of that in bulk cash.

The charge sheet against Wachovia states it was "the largest violation of the Bank Secrecy Act, an anti-money laundering law, in US history." In particular, the AML programme at Wachovia was found materially deficient in three of the four core elements required by the BSA. The bank failed to: establish and implement effective internal policies, procedures and controls; designate personnel to ensure day-to-day compliance; and implement an effective independent audit function to test programmes with respect to the BSA, particularly the suspicious activity reporting requirements. Wachovia and its executives avoided criminal prosecution in return for the US\$160mio payment and significant improvements in its AML programme within 12 months of the Agreement. At the time of the charges, Wachovia had already ended its relationships with foreign currency exchange houses in 2008 and said in a statement that it had begun adopting a more robust AML programme including hiring a new chief compliance officer and a BSA officer, as well as training employees and monitoring suspicious transactions with high-risk countries.

Wachovia had a well established Casa de Cambio client base from Mexico from the 1990s onwards inherited from First Union, which was merged into Wachovia

in 2002. Still Wachovia then expanded its Mexican Casa de Cambio business, for example, by acquiring the existing business from Union Bank of California which had ironically decided to close its own casa de cambio business after itself entering into a DPA with the US government on charges of failing to maintain an effective AML programme when US\$22mio in drug proceeds were identified as flowing through Mexican exchange-house, Ribadeo Casa de Cambio at Union Bank of California. Union Bank of California, a unit of San Francisco-based UnionBanCal, agreed to pay US\$31.6mio in fines and penalties (see above). Wachovia also hired a former UBOC manager who previously supervised the CDC accounts and he helped Wachovia's Miami branch to set up the structure of wire transfers. This increase in business with Mexican Casas de Cambio came despite known money laundering concerns, for example, in addition to the Union Bank of California DPA, the US government highlighted in 2005 nine casas that helped the Arellano Felix Drug Cartel to launder US\$120mio. In fact, the US government have been warning since 1996 that Mexican currency exchanges were laundering drug money through US banks. It also came at a time when many other US banks were exiting or placing restrictions on their business with Mexican and indeed more broadly Latin American Casas de Cambio.

Their acceptance of this type of business, knowing it to be higher risk should have raised alarm bells at Wachovia and at the very least money laundering controls should have been enhanced and commensurate with the risk. The failure to heed warnings from experienced Compliance Officers within the Organisation, both in London and in Miami was an expensive and dangerous error. One problematic Mexican Casa de Cambio was Casa de Cambio Puebla (see Cases in Part 2, Section 7) which would also feature in the later case of HSBC (see later in this section - 2012).

Wachovia admitted it did not do enough to spot illicit funds in its handling of US\$378bio for Mexican-currency-exchange houses from 2004 to 2007. Whilst it is not suggested that these hundreds of billions of dollars were the proceeds of drug trafficking, in fact according to the DPA the only monies forfeited were US\$110mio, it is nevertheless such a large sum, equaling almost the annual GDP of Mexico that the suggestion must be that a great deal more than US\$110mio was in fact laundered drug monies though how much this may be is impossible to say. In processing such large sums, Wachovia should have questioned whether the size of the business was commensurate and compatible with the legitimate activity performed by Casas de Cambio.

For example, Casas de Cambio play an important role in processing remittance payments though these funds usually are directed from the US to Mexico and according to the UN are approximately only US\$8bio per year.

Following the Wells Fargo acquisition and in public statements made, Wells Fargo invested US\$42mio over three years to improve its AML programme. The bank also stated, "We have substantially increased the caliber and number of staff in our international investigations group, and we also have significantly upgraded the monitoring software."

Financial Institutions, no matter the size, will be held accountable for allowing the laundering of illegal proceeds through the US banking system. It is imperative that banks maintain a robust AML programme and policies and procedures to identify possible illegal activity. More in depth due diligence by Wachovia would have identified the source of funds flowing through the Wachovia accounts from the Mexican currency exchanges and questioned the reason for bulk cash deposits that exceeded the customer's expected activity. Adequate AML monitoring and training would have captured numerous suspicious transactions such as round-number wire transfers on the same day for a single account and deposits of traveller's cheques with sequential numbers, that should have raised red flags. Failing to have this, however, caused Wachovia to act as a channel to launder money.

Special Focus 19 Barclays Bank

2010 – US\$298mio¹¹³⁻¹¹⁵

Agencies: DoJ DPA, OFAC, NYDA

In 2010, Barclays agreed to pay close to US\$298mio to US authorities, following allegations that it engaged in practices that prevented US banks from detecting 1,285 transactions involving Cuba, Iran, Libya, Burma and Sudan, transferring approximately US\$500mio through the US by altering payments to evade sanctions filters used by US banks. This was the first US fine of this magnitude where all of the apparent violations were voluntarily disclosed to enforcement authorities.

US authorities charged Barclays with intentionally routing payments for sanctioned parties through its own sundry accounts, disguising the originator. The use of the sundry account led Barclays' New York branch to believe that the payments was originating from Barclays.

A sundry account is a bank's internal suspense account generally used for recording miscellaneous items until an appropriate account entry is made.

Barclays created an internal process for altering payment messages that would otherwise have alerted US financial institutions about the true origins of the funds. Beginning in 1987, Barclays received a request from an Iranian bank not to mention its name on a payment message destined for the US. Barclays converted this request into a process of preparing payment messages without mentioning the name of the client.

Barclays' payment operations manual contained instructions on how to process payments for sanctioned bank clients. The manual instructed that the transfer should be formatted as a cover payment using an MT202 message with no mention of the sanctioned client. The manual also directed operations personnel to seek special routing instructions for US dollar transactions involving clients that were sanctioned by the US.

Payments stopped in Barclays' sanctions filters would either be 1) returned to the remitting bank indicating which words had to be removed from the message to bypass filters, 2) converting a serial MT103 message to a cover payment requiring an MT202 format that hid the underlying transaction parties, or 3) stripping or altering the information triggering the filter.

Most banks use a screening filter to check incoming and outgoing payments for sanctioned countries or references to sanctioned parties. Barclays' UK office employed a filter for screening only those MT202s headed for the US, and not the corresponding MT 103s that described the underlying transaction but would not be routed through the US.

Barclays deliberately used the MT202 format instead of a serial MT103 to hide the underlying transaction information. One Barclays employee explained in an email:

"[W]e can get around (OFAC seizure) by sending only cover payments to US banks and then make MT103 direct to beneficiary's bank. The MT202 cover must not mention of (sic) the offending entity which could cause funds to be seized. A good example is Cuba which the US says we shouldn't do business with but we do."

An internal memo stated in a relevant part as follows: "Changing to different message types would be much more expensive to us. Moral risk exists if we carry on using cover payments but that is what the industry does.

I[n] M[y] H[umble] O[pinion] we should carry on using cover payments and accept that there is a risk of these being used on occasion to hide true beneficiaries (who may or may not be sanctioned individuals or entities)."

This quote reflected a misguided belief that no legal risk existed so long as the transactions were initiated from outside the US.

In 2006, senior management at Barclays learned that several cover payments involving sanctioned parties had been routed through the NY branch on purpose. They made a voluntary disclosure to US authorities immediately. The US Department of Justice and the Manhattan District Attorney's Office launched an investigation into Barclays' practices that lasted almost three years.

Barclays agreed in 2010 to pay a US\$298mio fine and enter into a Deferred Prosecution Agreement with US authorities. Barclays admitted to violating New York law by falsifying the records of US banks, and to wilfully violating US sanctions laws. Barclays transferred approximately US\$500mio in transactions violating US sanctions laws from 2000 to the end of 2006.

US authorities remarked that the fine Barclays received could have been greater, had Barclays not voluntarily disclosed the transactions. Additional mitigators included Barclays' cooperation, its own extensive review of transactions between 2000 and 2007, its creation of a new, enhanced sanctions policy and its voluntary exit of relationships with banks and other entities sanctioned by the US.

Deutsche Bank

2010: US\$553.6mio fine DPA in connection with the sale of fraudulent tax shelters¹¹⁶

Agency: US DOJ

Deutsche Bank AG, Germany's largest bank, admitted criminal wrongdoing and agreed to pay US\$553.6mio to avoid prosecution in the US over fraudulent tax shelters that generated US\$29bio in "bogus" tax losses. The settlement includes a US\$149mio civil penalty, the fees that Deutsche Bank generated from the shelters, and the taxes and penalties the Internal Revenue Service was unable to collect from taxpayers because of the misconduct, according to the agreement. From 1996 to 2002, "Deutsche Bank assisted high net worth US citizens, who, through 2005, reported approximately US\$29.3bio in bogus tax benefits on their tax returns," according to the agreement. "DB acknowledges that it was wrong and unlawful to have engaged in these

transactions and regrets having done so." As part of the settlement, Deutsche agreed to the appointment of an independent expert to ensure the bank doesn't use transactions to defraud the IRS again, according to the agreement. The bank said in a statement. "Deutsche Bank is pleased that this investigation, which concerned transactions that ceased more than eight years ago, has come to a resolution." Deutsche Bank admitted that it participated in 15 different shelters, including transactions called "BLPS," "FLIP" and "HOMER," in at least 1,300 deals for over 2,100 customers. As part of the agreement, Deutsche Bank admitted that it knew or should have known that its participation in the deals was meant to create the appearance of legitimate investment activity, even though their "primary purpose" was to avoid taxes. The bank also said it knew that documents falsely describing the transactions would be used by taxpayers and promoters of the shelters.

The settlement stems from a US probe into illegal tax shelters sold by accounting firm KPMG LLP. The US previously brought criminal charges against former KPMG executives, which were eventually dismissed in 2007 after the firm paid a US\$456mio fine. In addition, HVB Group agreed to pay US\$29.6mio to avoid prosecution on charges the Munich-based bank helped KPMG sell shelters. Criminal cases were also brought against numerous executives, with 17 ex-KPMG executives originally accused, with 3 of these convicted at trial. The US crackdown on illegal tax shelters also targeted Jenkens & Gilchrist, a Dallas-based law firm that once had 600 lawyers and which shut down after agreeing to pay millions of dollars to avoid prosecution for selling these illegal tax shelters. Executives at accounting firms BDO Seidman and Ernst & Young were also convicted of selling illegal shelters to wealthy clients. The E&Y men had all been members of what E&Y originally called its "VIPER" Group (for "Value Ideas Produce Extraordinary Results") and later renamed the "Strategic Individual Solutions Group". Ernst & Young for itself agreed to pay US\$123mio and admitted to wrongful conduct by some of its partners and employees in connection with the firm's participation, from 1999 to 2004, in the promotion of abusive tax shelters to rich individuals. BDO paid US\$50mio.

Pamrapo Savings Bank

2010: US\$6mio - US\$5mio CMP satisfied by Forfeiture and US\$1mio Fincen fine and guilty plea for BSA violations¹¹⁷⁻¹¹⁹

Agencies: DoJ; FDIC; OTS and AG/NJ & Fincen

Pamrapo Savings Bank S.L.A., a wholly-owned subsidiary of Pamrapo Bancorp Inc., pleaded guilty to conspiracy to violate the Bank Secrecy Act and has

agreed to forfeit US\$5mio to the US government. It was also fined US\$1mio for BSA violations by FinCEN. According to the criminal information filed in US District Court in Trenton, N.J., Pamrapo Savings Bank conspired with others to conceal its customers' illegal or suspicious activities by failing to file currency transaction reports (CTR) and suspicious activity reports (SAR) and by wilfully failing to maintain adequate anti-money laundering programmes.

Pamrapo Savings Bank admitted that it wilfully violated the Bank Secrecy Act to avoid the expenses associated with compliance, despite federal and state banking regulators telling Pamrapo Savings Bank as early as 2004 that its Bank Secrecy Act and anti-money laundering programmes contained serious and systemic deficiencies in critical areas required under the law. Specifically, Pamrapo Savings Bank admitted during its guilty plea that it unlawfully failed to file CTRs and SARs related to approximately US\$35mio in illegal and suspicious financial transactions, including more than US\$5mio in structured currency transactions. The bank acknowledged that its wilful failure to maintain adequate Bank Secrecy Act and anti-money laundering programmes resulted in numerous and repeated violations of the law. In one specific example outlined in court documents, from approximately March 2005 to September 2006, a co-conspirator cashed approximately 586 cheques worth a total of US\$3.2mio, payable to "cash" at multiple branches of Pamrapo Savings Bank. Each cheque was under US\$10,000, thus structured to evade the bank's obligation to file CTRs. Ultimately, according to the court documents, Pamrapo Savings Bank wilfully failed to file a SAR related to these known and repeated violations of the Bank Secrecy Act. In addition, Pamrapo Savings Bank admitted that it made false and misleading statements to bank regulators to prevent regulatory oversight and enforcement of its deficient Bank Secrecy Act compliance programmes.

Special Focus 20 Goldman Sachs & GS International

**2010 - US\$591.5mio / £17.5mio, US\$550mio CMP/
Disgorgement US\$15mio¹²⁰⁻¹²³**

Agencies: FSA, SEC

Goldman Sachs Corp (GSC) agreed to pay US\$550mio and US\$15mio disgorgement to the SEC with regards to their Abacus programme. The Abacus programme refers to a synthetic collateralised debt obligation deal,

during which the SEC alleged that GSC and Fabrice Tourre made 'materially misleading statements and omissions'. The Abacus deal allowed GSC to sell short positions, but also to carry out its own shorts at the same time. Under particular scrutiny was the Abacus deal GSC constructed for John Paulson, acting on behalf of his hedge fund Paulson & Co. Inc., who approached GSC with the request that they set up a deal that allowed the hedge fund to short multiple RMBS securities. Email evidence, in particular those of Fabrice Tourre (employed on the Correlation Trading Desk), revealed that GSC was fully aware Paulson sought an investment that would perform poorly, thus allowing him to profit from the short position, at the expense of long investors. GSC's function in the deal was as an agent and administrator, taking fees for its services rather than a stake in the investment. Whilst criminal charges against Tourre failed, civil charges against him filed by the SEC succeeded and the court levied a fine of US\$825,000 against him.

On 9 September 2010, the Financial Services Authority (FSA) fined Goldman Sachs International (GSI) £17.5mio (US\$26.5mio) for its breach of FSA principles, in particular its failure to introduce systems and controls ensuring compliance with UK reporting regulations. GSI was found guilty of failing to report information relevant to the investigation launched by the US Securities Exchange Commission (SEC) into the Abacus 2007-ACI synthetic collateralised debt obligation. The Abacus product was structured by GSI's US counterpart, Goldman Sachs & Co. (GSC). As a result of the SEC investigation, GSC and Fabrice Tourre were issued Wells Notices containing allegations of serious violations of US securities law in respect to Abacus. GSI then failed to comply with FSA Principle 11, under which the FSA must be notified of any Wells Notices. In July of 2010, Margaret Cole, managing director of enforcement and financial crime, concluded that 'GSI did not set out to hide anything, but its defective systems and controls meant that the level and quality of its communications with the FSA fell far below what we expect of an authorised firm'.

Trillium Capital

2010 – US\$1mio fine, \$173,000 Disgorgement^{124/125}

Agency: FINRA

Trillium Capital, a high frequency trading firm in New York, was fined by FINRA for quote stuffing and market manipulation. The fine of US\$1mio is the first of a high frequency trading firm ever to be charged with using an illicit high frequency trading strategy. HFT firms have been suspected of manipulative practices for years, but no one has ever been able to prove anything.

FINRA alleged that Trillium, through nine proprietary traders, entered numerous layered, non-bona fide market moving orders to generate selling or buying interest in specific stocks. By entering the non-bona fide orders, often in substantial size relative to a stock's overall legitimate pending order volume, Trillium traders created a false appearance of buy or sell-side pressure. This trading strategy induced other market participants to enter orders to execute against limit orders previously entered by the Trillium traders. Once their orders were filled, the Trillium traders would then immediately cancel orders that had only been designed to create the false appearance of market activity. As a result of this improper high frequency trading strategy, Trillium's traders obtained advantageous prices that otherwise would not have been available to them on 46,000 occasions. Fines and suspensions were also handed out to the traders involved, the highest for John J Raffaele: US\$220,000 fine, US\$78,245 in disgorgement, and a two-year suspension and for the Chief Compliance Officer, Rosemarie Johnson: US\$50,000 fine, and a one-year suspension.

Royal Bank of Scotland

2010 - £5.6mio CMP¹²⁶

Agencies: UK FSA

In August 2010, the UK FSA levied one of its largest fines of £5.6mio (US\$8.5mio) to date on the RBS Group for not having controls in place between December 2007 and December 2008 for screening customers and transactions against an HM Treasury sanctions list, creating the risk of facilitating terrorist financing.

Special Focus 21 Merrill Lynch

2011 - US\$10mio penalty, C&D^{127/128}

Agency: SEC

Merrill Lynch was fined US\$10mio to settle charges brought by the SEC who accused the firm of misusing customers' order data to make trades for its own account and for failing to disclose trading fees. The firm's equity strategy desk improperly obtained details of trades the firm's institutional clients were making and placed the same trades for its own account, the SEC said. "Investors have the right to expect that their brokers won't misuse their order information," said Scott W Friestad of the SEC's Division of Enforcement. "The conduct here was clearly inappropriate. Merrill's proprietary traders had improper access to information about the firm's

customer orders, and misused it to place trades on the firm's behalf."

Between February 2003 and February 2005, Merrill operated a proprietary trading desk, known as the Equity Strategy Desk ("the ESD"), which traded securities solely for the firm's own benefit and had no role in executing customer orders. The ESD was located on Merrill's equity trading floor in New York City, where traders on Merrill's market making desk received and executed orders for Merrill's institutional customers. While Merrill represented to customers that their order information would be maintained on a strict need-to-know basis, Merrill's ESD traders obtained information about institutional customer orders from traders on the market making desk and used it to place trades on Merrill's behalf. In doing so, Merrill misused this information and acted contrary to its representations to customers.

Between 2002 and 2007, Merrill had agreements with certain institutional and high net worth customers that Merrill would charge only a commission equivalent for executing riskless principal trades. In certain instances in which Merrill had these arrangements, Merrill also charged customers, in addition to a commission equivalent, undisclosed mark-ups and mark-downs by filling customer orders at prices less favorable to the customer than the prices at which Merrill purchased or sold the securities in the market. This charging of undisclosed mark-ups and mark-downs was improper and contrary to the agreements the firm had with its customers.

Ocean Bank

2011 - US\$10.9mio CMP , \$10.9mio Forfeiture, DPA¹²⁹⁻¹³³

Agencies: FinCEN, FDIC, FL Office of Financial Regulation, DoJ

On August 22, 2011, FinCEN, the FDIC and the FL Office of Financial Regulation (OFR) issued a joint press release announcing Orders for the assessment of concurrent civil money penalties of \$10.9 million against Ocean Bank, Miami, Florida, for violations of federal and state Bank Secrecy Act (BSA) and anti-money (AML) laundering laws and regulations. Ocean Bank, without admitting or denying the allegations, consented to payment of the civil money penalties, which was satisfied by a single payment to the US Government. "The Bank failed to recognise and mitigate risks and report transaction activity often associated with money laundering involving direct foreign account relationships in high-risk jurisdictions, particularly Venezuela," noted then FinCEN Director

James H. Freis, Jr. "The Bank's failure to respond to such risk with commensurate systems and controls was both systemic and longstanding. The civil money penalties and forfeiture concludes joint investigations by FinCEN, the Drug Enforcement Administration, Internal Revenue Service-Criminal Investigation and the US Attorney's Office for the Southern District of Florida, and parallel examinations conducted by the Federal Deposit Insurance Corporation and the Florida Office of Financial Regulation."

Pacific National Bank

2011 - US\$7mio CMP¹³⁴⁻¹³⁶

Agencies: FinCEN, OCC

The OCC issued a Consent Order for a US\$7mio Civil Money Penalty against Pacific National Bank, Miami, FL. FinCEN had ordered a concurrent US\$7mio penalty (a single \$7 million payment will satisfy both penalty orders). The OCC had issued an earlier Consent Order against the bank in 2005, that the bank had failed to establish and maintain procedures reasonably designed to assure and monitor [its] compliance with the Bank Secrecy Act and that the bank had violated the OCC's SAR requirements and BSA compliance programme regulations. In an exam starting on March 25, 2009, the OCC determined that the bank continued to be in violation of the BSA and Treasury and OCC regulations. Similar violations were identified in a March 23, 2010 exam. Among the factors cited as causing the bank's failure to comply are (i) failure to recognise the risk inherent in foreign correspondent bank accounts and to adequately monitor transactions in light of that risk; (ii) inadequate staffing of the BSA department; (iii) failure to have adequate policies and procedures governing the foreign correspondent bank accounts; and (iv) inadequate collection and analysis of customer due diligence and enhanced due diligence information. In the exams, the OCC found that the bank failed to: develop and implement an effective risk assessment programme; ensure that sufficient and qualified Bank resources were available to effectively manage the BSA/anti-money laundering risk, comply with applicable laws and regulations, correct violations, and remediate other deficiencies addressed in the 2005 BSA Order in a timely manner; implement adequate policies, practices, procedures and internal controls for conducting customer due diligence and enhanced due diligence; implement effective policies, procedures, and internal controls to ensure effective monitoring, customer due diligence, and enhanced due diligence pertaining to the Bank's foreign correspondent bank accounts; implement appropriate procedures for identifying, monitoring and reporting suspicious activity; identify and report suspicious activity involving

foreign correspondent bank accounts; file suspicious activity reports and report ongoing suspicious activity in a timely manner; ensure that adequate and timely independent audits were conducted and that full audit reports issued; and identify and monitor suspicious activity in the bank's bill payment systems.

Zions First National Bank

2011 - US\$8mio CMP^{137/138}

Agencies: OCC, FinCEN

Zion's First National Bank is headquartered in Salt Lake City, Utah, with 148 offices in Utah. On February 11, 2011, the OCC and FinCEN each announced the issuance of concurrent consent orders for the assessment of US\$8mio civil money penalties. The two CMPs were satisfied by a single payment of US\$8mio. The OCC Consent Order focuses on activity of Zion's former foreign correspondent business, which was wound down in 2008. The following is excerpted from the FinCEN Order: "Zions utilised RDC to process certain deposit items from its non-US correspondent accounts. RDC, a deposit-transaction delivery system, allows a financial institution to receive digital information from deposit documents captured at remote locations such as financial institution branches, ATMs, domestic and foreign correspondents, or locations owned or controlled by commercial or retail customers of the financial institution. In substance, RDC is similar to traditional deposit-delivery systems at financial institutions. However, RDC enables customers of financial institutions to deposit items electronically from locations globally. RDC introduces additional risks beyond traditional deposit-delivery systems because it enables a bank's customers to scan a cheque or monetary instrument and then send the scanned or digitized image to the financial institution without the need for face-to-face transactions. This change in the interaction process for executing such transactions raises several challenges, including but not limited to: (i) the difficulty of determining in what jurisdiction the equipment is being used and by whom; (ii) development of internal controls to ensure transaction data and check images are not altered; and (iii) implementation of monitoring by qualified personnel for potentially fraudulent, sequentially numbered or altered money orders or traveller's cheques."

Mizrahi Tefahot Bank

2011 - US\$350,000 CMP^{139/140}

Agencies: FDIC, CA DFI

Mizrahi Tefahot Bank, Ltd. is chartered as a US branch of an Israeli foreign institution. It has one office, in Los Angeles, CA. On January 31, 2011, the FDIC and the

California Department of Financial Institutions (DFI) issued the bank a US\$350,000 CMP Order, half to be paid to the US Treasury and half to the DFI. The Order states that the agencies believe that from at least 2007 through 2009, the bank lacked an adequate programme to monitor, analyze, and report suspicious activity. In addition, the FDIC and the DFI have determined that Mizrahi failed to comply with an August 27, 2008 Consent Order issued by the FDIC and the DFI.

JP Morgan Chase Bank
2011 – US\$88.3mio fine^{141/142}

Agency: OFAC

In 2011, OFAC announced a US\$88.3mio fine against US-based JP Morgan Chase Bank, N.A (JPMC) for a collection of violations of various OFAC sanctions restrictions over a 5 and a half year period. OFAC determined that certain of JPMC's violations were egregious, including the following: failing to disclose to US authorities the fact that it processed 1,711 wire transfers involving Cuban nationals between December 12, 2005 and March 31, 2006, totaling approximately US\$178.5mio; failing to respond adequately to an OFAC administrative subpoena about its extension of a trade loan valued at US\$2.9mio to the bank issuer of a letter of credit in which the underlying transaction involved a blocked vessel connected to Iran; and failing to produce responsive documents to an OFAC administrative subpoena regarding wire transfers referencing Khartoum, Sudan. Other violations determined non-egregious by OFAC included the following: advice and confirmation of a US\$2.7mio letter of credit in which the underlying transaction involved a vessel affiliated with Iran; advice and confirmation of a US\$79,308 letter of credit involving goods destined for Sudan; and transfer of 32,000 ounces of gold bullion valued at US\$20mio to the benefit of a bank in Iran. While OFAC halved the proposed penalty of US\$178mio because of JPMC's cooperation, it also determined that JPMC recklessly failed to exercise a minimal degree of caution or care regarding its sanctions obligations. This determination was made despite the fact that JPMC had conducted investigations and made voluntary disclosures in certain cases. The aggravating factors in JPMC's case included delays in making voluntary disclosures of violations and incomplete responses to government subpoenas. JPMC's conduct did not involve systematic evasion efforts, such as "payment stripping", that formed the basis of enormous fines in years past against non-US institutions like ABN Amro, Lloyds, Credit Suisse, and Barclays. The common thread through those actions was each institution's mistaken belief that they were acting outside of US jurisdiction and beyond the risk of fines and penalties.

Deutsche Securities Korea
2011 - KRW1bio (US\$884,000)¹⁴⁴
Agency: Korea Exchange, Financial Supervisory Service

Deutsche Securities Korea was fined KRW1bio (US\$884,000) for market manipulation around the KOSPI200 stocks and derivatives trading on 11 November 2010 ("11.11 option shock"), a KOSPI200 options' expiry date. This is the highest fine by the Korea Exchange (KRX) ever imposed against a brokerage firm for market abuse and three employees involved were heavily sanctioned. According to investigation results, Deutsche sold KRW2.4424 trillion (US\$ 2.2bio) worth of stocks listed in the KOSPI200, which they had purchased through index arbitrage trading, in the last ten minutes before the market close. Due to the massive manipulative orders, KOSPI200 index plunged 2.78% and they gained illegal profit of KRW44.87bio (US\$40.5mio) from the trading. The actions have been dubbed "option terrorism".

Lebanese Commercial Bank
2011¹⁴⁵
Agency: FINCEN - US\$102 mio forfeiture

US authorities (Fincen) designated (actually proposed to designate though in effect has the same effect) Lebanese Commercial Bank (LCB) a financial institution of primary money laundering concern (under the US Paytrot Act) and froze LCB assets of US\$150mio held in the correspondent Bank of another Lebanese Bank, ultimately leading to the forfeiture of US\$102mio following an agreement reached. The US Government alleged that from approximately January 2007 to early 2011, at least US\$329mio was transferred by wire transfer from LCB and other financial institutions, primarily two Lebanese money exchange houses, to the US for the purchase of used cars that were then shipped to West Africa. Cash from the sale of the cars, along with the proceeds of narcotics trafficking, were funneled to Lebanon through Hezbollah-controlled money laundering channels. LCB played a key role in these money laundering channels and conducted business with a number of Hezbollah-related entities. Hezbollah is a US Department of State designated Foreign Terrorist Organisation, a Specially Designated Terrorist, and a Specially Designated Global Terrorist. Following the FinCEN action, another Lebanese financial institution, Société Générale de Banque au Liban acquired most of the assets of LCB. In addition, a second agreement was reached in June 2013, regarding claims against the Hassan Ayash Exchange Company ("Ayash"), one of the Lebanese money exchange houses allegedly involved in the money laundering scheme.

Under this settlement, Ayash agreed to forfeit more than US\$720,000 to the US government.

Turkish Bank (UK)
2012 - £294,000¹⁴⁶
Agency: UK FSA

The Financial Services Authority said it fined the Northern Cyprus-headquartered bank £294,000 for AML failures after a previous warning. This is only the second time that the FSA has fined a bank at that time under anti-money laundering regulations that came into force in 2007, following the £5.6mio penalty levied on the Royal Bank of Scotland in 2010 for not having tight enough controls to guard against payments from sanctioned parties (see above). Turkish Bank did not properly vet clearing and payment services offered to nine banks in Turkey and six based in Northern Cyprus between 2007 and 2010, leading to £114.5mio flowing through accounts that were insufficiently checked, the FSA said, adding that Turkish Bank did not keep proper records. UK banks are meant to undertake more stringent research on lenders based outside the European Economic Area to which they provide correspondent services. The fine follows a review of the banking sector by the FSA, when it found that about a third of the banks it studied dismissed serious allegations about customers without sufficient due diligence. This prompted the regulator to put banks on notice a year ago that it would step up its examination of their AML controls. "Turkish Bank fell far short of the standards we expect of firms in managing their money laundering risks. This was despite clear warnings from the FSA that it needed to improve," said Tracey McDermott, acting director of the agency's financial crime and enforcement division. "Turkish Bank's correspondent banking business made it particularly vulnerable to money laundering risks and its failings exposed UK financial services to the possibility that money could be laundered through the UK." Turkish Bank settled with the FSA, which lowered a fine that otherwise would have been more than £400,000. "This was a painful experience and we have now tidied up our act," Bob Long, the bank's managing director, told the Financial Times. "We were not deliberate or reckless, and no actual money laundering was detected in our subsequent review; it's simply that our procedures were not up to scratch."

Mizrahi-Tefahot Bank
2012 - NIS3.8mio (US\$974,000)¹⁴⁷
Agency: Bank of Israel

The Israeli Banking Corporations Sanctions Committee regarding the Prohibition on Money Laundering

and Terror Financing decided on September 19, 2012 to impose a financial sanction of NIS3.8mio (US\$974,000) on Mizrahi-Tefahot Bank Ltd. (Mizrahi) for infringing the banking directives on the Prohibition on Money Laundering Law, 2000. The infringements and faults are based on the findings in the report of an examination by the Banking Supervision Department carried out in 2007–10. The examination report findings indicated several infringements which led to the financial sanction. Most of the infringements derived from improper preparation by Mizrahi, primarily of the following types of issues: Management of accounts for lawyers without obtaining an appropriate declaration on the beneficiary; Failure to report unusual transactions; Deficiencies and faults in information transferred to the Israel Money Laundering and Terror Financing Prohibition Authority; Failure to take adequate actions to obtain declarations on beneficiaries in accounts opened, in accordance with the MLO. Mizrahi did not make carrying out a transaction contingent on obtaining the declaration on beneficiaries, despite the fact that the customer was in the branch; Notably late submission of reports to the Israel Money Laundering and Terror Financing Prohibition Authority. In its decision, the Committee took into account Mizrahi's actions to rectify the above faults.

Coutts & Company (RBS Group)
2012 - £8.75mio (US\$13.25mio) CMP¹⁴⁸
Agency: UK FSA

The UK Financial Services Authority (FSA) fined Coutts & Company (Coutts) £8.75mio for failing to take reasonable care to establish and maintain effective anti-money laundering (AML) systems and controls relating to high risk customers, including Politically Exposed Persons (PEPs). The failings at Coutts were serious, systemic and were allowed to persist for almost three years. They resulted in an unacceptable risk of Coutts handling the proceeds of crime. In October 2010, the FSA visited Coutts as part of its thematic review into banks' management of high money laundering risk situations. Following that visit, the FSA's investigation identified that Coutts did not apply robust controls when starting relationships with high risk customers and did not consistently apply appropriate monitoring of those high risk relationships. In addition, the FSA determined that the AML team at Coutts failed to provide an appropriate level of scrutiny and challenge. The FSA identified deficiencies in nearly three quarters of the PEP and high risk customer files reviewed. Tracey McDermott, acting director of enforcement and financial crime, said: "Coutts' failings were significant, widespread and unacceptable. Its conduct fell well below the standards we expect and the size of the financial penalty demonstrates how seriously we view its failures. "Coutts was expanding its customer base which in-

creased the number of high risk customer relationships. The regulatory environment in relation to financial crime had also changed. It is therefore particularly disappointing that Coutts failed to take appropriate steps to manage its AML risks. This penalty should serve as a warning to other firms that, not only should they ensure they constantly review and adapt their controls to changing financial crime risks within their businesses, but that they must also make changes to reflect changing regulatory or other legal standards.¹⁵³ As a result of the FSA's review, a number of improvements and recommendations have already been, or are being, implemented. These include significant remedial amendments to PEP and other high risk customer files to ensure that appropriate due diligence information about Coutts' customers has been assessed and recorded. Coutts agreed to settle at an early stage and therefore qualified for a 30% discount. Were it not for this discount, the FSA would have imposed a financial penalty of £12.5mio. Specifically, in one or more of each inadequate file Coutts failed to: gather sufficient information to establish the source of wealth and source of funds of its prospective PEP and other high risk customers; identify and/or assess adverse intelligence about prospective and existing high risk customers properly and take appropriate steps in relation to such intelligence; keep the information held on its existing PEP and other high risk customers up-to-date; and scrutinise transactions made through PEP and other high risk customer accounts appropriately.

Habib Bank

2012 - £525,000 CMP¹⁴⁹

Agency - UK FSA

Habib Bank, a Swiss bank of Pakistani parentage was fined by the UK FSA £525,000 alongside its former money laundering reporting officer Syed Itrat Hussain who was fined £17,500 for failures in setting up adequate AML systems and controls. The failings at Habib happened between 2007 and 2010, and exposed the firm to an "unacceptable risk" of money laundering. The FSA says Habib failed to set up and maintain adequate controls for assessing the level of money laundering risk posed by its customers. Habib maintained a high risk country list but this excluded certain high risk countries on the basis that it had group offices in them. The bank also failed to carry out appropriate due diligence on higher risk customers. In two-thirds of the 68 customer files it reviewed, the FSA found instances where the account had been inappropriately classified as normal risk, insufficient information or supporting evidence had been gathered, and/or enhanced due diligence had not been carried out ahead of transactions on the account. FSA acting director of enforcement and financial crime Tracey McDermott says: "Habib's failings were unacceptable. Habib's belief that local knowledge of a country through a group office mitigated the higher money laundering risk posed by that country was entirely misconceived. "It is critical that money laundering

reporting officers properly evaluate, on an ongoing basis, the adequacy and effectiveness of the anti-money laundering systems and controls which they are responsible for. Where individuals fail to meet their regulatory responsibilities we will not hesitate to take action."

Special Focus 22

HSBC

2012 - US\$1.96bio - US\$1.256bio Forfeiture (incl US\$375 to OFAC) / DPA, \$US665 civil penalties (US\$500mio to OCC; US\$165mio to FED)/ US\$41.8mio by Mexican Regulators¹⁵⁰⁻¹⁵⁴

Agencies: DoJ, OFAC, OCC, Fed, FinCEN, DANY

In December 2012, HSBC Bank USA, N.A. (HSBC US) and HSBC Holdings plc (together, HSBC) agreed to forfeit US\$1.256bio and enter into a Deferred Prosecution Agreement with the Justice Department for HSBC's violations of the Bank Secrecy Act (BSA), the International Emergency Economic Powers Act (IEEPA) and the Trading with the Enemy Act (TWEA). According to court documents, HSBC US violated the BSA by failing to maintain an effective AML programme and not conducting appropriate due diligence on various foreign account holders. The HSBC Group violated IEEPA and TWEA by illegally conducting transactions on behalf of customers in Cuba, Iran, Libya, Sudan and Burma – all countries that were subject to sanctions enforced by the Office of Foreign Assets Control (OFAC) at the time of the transactions. HSBC's DPA recognised the extensive remedial actions taken by HSBC and HSBC's agreement to continue to enhance its AML programmes and OFAC compliance. These actions included: 1) Resource Investment; 2) Organisation of AML Compliance Department; 3) Global Compliance Standards; 4) Global Responsibility for the Head of HSBC Group Compliance; 5) Global Risk Management; 6) Bonus Structure; 7) Termination of Risky Business; 8) Training and Procedures for Timely Notification of Red Flags; and 9) Due Diligence Requirements. Noteworthy among these provisions is the substantial compliance remediation efforts that HSBC performed prior to entering the DPA, including nearly ten-fold increases in compliance spending and staffing, exiting more than 100 business relationships for risk reasons, and undertaking a comprehensive overhaul of its compliance structure, controls, and procedures.

Furthermore it was announced that: Spending by HSBC Bank USA on staff allocated to AML compliance increased approximately nine-fold even before the entry of the DPA, and the Bank increased its number

of AML compliance staffing nearly ten-fold. The Bank also adopted a new automated monitoring system that monitors every wire transaction moving through the institution; HSBC Bank USA strengthened the compliance department's reporting lines and elevated its status within the Bank by (i) separating the Legal and Compliance departments, (ii) requiring that the AML compliance director report directly to the Chief Compliance Officer, and (iii) providing that the AML compliance director report directly to the Board and senior management about the status of the Bank's BSA and AML compliance programme on a regular basis; HSBC Group's remedial measures included adoption and implementation of global compliance standards, including applying the highest or most effective AML requirements for operations worldwide, and using OFAC's and other sanctions lists to conduct screening in all jurisdictions and in all currencies; HSBC Group centralized oversight of every compliance officer worldwide to ensure that both accountability and escalation flow directly to and from HSBC Group Compliance; the agreement identified a number of measures with regard to risk management, including implementing a new customer risk-rating methodology and the adoption of risk guidelines for considering business opportunities "in countries posing a particularly high corruption/rule of law risk" and limiting business in countries where there is a high risk of financial crime; HSBC Group changed its bonus structure for its senior executives to consider executives' fulfillment of its compliance standards and values; HSBC Bank USA terminated certain business relationships and exited the Banknote business, and HSBC Group sold subsidiaries and withdrew from nine countries by applying "a more consistent global risk appetite"; the agreement requires HSBC to implement specific procedures and training to ensure the compliance officers responsible for sanctions are promptly made aware of requests or attempts to withhold or change identifying information that may reflect an effort to evade US sanctions laws; The agreement requires HSBC to implement more robust risk-based AML and BSA procedures for conducting due diligence of potential new business entities in connection with mergers and acquisitions, including by involving audit, compliance, and legal personnel in the due diligence process.

In addition to forfeiting US\$1.256bio as part of its DPA, HSBC also agreed to pay US\$665mio in civil penalties – US\$500mio to the OCC and US\$165mio to the Federal Reserve – for its AML programme violations. The OCC penalty also satisfies a US\$500mio civil penalty to FinCEN. The bank's US\$375mio settlement agreement with OFAC is

satisfied by the forfeiture to DoJ.

As required by the DPA, HSBC also has committed to undertake enhanced AML and other compliance obligations and structural changes within its entire global operations to prevent a repeat of the conduct that led to this prosecution. HSBC has replaced almost all of its senior management, "clawed back" deferred compensation bonuses given to its most senior AML and compliance officers, and has agreed to partially defer bonus compensation for its most senior executives – its group general managers and group managing directors – during the period of the five-year DPA. In addition to these measures, HSBC has made significant changes in its management structure and AML compliance functions that increase the accountability of its most senior executives for AML compliance failures.

According to court documents, from 2006 to 2010, HSBC Bank USA severely understaffed its AML compliance function and failed to implement an anti-money laundering programme capable of adequately monitoring suspicious transactions and activities from HSBC Group Affiliates, particularly HSBC Mexico, one of HSBC Bank USA's largest Mexican customers. This included a failure to monitor billions of dollars in purchases of physical US dollars, or "banknotes," from these affiliates. Despite evidence of serious money laundering risks associated with doing business in Mexico, from at least 2006 to 2009, HSBC Bank USA rated Mexico as "standard" risk, its lowest AML risk category. As a result, HSBC Bank USA failed to monitor over US\$670bio in wire transfers and over US\$9.4bio in purchases of physical US dollars from HSBC Mexico during this period, when HSBC Mexico's own lax AML controls caused it to be the preferred financial institution for drug cartels and money launderers.

A significant portion of the laundered drug trafficking proceeds were involved in the Black Market Peso Exchange (BMPE), a complex money laundering system that is designed to move the proceeds from the sale of illegal drugs in the US to drug cartels outside of the US, often in Colombia. According to court documents, beginning in 2008, an investigation conducted by ICE Homeland Security Investigation's (HSI's) El Dorado Task Force, in conjunction with the US Attorney's Office for the Eastern District of New York, identified multiple HSBC Mexico accounts associated with BMPE activity and revealed that drug traffickers were depositing hundreds of thousands of dollars in bulk US currency each day into HSBC Mexico accounts. Since 2009, the investigation has resulted in the arrest, extradition, and conviction of numerous individuals

illegally using HSBC Mexico accounts in furtherance of BMPE activity.

As a result of HSBC Bank USA's AML failures, at least US\$881mio in drug trafficking proceeds – including proceeds of drug trafficking by the Sinaloa Cartel in Mexico and the Norte del Valle Cartel in Colombia – were laundered through HSBC Bank USA. HSBC Group admitted it did not inform HSBC Bank USA of significant AML deficiencies at HSBC Mexico, despite knowing of these problems and their effect on the potential flow of illicit funds through HSBC Bank USA.

According to court documents, from the mid-1990s through September 2006, HSBC Group allowed approximately US\$660mio in OFAC-prohibited transactions to be processed through US financial institutions, including HSBC Bank USA. HSBC Group followed instructions from sanctioned entities such as Iran, Cuba, Sudan, Libya and Burma, to omit their names from US dollar payment messages sent to HSBC Bank USA and other financial institutions located in the US. The bank also removed information identifying the countries from US dollar payment messages; deliberately used less-transparent payment messages, known as cover payments; and worked with at least one sanctioned entity to format payment messages, which prevented the bank's filters from blocking prohibited payments.

Specifically, beginning in the 1990s, HSBC Group affiliates worked with sanctioned entities to insert cautionary notes in payment messages including “care sanctioned country,” “do not mention our name in NY,” or “do not mention Iran.” HSBC Group became aware of this improper practice in 2000. In 2003, HSBC Group's head of compliance acknowledged that amending payment messages “could provide the basis for an action against [HSBC] Group for breach of sanctions.” Notwithstanding instructions from HSBC Group Compliance to terminate this practice, HSBC Group affiliates were permitted to engage in the practice for an additional three years through the granting of dispensations to HSBC Group policy.

Court documents show that as early as July 2001, HSBC Bank USA's chief compliance officer confronted HSBC Group's Head of Compliance on the issue of amending payments and was assured that “Group Compliance would not support blatant attempts to avoid sanctions, or actions which would place [HSBC Bank USA] in a potentially compromising position.” As early as July 2001, HSBC Bank USA told HSBC Group's head of compliance that it was concerned that the use of cover payments prevented HSBC Bank USA from confirming whether the underlying transactions

met OFAC requirements. From 2001 through 2006, HSBC Bank USA repeatedly told senior compliance officers at HSBC Group that it would not be able to properly screen sanctioned entity payments if payments were being sent using the cover method. These protests were ignored.

The US Senate's Permanent Subcommittee on Investigations held hearings in 2012 and released a 335-page report describing the bank's use of the US financial system to support Mexican drug cartels, terrorism supporters and Iran.

The report stated that HSBC marketed its New York payment operations to its global client base as a means for US dollar clearing, according to the report. HSBC affiliates operated in countries that included Mexico, Iran, the Cayman Islands, Saudi Arabia and Syria. Most of the USD payment transactions HSBC's US affiliate processed were for other HSBC affiliates, which were using the US affiliate almost exclusively for US dollar clearing.

For years, HSBC allowed non-US affiliates to omit or conceal information in US-bound transaction messages to evade the sanctions filter. To conceal the transactions, HSBC affiliates used a method called “stripping”, where references to Iran were deleted from records. HSBC affiliates also characterized the transactions as transfers between banks without disclosing the connection to Iran in what the Senate report called a “cover payment”. Between 2001 and 2007, more than 28,000 transactions were identified by an outside auditor for HSBC that potentially could have run afoul of laws that prohibit transactions with sanctioned countries. Of those, 25,000 involved Iran.

HSBC also provided global banking services, including US dollar clearing, to a Saudi-based Bank for decades despite evidence of the bank's relationship with global terrorist groups - the report said.

According to the report, the Saudi Bank was part of a network of Saudi-based banks and charities that funneled money to Al-Qaeda. In 2002, US agents searched the offices of a Saudi non-profit designated by the US as a terrorist organisation, Benevolence International Foundation. In that raid, agents uncovered a CD-ROM listing the names of financiers in Osama bin Laden's elite 'Golden Chain.' One of those names was a founder of a Saudi bank. The Golden Chain document is referenced by the 9-11 Commission's 2004 Report, media reports, US court filings and US Congressional hearings, though the Bank is not on any formal list and the Bank has denied all such allegations.

HSBC provided a wide range of banking services to the Saudi Bank, including wire transfers, trade finance, foreign exchange and asset management services. HSBC supplied large amounts of US\$ to the Saudi Bank through its US affiliate's Banknotes Department.

In 2005, HSBC's internal compliance officers asked that HSBC exit its relationship with the Saudi Bank. In 2005, US authorities sanctioned several Saudi organisations for terrorism support. These organisations were clients of the Saudi Bank but not the Saudi Bank. US investigations of one of the sanctioned organisations revealed that the organisation's senior officials cashed US\$130,000 in US travellers cheques at the Saudi Bank and used the money to support violent extremists in Chechnya. Some, but not all, HSBC employees acted to close accounts.

Four months later, HSBC officials reversed course, allowing affiliates to decide whether to continue to do business with the Saudi Bank. In late 2006, the Saudi Bank threatened to pull all of its business with HSBC unless it regained access to HSBC's bulk-cash transaction services. By the end of 2006, the relationship was completely reinstated, and HSBC continued to provide the bank with US dollars. HSBC agreed to continue to provide the bank bulk shipments of US dollars until 2010, when HSBC fully exited the bulk-cash business. In addition, at the Saudi Bank's request, HSBC expanded the relationship in January 2009, by authorising a Hong Kong office to supply the Saudi Bank with non-US currencies.

Additionally, the report described HSBC's provision of correspondent banking services to two other banks despite having information that both had alleged connections to terrorist groups through ownership.

UBS
2012 - US\$47.6mio¹⁵⁵
Agencies: UK FSA/FINMA

In November 2012, the UK FSA fined UBS £29.7mio (US\$47.6mio) for system and control failings that allowed Kweku Adoboli to cause over US\$2bio losses through unauthorized trading in London. The FSA Notice stated that, “UBS failed to take reasonable care to organise and control its affairs responsibly and effectively, with adequate risk management systems, and failed to conduct its business from the London Branch with due skill, care and diligence.” For more details of this case see Kweku Adoboli in Part 2 Section 7, Criminal Cases above

At the same time in November 2012, FINMA published its findings, concluding that serious failings existed

in UBS' risk management and control environment. FINMA's conclusions were largely based on the internal report commissioned by UBS following the revelation of Adoboli's off-book trades. Its findings and conclusions largely mirrored those of the FSA, although it did go further than the FSA in some respects. Specifically, FINMA in addition criticized the Bank for a failure to formalise and communicate the ETF desk's reporting lines. It also explicitly censured the bank's reward and recognition systems, noting that despite several breaches of the bank's compliance policies relating to personal account dealing and spread betting, and repeated failures to comply with the bank's control standards, Adoboli was nonetheless highly remunerated, thereby incentivising his risk-seeking behaviour.

This went further than the FSA who made no specific findings on the culture at UBS (although they did make some oblique references, including to a suggestion that as those working in the middle office aspired to front office roles, they were more inclined to facilitate rather than challenge traders).

FINMA prohibited UBS from engaging in any new business activities without prior authorisation from the Swiss regulator.

Wegelin & Co
2012 - US\$58mio (forfeit) - shut down¹⁵⁶
Agency: DoJ

Wegelin & Co. was indicted in January 2012 on criminal charges alleging that the bank assisted wealthy Americans with concealing more than \$1.2 bio in secret accounts overseas. The charges against Wegelin were a superseding indictment of three Wegelin bankers on 3 January 2012 who were charged with fraud and conspiracy; and the indictment was the first time US authorities charged a bank rather than individuals with helping Americans evade taxes. It was reported that the US government seized over US\$16mio from Wegelin's correspondent banking account. The indictment alleges that Wegelin's bankers prospected the US clients that UBS had exited when they stopped servicing undeclared Swiss accounts. On 3 January 2013, Wegelin pleaded guilty and admitted it had helped wealthy Americans to evade at least US\$20mio in taxes. At its sentencing on 4 March, 2013, the court ordered a US\$22.05mio fine and ordered US\$20mio in further restitution, on top of US\$16.3mio already recovered in April 2012 by seizing money in its US correspondent account. Wegelin told clients that since they did not have a presence in the US they were not as likely to face US law enforcement pressure. Also, as Switzerland's oldest bank, they had a long tradition of secrecy and their

undeclared accounts would not be disclosed to the US authorities. The charges offer insight on how Wegelin allegedly attempted to solicit business from the US clients leaving UBS, and how they could charge high fees due to the clients' fear of criminal prosecution. The indictment outlines how: Wegelin used a special code, "BNQ," on around 70 new US undeclared accounts that were opened in 2008 and 2009. It also sometimes opened accounts for US citizens who held passports from other countries, and opened the accounts relying on non-US passports. Wegelin recruited US clients through a website, www.SwissPrivateBank.com, that was run by an unidentified third party. The website boasted there that "Swiss bank secrecy is not lifted for tax evasion. Neither the Swiss government nor any other government can obtain information about your bank account." Wegelin gave accounts special names, including "Elvis" and "Limpopo Foundation." The charges detailed the bank's work for nearly three dozen American clients, known only as clients A through JJ and also used sham companies and foundations formed under the laws of Liechtenstein, Panama and Hong Kong to provide secrecy. Wegelin encouraged clients not to come forward to the US Internal Revenue Service and disclose their names in exchange for reduced penalties. Wegelin assisted two unnamed Swiss banks to repatriate undeclared funds to their own US taxpayer clients by issuing cheques drawn on, and executing wire transfers through, its US correspondent bank account. In doing so, the bank sometimes separated the transactions into batches of cheques or multiple wire transfers in amounts that were less than US\$10,000 and comingled with unrelated funds to reduce the risk that the IRS would detect the undeclared accounts.

Special Focus 23 ING Bank

2012 - US\$619mio CMP^{157/158}
Agencies: DoJ, OFAC

In June 2012, Dutch bank ING agreed to a US\$619mio settlement for violations of US sanctions laws - the largest settlement for US sanctions violations at that time. The settlement resolved a two-year investigation into ING's intentional manipulation and deletion of information about Cuba, Iran and other US sanctions targets in transactions routed through US banks between 2002 and 2007. This "stripping activity" involved more than 20,000 financial and trade transactions totaling more than US\$1.6 bio.

US court documents describe how ING profited by

courting business from sanctioned entities like Iran and Cuba. Its clients in Cuba included a range of people, from individuals who wanted to cash US travellers' cheques to government ministries. It also engaged in transactions with Iran's central bank and state-owned National Iranian Oil Co.

ING's Wholesale Banking Division created policies for removing references in US-bound payments to Cuba and other countries sanctioned by the US. It created payment processing manuals to instruct employees on this practice and reprimanded employees for failing to follow these procedures. Beginning in the 1990s, senior bank management instructed employees in Curacao to omit references to Cuba in payment messages sent to the US to prevent US banks from stopping the transactions. Payments stopping in ING's filter because of references to Cuba were then stripped of information. For documentary trade transactions, ING arranged with paying banks and clients for the use of codes in settlement instructions to hide the involvement of a Cuban party. Additionally, ING's Curacao office increasingly used a type of bank-to-bank payment message format, an MT202, to send Cuba-related payments to US banks. The MT202 SWIFT message format in use during this time was not structured to provide the underlying transaction's beneficiary and remitter information.

While ING's US offices were not involved, several of its other branches also engaged in removing, omitting or hiding information in US bound payments. In 2003, ING's Trade and Commodity Finance's Romanian branch colluded with Iran's Bank Tejarat to remove details from trade finance documentation involving a US supplier to finance the exportation of US-origin goods to Iran. ING Bank's senior management in France oversaw the use of fraudulent endorsement stamps for use by Cuban financial institutions in processing travellers' cheque transactions, which disguised the involvement of Cuban banks in these transactions when they were processed through the US. ING Bank's Trade and Commodity Finance business at its Wholesale Banking branch in the Netherlands routed payments made on behalf of US-sanctioned Cuban clients through other corporate clients to obscure the sanctioned clients' identities.

Special Focus 24 Standard Chartered

2012 - US\$667mio¹⁵⁹⁻¹⁶³
Agencies: NY DFS, OFAC, Fed, DoJ, DANY

A New York bank regulator surprised the banking industry by threatening to pull British-based Standard Chartered's New York banking license because of the bank's concealment of more than 60,000 transactions involving Iran from US banks. In August 2012, New York's Department of Financial Services (DFS) ordered Standard Chartered to appear at a hearing to explain why it should keep its banking license. News of the order was reported on the front page of the Financial Times, the Wall Street Journal and other media sources. On the day the order was announced, Standard Chartered's share price plummeted.

The order described Standard Chartered's development and maintenance of automated processes to strip references to Iran from US bound payment messages. This practice allowed Iranian clients a way to evade US banks' OFAC sanctions filters and thus gain access to the US financial system. Internal emails revealed that senior management were aware of the stripping activity and refused to terminate it. The order quoted a senior Standard Chartered executive's reply to internal challenges to these practices, a reply that became instantly famous: "You f*cking Americans. Who are you to tell us, the rest of the world, that we're not going to deal with Iranians".

Eight days after the order was announced, and a day before the license hearing, Standard Chartered agreed to pay the New York regulator US\$340mio to settle the allegations that it concealed from US banks its use of those banks to process US\$250bio of transactions for Iranian clients. The loss of its New York banking license would have effectively barred the bank's direct access to the US financial system.

The settlement followed Standard Chartered's strong denial of having schemed with the Iranian government to launder US\$250bio through the US financial system. The bank pointed out that that non-US banks' initiation of "U-turn" transactions through New York to dollarize Iran-related transactions were permissible up until 2008. However, the NY regulator's preliminary findings of violations were based on New York State "books and records" requirements, not the federal OFAC sanctions regulations.

The New York regulator acted alone, but prominent members of the US Congress applauded the state regulator's ability to act quickly. Standard Chartered was already the subject of a separate probe dating to 2010 involving the US Treasury, the Federal Reserve Bank, the Justice Department and the Manhattan District Attorney to determine if Standard Chartered violated the OFAC regulations.

Days after the order was announced, victims of the 1983 Iran-sponsored terrorist bombing of US Marine barracks in Lebanon filed a civil suit against Standard Chartered in the US District of New York. In the suit, the plaintiffs allege that Standard Chartered conspired with Iran to hide assets and evade their 2007 US\$2.7bio default judgment.

In December 2012, Standard Chartered settled with DoJ, the New York District Attorney's Office (DANY), OFAC and the Fed in connection with apparent violations of multiple sanctions programmes for an aggregate penalty of US\$327mio. The US\$327mio included US\$227mio to DoJ/DANY; OFAC's fine of US\$132mio, which was deemed satisfied by the payment of the fines assessed by the US federal/county officials; and a US\$100mio fine imposed separately by the Fed. The December settlement by Standard Chartered is in addition to Standard Chartered's settlement and payment of a US\$340mio fine to the NY DFS in August of 2012. Standard Chartered's combined fine of US\$667mio is now the highest total fine in the continuing series of OFAC-related cases against non-US banks.

First Bank of Delaware
2012 - US\$15mio¹⁶⁴
Agencies: FDIC, FinCen

FDIC and FinCEN determined that the bank failed to implement an effective BSA/AML Compliance Programme with internal controls reasonably designed to detect and report evidence of money laundering and other suspicious activity. Specifically, the bank failed to adequately oversee third-party payment processor relationships and related products and services in a manner commensurate with associated risks. The civil money penalty is the result of the bank's history of non-compliance with laws and regulations and its numerous violations of the BSA.

Allianz
2012: US\$12.3mio¹⁶⁵
Agency: US SEC

Allianz, Germany-based insurance and asset management

company agreed to pay more than US\$12.3mio to settle SEC's corruption charges. "Allianz's subsidiary created an 'off-the-books' account that served as a slush fund for bribe payments to foreign officials to win insurance contracts worth several million dollars," said Kara Brockmeyer, Chief of the SEC Enforcement Division's FCPA Unit. The SEC's investigation uncovered 295 insurance contracts on large government projects that were obtained or retained by improper payments of US\$650,626 by Allianz's subsidiary in Indonesia to employees of state-owned entities. Allianz made more than US\$5.3mio in profits as a result of the improper payments. According to the SEC's order instituting settled administrative proceedings against Allianz, the misconduct occurred from 2001 to 2008 while the company's shares and bonds were registered with the SEC and traded on the New York Stock Exchange. Two complaints brought the misconduct to Allianz's attention. The first complaint submitted in 2005 reported unsupported payments to agents, and a subsequent audit of accounting records at Allianz's subsidiary in Indonesia uncovered that managers were using "special purpose accounts" to make illegal payments to government officials in order to secure business in Indonesia. The misconduct continued in spite of that audit. According to the SEC's order, the second complaint was made to Allianz's external auditor in 2009. Allianz failed to properly account for certain payments in their books and records. The improper payments were disguised in invoices as an "overriding commission" for an agent that was not associated with the government insurance contract. In other instances, the improper payments were structured as an overpayment by the government insurance contract holder, who was later "reimbursed" for the overpayment. Excess funds were then paid to foreign officials who were responsible for procuring the government insurance contracts. Allianz lacked sufficient internal controls to detect and prevent the wrongfull payments and improper accounting.

Special Focus 25 Libor Bid Rigging Scandal

**2012-2013: Fines so far: US\$6bio, US\$3.7bio by Regulators/US\$2.33bio by Competition Authorities,^{166/167}
Agencies: US DOJ, US CFTC, UK FSA, EU Commission**

The London Interbank offered Rate ("Libor") bid rigging scandal has so far exposed activities by a number of Libor benchmark setting banks to manipulate the London interbank offered rate, or Libor, as well as other benchmark rates, which together serve as the basis for interest rates on hundreds of trillions of dollars of financial instruments, with the prospect of more to come. In 2012, Barclays

(US\$455mio) and UBS (US\$1.5bio) and in 2013 Royal Bank of Scotland (US\$612mio), ICAP (US\$87mio) and Rabobank (US\$1.05bio) all admitted traders had acted improperly. EU Competition Authorities have also levied fines (see later).

The manipulation goes back mainly to 2007 to the start of the financial crises with suspicions first raised in 2008 by The Wall Street Journal (WSJ) suggesting that some banks, concerned about the negative implications of reporting borrowing costs, had instead understated borrowing costs which fed into Libor setting during the period. Whilst both the British Bankers Association (BBA), and the Bank for International Settlements at the time rejected these suggestions. The then Governor of the Bank of England, Mervyn King, by the end of 2008, described Libor to the UK Parliament saying "It is in many ways the rate at which banks do not lend to each other, .. it is not a rate at which anyone is actually borrowing," and released minutes from the Bank of England showed that as early as November 2007, the BoE deputy governor Paul Tucker was aware of industry concerns that the Libor rate was being underreported.

Across the Atlantic, documents since released in 2012, dating back to 2007 showed that The New York Federal Reserve were aware that some banks were understating their borrowing costs when setting Libor and chose to take no action against them at that time. In a released 2008 document a Barclays employee told the New York Fed, "We know that we're not posting an honest Libor, and yet we are doing it, because if we didn't do it, it draws unwanted attention on ourselves." Released documents also show that in early 2008 a memo written by then New York Fed President Tim Geithner to Bank of England chief Mervyn King looked into ways to "fix" Libor.

It is now clear that the turmoil in the markets following the financial crises had serious consequences for the validity of Libor.

A detailed study by economists, Snider and Youle, in April 2010, however, publicly corroborated the results of the earlier Wall Street Journal study that the Libor submissions by some member banks were being understated. Unlike the earlier study, Snider and Youle suggested that the reason for understatement by member banks was not simply that some of the banks were trying to appear strong, especially during the financial crisis starting in 2007, but rather that the banks sought to make substantial profits on their large Libor interest-linked portfolios. This put the nature of possible actions into a new light and led to comprehensive investigations to learn the truth.

Barclays Bank¹⁶⁸

In 2012, Barclays agreed to pay US\$455 mio for its role in

the scandal, with investigations revealing that traders had rigged the Libor rate which is the benchmark for more than \$360 trillion of securities. The CFTC imposed a penalty of US\$200 million, in addition, as part of an agreement with the DOJ, Barclays admitted to its misconduct and agreed to pay a penalty of US\$160 million with the FSA levying a fine of US\$95mio(£59.5 million). Following public outrage, Marcus Agius, Chairman of Barclays, resigned from his position, and one day later, Bob Diamond, the Chief Executive officer of Barclays. Bob Diamond was subsequently questioned by the Parliament of the UK regarding the manipulation of Libor rates. He said he was unaware of the manipulation until that month, but mentioned discussions he had with Paul Tucker, deputy governor of the Bank of England. Tucker then voluntarily appeared before parliament, to clarify the discussions he had with Bob Diamond. He said he had never encouraged manipulation of Libor, and that other self-regulated mechanisms like the Libor should be reformed.

According to the FSA, Barclays' misconduct included: making submissions which formed part of the Libor and EURIBOR setting process that took into account requests from Barclays' interest rate derivatives traders. These traders were motivated by profit and sought to benefit Barclays' trading positions; seeking to influence the European Interbank Offered Rate ("EURIBOR") submissions of other banks contributing to the rate setting process; and reducing its Libor submissions during the financial crisis as a result of senior management's concerns over negative media comment. In addition, Barclays failed to have adequate systems and controls in place relating to its Libor and EURIBOR submissions processes until June 2010 and failed to review its systems and controls at a number of appropriate points. Barclays also failed to deal with issues relating to its Libor submissions when these were escalated to Barclays' Investment Banking compliance function in 2007 and 2008. Tracey McDermott, acting director of enforcement and financial crime, said:

"Barclays' misconduct was serious, widespread and extended over a number of years. The integrity of benchmark reference rates such as Libor and EURIBOR is of fundamental importance to both UK and international financial markets. Firms making submissions must not use those submissions as tools to promote their own interests." "Making submissions to try to benefit trading positions is wholly unacceptable. This was possible because Barclays failed to ensure it had proper controls in place. Barclays' behaviour threatened the integrity of the rates with the risk of serious harm to other market participants." "The FSA continues to pursue a number of other significant cross-border investigations in this area and the action we have taken against Barclays should leave firms in no doubt about the serious consequences of this type of failure."

UBS¹⁶⁹

On 19 December 2012, UBS agreed to pay regulators US\$1.5bio (US\$1.2bio to the US Department of Justice and the Commodity Futures Trading Commission, £160mio to the UK Financial Services Authority and 60m CHF to the Swiss Financial Market Supervisory Authority) for its role in the scandal. The investigation revealed that UBS traders had colluded with other panel banks and had made over 2,000 written requests for movements in rates from at least January 2005 to at least June 2010 to benefit their trading positions. According to transcripts released by the UK's Financial Services Authority, UBS traders also offered financial inducements to interdealer brokers to help manipulate rates by spreading false information. US Assistant Attorney General Lanny Breuer described the conduct of UBS as "simply astonishing" and declared the US would seek, as a criminal matter, the extradition of traders Tom Hayes and Roger Darin. UBS's settlement also included an agreement for its Japanese unit to plead guilty to wire fraud.

Royal Bank of Scotland¹⁷⁰

In 2013, the third Bank involved in the Libor bid rigging scandal was announced with a global settlement when, Royal Bank of Scotland (RBS) agreed to pay a combined US\$612mio, including US\$325mio to the US Commodities Futures Trading Commission, US\$150mio to the DOJ and US\$137 to the UK Financial Services Authority. RBS Securities Japan Limited also pleaded guilty to one count of US wire fraud and admitted its role in manipulating the Japanese Yen Libor and participating in a price-fixing conspiracy.

ICAP¹⁷¹

In September 2013 the fourth Financial Institution involved in the Libor bid rigging scandal was revealed. US and UK authorities fined brokerage firm ICAP US\$87mio for its role in manipulating benchmark interest rates, in particular, Libor. As part of the agreement, ICAP will pay the U.S. Commodity Futures Trading Commission US\$65mio and the U.K.'s Financial Conduct Authority £14mio (US\$22mio).

In addition, the US Department of Justice (DOJ) also announced that it was charging three former ICAP brokers, claiming they engaged in criminal fraud related to the Libor scandal. The DOJ charged Darrell Reed, Daniel Wilkinson and Colin Goodman with conspiracy to commit wire fraud and two counts of wire fraud. They each face a maximum penalty of 30 years in prison. "By allegedly participating in a scheme to manipulate benchmark interest rates for financial gain, these defendants undermined the integrity of the global markets," Attorney General Eric Holder said in a statement. "They were supposed to be honest brokers, but instead, they put their own financial interests ahead of that larger responsibility. And as a result, transactions and finan-

cial products around the world were compromised, because they were tied to a rate that was distorted due to the brokers' dishonesty. These charges underscore the Justice Department's determination to hold accountable all those whose conduct threatens the integrity of our financial markets."

London-based ICAP is the world's largest interdealer broker, which acts as a middleman between major financial institutions. In the Libor case, some brokers, including those at ICAP, allegedly took instructions from bank traders about which direction they wanted Libor to move, and they passed those requests on to other banks. Authorities say that allowed Libor rigging to become a widespread phenomenon rather than a series of isolated efforts by individual bank traders

Authorities disclosed electronic communications among those charged. The released excerpts show the brokers allegedly writing about "managing to fudge" Libor, of receiving "kick backs" and bottles of champagne. One broker referred to himself as "Lord Libor" and "Mr. Libor" according to the UK and US settlements. The rewards given to the brokers for their allegedly corrupt conduct ranged from "copious amounts of curry" to tens of thousands of dollars in cash, according to settlement documents. "The motivation for this scheme was nothing short of pure greed," said David Meister, Director of Enforcement at the CFTC.

In a July 2007 electronic chat, one of the ICAP brokers told a colleague that he had "promised to line pockets with silver" if Mr..... could move one type of Libor higher on behalf of a lucrative trading client, according to an excerpt published by the Justice Department.

The ICAP brokers were especially interested in pleasing a derivatives trader who at the time worked in Tokyo for UBS, the settlements state. That trader, Tom Hayes, has been criminally charged in the US and UK. Mr. Hayes was a coveted client for ICAP and other brokerages because he brought them a lot of business. At times, though, the brokers grumbled that they were being insufficiently compensated for the work they were doing.

"With UBS how much does [Mr. Hayes] appreciate the yen Libor scoop?" one broker allegedly wrote in an April 2007 email to another disclosed by the Justice Department. He added: "It seems to me that he has all the glory etc....I get the dribs and drabs. Life is tough enough over here without having to double guess the Libors every morning and get zipper-de-do-da."

Rabobank^{172/173}

US and European regulators fined Dutch lender Rabobank US\$1.05bio for rigging benchmark interest rates, making it the fifth bank punished so far, after 30 staff were involved

in "inappropriate conduct". The bank's Chief Executive Piet Moerland resigned, saying he was shocked by language revealed in emails exchanged by staff involved over six years to 2011. Japan's banking regulator also criticized the Tokyo branch of Rabobank, with Rabobank reacting with closing its branch in Japan. Rabobank failed to act after an employee responsible for submitting the bank's yen-denominated Libor rates told an internal audit group in 2009 his submissions were based on instructions from traders. One of the regulators, the UK FCA found over 500 instances of attempted Libor manipulation, directly or indirectly, involving at least nine managers and 19 other individuals based across the world.

European Commission Action

The European Commission fined 8 international financial institutions a total of €1.7bio for participating in illegal cartels in Euro interest rate derivatives (EIRD), and in Yen interest rate derivatives (YIRD).

The EIRD cartel operated between September 2005 and May 2008. The settling parties were Barclays, Deutsche Bank, RBS and Société Générale. The cartel aimed at distorting the normal course of pricing components for these derivatives. Traders of different banks discussed their bank's submissions for the calculation of the EURIBOR as well as their trading and pricing strategies. The Commission's investigation started with unannounced inspections in October 2011. The Commission opened proceedings in March 2013. Barclays was not fined as it benefited from immunity under the Commission's 2006 Leniency Notice for revealing the existence of the cartel to the Commission. Deutsche Bank, RBS and Société Générale received a reduction of their fines for their cooperation in the investigation under the Commission's leniency programme. These companies received a further fine reduction of 10% for agreeing to settle the case with the Commission. In the context of the same investigation, proceedings were opened against Crédit Agricole, HSBC and JP Morgan and the investigation continues.

In the Yen interest rate derivatives (YIRD) sector, the Commission uncovered 7 distinct bilateral infringements lasting between 1 and 10 months in the period from 2007 to 2010. The collusion included discussions between traders of the participating banks on certain JPY LIBOR submissions. The traders involved also exchanged, on occasions, commercially sensitive information relating either to trading positions or to future JPY LIBOR submissions (and in one of the infringements relating to certain future submissions for the Euroyen TIBOR – Tokyo interbank offered rate). The banks involved in one or more of the infringements were UBS, RBS, Deutsche Bank, Citigroup and JP

Morgan. The broker RP Martin facilitated one of the infringements by using its contacts with a number of JPY LIBOR panel banks that did not participate in the infringement, with the aim of influencing their JPY LIBOR submissions.

The Commission opened proceedings in February 2013. UBS received full immunity under the Commission's 2006 Leniency Notice for revealing to the Commission the existence of the infringements. Citigroup also benefited from full immunity for its participation in one bilateral infringement. For their cooperation with the investigation, the Commission granted fine reductions to Citigroup, Deutsche Bank, RBS and RP Martin, under the Commission's leniency programme. The Commission has also opened proceedings against the cash broker ICAP, which continues.

In setting the level of fines, the Commission took into account the banks' value of sales within the EEA, the serious nature of the infringements, their geographic scope and respective durations.

As far as the EIRD cartel, the fines imposed are as follows: Barclays - None (due to whistle blowing- avoiding €690mio fine); Deutsche Bank - €465.8mio; Société Générale - €445.8mio; and RBS - €131mio;

As far as the YIRD cartels, the fines imposed are as follows: UBS - None (due to whistle blowing- avoiding €2.5bio); RBS - €260mio; Deutsche Bank - €259.5 mio; JP Morgan - €79.9 mio; Citigroup - €70mio (avoided €55mio in addition); and RP Martin - €247,000.

National Bank Abu Dhabi

2012: US\$855,000¹⁷⁴

Agency: US OFAC

National Bank of Abu Dhabi ("NBAD") paid US\$855,000 to settle with OFAC for violations of OFAC regulations relating to Sudan. NBAD provided information to OFAC revealing that certain of its clerical staff removed or omitted Sudan-related references in 45 payment instructions processed on behalf of its Sudan branch for payments routed through financial institutions located in the US. The transactions occurred between 2004 to 2005.

MoneyGram

2012: US\$100mio DPA¹⁷⁵

Agency: US DoJ

Moneygram International Inc. a global money services business headquartered in Dallas entered into a Deferred Prosecution Agreement with the US DoJ and forfeited

US\$100mio for Anti-Money Laundering and Wire Fraud Violations. MoneyGram admitted to criminally aiding and abetting wire fraud and failing to maintain an effective anti-money laundering programme. According to court documents, MoneyGram was involved in mass marketing and consumer fraud phishing schemes, perpetrated by corrupt MoneyGram agents and others, that defrauded tens of thousands of victims in the US. MoneyGram also failed to maintain an effective anti-money laundering programme in violation of the Bank Secrecy Act.

"MoneyGram's broken corporate culture led the company to privilege profits over everything else," said Assistant Attorney General Breuer. "MoneyGram knowingly turned a blind eye to scam artists and money launderers who used the company to perpetrate fraudulent schemes targeting the elderly and other vulnerable victims. In addition to forfeiting US\$100mio, which will be used to compensate victims, MoneyGram must for the next five years retain a corporate monitor who will report regularly to the Justice Department."

As part of the DPA, MoneyGram has agreed to enhanced compliance obligations and structural changes to prevent a repeat of the charged conduct, including: the creation of an independent compliance and ethics committee of the board of directors with direct oversight of the chief compliance officer and the compliance programme; the adoption of worldwide anti-fraud and anti-money laundering standards to ensure all MoneyGram agents throughout the world will, at a minimum, be required to adhere to US anti-fraud and anti-money laundering standards; the adoption of a bonus system which rates all executives on success in meeting compliance obligations, with failure making the executive ineligible for any bonus for that year; and the adoption of enhanced due diligence for agents deemed to be high risk or operating in a high-risk area.

To oversee implementation and maintenance of these enhanced compliance obligations and evaluate the overall effectiveness of its anti-fraud and anti-money laundering programmes, MoneyGram has agreed to retain an independent corporate monitor who will report regularly to the Justice Department. Under the DPA, the department will recommend the dismissal of the criminal information in five years, provided MoneyGram fully abides by the DPA's terms.

According to court documents, starting in 2004 and continuing until 2009, MoneyGram violated US law by processing thousands of transactions for MoneyGram agents known to be involved in an international scheme to defraud members of the US public. MoneyGram profited from the scheme by collecting fees and other revenues on the fraudulent transactions. The scams, which generally

targeted the elderly and other vulnerable groups, included posing as victims' relatives in urgent need of money and falsely promising victims large cash prizes, various high-ticket items for sale over the Internet at deeply discounted prices or employment opportunities as "secret shoppers." In each case, the perpetrators required the victims to send them funds through MoneyGram's money transfer system. Despite thousands of complaints by customers who were victims of fraud, MoneyGram failed to terminate agents that it knew were involved in scams. As early as 2003, MoneyGram's fraud department would identify specific MoneyGram agents believed to be involved in fraud schemes and recommended termination of those agents to senior management. These termination recommendations were rarely accepted because they were not approved by executives in the sales department and, as a result, fraudulent activity grew from 1,575 reported instances of fraud by customers in the US and Canada in 2004 to 19,614 reported instances in 2008. Cumulatively, from 2004 through 2009, MoneyGram customers reported instances of fraud totaling at least US\$100mio.

The USPIS and US Attorney's Office for the Middle District of Pennsylvania have been investigating and prosecuting telemarketing scams that used MoneyGram's money transfer system and corrupt MoneyGram agents since 2007. To date, the US Attorney's Office for the Middle District of Pennsylvania has brought conspiracy, fraud and money laundering charges against 28 former MoneyGram agents.

US Attorney Smith said, "Thousands of citizens in Pennsylvania and other states suffered heartbreaking financial losses for years because of these international telemarketing schemes which depended on MoneyGram's facilities to give them an electronic highway to move their illegal profits quickly out of the country. The determined work of US Postal Inspectors and federal prosecutors disrupted and closed that electronic highway, hopefully for good. This case provides a way to get restitution for victims and ensure that MoneyGram does its part to deter similar scams in the future."

MoneyGram's involvement in this international fraud scheme resulted from a systematic, pervasive, and wilful failure to meet its anti-money laundering (AML) obligations under the Bank Secrecy Act (BSA). Court documents show that MoneyGram failed to meet its AML obligations by, among other things, failing to: implement policies or procedures governing the termination of agents involved in fraud and/or money laundering; implement policies or procedures to file the required Suspicious Activity Reports (SARs) when victims reported fraud to MoneyGram on transactions over US\$2,000; file SARs on agents MoneyGram knew were involved in the fraud; conduct effective AML audits of its agents and outlets; conduct adequate due diligence on

prospective and existing MoneyGram Agents by verifying that a legitimate business existed; and Sufficiently resource and staff its AML programme.

MoneyGram's BSA failures spanned five years, and resulted, among other things, from the failure of its fraud and AML compliance functions to share information and from its regularly resolving disagreements between its sales and fraud departments in the sales department's favour. One notable such disagreement occurred in April 2007, when, at a meeting attended by senior MoneyGram executives, the fraud department recommended that 32 specific Canadian agents that were characterized as "the worst of the worst" in terms of fraud be immediately closed. The sales department disagreed with the fraud department's recommendation, and these outlets were not closed; instead, MoneyGram continued to process transactions from the 32 outlets despite continued complaints of fraud.

SAC Capital

2013 - US\$1.8bio (3 cases: 1 - US\$602mio/2 - US\$14mio/3 - US\$1.2bio)¹⁷⁶

Agency: SEC and others

A US hedge fund, SAC Capital Group agreed in March 2013 to pay US\$602mio and US\$14mio to settle SEC charges that it participated in insider trading schemes. The main case involved a clinical trial for an Alzheimer's drug being jointly developed by two pharmaceutical companies. The SEC had charged CR Intrinsic with insider trading in November 2012, alleging that one of the firm's portfolio managers Mathew Martoma illegally obtained confidential details about the clinical trial from Dr Sidney Gilman, who was selected by the pharmaceutical companies, Elan Corporation and Wyeth, who served as chairman of the safety monitoring committee overseeing the trial and who was to present the final drug trial results to the public. The settlement amount is the largest ever in an insider trading case, requiring CR Intrinsic, an affiliate of SAC Capital Advisors, to pay US\$274,972,541 in disgorgement, being the amount made on the inside information, US\$51,802,381.22 in prejudgment interest, and a US\$274,972,541 penalty. "The historic monetary sanctions against CR Intrinsic and its affiliates are sharp warning that the SEC will hold hedge fund advisory firms and their funds accountable when employees break the law to benefit the firm," said George S. Canellos, Acting Director of the SEC's Division of Enforcement. Sanjay Wadhwa, Senior Associate Director of the SEC's New York Regional Office, added, "A robust culture of compliance and zero tolerance toward employee misconduct can help other firms avoid the severe financial consequences that CR Intrinsic is facing for its misconduct."

The SEC's complaint against CR Intrinsic, Martoma, and

Dr. Gilman alleged that during phone calls arranged by a New York-based expert network firm for which Dr. Gilman moonlighted as a medical consultant, he tipped Martoma with safety data and eventually details about negative results in the trial about two weeks before they were made public in July 2008. Martoma and CR Intrinsic then caused several hedge funds to sell more than US\$960mio in Elan and Wyeth securities in a little more than a week.

Fast Forward to 2013 and SAC Capital faced more trouble, when it was charged criminally by the Manhattan US Attorney's office for insider trading. After a multiyear investigation conducted by the U.S. Attorney's Office, the FBI, and the Securities and Exchange Commission, a grand jury indicted SAC Capital, accusing the firm of fostering a culture where employees engaged in rampant securities fraud. The indictment said traders at SAC engaged in insider trading that was "substantial, pervasive, and on a scale without known precedent in the hedge fund industry." Manhattan US Attorney Preet Bharara described SAC as "a magnet for market cheaters." In addition to charges against the hedge fund, charges were laid against founder Steven Cohen, by the SEC for failure to supervise two employees who faced trial for insider trading. As a result SAC Capital agreed to a guilty plea for securities fraud and to pay a fine amounting in total to US\$1.8bio (which includes the US\$616mio already paid). As part of the settlement, SAC will lose the right to manage public money, by surrendering its investment-advisor registration with the SEC, and it will redeem the rest of the public money it currently manages. SAC will then convert to a family office that manages at least US\$9 billion. Despite the settlement, SAC will still have open separate civil charges, levied by the SEC, that company founder Steve Cohen failed to supervise employees who engaged in insider trading.

EFG Private Bank

2013 - £4.2 mio (US\$6.4mio)¹⁷⁷

Agency: UK FCA

The UK Financial Conduct Authority (FCA), formerly the FSA fined EFG Private Bank Ltd £4.2 million for failing to take reasonable care to establish and maintain effective anti-money laundering (AML) controls for high risk customers. The failings were serious and lasted for more than three years.

EFG is the UK private banking subsidiary of the EFGI Group, a global private banking group, based in Switzerland. EFG provides private banking and wealth management services to high net worth individuals including some from overseas jurisdictions recognised as presenting a higher risk of money laundering and/or bribery and corruption. At the end of 2011 around 400 of EFG's 3,342 customer accounts were deemed by the firm to present a higher risk

of money laundering or reputational risk, and of these 94 were held by politically exposed persons (PEPs).

During an FSA inspection in 2011, the FSA found that EFG had not fully put its AML policies into practice. Of particular concern was that 17 of 36 reviewed customer files, opened between December 2007 and January 2011, contained customer due diligence that highlighted significant money laundering risks, but insufficient records of how the bank's senior management had mitigated those risks. Of these 17 files, the FSA found that the risks highlighted in 13 files related to allegations of criminal activity or that the customer had been charged with criminal offences including corruption and money laundering. For example, in one account, EFG's due diligence highlighted that a prospective client had acquired their wealth through their father, about whom there were allegations of links with organised crime, money laundering and murder. However there was insufficient information on file to explain how the bank concluded that this risk was acceptable or how it was mitigating the risks. EFG also failed to appropriately monitor its higher risk accounts. Of the 99 PEP and other high risk customer files reviewed by the FSA, 83 raised serious concerns about EFG's monitoring of the relationship.

Tracey McDermott, head of enforcement and financial crime, said: "Banks are the first line of defence to make sure that proceeds of crime do not find their way into the UK. In this case while EFG's policies looked good on paper, in practice it manifestly failed to ensure that it was addressing its AML risks. Its poor implementation of its agreed policies risked the bank handling the proceeds of crime. These failures merited a strong penalty from the FCA. Firms that accept business from high risk customers must have systems, controls and practices to manage that risk. The FCA will continue to focus on high risk customers and business." EFG settled at an early stage of the investigation and qualified for a 30% discount on its fine. Without the discount the fine would have been £6mio.

UBS France

2013 - US\$13mio (€10mio)¹⁷⁸

Agency: French ACP

The French banking regulator, ACP, fined UBS France €10mio for according to it failing to tighten controls to curb money laundering and cross-border fiscal fraud. The ACP statement did not specify whether there had been any illicit activity, however. According to the ACP, UBS France was alerted to "grave suspicions" in 2007 of its sales force's possible involvement in illicit marketing and the covering up of tax fraud, waiting more than 18 months before setting up the necessary controls. The fine is more than twice the €4mio penalty the regulator demanded from Société Générale SA in 2008 because of internal-control shortcomings

related to Jerome Kerviel's multi-billion-euro trading loss. The UBS unit also failed to control its sales force's potential access to computer files shared with the parent company that could have been used to identify prospective clients for accounts outside France. In response UBS stated that "We disagree with many of the disciplinary commission's conclusions," adding that it will consider whether to appeal the decision. "UBS does not tolerate any activities intended to help its clients circumvent their tax obligations." UBS also stated that "This is an issue from the past and we are pleased to note that the disciplinary commission acknowledges in its report that UBS France SA has taken appropriate steps to strengthen its compliance framework since 2009."

HSBC Argentina

2013 - US\$1mio (& US\$20mio/2012)¹⁷⁹

Agency: Financial Crimes Unit/Argentina

Argentina's financial crimes unit fined the local unit of HSBC Holdings Plc (HSBA) US\$1mio for failing to report a suspicious transaction at the time, carried out in 2007. The case involved a client who moved five million pesos (about US\$941,530) into a bank account, with the money then withdrawn from the bank account over a month. Allegedly the client involved had no declared assets and a monthly income that was officially reported as less than US\$3,000. This is not the first time that HSBC has faced fines in Argentina. The financial crimes unit fined the bank US\$14mio and then another US\$6mio in 2012 for failing to report suspicious transactions.

HSBC Mexico SA

2013 - No Fine / License Revoked¹⁸⁰

Agency: The Cayman Islands Monetary Authority (CIMA)

The Cayman Islands Monetary Authority (CIMA) announced in March 2013 that it had revoked the licence of the HSBC Mexico SA Cayman Islands branch. The decision followed an investigation to determine whether the Cayman Islands branch had violated local money laundering laws and regulations. The investigation found that the bank was "conducting business in a manner detrimental to the public interest, the interest of its depositors or of the beneficiaries of any trust or other creditors and that the direction and management of its business has not been conducted in a fit and proper manner."

Bank of Tokyo Mitsubishi-UFJ Ltd (BTMU)

2013 - US\$258.5mio (US\$250mio & US\$8.5mio)^{181/182}

Agencies: The New York State Department of Financial Services (DFS) / OFAC

The Bank of Tokyo Mitsubishi-UFJ Ltd (BTMU) has agreed to pay US\$250 million to settle charges that it

breached New York state banking laws by moving an estimated US\$100bio through 28,000 USD clearing transactions through New York, for entities subject to international sanctions and entities on the US Department of the Treasury Office of Foreign Assets Control's list of specially designated nationals. According to the DFS, BTMU provided employees with written instructions on how to remove information from wire transfers that could have identified the entities and countries involved. DFS financial services superintendent Benjamin Lawsky said the DFS will "continue to take a hard line in rooting out misconduct at banks that threatens our national security" and "will take strong enforcement action to protect our country from money laundering, terrorism, and other dangerous misdeeds". BTMU said in a statement that it "voluntarily and promptly" stopped the practices when they came to light in 2007 and has subsequently "significantly" improved its compliance policies and procedures. BTMU had a year earlier in 2012 received a US\$8,571,634 fine from OFAC for the same matter. In 2007, BTMU's senior management learned of these practices, commenced an internal review of historical transaction data, and initiated a voluntary self-disclosure to the US authorities - OFAC. OFAC found that the apparent violations constituted an egregious case, because: BTMU's conduct concealed the involvement of U.S. sanctions targets and displayed reckless disregard for U.S. sanctions; the general manager of the Operations Centre in Tokyo knew or had reason to know that procedures had been implemented instructing employees to manipulate payment instructions; BTMU's conduct conferred a substantial economic benefit to targets of OFAC sanctions and BTMU is a large, commercially sophisticated financial institution. Nevertheless in its favour, BTMU had undertaken significant remediation to improve its OFAC compliance policies and procedures; BTMU substantially cooperated with OFAC's investigation, including providing detailed and organised information regarding the apparent violations, and entered into a tolling agreement with OFAC.

Barclays

2013 - US\$487.9mio¹⁸³

Agency: Federal Energy Regulatory Commission (FERC)

Barclays faced energy market manipulation charges, from the US Federal Energy Regulatory Commission who proposed a fine of US\$435mio and US\$34.9mio disgorgement from Barclays over the power trading market from late 2006 to 2008. The proposed fines were confirmed recently in 2013 as FERC found that Barclays traders flattened substantial monthly physical index positions of four of the then most liquid trading points in the western US for the fraudulent purposes of manipulating the index price to benefit Barclays' financial swap positions. FERC found that Barclays' actions demonstrated an alternative co-ordinated and intentional effort to carry out a manipulative scheme,

in violation of the Federal Power Act and FERC's Anti-Manipulation Rule.

Nordea AB

2013: US\$4.7mio fine¹⁸⁴

Agency: Sweden's Financial Supervisory Authority

The Nordic region's biggest bank, was fined by Sweden's Financial Supervisory Authority 30 million kronor (US\$4.7mio) for inadequate anti-money laundering and terrorism financing prevention procedures. Following investigations into the bank beginning in late 2009, the SFSA's conclusions ultimately came down to four regulatory areas: identifying and screening clients' beneficial owners; reporting transactions; "know your customer"; and internal governance and control.

The Fine cited Nordea's approach to a customer named Takilant Ltd. Takilant, a Gibraltar-based company, had been linked by Swedish prosecutors to a suspected bribery deal involving Swedish telecom operator TeliaSonera AB. The SFSA also criticised Nordea for failing to comply with EU regulations. SFSA Executive Director of the Banks Operational Section, Uldis Cerpšs stated that, "There were several risk indicators that we had outlined, which in combination should clearly signal heightened risk." "We share the FSA's view," Nordea press spokeswoman Helena Ostman said "We should have conducted a more thorough review [of Takilant]." Nordea has frozen Takilant's account, and has imposed stricter due diligence routines, she said. The bank, however, finds the penalty to be too large as no illegal transactions are believed to have taken place in the frozen accounts. The SFSA argues that for several years Nordea did not screen beneficial owners against the EU sanctions regulations, exposing itself to the risk of giving blacklisted individuals access to economic resources without its knowledge. The bank has also been deficient in its reporting to the SFSA regarding transactions in frozen accounts, the agency said. Takilant opened the account with Nordea Sweden in 2011, according to the bank.

Swedish prosecutors have been investigating allegations that telecom operator TeliaSonera AB engaged in money laundering connected to the acquisition in 2007 of an Uzbekistan wireless data license and other assets from Takilant. The prosecutors have claimed TeliaSonera knew that one of the partners in Takilant was the daughter of Uzbek president Islam Karimov. TeliaSonera in a statement in January denied it was aware of any beneficiaries from the deal other than Takilant's registered director. Uzbekistan is the world's eighth most corrupt country according to anti-corruption watchdog Transparency International, and the combination of a beneficial owner domiciled in that country and the hefty US\$20mio deposit in the account should have alerted Nordea to conduct enhanced due diligence such as a more

extensive background check of the owners, Mr Cerpšs said.

Panther Energy Trading

2013: US\$5.8mio¹⁸⁵

Agencies: US CFTC; CME; UK FCA

High Frequency trading makes up much of the volume on today's equity markets and has been identified as a particular risk for some time, albeit more to do historically with concerns about algorithmic trading leading to flash crashes and the like. High Frequency or Algorithmic Trading is essentially where traders use superfast computers to trade in milliseconds after news or markets start to move but ahead of the rest of the traditional market in order to capture the market news as quickly as possible. Still as with any other trading firm or trader manipulative techniques can be practiced and even hard-wired into algo trading and this is what US and UK regulators alleged against Panther Energy Trading and Michael Coscia, one of its chief traders. US and UK authorities have signalled their intent to focus on high-frequency trading and so this fine shouldn't be a surprise, still it is the first of its kind and clearly demonstrates that regulatory authorities are looking to crack down on market abuse in this area and to send a clear signal to the market as a result. The crackdown represents the first time the CFTC has used powers granted under the Dodd-Frank Act, and that the newly-created FCA has fined a high-frequency trading company.

The regulators allege Panther used practices such as spoofing and layering. These techniques are used to deliberately make and then cancel large amounts of orders to create a false impression of liquidity. For example, the CFTC said in the West Texas Intermediate crude oil market, Panther Energy placed a small, 17-contract sell order of US\$85.29 per barrel that underpriced other offers in the market. Within a fraction of a second, Panther then flooded the market with buy orders that it intended to cancel, driving the market towards its selling price. "The programme sought to capture an immediate profit from selling the 17 lots," the regulator said. The CFTC said Panther spoofed 18 separate US futures markets, including oil, soybeans and wheat, as well as interest rates and stock indices between August and October 2011. UK regulators said Panther also made thousands of false orders for crude oil and gas contracts on the ICE Futures Europe exchange.

"High-frequency trading and the use of algorithms are an important and commonplace part of the markets nowadays, but in this case these techniques were deliberately designed to abuse the market, undermining its integrity," said Tracey McDermott, the FCA's director of enforcement and financial crime. The CFTC ordered Michael Coscia, the trader at the centre of the allegations, to pay a total of US\$2.8mio in trading profits, while CME Group imposed

fines totalling US\$2.1mio. The CFTC also banned Panther and Mr Coscia from trading on any its registered entities for one year for offences in the US. The FCA imposed a fine of US\$903,000 (£597,000) and six-month trading ban on its exchanges.

Oppenheimer & Co., Inc

2013: US\$1.4mio CMP¹⁸⁶

Agency: Finra

FINRA fined Oppenheimer US\$1,425,000 for the sale of unregistered penny stock shares and for failing to have an adequate anti-money laundering (AML) compliance programme to detect and report suspicious penny stock transactions. Oppenheimer is also required to retain an independent consultant to conduct a comprehensive review of the adequacy of Oppenheimer's penny stock and AML policies, systems and procedures. Oppenheimer agreed to the sanctions to resolve charges first brought against the firm in a FINRA complaint in May 2013.

FINRA said, "Broker-dealers are required by federal securities laws and FINRA rules to monitor customers' accounts so that those accounts are not used for illegal activities, such as money laundering and penny stock schemes that can cause considerable harm to investors. If Oppenheimer had an adequate AML and supervisory programme in place, it would have made further inquiry into the penny stock sales that were the basis of this action." FINRA found that from 19 August 2008 to 20 September 2010, Oppenheimer, through branch offices located across the country, sold more than a billion shares of twenty low-priced, highly speculative securities (penny stocks) without registration or an applicable exemption.

The customers deposited large blocks of penny stocks shortly after opening the accounts, and then liquidated the stock and transferred proceeds out of the accounts. Each of the sales presented additional "red flags" that should have prompted further review to determine whether the securities were registered. FINRA also found that the firm's systems and procedures governing penny stock transactions were inadequate, and were unable to determine whether stocks were restricted or freely tradable. Oppenheimer also failed to conduct adequate supervisory reviews to determine whether the securities were registered. FINRA also found that Oppenheimer's AML programme did not focus on securities transactions and therefore, failed to monitor patterns of suspicious activity associated with the penny stock trades. In addition, Oppenheimer failed to conduct adequate due diligence on a correspondent account for a customer that was a broker-dealer in the Bahamas, and therefore a Foreign Financial Institution under the Bank Secrecy Act; the firm's failure contributed to Oppenheimer's failure to understand the nature of the customer's business and the anticipated

use of the account, which was to sell securities on behalf of parties not subject to Oppenheimer's AML review.

American Express

2013: Fine of US\$5.2mio¹⁸⁷

Agency: OFAC

The US Office of Foreign Assets Control ("OFAC"), fined American Express ("Amex") US\$5,226,120 because Amex's overseas offices booked travel to and from Cuba. OFAC justified the size of the fine due to a few aggravating factors such as (1) reckless disregard for the Cuba sanctions regulations, (2) knowledge by the company that the Cuba transactions "would or might take place," and (3) OFAC's provision of a notice in 1995 to Amex that the bookings were a violation of the Cuba sanctions. The fine related to long dated occurrences that no longer took place.

Guaranty Trust Bank

2013: £525,000 fine¹⁸⁸

Agency: UK Financial Conduct Authority (FCA) successor to FSA

The Financial Conduct Authority (FCA) has fined Guaranty Trust Bank (UK) Ltd (GT Bank) £525,000 for failings in its anti-money laundering (AML) controls for high risk customers between May 2008 and June 2010. These failings are particularly serious as they affected customers based in countries associated with a higher risk of money laundering, bribery or corruption, including accounts held by politically exposed persons (PEPs). The FCA's predecessor, the Financial Services Authority (FSA), reviewed GT Bank's controls as part of a thematic review into banks' management of money laundering risks in 2010. The review of GT Bank raised significant concerns and after further investigation, the FCA found that GT Bank failed to establish effective AML policies and procedures when they established their UK operations. This included failures to: i) assess or document potential money laundering risks posed by higher risk customers; ii) screen prospective customers against sanction lists or databases of PEPs; iii) obtain and/or document senior management approval to establish a business relationship with PEPs; iv) establish the purpose and intended nature of prospective customers' accounts or the sources of higher risk customers' wealth or funds; and v) review the activity of higher risk customers' accounts and check that the information they held on these customers was up to date. As a result, GT Bank was not able to fully understand or assess their higher risk customers' activities. This breached FCA Principle 3, which requires firms to take reasonable care to organise and control their affairs responsibly and effectively, and a number of FCA rules on systems and controls.

Tracey McDermott, director of enforcement and financial

crime, said: "Banks are at the front line in ensuring the proceeds of crime do not enter the UK financial system". GT Bank's failures were serious and systemic and resulted in an unacceptable risk of handling the proceeds of crime. "Regardless of whether firms are well established or new to the industry they must ensure that they have systems and controls to manage money laundering risk". GT Bank settled at an early stage of the investigation and qualified for a 30% discount on its fine. Without the discount the fine would have been £750,000.

According to the FCA Notice, GT Bank provided financial services to a significant number of higher risk customers, acting as a gateway to the UK financial system. However, 70% of these customers were based in countries which do not have requirements equivalent to those in the UK, and are recognised sources as posing a higher risk of money laundering. During the relevant period (May 2008 – June 2010) the FSA took action against a number of institutions for shortcomings in their financial crime systems and controls. As such, GT Bank should have been aware of the importance of systems and controls to prevent and detect all types of financial crime, including money laundering. As part of the settlement the regulator said that the bank had made a "strategic decision" to move away from establishing new relationships with PEPs and would, wherever possible, exit existing PEPs relationships. It has also significantly improved its compliance resourcing and its systems and controls. FCA investigators found that, in a sample of GT Bank's high-risk customer files, 46 out of 51 did not have adequate documentation to suggest that an AML review had taken place. The FCA said there was no evidence that the bank had properly considered all the potential risks for the customers. The FCA noted one example of a customer depositing a cheque for more than £500,000 from an offshore account into GT Bank. The bank failed to request any evidence about the source of the funds and how they were generated. It later emerged that the customer was wanted by the UK authorities in connection with the laundering of millions of dollars of embezzled public funds.

GT Bank also failed to record its screening results properly. The findings were only evidenced if there was a positive match, while in some instances customer screening had not been done before accounts were opened. In three cases accounts had been open for more than two years before being screened. The bank also failed to review its customers annually, as required, until July 2010. Forty-six of the 51 customer files reviewed by the FCA raised concerns about GT Bank's ongoing monitoring, the regulator said. Ade Adebisi, UK managing director GT Bank, said the failings happened during the bank's early years in the UK and that it had worked hard to ensure its systems were now fully compliant. "The FCA found no evidence that GTB UK did in fact handle any proceeds of crime. The total value

that passed through reviewed customer accounts was de minimis," he said.

JP Morgan Chase

2013: US\$410mio fine¹⁸⁹

Agency: Federal Energy Regulatory Commission (FERC)

JP Morgan Chase power-trading unit, JP Morgan Ventures Energy Corp manipulated electricity markets by misrepresenting the prices of electricity contracts with California and the Midwest that resulted in overpayments and fined US\$410mio by US electricity regulator, Federal Energy Regulatory Commission. This fine follows the one recently made with Barclays for US\$435mio and disxxxx at a further US\$34.9mio (see above). The fines are a sign of the increasingly aggressive stance taken by FERC, a relatively speaking low-profile federal agency that oversees transmission lines, natural-gas pipelines and power trading markets across the US. Using enforcement muscle beefed up in the wake of Enron Corp's collapse, the agency is broadly scrutinizing potential manipulation of energy markets and has sought fines from Wall Street firms that include Barclays (see above) and Deutsche Bank which also settled with FERC. Many of the biggest US banks and trading firms began buying and selling power in the US's deregulated energy markets following a California Energy Crisis in 2001, which was caused in part by manipulative trading behavior linked to Enron. Following Enron's collapse, FERC received authority from Congress to levy fines of up to US\$1mio per violation per day, up from US\$10,000 per violation. It has assessed US\$291mio in penalties since 2007 in 78 separate enforcement actions. JP Morgan began buying and selling energy largely because of its 2008 purchase of securities firm Bear Stearns Co, which had a power group based in Houston. It is alleged that the manipulation occurred as follows: traders would submit a relatively low bid to deliver electricity in the "day-ahead" market, ensuring that system operators would schedule their power plant to turn on the following day. Then the traders would make an offer the next day to deliver electricity from that same plant at a relatively high price, which prevented them from being chosen to provide electricity that day. While the traders might lose money because they were not dispatched to generate power, they would also be eligible for a "make-whole" payment because their power plant unit had been scheduled the day ahead to deliver a substantial amount of electricity. The "make-whole" payment could cover any losses and generate a profit for the firm overall. JP Morgan will pay US\$124mio to California residents who overpaid for electricity. Customers in the midwest will receive US\$1mio. The rest of the fine is to be paid to the US Treasury.

JP Morgan Chase

2013: US\$1.020bio¹⁹⁰

Agencies: US SEC; OCC; FED; UK FCA

JP Morgan Chase agreed to pay US\$1.020mio in fines stemming from its 2012 “London Whale” incident, which amount to one of the largest ever levied against a bank over a single trading strategy. The money will go to the US Securities and Exchange Commission, (US\$200mio), the Office of the Comptroller of the Currency, (US\$300mio), the Federal Reserve, (US\$200mio), the Commodity Futures Trading Commission (US\$100mio) and Britain’s Financial Conduct Authority, (US\$220mio/ £137.6mio). As part of the settlement, the bank will also admit wrongdoing and acknowledge that lax internal controls were partly responsible for allowing the massive derivative wagers made by traders in the London office that ultimately cost the bank more than US6bio in losses. These are settlements of civil actions against JP Morgan Chase who may still face the FBI and federal prosecutors who are still considering criminal investigations.

Saddle River Valley Bank

2013: US\$8.2mio¹⁹¹

Agencies: OCC and FINCEN

The Saddle River Valley Bank (SRVB) was fined US\$8.2mio by the OCC and FINCEN for violation of US money laundering laws and regulations. Beginning at least as early as 2000, numerous federal agencies, including the Department of State, the Department of the Treasury, the Federal Reserve Bank, and the IRS, began issuing public warnings to US financial institutions about the increased money laundering threat present in Mexico. These warnings were also available through industry-wide advisories. It was believed that the proceeds of narcotics sales in the US were being disproportionately laundered and transferred through banking institutions in Mexico. Many of these warnings also discussed the specific money laundering risks associated with “Casas de Cambio,” (CDCs), which are non-bank currency exchange businesses located in Mexico and elsewhere.

Beginning in June 2009, SRVB began servicing what would ultimately become four CDCs, including three CDCs in Mexico and one in the Dominican Republic. SRVB voluntarily severed its relationship with the CDCs by May 2011 but only after processing at least US\$1.5bio in transactions on behalf of the CDCs. SRVB’s anti-money laundering programme related to the CDCs was deficient in several key areas, in particular SRVB failed to: appropriately monitor at least US\$1.5bio in transactions conducted on behalf of the CDCs; properly detect and report suspicious activity occurring within the CDC accounts and file Suspicious Activity Reports on a timely basis; conduct sufficient enhanced due diligence on the CDCs; have a BSA officer or other

personnel with sufficient experience to operate an AML programme; provide adequate training to its employees concerning anti-money laundering and retain qualified periodic independent testers for its anti-money laundering programme, as required by the BSA. After a joint investigation by the US Attorney’s Office for the District of New Jersey and the OCC, SRVB agreed to an assessed civil monetary penalty by the OCC of US\$4.1mio for the deficiencies in its anti-money laundering programme. SRVB has agreed to a concurrent civil monetary penalty by FinCEN of US\$4.1mio, to be satisfied by one payment to the U.S. Treasury Department on behalf of both actions by the OCC and FinCEN. SRVB also agreed to surrender and forfeit an additional US\$4.1mio to the US to resolve the investigation conducted by the US Attorney’s Office for the District of New Jersey and the OCC, for a total penalty of US\$8.2mio.

TCF National Bank

2013: US\$10mio CMP¹⁹²

Agency: OCC

TCF National Bank, based in Sioux Falls, South Dakota was fined US\$10mio by the OCC for violations of the Bank Secrecy Act (BSA). An OCC examination of the bank’s account and transaction activity between November 2008 and July 2010 revealed late filing of suspicious activity reports (SARs). The suspicious activities primarily consisted of cash transactions which indicated structuring and wire transfers where the source and purpose of the funds were unknown. In addition, upon further investigation, the OCC found instances where SARs failed to adequately explain or identify potential terrorist financing. The CMP follows a cease and desist order issued in July 2010 which directed the bank to correct deficiencies in its BSA and anti-money laundering programmes and required an independent examination of BSA reports filed between November 2008 and July 2010.

TD Bank

2013: US\$5.25mio (US\$37.5mio CMP - and US\$15mio)¹⁹³

Agencies: FINCEN/ OCC - SEC

TD Bank, N.A. was fined US\$37.5mio by the US Financial Crimes Enforcement Network (FinCEN) and the OCC for failures in filing suspicious activity reports related to the Ponzi scheme orchestrated by Florida attorney Scott Rothstein. Additionally, the Securities and Exchange Commission has assessed a separate US\$15mio penalty against the Bank for related securities violations.

From April 2008 through September 2009, the Bank was found to have wilfully violated the Bank Secrecy Act’s reporting requirements by failing to detect and adequately

report suspicious activities in a timely manner. During that period, Rothstein orchestrated a major Ponzi scheme by fraudulently inducing victims to invest in purported settlements involving whistleblower and sexual harassment lawsuits. Thousands of transactions flowed through his multiple law firm accounts at TD Bank which included transactions related to Rothstein’s Ponzi scheme. While the Rothstein law firm’s accounts alerted in TD Bank’s anti-money laundering surveillance software for suspicious activity, TD Bank employees failed to recognise the suspicious activity and file SARs in a timely manner. In 2010, Rothstein pleaded guilty to a racketeering conspiracy in the US District Court for the Southern District of Florida and is currently serving a 50-year prison sentence.

In 2011, the Bank conducted a review of the Rothstein transactions. Based on the results of the review it filed five late suspicious activity reports, totaling an estimated US\$900mio in aggregate suspicious transaction activity occurring between April 2008 and October 2009. A lack of adequate training for both the anti-money laundering and business staff contributed to the failure to recognise this suspicious activity.

“In the face of repeated alerts on Mr. Rothstein’s accounts by the Bank’s anti-money laundering surveillance software over an 18 month period, the Bank did not do enough to prevent the pain and financial suffering of innocent investors,” FinCEN Director Jennifer Shasky Calvery stated. “Financial institutions must do a better job of protecting our financial system and citizens from such harm. It is not acceptable to have a poorly resourced and trained staff overseeing such a critical function.”

Indian Banks

2013: US\$1mio¹⁹⁴

Agency: Reserve Bank of India

The Reserve Bank of India imposed fines in aggregate of just over US\$1mio on six Indian banks for violation of the Reserve Bank of India Know Your Customer/Anti-Money Laundering Standards, following industry wide inspections during April and May 2013. The Banks and respective fines involved the following: Allahabad Bank (Rs. 0.50 Crore ~ US\$78K); Bank of Maharashtra (Rs. 0.501 Crore ~ US\$78K); Corporation Bank (Rs. 1.50 Crore ~ US\$233K); Dena Bank (Rs. 2.00 Crore ~ US\$311K); IDBI Bank Ltd. (Rs. 1Cr ~ US\$155K) and Indian Bank (Rs. 1Cr ~ US\$155K). The violations ranged across the AML environment including with respect to the non-adherence to certain aspects of know your customer (KYC) norms and anti-money laundering (AML) guidelines like customer identification procedure, risk categorisation, periodical review of risk profiling of account holders, periodical KYC updates, non-adherence of KYC norms for walk in customers

including for sale of third party products, omissions in filing of cash transaction reports (CTRs) in respect of some cash transactions, non-adherence to instructions on monitoring of transactions in customer accounts including walk-in-customers, non-adherence to instructions which prohibit acceptance of cash above Rs50,000 from customers for sale of gold coins and issue of demand drafts, non-adherence to instructions on import of gold on consignment basis and non-adherence to instructions on permitted credits to Non-resident accounts. The investigation did not reveal any *prima facie* evidence of actual money laundering.

Swiss Bank Fines

2013: US\$216,000 (HSBC; UBP; EFG)¹⁹⁵

Agency: Swiss FINMA

Three Swiss banks were ordered to pay fines up to CHF100,000 for handling suspicious funds from friends and relatives of Tunisia’s ousted President Ben-Ali. President Zine al-Abidine Ben Ali, who ruled for 23 years, fled Tunisia in 2011 after popular protests against his regime. HSBC Private Bank, Union Bancaire Privee (UBP) and EFG were fined by the Financial Market Supervisory Authority for mismanaging funds from those in the President’s regime.

According to press reports, HSBC Private Bank, received the most severe punishment, receiving a fine of 88,000 CHF (US\$98,000) and have installed an external auditor and had imposed a ban on opening accounts for politically exposed persons (PEPs) for three years. In an aim to curtail money laundering and other criminal activity Swiss law dictates that banks must pay close attention to those holding high offices in government (PEPs) and their family members. EFG was fined 46,000 Swiss francs (CHF) (US\$51,000) and UBP fined 49,000 CHF (US\$57,000). These actions and fines result from an investigation carried out by FINMA the Swiss market regulator, following the Arab Spring. It had been announced initially that 20 Banks were being reviewed and that 4 Banks are likely to face measures. The 3 announced relate solely to Tunisian assets so it could be expected that further announcement with respect to either Libya or Egyptian assets could follow.

Royal Bank of Scotland

2013 - US\$100mio CMP Cease and Desist¹⁹⁶

Agencies: US FED; OFAC; DFS

UK based Bank, Royal Bank of Scotland Group agreed to pay US\$100mio in penalties to settle allegations by US regulators that the bank violated US sanctions against Iran, Sudan, Burma and Cuba. This includes a Cease and Desist Order and a payment of US\$50mio to the Fed, of which US\$33mio is deemed to satisfy an OFAC penalty, with another US\$50mio to the New York State Department of Financial Services (DFS). The US Department of Justice

and the District Attorney of New York have concluded their parallel criminal investigations and have decided not to take any action against RBS.

From 2005 to 2009, RBS is alleged to have engaged in payment practices that interfered with the implementation of US economic sanctions by financial institutions in the US. Those practices included removing material references to US-sanctioned locations or persons from payment messages sent to U.S. financial institutions. The DFS said that between 2002 and 2011 RBS hid or failed to disclose information about sanctioned parties in 3,500 transactions valued at approximately US\$523mio. The DFS noted that employees at RBS acted to conceal the identity of sanctioned clients by various means, including implementing formal procedures to strip out identifying data from payment messages. According to US regulators, with respect to Iran, RBS developed written procedures to send payments that omitted information about the Iranian nexus in cover payments sent to US financial institutions. The procedures instructed RBS employees to list the actual name of the Iranian financial institution rather than the Bank Identifier Code in the beneficiary bank field of the payment instructions.

The US Department of the Treasury said in a statement, "Doing so prevented the RBS payment system from automatically including references to the Iranian bank or Iran in related cover messages and resulted in the omission of that data from instructions sent to US clearing banks. While the instructions were developed to handle payments involving Iran, RBS identified that similar methods were used for certain payments involving Sudan, Burma, and Cuba as well."

According to RBS, the settlement arose from an investigation initiated by the bank in 2010 into its historical US dollar payment practices and controls in the UK and that the review was shared by it with the relevant US authorities in 2010.

RBS announced that it had embarked on an extensive remediation plan to address the shortcomings identified in its investigation, including committing almost £300 million (since 2010) to strengthen the bank's control environment on sanctions, and since 2009, RBS has instituted a new more comprehensive global OFAC compliance policy, the introduction of electronic filtering of payments including an enhanced filtering approach, conducted an extensive review of all customer relationships in the relevant countries and exited a number of customer relationships, enhanced its Anti-Money Laundering and Sanctions Compliance function and increased its team by more than 730 employees since June 2011 to a total of 1,700 today. It also strengthened governance at a number of different levels within the Group to ensure the appropriate coordination and prioritization of sanctions compliance activity across the Group.

JLT Specialty

2013: £1.8 mio¹⁹⁷

Agency: UK Financial Conduct Authority

JLT Specialty provides insurance, broking, risk management and claims consulting services to a wide range of national and international corporate clients, but in so doing the FCA found that the Company had failed to implement adequate risk management systems and controls over anti bribery and corruption, including weaknesses around due diligence on overseas introducer's and generally failing to implement issued policies and procedures, in particular red flag areas identified as warranting greater attention in the firms own policies and procedures.

Outlook Cases/2014 and beyond

Without prejudging outcomes in any way, the following have been publicly disclosed and so are mentioned as a matter of record and for information only. No conclusions can be made until facts and findings if any are revealed.

Sanctions

According to press reports and in some cases confirmed by the Bank itself the following Financial Institutions are co-operating with US investigations into possible breaches of US Sanctions. The Banks are thought to include Unicredit's German subsidiary, **HypoVereinsbank**, which the Italian bank bought in 2005, other German Banks; **Commerzbank** and **Deutsche Bank** and French Banks' **BNP Paribas** and **Credit Agricole**.

The UK authorities in 2011 concluded and published findings from a thematic review, which focused on how banks manage money laundering risk in higher risk situations, uncovering in their words "serious weaknesses" in some banks' systems and controls and finding that three quarters of institutions were managing their money laundering risks inadequately. The majority of these failings were related to the handling of PEPs. Since then the FSA and its successor the FCA has fined Swiss bank **EFG Private Bank** £4.2mio, **Coutts** £8.75mio and **Habib Bank** was fined £525,000, while its money laundering reporting officer was fined £17,500. The recent fine for **GT Bank** of £525,000 brings the list of offenders to 4 with one more unnamed institution thought to still face censure resulting from the regulator's thematic review, thought to be **Standard Bank** (see below)

Libor

According to the WSJ,^{198/199} regulators hope to reach settlements with others, including **Lloyds**, **Bank of America**, **Citigroup** and **JPMorgan Chase** as well as **Deutsche Bank**. Other reports also name **HSBC**. The EU Commission are still investigating **HSBC**, **JP Morgan**, **Credit Agricole** and **ICAP**.

Cross Border Tax Cases

According to media reports^{200/201} a number of Banks are under investigation/ co-operating in connection with probes by US authorities investigating tax matters, including Banks in Switzerland, namely **Credit Suisse**, **Julius Baer**, **Pictet & Cie**, the **Zürcher and Basler Kantonal Banks**, **Bank Frey**, **HSBC**'s Swiss subsidiary and Israel's **Bank Leumi**. **Credit Suisse** had previously announced it was making a provision of CH250mio. These 8 banks are likely not the only ones with 6 more expected to make 14. In August 2013 the US

and Swiss governments announced a framework for co-operation which would not include the 14 banks still under criminal investigation. Instead it will apply to Switzerland's 2nd tier of around 100 banks, which will be divided up into 3 groups, with fines expected to range from 20-50% of the total amount of hidden US assets in Swiss accounts up to August 2008. Eligible banks will pay penalties and disclose account information about US customers in order to avoid prosecution. The Chairman of the Swiss Bankers Association, Patrick Odier, commented that "the situation would be sorted out within the next 12-18 months" but also offered an apology, stating "it was not because we lacked skills and knowledge that we found ourselves in these unfortunate situations....it was because we acted wrongly and we displayed wrong conduct".

Others

Barclays has said that UK and US authorities have opened an investigation into how the Bank raised money from Middle Eastern investors during the first phase of the financial crisis. According to press reports^{202/203} the probes relate to both the granting of a banking license in Saudi Arabia as well as capital raising and dealings in Qatar. The bank turned to the Qatar Investment Authority for two capital raisings in 2008. Barclays disclosed that year that £300mio had been paid in fees and commissions as part of the deal, including £66mio to Qatar Holding "for having arranged certain of the subscriptions in the capital raising".

JP Morgan Chase have acknowledged being the subject of an SEC investigation into the Bank's hiring practices. According to reports the SEC and the US Justice Department are trying to determine whether the Bank's hiring practices violated US anti-bribery laws. The focus on the hiring of so-called "princelings" was sparked after the US government began looking into hires that could have helped the Bank (and others) win lucrative IPOs in the region.²⁰⁴

The SEC charged the former head of the Miami office at brokerage firm **Direct Access Partners ("DAP")** for his role in an alleged kickback scheme to secure the bond trading business of Bandes, a state-owned Venezuelan bank. The SEC previously charged four individuals who enabled the global markets group at DAP to generate more than US\$66mio in revenue from transaction fees related to fraudulent trades they executed for Bandes. A portion of this revenue was illicitly paid to the Vice President of Finance at Bandes, who authorised the fraudulent trades. According to the SEC, the managing partner and others executed internal wash trades, interpositioned another broker-dealer in the trades to conceal their role in the transactions, and engaged in massive round-trip trades to pad their revenue. The SEC's amended complaint charges the managing partner and the other defendants with fraud.²⁰⁵

Breaking News

Brief Update from start of the Year to end March 2014.

As this book was finalised at the end of December 2013 and intended to be up to date as at this date, the Author will issue quarterly updates, including brief summaries of the most important quarterly developments, the first of which is set out below covering the period from the start of the year to the end of March 2014.

Part 1 Section 1 Predicate Crimes

Bribery & Corruption

The EU issued its first ever Anti-Corruption Report¹ which covered all 28 EU Member States, concluding that Corruption continues to be a challenge for Europe, with corruption costs for the European economy estimated at around €120 billion per year. The report shows that both the nature and level of corruption, and the effectiveness of measures taken to fight it, vary from one Member State to another. It also shows that corruption deserves greater attention in all Member States. The Report also publishes the results of a survey which found that three quarters (76%) of Europeans think that corruption is widespread and more than half (56%) think that the level of corruption in their country has increased over the past three years. One out of twelve Europeans (8%) say they have experienced or witnessed a case of corruption in the past year. The Report believes that there are great differences in many Member States due to the approaches taken, with for some, effective prevention contributing to a strong reputation of little corruption, whereas others have implemented policies in an uneven way and with limited results. Conflicts of interests were highlighted, differences as to the likelihood of prosecution and the severity of punishment another area identified. Risk areas include politics, with integrity in politics an issue still for many Member States and in particular the risks are generally higher at regional and local levels, where checks and balances and internal controls tend to be weaker, than at the central level. Urban development and construction, as well as health care, are sectors identified as vulnerable to corruption in a number of Member States, as well as shortcomings regarding the supervision of state-owned companies, increasing their vulnerability to corruption. Public procurement is also an area identified as vulnerable to corruption as approximately one fifth of the EU's GDP is spent every year by public entities buying goods, works and services.

Fraud including Tax Fraud & Cybercrime

The British Bankers Association (BBA) warned its members about cyber-attacks and the dangers posed but also about their responsibilities and in particular information sharing and reporting obligations in such a case, this following the publication of the Bank of England's findings of the "war game exercise" conducted in November 2013 known as "Waking Shark II." The

Report² has provided important lessons to both Industry and Government, with the need to use an available protected common platform for reporting and information sharing during potential stress scenarios and the need to not only inform Regulators and share important information with other market participants, in order to gauge, understand and respond to a market threat but also to inform Law Enforcement and file Suspicious Activity Reports.

Part 1 Section 2 Sub-Section 4 Country Risks

The FATF Plenary held in Paris in February 2014 published updates to its list of Countries with strategic anti-money laundering and combating the financing of terrorism (AML/CFT) deficiencies. FATF cited the following Countries with Iran and North Korea still requiring counter-measures, the others with strategic deficiencies being: Algeria, Ecuador, Ethiopia, Indonesia, Myanmar, Pakistan, Syria, Turkey, Yemen, followed by Countries with strategic AML/CFT deficiencies for which they have developed an action plan with the FATF, being: Albania, Angola, Argentina, Cuba, Iraq, Kenya, Kuwait, Kyrgyzstan, Lao PDR, Mongolia, Namibia, Nepal, Nicaragua, Papua New Guinea, Sudan, Tajikistan, Tanzania, Uganda, Zimbabwe. In this group Countries not making sufficient progress were identified as Afghanistan and Cambodia. FATF also received an update on AML/CFT improvements in Antigua and Barbuda, Bangladesh and Vietnam, which allowed these last 3 countries to be removed from the above list.

Part 1 Section 4 Laws & Regulations

AML Treaties, Conventions & Major Laws

The Consultative Paper from the Basel Committee on Banking Supervision, titled, "Sound Management of Risks related to money laundering and the financing of terrorism" was issued in final form.³

Financial Action Task Force

FATF work in 2014

The FATF Plenary held in Paris in February 2014 under the Russian Presidency published updates to its list of Countries with strategic anti-money laundering and combating the financing of terrorism (AML/CFT) deficiencies (see above). FATF also approved and published follow-up reports to the mutual evaluations of Aruba (Kingdom of the Netherlands), Austria, Canada, Luxembourg, Mexico and the Netherlands. Finally FATF reviewed the voluntary tax compliance programmes in several jurisdictions, adopted and published universal procedures for assessments conducted by assessment bodies, continued to develop guidance on effective implementation of beneficial ownership requirements, explored common issues between AML/CFT and data protection experts and is conducting further research on the AML/CFT implications of virtual currencies.

The Wolfsberg Group

In response to increasing regulatory focus on the risks associated with Correspondent Banking, The Wolfsberg Group announced revised Anti-Money Laundering Principles for Correspondent Banking, Frequently Asked Questions on Correspondent Banking and Wolfsberg Group Anti-Money Laundering Questionnaire. The Wolfsberg Group also announced the publication of its Guidance Paper on Mobile and Internet Payment Services (MIPS). Addressing the growing demand in the marketplace, and in financial institutions, for migration from paper based payments to MIPS, the paper considers the money laundering risks and mitigants of MIPS and supplements the Wolfsberg Group Statements on Credit/Charge Card Issuing and Merchant Acquiring Activities and Prepaid and Stored Value Cards. The paper seeks to counter the widely-held perception that all MIPS arrangements represent automatic high risk of money laundering by underlining that there is a broad spectrum of risk and mitigants for these arrangements.

Sanctions & Embargoes

Developments with Iran have slightly improved with an initial agreement to explore talks under the Joint Plan of Action ("JPA"), between Iran and the P5+1 countries (China, France, Germany, the Russian Federation, the UK and the US) which led to the temporary lifting of certain Iran-related sanctions. These sanctions suspensions became effective on January 20, 2014, and are mostly related to activity involving non-US persons and activity involving transactions relating to Iran's exports of petrochemical products, precious metals and transactions involving the automotive sector. Dealings involving US products/US persons involving medicines, medical supplies, food and agricultural related products, may also be permissible under general licenses issued by the US Treasury Department. This temporary lifting of sanctions by the US, however, does not include investments in Iran. Except in limited circumstances, US persons continue to be subject to sanctions against Iran and any Iranian designated party under sanctions issued by the US Treasury Department and enforced by the Office of Foreign Assets Control (OFAC), and the US Department of State which imposes restrictions with regards to exports of US goods directly or indirectly to Iran. The US also lifted certain "secondary" sanctions against non-US persons engaged in activity with Iran. The JPA is due to expire July 20, 2014 and the US has made clear that if a permanent deal with Iran is not reached, all sanctions, including sanctions against non-US persons, will be re-instated. Any dealings with Iran that are permissible as a result of the lifting of sanctions must be concluded on or before July 20, 2014. There will be no grandfathering of business dealings that are not completed by that date. There is no certainty that a long term agreement with Iran will be reached that could extend this temporary sanctions relief. In response to the JPA, third Countries have also acted including for example, Switzerland that lifted a ban on precious metal trading with Iranian public entities and eased restrictions on trading in petrochemical products,

transport of Iranian oil and petroleum products and insurance transactions relating to shipping until August 2014. Switzerland also increased the ceiling for transfers of funds to Iranian nationals.

The EU and the US imposed sanctions on more than two dozen Russian and Ukrainian officials following the crises in the Ukraine and Russian attempts to annex Crimea and threatened more severe moves if Moscow continues. Washington targeted seven top Russian policy makers including some of President Vladimir Putin's closest advisers with asset freezes and travel bans and the EU took measures against 21 people, including 13 Russians. The seven Russians hit by US sanctions include Vladislav Surkov and Sergei Glaziev, two aides to Mr Putin; Dmitry Rogozin, a deputy prime minister, and Valentina Matviyenko, head of the Federation Council, or upper house of parliament. Washington also placed sanctions on Sergei Aksyonov, the new pro-Russian prime minister of Crimea, and Vladimir Konstantinov, speaker of the Crimean parliament. The White House said its "current focus" was on targeting particular individuals and their personal assets "but not companies that they may manage on behalf of the Russian state". However, the US order also allows Washington to impose curbs on "any individual or entity that operates in the Russian arms industry". The 21 officials targeted by EU sanctions also includes people from Russia's parliament and armed forces but not Mr Putin's immediate circle.

Part 2 Section 5 Regions, Countries, Criminals & Terrorists

Following the election of less hardline Iranian President Hassan Rouhani in 2013, talks ensued and an interim agreement, the so called Joint Plan of Action ("JPA")), between Iran and the P5+1 countries (China, France, Germany, the Russian Federation, the UK and the US) came into force in January 2014. For details on the temporary lifting of certain Sanctions and Embargoes see above.

Major developments in this period focussed on the continuing instability and political unrest in the Ukraine, where with protesters increasingly active, particularly in Western Ukraine and in Kiev, its Capital, the government of President Yanukovic fell, with the President fleeing first to the East and now residing in Moscow. With a new interim government installed under acting President Oleksander Turchinov, the former Parliamentary speaker, an immediate crisis ensued with the Eastern Region of Crimea, which is home to a majority of former Russians, coming under direct Russian control followed by a vote in Crimea first by the Crimean Parliament and then by a hastily Organised Referendum to leave Ukraine and to join Russia. As at the time of writing and with the crises continuing Sanctions first against former Ukrainian officials and against targeted Russian persons have been the initial Western response (US/EU). For more details on Sanctions & Embargoes

see above. Whilst going into this quarter most eyes were on the Winter Olympics held in the Russian City of Sochi, with fears of terrorist acts from the Caucasus Emirate of most concern, the security arrangements may have deterred attacks and the games thankfully passed off without incident. With the games just at an end and Russia seeking to promote itself in a new light towards the world and after spending amounts up to US\$30 bio, for this purpose, the aggressive acts in the Crimea have not only tarnished that image but set back Russia's ability to act as a reliable partner on the International stage.

Part 2 Section 6 Terrorist Attacks

2014: Terrorist Attack at Train Station in Kunming, China by Xinjiang extremists (29)

At least 29 people died and 140 were injured in an orchestrated knife attack, at a Chinese Railway Station in Kunming which Chinese state media have called "China's September 11th". Chinese authorities say it was an act of terrorism carried out by "Xinjiang extremists", or ethnic Uighurs, a Muslim minority group from the north-west, perhaps carried out by members of the East Turkستان Islamic Movement.

Numerous attacks by Boko Haram in Nigeria (700)

According to Human Rights Watch the killings in Nigeria by Boko Haram have intensified in 2014. With more than 40 significant attacks so far, the death toll has reached 700 people.

Part 2 Section 8 Enforcement Cases

JP Morgan Chase

2014: US\$2.05bio (US\$1.7 bio forfeiture for investors/US\$350mio OCC (US\$461 mio FINCEN)⁴
Agencies: US DoJ & OCC & FINCEN

Five years after Bernie Madoff admitted to operating the largest ever Ponzi scheme, Madoff's custodian bank, JPMorgan Chase (JPM) agreed to two criminal violations of the Bank Secrecy Act tied to its relationship as Madoff's primary banker for over two decades as authorities believe the company ignored signs of the fraud. JPM agreed to pay US\$1.7 billion to victims of the Madoff fraud and agreed to reform its anti-money laundering policies, paying a fine levied by the OCC of US\$350mio. The deal with U.S. authorities includes a two-year deferred prosecution agreement and represents the largest-ever bank forfeiture in the U.S. and largest ever combined forfeiture and fine for money laundering related matters. JPM agreed to overhaul and reform its anti-money laundering policies, after the OCC found "critical and widespread deficiencies" of the bank's anti-money laundering compliance programs. The OCC said the penalty is based on JPMorgan's failure to report suspicions about Madoff's investment firm to U.S. law enforcement and regulators despite alerting U.K. authorities. Concurrent with the OCC's enforcement action, the Financial Crimes Enforcement Network assessed

a US\$461 million civil money penalty that is deemed satisfied by the forfeiture to the U.S. government.

Standard Bank

2014: £7,640,400⁵

Agency: The UK Financial Conduct Authority

The UK financial Conduct Authority (FCA) fined Standard Bank PLC (Standard Bank PLC is the UK subsidiary of Standard Bank Group, South Africa's largest banking group) £7,640,400 for failings relating to its anti-money laundering (AML) policies and procedures over corporate customers connected to politically exposed persons (PEPs). This action flows from the 2011 published review by the FSA in connection with an undertaken thematic review, which focused on how banks manage money laundering risk in higher risk situations. Tracey McDermott, director of enforcement and financial crime, said: "One of the FCA's objectives is to protect and enhance the integrity of the UK financial system. Banks are in the front line in the fight against money laundering. If they accept business from high risk customers they must have effective systems, controls and practices in place to manage that risk. Standard Bank clearly failed in this respect."

Canada Inc formerly Swift Trade Inc

2014: £8,000,000⁶

Agency: The UK Financial Conduct Authority

The Financial Conduct Authority (FCA) issued a Final Notice against Canada Inc formerly carrying on business as Swift Trade Inc ("Swift Trade") and levied a financial penalty of £8,000,000 for engaging in market abuse.

Credit Suisse

2014: US\$196 mio Fine⁷

Agency: The Securities and Exchange Commission

Credit Suisse Group AG was fined for violating federal securities laws by providing cross-border brokerage and investment advisory services to US clients without first registering with the SEC. Credit Suisse agreed to pay US\$196mio and admit wrongdoing to settle the SEC's charges. According to the SEC's order instituting settled administrative proceedings, Credit Suisse provided cross-border securities services to thousands of US clients and collected fees totaling approximately US\$82mio without adhering to the registration provisions of the federal securities laws. Credit Suisse relationship managers traveled to the US to solicit clients, provide investment advice, and induce securities transactions. These relationship managers were not registered to provide brokerage or advisory services, nor were they affiliated with a registered entity. The relationship managers also communicated with clients in the US through overseas e-mails and phone calls. "The broker-dealer and investment adviser registration provisions are core protections for investors," said Andrew J. Ceresney, director

of the SEC's Division of Enforcement. "As Credit Suisse admitted as part of the settlement, its employees for many years failed to comply with these requirements, and the firm took far too long to achieve compliance." According to the SEC's order, Credit Suisse began conducting cross-border advisory and brokerage services for US clients as early as 2002, amassing as many as 8,500 US client accounts that contained an average total of US\$5.6bion in securities assets. The relationship managers made approximately 107 trips to the US during a seven-year period and provided broker-dealer and advisory services to hundreds of clients they visited. Credit Suisse was aware of the registration requirements of the federal securities laws and undertook initiatives designed to prevent such violations. These initiatives largely failed, however, because they were not effectively implemented or monitored. According to the SEC's order, it was not until after a much-publicised civil and criminal investigation into similar conduct by Swiss-based UBS that Credit Suisse began to take steps in October 2008 to exit the business of providing cross-border advisory and brokerage services to US clients. Although the number of US client accounts decreased beginning in 2009 and the majority were closed or transferred by 2010, it took Credit Suisse until mid-2013 to completely exit the cross-border business as the firm continued to collect broker-dealer and investment adviser fees on some accounts. The SEC's order finds that Credit Suisse willfully violated Section 15(a) of the Securities Exchange Act of 1934 and Section 203(a) of the Investment Advisers Act of 1940. Credit Suisse admitted the facts in the SEC's order acknowledged that its conduct violated the federal securities laws, accepted a censure and a cease-and-desist order and agreed to retain an independent consultant. Credit Suisse agreed to pay US\$82,170,990 in disgorgement, US\$64,340,024 in pre-judgment interest, and a US\$50mio penalty.

Whilst the settlement with the SEC closes one important aspect of US investigations into Credit Suisse's cross-border US business, the Bank still has likely larger fines and agreements still to reach with the US Department of Justice and the US IRS, particularly to answer allegations contained in a Report issued by the US Senate on Permanent Investigations, entitled: Offshore Tax Evasion: The Effort to Collect Unpaid Taxes on Billions in Hidden Offshore Accounts and discussed in Hearings held in February 2014.⁸ After paying US\$196mio fine, Credit Suisse still has a disclosed reserve of around CHF300mio set aside for further fines and penalties, though many commentators believe the final figure is more likely to surpass the US\$780mio paid by UBS in 2009. As a result of the findings from tax investigations such as this, the US Congress enacted the Foreign Account Tax Compliance Act, requiring banks to disclose American customer accounts every year or pay a 30% tax on their US investment income. But there are loopholes in the law that, among other things, allow foreign financial firms to protect US offshore shell companies.

Gold Fixing Investigation

The London gold fix, the benchmark used by miners, jewellers and central banks to value the metal, may have been manipulated for a decade by the banks setting it, and is the subject of continued investigations by Regulators. With an estimated 175m ounces of gold, worth US\$215bn at today's prices, changing hands daily on the over-the-counter market, London is the global centre of gold trading. Unusual trading patterns around 3 p.m. in London, when the so-called afternoon fix is set on a private conference call between five of the biggest gold dealers, may be a sign of collusive behavior. The rate-setting ritual dates back to 1919. Dealers in the early years met in a wood-paneled room in Rothschild's office in the City of London and raised little Union Jacks to indicate interest. Now the fix is calculated twice a day on telephone conferences at 10:30 a.m. and 3 p.m. London time. The calls usually last 10 minutes, though they can run more than an hour. The five Banks overseeing the century-old rate are until recently Barclays, Deutsche, Bank of Nova Scotia, HSBC and Société Générale, though Deutsche Bank have recently announced their intention to withdraw from the Gold fixing. Deutsche have also announced withdrawing from the Silver fixing which is carried out with two other Banks, HSBC and Scotiabank and is fixed in a similar way to the Gold price.

Brown Brothers Harriman & Co

2014: US\$8mio⁹

Agency: FINRA

FINRA Fined Brown Brothers Harriman a Record US\$8 Million for Substantial Anti-Money Laundering Compliance Failures and fined and suspended a former AML Compliance Officer in particular over BBH's failure to have an adequate anti-money laundering program in place to monitor and detect suspicious penny stock transactions. BBH also failed to sufficiently investigate potentially suspicious penny stock activity brought to the firm's attention and did not fulfill its Suspicious Activity Report (SAR) filing requirements. In addition, BBH did not have an adequate supervisory system to prevent the distribution of unregistered securities. BBH's former Global AML Compliance Officer Harold Crawford was also fined US\$25,000 and suspended for one month.

Penny stock transactions pose heightened risks because low-priced securities may be manipulated by fraudsters. FINRA found that from 1 January 2009, to 30 June 2013, BBH executed transactions or delivered securities involving at least six billion shares of penny stocks, many on behalf of undisclosed customers of foreign banks in known bank secrecy havens. BBH executed these transactions despite the fact that it was unable to obtain information essential to verify that the stocks were free trading. In many instances, BBH lacked such basic information as the identity of the stock's beneficial owner, the circumstances under which the stock

was obtained, and the seller's relationship to the issuer. Penny stock transactions generated at least US\$850mio in proceeds for BBH's customers.

Brad Bennett, FINRA Executive Vice President, Enforcement, said "The sanction in this case reflects the gravity of Brown Brothers Harriman's compliance failures. The firm opened its doors to undisclosed sellers of penny stocks from secrecy havens without regard for who was behind those transactions, or whether the stock was properly registered or exempt from registration. This case is a reminder to firms of what can happen if they choose to engage in the penny stock liquidation business when they lack the ability to manage the risks involved."

FINRA also found that although BBH was aware that customers were depositing and selling large blocks of penny stocks, it failed to ensure that its supervisory reviews were adequate to determine whether the securities were part of an illegal unregistered distribution. FINRA Regulatory Notice 09-05 discusses "red flags" that should signal a firm to closely scrutinize transactions to determine whether the stock is properly registered or exempt from registration, or whether it is being offered illegally. BBH customers deposited and sold penny stock shares in transactions that should have raised numerous red flags.

In concluding these settlements, BBH and Crawford neither admitted nor denied the charges, but consented to the entry of FINRA's findings.

Forex Probe

The forex probe is a financial investigation into whether the world's largest currency trading banks colluded to manipulate the daily foreign exchange rates.¹⁰ Market regulators in Asia, Switzerland, the UK and the US began to investigate the US\$5.3 trillion-a-day foreign-exchange market after Bloomberg News reported in June 2013 that currency dealers said they had been front-running client orders and rigging the foreign exchange benchmark WM/Reuters rates by colluding with counterparts and pushing through trades before and during the 60-second windows when the benchmark rates are set. The behavior occurred daily in the spot foreign-exchange market and went on for at least a decade according to currency traders using electronic chatrooms in which senior currency traders discussed with their competitors at other banks the types and volume of the trades they planned to place. The electronic chatrooms had names such as "The Cartel," "The Bandits' Club," "One Team, One Dream" and "The Mafia". At least 15 banks including Barclays, HSBC and Goldman Sachs disclosed investigations by regulators. Barclays, Citigroup, and JPMorgan Chase all suspended or placed on leave senior currency traders. Deutsche Bank was also cooperating with requests for information from regulators. Barclays, Citigroup, Deutsche Bank, HSBC, JPMorgan Chase, Lloyds, RBS, Standard Chartered, and UBS as of February 2014 had suspended, placed on leave, or fired 21 traders. Citigroup had also fired its

head of European spot forex trading.

BNP Paribas

BNP Paribas, France's biggest bank, announced in February 2014 that it had set aside US\$1.1bio for a possible fine for breaching US sanctions in countries including Iran, but also thought to include Sudan and Cuba. BNP said it had set aside the funds after talks with the US authorities, though it said there had been no discussion on the size of any potential penalty. "We've been doing a retrospective review for several years and we've basically now presented our findings to the US authorities," said BNP Chief Financial Officer, Lars Macheil. The US authorities involved are thought to include, the US Treasury Department's Office of Foreign Assets Control, the Manhattan District Attorney, the US Attorney for the Southern District of New York, the Justice Department, the Federal Reserve and the New York Department of Financial Services, which the person said are all involved in the probe, either declined comment or did not immediately respond to a request for comment.

Notes

Introduction

1. The Art of War by Sun Tzu – Special Edition. Translated and annotated by Lionel Giles (2005). El Paso Norte Press. ISBN 0-9760726-9-6. The Art of War is an ancient Chinese military treatise attributed to Sun Tzu (also referred to as "Sun Wu" and "Sunzi"), a high-ranking military general, strategist and tactician. It was believed to have been compiled during the period before the victory of the state of Qin in 221 BC, creating a unified China under the Qin Dynasty. The text is composed of 13 chapters, each of which is devoted to one aspect of warfare. It is commonly known to be the definitive work on military strategy and tactics of its time. It has been the most famous and important military treatise in Asia, for the last two thousand years. It has had an influence on Eastern and Western military thinking, business tactics, legal strategy and beyond.

Five Recommendations to “Effectively” combat Money Laundering

1. Whilst the term “money laundering” was invented and used for the first time only in the 20th Century, money laundering as a practice goes back much further. For details about the history of money laundering and the use of the term itself see “What is Money Laundering” at Page 14 onwards.

2. The United Nations Office on Drugs and Crime (UNODC) issued a report on 25 October 2011 entitled “Estimating illicit financial flows resulting from drug trafficking and other transnational organised crime,” which estimated that criminal proceeds, excluding tax evasion, would amount to some \$2.1 trillion or 3.6% of GDP in 2009, with US\$1.6 trillion being laundered. Of this total, the proceeds of transnational organised crime, such as drug trafficking, counterfeiting, human trafficking and small arms smuggling, would amount to 1.5% of 2009 global GDP, 70% of which or would likely have been laundered through the financial system. The Report stated that only 0.2% of illicit financial flows are currently being seized and frozen. UNODC [online]. 2011. Available from: <http://www.unodc.org/documents/data-and-analysis/Studies/Illicit_financial_flows_2011_web.pdf> [Accessed 14 July 2013]. Note: A trillion is a number which has technically two definitions essentially the long scale definition traditionally used by the British and the short scale definition used by Americans. In Finance (the Bank of England has used the US definition for at least 20 years) and for the purposes of money laundering and as used by the UN and others in their work, the short scale definition is used so that a trillion is one million million or 1,000,000,000,000 As opposed to the long scale definition being one million million million or 1,000,000,000,000,000. Using the short scale definition a million is equal to a thousand thousands and a billion is equal to a thousand millions. In order to try to appreciate the size of a trillion consider the following: (i) How Long Ago Is a Trillion Seconds? - If you count backward, then: 1 million seconds = 12 days ago; 1 billion seconds = 31 years ago; 1 trillion seconds = 30,000 B.C. (approx); (ii) Height of a stack of US\$1000 bills?: If you stack a trillion-worth of \$1000 bills together, then: 1 million dollars = 4 inches high; 1 billion dollars = 364 feet high; 1 trillion dollars = 63 miles high (approx). Thankfully we are yet to hear about 1,000,000,000,000,000 or Quadrillion!

3. Havocscope [online]. 2013. Available from: <<http://www.havocscope.com/illicit-trade/>> [Accessed 14 July 2013]. According to Havocscope Illicit Trade is estimated at US\$1.79 trillion. The Havocscope Illicit Trade Value is the estimated value of the global black market. This figure is determined by combining the total value of 50 contraband products and illegal activities with the total value of black markets in 91 countries. The total values from both the products and countries are added together and divided by 2 in order to produce the Havocscope Illicit Trade Value. The Value of Products is estimated at US\$1.63 trillion and the Value of Countries at US\$1.94 trillion. Havocscope provides accurate, unbiased data by providing a centralized location for all information about the black market. All data listed within Havocscope's website is collected from credible public sources, such as newspapers, government reports and academic journals. Every single data point is listed with its original source. This allows users to see where the information has come from, judge the credibility of the source, and pursue further research if necessary. Havocscope maintains a strict policy of neutrality when dealing with issues surrounding the black market. They do not advocate for any position or offer any type of policy recommendations. They do not consult, advise, investigate or provide any ideas on how to change the black market. They are not funded by government agencies, foundations, or industry associations. Havocscope data has been used by the World Economic Forum in its 2011 Global Risks Report to highlight the issue of illicit trade. In 2012, the Council on Foreign Relations utilised Havocscope research when researching the issue of transnational crime for their Global Governance Monitor Project. Havocscope data has also been used in a wide range of publications such as Bloomberg News, National Geographic, The Atlantic

Monthly, and TheStreet.com.

4. Estimating the dimensions of the money flows related to corruption either in terms of how much is paid or how much is laundered as the profits of bribery is virtually impossible. Still the the World Bank has estimated between US \$1 trillion and US\$1.6 trillion dollars are lost globally each year to illegal activities. According to the World Bank, Corruption includes the abuse of public power for private gain, misappropriations of public goods, nepotism (favoring family members for jobs and contracts), and influencing the formulation of laws or regulations for private gain. World Bank [online]. 2013. available from <<http://web.worldbank.org/WBSITE/EXTERNAL/EXTABOU/TUS/0,contentMDK:23272490-pagePK:51123644-piPK:329829-theSitePK:29708,00.html>> [Accessed 14 July 2013].
5. The UK National Fraud Authority estimates that in 2010, Fraud cost the UK £38.4bio; see Fraud incl Tax Fraud and Cybercrime in Part 1 Section 1
6. According to the Association of Certified Fraud Examiners in the US Fraud costs US organisations more than US\$400 bio each year; see Fraud incl Tax Fraud and Cybercrime in Part 1 Section 1
7. See Note 2 above for details on the UNODC Report issued in October 2011. As far as transnational Organised crime is concerned the Report stated that their largest income still comes from illicit drugs, accounting for a fifth of all crime proceeds. For more details on organised crime and organised criminal gangs see Organised Crime in Part 1, Section 1 on Page 93 and Organised Criminal Gangs in Criminals and Terrorists in Part 2 Section 5.
8. Statement of Senator Carl Levin, Permanent Sub-Committee on Investigations Hearing on Private Banking and Money Laundering: A Case Study of Opportunities and Vulnerabilities, 9 November 1999. In fact Levin is quoting from one of the witnesses for the Sub-Committee, Raymond Baker, a guest scholar in Economic Studies at Brookings who estimates that US\$500bio to US\$1 trillion of international criminal proceeds are moved internationally and deposited into bank accounts annually. He estimates that half of this money comes to the US.
9. For more on the history that led to the signing of the Opium Convention see Drug Trafficking in Part 1 Section 1 and for brief details of the Convention itself see Money Laws and Regulation; AML Treaties, Conventions and Major Laws in Part 1 Section 3
10. For more on the history and developments of dangerous illegal drugs see Drug Trafficking in Part 1 Section 1
11. For more on the history and developments of organised crime and organised criminal gangs see Organised Crime in Part 1 Section 1 and Organised Criminal Gangs in Criminals and Terrorists in Part 2 Section 5.
12. For brief details on the Vienna Convention see Money Laundering Laws and Regulation; AML Treaties, Conventions and Major Laws in Part 1 Section 3.
13. According to FATF, money laundering is made up of the following 3 stages; placement, layering and integration. Placement - In the initial - or placement - stage of money laundering, the launderer introduces his illegal profits into the financial system. This might be done by breaking up large amounts of cash into less conspicuous smaller sums that are then deposited directly into a bank account, or by purchasing a series of monetary instruments (cheques, money orders, etc.) that are then collected and deposited into accounts at another location; Layering - After the funds have entered the financial system, the second – or layering – stage takes place. In this phase, the launderer engages in a series of conversions or movements of the funds to distance them from their source. The funds might be channelled through the purchase and sales of investment instruments, or the launderer might simply wire the funds through a series of accounts at various banks across the globe. This use of widely scattered accounts for laundering is especially prevalent in those jurisdictions that do not co-operate in anti-money laundering investigations. In some instances, the launderer might disguise the transfers as payments for goods or services, thus giving them a legitimate appearance; Integration - Having successfully processed his criminal profits through the first two phases the launderer then moves them to the third stage – integration – in which the funds re-enter the legitimate economy. The launderer might choose to invest the funds into real estate, luxury assets, or business ventures.....FATF 2012, 40 Recommendations. This 3 stage process, the classic description of money laundering has also been described as “immersion”; generally inserting the proceeds of crime into the legitimate financial system, “heavy soaping” or disguising the trail of the monies as they pass through the financial system and finally the “spin dry” when the funds make it into legitimate income or assets. Furthermore FATF explain where Money Laundering may occur as follows: “As money laundering is a consequence of almost all profit generating crime, it can occur practically anywhere in the world. Generally, money launderers tend to seek out countries or sectors in which there is a low risk of detection due to weak or ineffective anti-money laundering programmes. Because the objective of money laundering is to get the illegal funds back to the individual who generated them, launderers usually prefer to move funds through stable financial systems. Money laundering activity may also be concentrated geo-graphically according to the stage the laundered funds have reached. At the placement stage, for example, the funds are usually processed relatively close to the under-lying activity; often, but not in every case, in the country where the funds

originate. With the layering phase, the launderer might choose an offshore financial centre, a large regional business centre, or a world banking centre – any location that provides an adequate financial or business infrastructure. At this stage, the laundered funds may also only transit bank accounts at various locations where this can be done without leaving traces of their source or ultimate destination. Finally, at the integration phase, launderers might choose to invest laundered funds in still other locations if they were generated in unstable economies or locations offering limited investment opportunities. "For Terrorism Finance, FATF, in their 2008 Terrorism Financing Typologies Report, also highlighted 3 stages, though these were not Placement, Layering and Integration, but Raising, Moving and Using funds, both criminally originated funds, where the 3 money laundering stages would still apply, but also to legally originated funds. As criminal activity, beyond drug trafficking become classified as predicate offences to Money Laundering, the original definitions and the classical 3 stages are unlikely to be sufficient to fully describe what money laundering is and how it is carried out, particular when considering, trade based laundering schemes, insider dealing and market manipulation, terrorism finance and tax evasion. Furthermore with advances in technology, electronic and mobile cash and digital currencies, we may need to consider whether money alone remains the principal concern. For more details see "What is Money Laundering," at Page 18.

14. Whilst the costs of compliance with applicable AML regulation are now both a cost of doing business and a necessary cost to protect a firm's reputation and from enforcement from those in the regulated sector, few estimates of the costs of compliance have been gathered. One study albeit somewhat dated now and as such likely to be a significant understatement, as AML regulations, expectations and enforcement risks for regulated firms have since this study significantly increased. Still for the period 2004/2005 the Corporation of London and the Institute of Chartered Accountants in England & Wales commissioned Z/Yen to investigate AML Costs of Compliance. The study assessed the perceived costs of UK Anti-Money Laundering Requirements compared with other jurisdictions including the USA, Germany, France and Italy. It was carried out between September 2004 and March 2005 and involved 34 personal interviews and an online survey that received 386 responses. From the report (published in June 2005), edited by Professor Michael Mainelli, Executive Chairman, of the Z/Yen Group. Whilst the study made two important points: firstly, that it is difficult to support increased regulatory action without a cost/benefit analysis and, secondly, it is difficult to support increased regulatory action when there is little or no feed-back. The study also recommended measures which would aid effectiveness in particular focussing on closing co-operation gaps. Areas which, if improved, could yield significant results in terms of practicality and effectiveness include: (i) joined up intelligence – insufficient resources are focussed on this and/or little or not enough time and effort is undertaken to ensure there is a collective pooling of intelligence about money laundering activity; (ii) feedback to financial services institutions regarding the quality and quantity of their reporting appears to be inadequate; and (iii) publicity of successful convictions and asset seizures should be given a far higher profile. The results of the study relating to the costs of AML compliance concluded that the costs for a number of leading jurisdictions was significant though those with major international financial centers and as such a greater number of regulated entities were the highest in absolute terms with the US and UK reported at a best estimate level of UK£253mio and the US at UK£1.2bio with just more than 0.02% of respective then GDP and Germany (UK£150 mio); France (UK£85mio); and Italy (UK£70 mio) with just below 0.02% of global GDP. The Study also reported that a third to a half of all costs were being borne by the Banking sector. According to Australian Institute of Criminology - http://www.aic.gov.au/media_library/aic/research/staff/aic-iiaa_smith_slides.pdf, Australian figures for 2004/2005 would have been UK£80 mio. Applying a 0.02% average to 2005 Global GDP (US\$45 trillion) would result in total costs of US\$9bio for the regulated sector. With top estimates in the 2004/05 Study averaging at approximately 20-25% above the best estimate and with every indication that today's expectations are significantly ahead of best estimates for 2004/05 a realistic minimum sum today should amount to at least 0.025% of 2012 GDP, (US\$71.6 trillion - <http://databank.worldbank.org/data/download/GDP.pdf>) or US\$17.9bio. According to a study by Reuter and Truman, published in their book Chasing Dirty Money, The Fight against Money Laundering; Institute of International Economics 200; ISBN: 0881323705; they estimated that "the total financial cost of the current system in the US is about US\$7bio annually, including costs borne by the government, financial and non-financial private sector institutions, and the general public."

15. Whilst the number of Suspicious transaction reports has increased year on year, we are beginning to see a plateauing off in many countries where Money Laundering Prevention programs can be seen as mature. Whilst the total global numbers are approaching 2 million per year, the largest contributor is the US, which in 2011 recorded 1,505,823 and even topped this in 2012 with 1,582,875. In order to compare numbers, the Australian Institute of Criminology looked at a number of countries to compare not only SAR's filed but also conviction rates using country available information. The Report focussed on annual data from either or during 2008/2009 or 2007 if none more recent and was entitled, "Extent of compliance and enforcement activity." (insert note) http://www.aic.gov.au/publications/current%20series/rpp/100-120/rpp113/07_extent.html. The results of this study showed that SAR's filed were as follows: Australia - 32,449 -2008/9; USA - 1,290,590 - 2008; UK - 228,834 - 2008/09; Belgium - 15,554 -2008; France - 14,565 -2008; Germany - 7,349 -2008; Singapore - 12,158 - 2008; Hong Kong - 15,838 -2007; Taiwan - 1,741 -2007

16. For more details about fines and penalties incurred by Financial Institutions see Part 2 Section 8 Enforcement Cases.

17. See Note 2 above

18. The US has aggressively expanded forfeiture powers as part of a broader growth to combat serious and Organised crime. Now there are more than 400 federal statutes allowing for forfeiture ranging from racketeering and drug-dealing to violations of the Northern Pacific Halibut Act, according to a December 2009 Congressional Research Service report. The report shows that seizure powers were extended to about 200 of those laws in 2000 in a major congressional overhaul of the forfeiture system. There has also been a shift with greater use of civil-forfeiture proceedings, in which assets can be taken without criminal charges being filed against the owner. In a civil forfeiture, the asset itself, not the owner of the asset, is technically the defendant. In such a case, the government must usually show by a preponderance of evidence that the property was connected to illegal activity. In a criminal forfeiture case, the government must first win a conviction against an individual, where the burden of proof is higher. Both Justice and Treasury Departments operate separate asset forfeiture programmes that are designed to prevent and reduce crime through the seizure and forfeiture of assets that represent the proceeds of or were used to facilitate crime. Annually the amounts seized by Justice and Treasury are increasing. For The Justice Fund, assets have been seized by numerous agencies including ATF, DEA, FBI and US marshals. For the Treasury Fund, assets have been seized by agencies such as the IRS, ICE, US Customs, Coast Guard and US Secret Service. On the 25th anniversary of the US DoJ asset forfeiture programme in 2009 Eric Holder US Attorney General said looking back over the development of the programme that "we see a forfeiture regime that has been transformed from centuries old laws designed to fight pirates enforce customs laws and fight illegal contraband into an array of modern law enforcement tools designed to combat 21st century criminals both at home and abroad." Holder also noted that since 2004 the DoJ has deprived criminals of over US\$13 bio net by its asset forfeiture activities. According to a 1992 Cato Institute study, The Justice Department's forfeiture fund held just US\$27 million in 1985. According to the GAO 12-736 Report "Justice Assets Forfeiture Fund" published in July 2012' in the 9 year period from fiscal years 2003 to 2011 AFF revenues totalled US\$11bio growing from US\$500mio in 2003 FY to US\$1.8bio in FY 2011, with 2004, US\$571mio; 2005, US\$612mio; 2006, US\$1.2bio; 2007, US\$1.66bio; 2008, US\$1.42bio; 2009, US\$1.45bio; and 2010, US\$1.79bio. Since 2006, an increase in the prosecution of fraud and financial crime cases led to substantial increases in AFF revenue. As a result of the increase in forfeitures resulting from money laundering and financial crime investigations in 2006 revenues doubled from the previous year from US\$612mio to US\$1,207 bio for the first time in AFF history breaking the US\$1bio level and since then continuing to grow to US\$1.8bio in 2011. According to DoJ's own Office of Inspector General (OIG) in an audit released in 2012 entitled, "Drug Enforcement Administration (DEA) adoptive seizure process and equitable sharing requests," the OIG report notes "for the period of October 1, 2000, through September 30, 2011, the DEA and other federal agencies processed over 150,644 seized assets valued at about US\$9.2bio of which US\$5.5bio (60%) originated from seizures processed by the DEA and US\$3.7bio (40%) originated from seizures processed by other federal agencies." The Audit also reported that forfeitures by assets in 2011 were the result of Administrative actions (48%), Civil (29%) and Criminal (23%). From 2003 to 2011 expenditures totalled 8.3 bio, with 2003 expenditures at 458 mio increasing to 1.3 bio in 2011. Expenditures are made up of 3 main areas - first payments to third parties or victims, second equitable sharing with police and other bodies involved and programme expenses. In 2011 US\$1.8bio was recovered whilst expenditures totalled 1.3 bio with 376 mio paid to third parties, 445 mio equitably shared and 491 mio the cost of the programme. The balance is carried over into the fund to cover future anticipated expenditure. Once used mainly as a tool against organised crime, mobsters and drug dealers, forfeiture is now much more broadly employed. For example recent figures released from the US Attorney's Office for the Southern District of New York, which covers Manhattan, covering actions and asset forfeitures for 2012, showed that this one office had its most successful year ever, reporting a haul of US\$2.98 billion in forfeitures and in addition US\$526.7 million from civil actions and US\$76.8 million in restitution, fines, and special assessments. To illustrate the change in those targeted the largest big ticket forfeitures related to the Madoff Ponzi Scheme, where collections of approximately \$2.22 billion have been made in 2012 from in particular the estate of one major investor beneficiary; from Science Applications International Corporation (SAIC), the primary contractor on New York City's "CityTime" payroll project, which forfeited \$500,392,977 in connection with its role in a fraud and kickback scheme, under a Deferred Prosecution Agreement; from John Rigas, the founder and former Chairman and Chief Executive Officer of Adelphia, and

Timothy Rigas, the former Chief Financial Officer, who were convicted for their participation in a massive securities fraud at Adelphia Communications Corp and who agreed to forfeit more than US\$728.9 million; from the internet gambling firm PokerStars who agreed to a first installment of US\$158.5 million from a US\$547mio settlement. Beyond these a number of financial institutions were subjected to forfeitures as a result of settlements, including Deutsche Bank & MortgageIT Fraud who forfeited US\$202.3 million; CitiMortgage, Inc who forfeited US\$158.3 million. Even the City of New York itself contributed US\$70 million for Medicaid irregularities. Again according to the release from the US Attorney's Office for the Southern District of New York Jan 2nd 2013, US\$4.389 billion was collected in asset forfeiture actions in FY 2012, which made the Southern District of New York the most successful responsible for 68% of the total. The U.S. Attorney's Office for the Southern District of New York also reported in the same release that, "Nationwide, the U.S. Attorneys' offices collected \$13.1 billion in criminal and civil actions during FY 2012, more than doubling the \$6.5 billion collected in FY 2011.

19. Whilst reliable consistent statistics are hard to come by, particularly as countries have failed to prioritize data capture and the organisation of data regarding successful asset recovery, there is nevertheless some available data which provides a useful commentary on the levels at which Countries strongly committed to the fight against money laundering and to the seizure and confiscation of criminal assets, have reached and indeed on their attitude to the collection and reporting of these results. The following statistics and related commentary relate primarily to figures obtained for the EU, with a focus on the UK and for Australia/New Zealand and the US. The reader should be aware that terms can mean different things in different countries, however in this commentary the terms asset seizure, confiscation and disposal are used to denote 3 distinct phases in the asset forfeiture process with seizure, usually the first where assets are only blocked, confiscation where ownership is transferred to the State or an instrument of the State and disposal where the asset is converted to cash after being sold and the final value of the asset is realized. Furthermore it should be understood that not all data is by any means comprehensive or up to date. In the case of Australia, according to statistics from the Australian Institute of Criminology (source: http://www.aic.gov.au/media_library/aic/research/staff/aic-iiia_smith_slides.pdf) Australia confiscated A\$49 mio in the Financial year 2006/07, this being a steady increase over the previous 2 years of A\$38 mio (2005/06) and A\$28 mio (2004/05). For New Zealand, since the Criminal Proceeds (Recovery) Act took effect in December 2009, about NZ\$29million worth of assets have been confiscated with a further NZ\$130.9million worth of assets seized or frozen. (insert source). In the case of the UK, figures are available for assets "recovered" (i.e. confiscated) in England, Wales and Northern Ireland (so excluding Scotland), (Source: <http://www.europarl.europa.eu/document/activities/cont/201206/20120627ATT47783/20120627ATT47783EN.pdf>) and these figures report that in 2003/04 £54.5mio was recovered, followed by steady increases in each of the years ahead as follows: 2004/05 - £84.4 mio; 2005/06 - £96mio; 2006/07 - £125.3mio and in 2007/08 - £135.7mio. More recently, the UK Government announced that the confiscation of criminal assets had reached £161m in the year to April 2011 with a further £800mio seized or frozen and another £50m returned to victims, still significantly short of its announced target of £1bn of assets confiscated a year. In part, to try to close the gap the UK government has launched a new strategy to introduce a new National Crime Agency to replace the current Serious Organised Crime Agency, to focus on Organised crime and the proceeds of crime from Organised crime which according to James Brokenshire, UK minister for crime and security is a strategy which, "provides a comprehensive national response across government, law enforcement, security and intelligence agencies...paving the way for the National Crime Agency, galvanising all those with a role to play in tackling organised crime. We need to address the threat at a local, national and international level in order to make a lasting impact." For the EU which of course includes the UK figures are available for some countries for asset seizures only, for confiscation only and for disposal only and some for combinations. The following are the results according to a Study by Matrix commissioned by the EU itself reporting in 2009 in a paper called the Final Asset Recovery Report, (Source: http://ec.europa.eu/home-affairs/news/intro/docs/20120312/final_asset_recovery_report_june_2009.pdf) which in addition to reporting on asset seizures, confiscations and disposals provided a detailed commentary on the ills afflicting the EU asset forfeiture system and provided detailed recommendations to improve effectiveness. The figures contained in the report identified that for the year 2007 or the year with most recent data prior to 2007 Countries had either seized, confiscated or disposed of criminal assets as follows: The UK had confiscated €157mio and disposed of €100mio; Spain had confiscated €83mio; The Netherlands seized €80mio and confiscated US\$22.6mio; Italy seized US\$656mio and confiscated US\$147mio; Belgium seized US\$52mio and confiscated € 48 mio; Germany seized \$218 mio; France seized 55.5 mio; Ireland seized €62.6 mio and disposed of €3.2mio; Poland seized €122mio; Finland seized € 23.6mio and confiscated €1.8mio; Lithuania seized €11.9mio; Austria confiscated €44mio; Sweden confiscated €1.8mio; Portugal confiscated € 2.4mio and the Czech Republic disposed of €23.6mio. According to a Report from the European Court of Auditors in 2009, (Source: insert link eu inside etc) seized assets amounted to €281mio in Germany, €185mio in France, £154mio pounds in Britain, €

50mio in the Netherlands. <http://www.euinside.eu/en/news/the-eu-lets-hit-the-crime-where-it-hurts-most-in-the-pocket>

20. The largest single recorded seizure of assets was announced in 2013 in Italy, when an Italian court ordered the acquisition of US\$1.9bio in mafia assets to be seized from Sicily's so called "Lord of the wind" or Vito Nicastri, a businessman with links to the Cosa Nostra or the Sicilian Mafia. Nicastri, who earned his nickname through his interests in vast wind farms, invested money made from extortion, drug sales and other illegal activities for the Sicilian Mafia's most sought-after fugitive, Matteo Messina Denaro, who is believed to be the Cosa Nostra's overall boss. In 2010, it emerged that Cosa Nostra was attempting to take millions of euros from both the Italian government and the EU by taking the generous grants on offer for investment in wind power and environmentally-friendly business. General Antonio Girone, then head of the national anti-Mafia agency DIA, said Mr Nicastri had built up a huge alternative energy business at the behest of the organised crime syndicate. In addition to halting the wind farm business interests of Mr Nicastri, Italian prosecutors also seized 66 bank accounts, as well as real estate property and other businesses, in Lazio and Calabria, and the northern region of Lombardy. Italy is ranked third in Europe, after Germany and Spain, for wind power, with almost 300 farms as of the end of 2009, according to Gestore Servizi Energetici, a public company that manages incentive programmes for renewable energy. Over the past decade, thanks to generous subsidies, wind farms have proliferated and increased in number substantially, with most, around 98% in the South of Italy.

21. A report entitled: The Globalization of Crime: A Transnational Organised Crime Threat Assessment, by the UNODC in June 2010 Available at: <<http://www.unodc.org/unodc/en/frontpage/2010/June/international-criminal-markets-have-become-major-centres-of-power-unodc-report-shows.html>> [Accessed 18 August 2013]; released at the Council of Foreign Relations in New York, looked at major trafficking flows of drugs (cocaine and heroin), firearms, counterfeit products, stolen natural resources and people (for sex and forced labour), as well as smuggled migrants. It also covers maritime piracy and cybercrime and shows how organised crime has globalized and turned into one of the world's foremost economic and armed powers. "Since crime creates instability, peace is the best way of containing crime," he said. "Criminals are motivated by profit: so let us go after their money," said UNODC Executive Director Antonio Maria Costa, adding that "We must increase the risks and lower the incentives that enable the bloody hand of organised crime to manipulate the invisible hand of competition". He called for more robust implementation of the UN Convention against Corruption, more effective anti-money laundering measures, and a crackdown on bank secrecy. He also stated that, "Today, the criminal market spans the planet: illicit goods are sourced from one continent, trafficked across another and marketed in a third." "Transnational crime has become a threat to peace and development, even to the sovereignty of nations," warned the head of UNODC. "Criminals use weapons and violence, but also money and bribes to buy elections, politicians and power - even the military," said Mr. Costa. "Despite the intrinsic difficulty of doing research on crime, UNODC was able to document the enormous power and global reach of international mafias," said Mr. Costa. The report makes a number of suggestions on how to deal with the threats posed by the globalization of crime, including "disrupting the market forces" behind these illicit trades and global responses on the basis of the UN Convention against Transnational Organised Crime (also known as the Palermo Convention), which was adopted in 2000. "Crime has internationalized faster than law enforcement and world governance," said Mr. Costa. "The Palermo Convention was created precisely to generate an international response to these transnational threats, but is often neglected," he said. "Governments that are serious about tackling the globalization of crime should spur the nations that are lagging behind in the implementation of the Convention," said the head of UNODC. "When States fail to deliver public services and security, criminals fill the vacuum," said Mr. Costa. "Reaching the Millennium Development Goals would be an effective antidote to crime, that in itself is an obstacle to development," he added. He also called for greater attention to criminal justice in peacebuilding and peacekeeping operations.

22. For more details about the FATF 2012 revised recommendations see Money Laundering Laws and Regulation; FATF work in 2012 on Page 248.

23. For more details about the FATF 2013 work on "effectiveness" see Money Laundering Laws and Regulation; FATF work in 2013 on Page 247.

24. http://www.fincen.gov/news_room/speech/pdf/20130227.pdf

25. Matrix (2009) ; Assessing the effectiveness of EU Member States' practices in the identification, tracking, freezing and confiscation of criminal assets. (online) [2009] Available at: <http://ec.europa.eu/home-affairs/news/intro/docs/20120313/final_asset_recovery_report_june_2009.pdf> [Accessed 13 April 2013]. Matrix was commissioned by the European Commission (EC) to: review current investigative, judicial and disposal phases of criminal asset recovery in EU Member States and identify good practice and obstacles to the effective implementation of asset recovery measures. Findings published in 2009 and recommendations were numerous, including insufficient resources

to cover expanding responsibilities, scepticism over the value of Asset recovery, challenges over cross border co-operation leads to inaction in many cases, conflicts with human rights and privacy laws, insufficient capacity to deal with non-cash assets, insufficient incentives, training and education and a lack of reporting and oversight to drive effectiveness and efficiency. Seven specific Recommendations were made to address the weaknesses and challenges faced and presented to the EC to consider and to act. These 7 Recommendations were: 1. A more realistic and motivational mission statement for the criminal asset recovery system should be produced, accompanied by a logic model which shows how all levels in the system contribute to the success of the mission. Assessing the effectiveness of EU Member States' practices in the identification, tracing, freezing and confiscation of criminal assets; 2. The EC should propose a system of incentives for improving the efficiency and effectiveness of criminal asset recovery. The incentive system will necessitate the keeping of adequate local operational records and the publishing of analyses including the auditing of system costs; 3. An expert task force should be provided to Member States to assist in the development of appropriate statistical systems; 4. Jurisdictions should be grouped into 'sets (families)' of similar Members to encourage local transfer of information and to simplify consultation; 5. A process review of EU institutions that support criminal asset recovery should be undertaken to ensure alignment with operational needs; 6. The practical EU initiatives already proposed which are widely supported should be implemented once our priority recommendations have been addressed but not before; 7. Appropriate training courses should be developed with the help of expert practitioners in Member States; training should be offered as part of an incentive package.

27. See also in Part 1 Section 3 Laws and Regulations - Copy the reference Note 75 - laws and regulations Part 1 Section 3

28. Non-bank FI's - In particular Money Services Businesses (MSB's). A 2005 US DEA study determined that MSB's both in the US and in Mexico, so called Casas de Cambio and Centros Cambiaro presented clear money laundering risks principally related to laundering the proceeds connected with the North American drug trade. In 2006 US FIU, FINCEN advised all US financial institutions formally about this threat. Notwithstanding, MSB's continue to feature in major money laundering cases.

29. Non-Financial Intermediaries representing real risks have been identified or referred to by numerous bodies; though many are either lightly or partly regulated or not regulated for money laundering purposes at all. FATF have identified a group they call, Designated Non Financial Professions and Businesses (DNFPB's) being professions and businesses that are seen as being attractive to money launderers and these are: Casino's, (when their customers engage in financial transactions above US\$3,000), Lawyers, Accountants and Trust and Company Service Providers, Dealers in Precious Metals and Stones (when their customers engage in CASH transactions above US\$15,000) and Real Estate Agents. Beyond DNFBP's, FATF have also identified Charities and Not for profit organisations where the risk of terrorist financing is potentially higher. Despite Politically Exposed Persons (PEP) being identified where the risk of bribery and corruption is potentially higher, this group is not subject to any direct oversight or regulatory scrutiny beyond those applied by the bank that maintains banking facilities with any PEP.

What is Money Laundering

1. Hegastratos, a Greek merchant, in 260 B.C. obtained an advanced loan from a shipment of corn through an agreement that allowed the lender to keep the ship and the shipment if payment was not received. Hegastratos attempted to keep the corn and sink the ship, leaving the lender without payment of goods. Hegastratos was caught in his fraud and died trying to escape.

32. The UN Office on Drugs and Crime (UNODC) issued a report on 25 October 2011 entitled "Estimating illicit financial flows resulting from drug trafficking and other transnational organised crime," which estimated that criminal proceeds, excluding tax evasion, would amount to some \$2.1 trillion or 3.6% of GDP in 2009, with US\$1.6 trillion being laundered. Of this total, the proceeds of transnational organised crime, such as drug trafficking, counterfeiting, human trafficking and small arms smuggling, would amount to 1.5% of 2009 global GDP, 70% of which could have been laundered through the financial system. The Report stated that only 0.2% of illicit financial flows are currently being seized and frozen. UNODC [online]. 2011. Available from: <http://www.unodc.org/documents/data-and-analysis/Studies/Illicit_financial_flows_2011_web.pdf> [Accessed 14 July 2013].

Note: A trillion is a number which has technically two definitions essentially the long scale definition traditionally used by the British and the short scale definition used by Americans. In Finance (the Bank of England has used the US definition for at least 20 years) and for the purposes of money laundering and as used by the UN and others in their work, the short scale definition is used so that a trillion is one million million or 1,000,000,000,000 As opposed to the long scale definition being one million million million or 1,000,000,000,000,000,000. Using the short scale definition a million is equal to a thousand thousands and a billion is equal to a thousand millions. In order to try to appreciate the size of a trillion consider the following: (i) How Long Ago Is A Trillion Seconds? - If you count backward, then: 1 million seconds = 12 days ago; 1 billion seconds = 31 years ago; 1 trillion seconds = 30,000 B.C. (approx); (ii) Height of a stack of US\$1000 bills?: If you stack a trillion-worth of \$1000 bills together, then: 1 million dollars = 4 inches high; 1 billion dollars = 364 feet high; 1 trillion dollars = 63 miles high (approx). Thankfully we are yet to hear about 1,000,000,000,000,000 or Quadrillions!

33. Estimating the dimensions of the money flows related to corruption either in terms of how much is paid or how much is laundered as the profits of bribery is virtually impossible. Still the World Bank has estimated between US \$1 trillion and US\$1.6 trillion dollars are lost globally each year to illegal activities. According to the World Bank, Corruption includes the abuse of public power for private gain, misappropriations of public goods, nepotism (favoring family members for jobs and contracts), and influencing the formulation of laws or regulations for private gain. World Bank [online]. 2013. available from <<http://web.worldbank.org/WBSITE/EXTERNAL/EXTABOUTUS/0,,contentMDK:23272490-pagePK:51123644-piPK:329829-theSitePK:29708,00.html>> [Accessed 14 July 2013].

34. The figure of US\$2.75 trillion is an estimate arrived at by applying available estimates for the UK (see note 5, Five Recommendations to effectively combat money laundering) and for the US see note 6, 5 Recommendations to effectively combat money laundering to other countries using global GDP figures. See also Part 1, Section 1, Fraud incl Tax Fraud and Cybercrime.

35. The figure of US\$4.5 trillion is an estimate based on applying estimates and applying them to global GDP figures. See Part 1, Section 1, Fraud incl Tax Fraud and Cybercrime for more details.

7. Russian Oligarchs emerged in the post Soviet collapse, where a number of individual businessmen quickly acquired huge wealth during the privatization in Russia in the 1990s. The original Oligarchs were business entrepreneurs who started under Mikhail Gorbachev during his period of market liberalization or perestroika, which saw the start of private business and commerce develop. After Boris Yeltsin took office, the oligarchs emerged as well-connected entrepreneurs who exploited the governments lack and desperate need for finance and the weaknesses of the government designed voucher privatization schemes to acquire state assets at firesale prices. The most influential and well known oligarchs from the Yeltsin era were Boris Berezovsky, Mikhail Khodorkovsky, Alex Konanykhin, Mikhail Fridman, Vladimir Gusinsky, Vitaly Malkin and Vladimir Potanin. Potanin, Malkin and Fridman are the only ones to have made it to the Putin era as a number have lost their status, either banished, exiled or imprisoned. In particular, Vladimir Gusinsky (MediaMost) and Boris Berezovsky avoided direct legal proceedings by leaving Russia, whilst the most prominent, Mikhail Khodorkovsky (Yukos oil), was arrested in October 2003, and sentenced to 9 years, which was subsequently extended to 14 years imprisonment. Most observers believe this clash resulted from Khodorkovsky's increased interest in Politics. The arrest came 3 years after Putin met 21 of Russia's oligarchs informing them that their political power was at an end, that they would not be allowed to wield influence in the Kremlin and should stay out of political matters. They were offered the olive branch however of keeping the companies they won during Russia's privatisations. The most famous oligarchs that have risen during the Putin era include Roman Abramovich, Oleg Deripaska and Mikhail Prokhorov.

8. In 2010 the SEC's Enforcement Division created a specialised unit to further enhance its enforcement of the FCPA, bringing marquee names to account including the following: i) Innospec: The US-based chemical manufacturer pled guilty to paying bribes to Indonesian and Iraqi government officials to secure sales of a fuel additive, in 2010. The case was also prosecuted in Indonesia and the UK. Innospec paid US\$40.2mio in fines to the DOJ, SEC and UK Serious Fraud Office. ii) ABB: The Swiss-based global provider of power and automation products was charged and fined for using a US subsidiary to pay bribes to officials at Mexico's largest power company as well as to pay kickbacks to Iraq to obtain contracts under the UN Oil for Food Programme. ABB agreed to a US\$39.3mio settlement in 2010. iii) Alliance One/Universal Corp: Two tobacco companies were charged for making more than US\$5mio in secret payments to government officials in Thailand and around the world to illicitly obtain tobacco sales contracts. The companies paid US\$28.3mio to settle SEC and criminal charges in 2010. iv) DaimlerChrysler: The Germany-based automobile manufacturer was charged for its repeated and systematic practice of paying bribes to foreign government officials to secure business in Asia, Africa, Eastern Europe, and the Middle East. Daimler paid US\$185mio to settle SEC and criminal charges in 2010. v) General Electric: GE, and two subsidiaries, Ionics Inc, and Amersham plc were charged with making illegal kickback payments, in the form of cash, computer equipment, medical supplies, and services to the Iraqi government in order to obtain UN Oil for Food Programme contracts. GE paid US\$23mio to settle the charges in 2010. vi) ENI: The Italian energy giant and one of its subsidiaries in the Netherlands were charged with a decade-long bribery scheme that included deliveries of cash-filled briefcases and vehicles to Nigerian government officials to win construction contracts. Snamprogetti and ENI jointly paid US\$365mio to settle SEC and criminal charges in 2010. vii) Technip SA: The Paris-based global engineering company was charged for bribing Nigerian government officials over a 10-year period in order to win construction contracts worth more than US\$6bio. Technip agreed to pay US\$338mio to settle SEC and criminal charges in 2010. viii) Allianz SE: SEC charged the Germany-based insurer with violating the books and records and internal controls provisions of the FCPA for improper payments to government officials in Indonesia that resulted in US\$5.3mio in profits. Allianz agreed to pay more than US\$12.3mio to settle the SEC's charges. ix) Diageo: the UK-based premium alcohol and spirits producer made improper payments totaling approximately US\$2.7mio through its subsidiaries in India, Thailand and South Korea to obtain sales and tax breaks worth over US\$61mio.

The Company entered into a settlement with the SEC in 2010 accepting penalties totaling over US\$16mio. Additionally, the Korean authorities convicted five former Diageo Korea employees. x) Magyar Telekom: SEC charged the largest telecommunications provider in Hungary and three of its former top executives with bribing government and political party officials in Macedonia and Montenegro. The firm and its parent company agreed to pay US\$95mio to settle civil and criminal charges in 2011. xi) JGC: This Japanese company that is not a US issuer itself and committed no acts in the US, nevertheless was held accountable as a joint venture partner that paid bribes to Nigerian officials to secure development contracts for liquefied natural gas facilities, illustrating just how aggressively the US asserts its jurisdiction. US jurisdiction was obtained by virtue of its partnership with a US company and US issuers, and because the bribes were paid with US dollars, processed through US correspondent accounts. JGC entered into a two-year DPA with the US DOJ, agreeing to pay US\$218.8mio in fines in 2011. xii) Maxwell Technologies: The US-based electronic and power producer, entered into a three-year DPA with the DOJ, on charges that its Swiss subsidiary had paid US\$2.5mio on inflated invoices as "sales commissions" to a sales agent who passed it on to officials at Chinese state-owned entities to secure contracts. Maxwell Technologies knew of the bribes for six years before it took effective action to stop them. Ultimately, the company paid US\$8mio in criminal fines and US\$6.38mio in disgorgement of profits in 2011. xiii) Armor Holdings: The SEC charged the US-based body armor supplier for illicit payments to UN officials to obtain contracts related to U.N. peacekeeping missions. Armor Holdings agreed to an SEC settlement of US\$5.7mio and a criminal fine of US\$10.29mio in 2011. xiv) Tenaris: The SEC sanctioned in 2011 the global manufacturer of steel pipe products for bribing Uzbekistan government officials during a bidding process to supply pipelines for transporting oil and natural gas. Tenaris agreed to pay US\$5.4mio under a Deferred Prosecution Agreement, and paid a US\$3.9mio criminal fine. xv) Aon Corporation: US-based global insurer, via its UK subsidiary, charged with bribes, totaling \$3.6 million, including training, travel and entertainment, offered in Myanmar, Bangladesh, Indonesia, and Vietnam, and other countries to government officials who were responsible for awarding insurance contracts. The charges focussed on violations of the books and records and internal controls provisions of the FCPA. Aon entered into a two-year non-prosecution agreement (NPA) with DOJ in 2011 and agreed to pay a US\$1.76mio fine, and simultaneously settled with the SEC for US\$14,545,020 in disgorgement and pre-judgment interest. The UK Financial Services Authority (FSA) had imposed a fine of £5.25mio. xvi) Johnson & Johnson: The US-based provider of medical devices, pharmaceuticals, and consumer healthcare products, was charged for its alleged conduct in making improper payments to employees of state-owned healthcare providers in various countries to obtain contracts, including to doctors in several European Countries, to Iraq to illegally win business and elsewhere. J&J agreed to pay US\$70mio to settle cases brought by the SEC and DOJ and enter into a DPA in 2011. xvii) IBM: International Business Machines Corp was charged in 2011 with providing improper cash, gifts, overseas travel for training and entertainment in order to secure sales of its products to government officials in China and South Korea in order to secure the sale of IBM products. IBM agreed to pay US\$10mio to settle the SEC's charges. IBM agreed to pay penalties to the SEC amounting to US\$82mio in 2011. xviii) Tyson Foods: The US-based worldwide chicken manufacturer charged for making illicit payments to two Mexican government veterinarians responsible for certifying its Mexican subsidiary's chicken products for export sales. Tyson Foods agreed to pay US\$5mio in 2011 to settle charges. xix) Alcatel: The French Company paid bribes to employees of Telekom Malaysia, a 43% state-owned company, which led to FCPA charges, which indicates a broad definition of foreign officials. Besides bribes to government officials in Malaysia for information leading to a successful bid from Telekom Malaysia, there were also alleged bribes paid to Taiwanese legislators and a minister by consultants to obtain contracts with the Taiwan Railway Administration. Alcatel entered into a three-year deferred prosecution agreement (DPA) with DOJ in 2011 and the three charged subsidiaries pled guilty. Penalties totaling US\$135.5mio were incurred, with fines from DOJ amounting to US\$92mio, in addition to US\$45,372,000 in disgorgement of profits imposed by the SEC. The Company also in an earlier case in 2010 agreed to pay US\$137mio to settle charges for using consultants who performed little or no legitimate work to funnel bribes to government officials and win contracts in Latin America and Asia. xx) Eli Lilly & Company: SEC charged the US based pharmaceutical company for improper payments its subsidiaries made to foreign government officials to win business in Russia, Brazil, China, and Poland. Eli Lilly agreed to pay more than US\$29mio in 2012 to settle the charges. xxi) Tyco International: SEC charged the Swiss-based global manufacturer with violating the FCPA when subsidiaries arranged illicit payments to foreign officials in more than a dozen countries. Tyco agreed to pay US\$26mio in 2012 to settle the SEC's charges and resolve a criminal matter with the Justice Department. xxii) Pfizer: SEC charged the pharmaceutical company for illegal payments made by its subsidiaries to foreign officials in Bulgaria, China, Croatia, Czech Republic, Italy, Kazakhstan, Russia, and Serbia to obtain regulatory approvals, sales, and increased prescriptions for its products. Pfizer and recently acquired Wyeth LLC - charged with its own FCPA violations - agreed to pay in 2012 a combined US\$45mio in their settlements.

xxiii) Smith & Nephew: SEC charged the UK based medical device company with violating the FCPA when its US and German subsidiaries bribed public doctors in Greece for more than a decade to win business. The company and its US subsidiary agreed to pay more than US\$22mio in 2012 to settle civil and criminal cases. xxiv) In 2013, French oil giant Total S.A. agreed to pay US\$398mio in penalties and disgorgement for bribing an Iran official to gain access to oil and gas fields. Total will pay a criminal penalty to the DOJ of US\$245.2mio. It received a three-year deferred prosecution agreement that requires appointment of an independent compliance monitor. In its settlement with the SEC, Total will disgorge profits of US\$153mio. That's the second biggest disgorgement in FCPA history. It paid at least US\$60mio in bribes for access to the Iran oil and gas fields, and made more than US\$150 in profit, the enforcement agencies said. A criminal information filed in federal court in Virginia charged Total with one count of conspiracy to violate the FCPA's antibribery provisions, one count of violating the internal controls provisions, and one count of violating the books and records provisions. The SEC settled with Total through an administrative order and didn't file a complaint against Total in court. In 1995, the DOJ said, Total tried to obtain a concession from the National Iranian Oil Company to develop the Sirri A and E oil and gas fields. An Iranian official in the negotiations designated an intermediary to be a Total consultant. Total paid the consultant \$16 million in bribes under the phony consulting agreement over the next two and a half years. Total retained another consultant in 1997 designated by the same official and paid about US\$44mio under the agreement. In return, Total secured the rights to develop part of South Pars, the world's largest gas field. 'Total attempted to cover up the true nature of the illegal payments,' the SEC said, 'by entering into sham consulting agreements with intermediaries of the Iranian official and mischaracterizing the bribes in its books and records as legitimate "business development expenses" related to the consulting agreements.' Total also was charged today by the prosecutor of Paris (François Molins, Procureur de la République) of the Tribunal de Grande Instance de Paris for violations of French laws.

French oil giant Total S.A. agreed in 2013 to pay US\$398mio in penalties and disgorgement for bribing an Iran official to gain access to oil and gas fields. Total will pay a criminal penalty to the DOJ of US\$245.2mio. It received a three-year deferred prosecution agreement that requires appointment of an independent compliance monitor. In its settlement with the SEC, Total will disgorge profits of US\$153mio. That's the second biggest disgorgement in FCPA history. It paid at least US\$60mio in bribes for access to the Iran oil and gas fields, and made more than US\$150 in profit, the enforcement agencies said. In 1995, the DOJ said, Total tried to obtain a concession from the National Iranian Oil Company to develop the Sirri A and E oil and gas fields. 9. Operation Worthy: Interpol targeted criminal organisations behind the illegal trafficking of ivory which resulted in more than 200 arrests and the seizure of nearly two tons of contraband elephant ivory. The operation involved 14 countries across Eastern, Southern and Western Africa and resulted in the recovery of more than 20 kilos of rhinoceros horn in addition to lion, leopard and cheetah pelts, crocodile and python skins, live tropical birds, turtles, and other protected species destined to be illegally trafficked around the world. Firearms including AK-47s, G3s and M16s were also seized by law enforcement officers. More than 320 officers from a range of agencies including police, customs, environmental protection agencies, veterinary services, airport security, ministries of tourism and national prosecuting authorities took part in Operation Worthy which saw interventions carried out at markets, ports, shops, border crossings and during roadside checks.

13. Federation of American Scientists (online): International Crime Threat Assessment: states that, "Environmental crime is one of the most profitable and fastest growing new areas of international criminal activity. Growing international environmental concerns have led to the proliferation of multilateral conventions and national laws and regulations to control pollutants that are health or environmental hazards, to prevent wanton exploitation of scarce natural resources, and to protect endangered plant and animal species. Criminal organisations around the world--most notably in Italy, Russia, China, and Japan--have taken advantage of the significantly greater costs for waste disposal, as well as the much-increased value of rare or precious natural resource commodities that are the subject of tight trade and sale restrictions, to earn substantial illicit income from circumventing environmental laws and regulations. The US Government estimates that local and international crime syndicates worldwide earn \$22-31 billion annually from hazardous waste dumping, smuggling proscribed hazardous materials, and exploiting and trafficking protected natural resources. The tremendous costs for legally disposing of pollutants and dangerous chemicals have created new illicit business opportunities for criminal organisations, who earn \$10-12 billion per year for dumping trash and hazardous waste materials. Organised crime groups are taking increasing advantage of the multibillion-dollar legal trade in recyclable materials, such as scrap metals, to comingle or illegally export or dump toxic wastes. Most of these wastes are shipped in "trash-for-cash" schemes to countries in Eastern and Central Europe, Asia, and Africa where disposal costs and enforcement of environmental regulations are lower. The lack of specific legislation governing such crimes in many countries and poor enforcement or limited legal penalties in many others (often only fines that are insignificant in comparison to the millions in profits that can be made from this activity) reduce the risks for international crime groups involved in dumping hazardous wastes. While crime groups in Russia, Japan, and elsewhere have increasingly moved into illegal waste disposal, Italian criminal organisations are the most involved largely because of their success in infiltrating Italy's industrial waste disposal sector. They have used their control over waste-disposal businesses, both legitimate and front companies, to secure contracts in Italy and elsewhere in Europe and illegally dump wastes to boost profits. About half the 80 million metric tons of waste produced annually in Italy disappears and is presumed to be illegally dumped, according to Italian press sources. In 1997, Italian law enforcement authorities investigating the role of Italian organised crime in the illegal export and dumping of hazardous wastes claimed that criminal groups control most of Italy's waste disposal contracts. Italian authorities claimed in 1997 that 11 million metric tons of toxic and industrial waste are deposited annually in some 2,000 illegal domestic dump sites in local waterways or in the Mediterranean. In 1997, there were at least 53 Italian crime groups trafficking and disposing of hazardous waste, which was shipped to dumpsites in Albania, Eastern Europe, and the African west coast, according to European law enforcement officials cited in the press. The lack of inexpensive, adequate, safe disposal options for radioactive waste is also attracting the increased involvement of organised crime groups throughout Europe. In many cases, these groups appear to be using illicit networks already in place for smuggling arms, drugs, and other contraband. European authorities are investigating illegal dumping of radioactive wastes from Austria, France, and Germany--all of which have good, but costly, disposal options--and

Eastern Europe into the Mediterranean and Adriatic Seas by companies purportedly hired by Italian organised crime groups. In 1998, an 'Ndrangheta Italian organised crime family was being investigated by Italian authorities for dumping radioactive waste off Italy's southern coast, according to press reports." 18. At Three Mile Island in 1979 the main water pumps feeding the cooling system of reactor 2 failed, which resulted in partial melting of the reactor core and a release of approximately one thousandth (1/1000),as much radiation as during the Chernobyl explosion. Debate about how close the reactor came to a complete melt down have been heated with advocates on both sides claiming both safety measures were sufficient and others that it was only down to luck that the core didn't totally collapse and a massive release of radiation ensue. A few days after the accident all children and pregnant women were evacuated from an 8 km radius of the plant as a safety precaution. Radiation from the plant reactor is thought to have contributed to the premature deaths of some elderly people that lived in the region. Dairy farmers reported that many animals have died consequential to the accident and local residents have developed cancers. The reactor cleanup started in 1979 and officially ended in 1993 at a cost of around US\$975mio.

6. CSIS noted the difficulty of relying on methods such as surveys because companies that reveal their cyber losses often cannot estimate what has been taken, intellectual property losses are difficult to quantify and the self-selection process of surveys can distort the results. For purposes of the research, CSIS classified malicious cyber activity into the following areas: the loss of intellectual property; the loss of sensitive business information, including possible stock market manipulation; opportunity costs, including service disruptions and reduced trust for online activities; the additional cost of securing networks, insurance and recovery from cyber attacks and reputational damage to the hacked company. "We believe the CSIS report is the first to use actual economic modeling to build out the figures for the losses attributable to malicious cyber activity," said Mike Fey, executive vice president and chief technology officer at McAfee. 8. Further Key Findings from the report, "Illicit Financial Flows from China and the Role of Trade Misinvoicing" by Global Financial Integrity stated that: Mis-invoiced trade between Chinese companies and the US increased from US\$48.8bio in 2000 to US\$59.0bio in 2011. The volume of trade misinvoicing between mainland China and the US rose to US\$72.0 billion before the financial crisis of 2008, but has declined since then, probably as a result of lower growth in bilateral trade between the countries. The commodity groupings most susceptible to trade misinvoicing include nuclear reactors, boilers, machinery, etc. and electrical and electronic equipment, with the sub-group for electronic circuits showing the largest cumulative illicit outflows (US\$84.0bio). Trade misinvoicing related to the sub-group for mobile phones increased at the fastest pace from 2007-2011. Of the roughly US\$2.83 trillion that flowed illicitly out of China from 2005-2011, US\$595.8bio wound up as cash deposits or financial assets (such as stocks, bonds, mutual funds, and derivatives) in tax havens. Available at: (2012) [online] <<http://www.gfiintegrity.org/storage/gfip/documents/reports/ChinaOct2012/gfi-china-oct2012-report-web.pdf>>
9. The tax gap is defined as the amount of tax liability faced by taxpayers that is not paid on time. The US Internal Revenue Service collects more than US\$2 trillion annually in taxes so producing an estimate of the tax gap is a major statistical effort that it undertakes every few years. In 2012 the IRS released a new set of tax gap estimates for tax year 2006. The new tax gap estimate represents the first full update of the report in five years, and it shows the nation's compliance rate is essentially unchanged at about 83% from the last review covering tax year 2001, at around US\$385bio. US IRS (2012) [online] Available at <<http://www.irs.gov/uac/The-Tax-Gap>> [Accessed 8 September 2013]
10. Measuring the Size, Growth and Determinants of Income Tax Evasion in the U.S by Richard Cebula and Edgar L. Feige (2011) [online] Available at <<http://www.ssc.wisc.edu/econ/archive/wp2011-1.pdf>> [Accessed 8 September 2013]. This study empirically investigated the US tax gap and employing the most recent data they found that 18-19% of total reportable income is not properly reported to the IRS, giving rise to a "tax gap" approaching \$500 billion dollars.

4. The Small Arms Survey is an independent research project located at the Graduate Institute of International and Development Studies in Geneva, Switzerland. It provides impartial and public information on all aspects of small arms and light weapons, as a resource for governments, policy-makers, researchers, and activists, as well as research on small arms issues. The Survey monitors national and international initiatives (governmental and non-governmental), and acts as a forum and clearinghouse for the sharing of information. It also disseminates best practice measures and initiatives dealing with small arms issues. The Small Arms Survey mandate is to look at all aspects of small arms and armed violence. It provides research and analysis to support Governments to reduce the incidence of armed violence and illicit trafficking through our evidence-based analysis. Project staff includes international experts in security studies, political science, law, international public policy, development studies, economics, conflict resolution, and sociology. The staff works closely with a worldwide network of researchers and partners. Small Arms Survey (2013) [online] Available at: <<http://www.smallarmssurvey.org>> [Accessed 8 September 2013]

7. The Great Train robbery itself was a well planned and largely well executed endeavour. The train was brought to a halt at the isolated Railway Bridge by covering the line's green signal and attaching a battery to power its red light. All telephone lines within the local area had been cut to prevent an alarm being raised; therefore when a member of the train crew attempted to call the signalman he was unable to make a connection. This was the point at which the gang chose to reveal themselves, with members focussing their attack on the High Value Packages (HVP) carriage. Planning had gone as far as to designate one member with the task of familiarizing themselves with contemporary train operating controls, in order that the gang could uncouple the front carriage of the locomotive and drive it to an appropriate point to transfer the money to their vehicle. In the event gang members forced the train's original driver to do this, however the foresight to train one member in locomotive operation demonstrates the detail to which planning was undertaken. After loading 121 sacks containing bank notes into their waiting vehicle, the gang used back roads to make their way to a rural safe house. Along the way the group gathered valuable intelligence on police activity from radio broadcasts, monitoring police radio channels on a VHF radio. After lying low for several days the group dispersed from the farmhouse, which was to be cleaned of all potential traces of evidence by Brian Field. However this aspect of the plan proved to be a crucial sticking point, with Field failing to carry out this duty completely. As a result crucial evidence remained and was discovered by police before the gang could

return to complete the task of destroying any traceable evidence. In particular a fingerprint matching that of Roy James, the group's getaway driver, was found by police. Though ultimately unsuccessful for all known members of the group (three members are believed to have never been found), the heist has achieved somewhat iconic status, inspiring films such as *Buster* (based on the life of Ronald "Buster" Edwards). Particularly noteworthy is the story of Ronnie Biggs's life following the robbery. After serving 15 months of a 30 year sentence Biggs managed to flee to Paris, where he underwent plastic surgery and adopted a new identity with forged papers. Biggs then moved on to Adelaide, Australia, leading a quiet life as a builder. After tip off's that the police net was closing in about him, Biggs moved first to Melbourne and later onto Brazil where no extradition agreement existed with Britain. In Brazil Biggs fathered a son, rendering his legal protection from British extradition complete. As a result Biggs lived freely in Brazil for many years, however following three strokes he returned to the UK aged 71. Biggs then served 8 years of his sentence before being released on 'compassionate grounds' after a severe case of pneumonia. Today Ronnie Biggs has his own website and twitter account, through which he promotes his autobiography *Odd Man Out: The Last Straw*.

12. While there are casinos in many places, none have quite the long history or have defined a place more than the casino in Monte Carlo, in the Principality of Monaco. In 1850s the reigning Monaco's family was almost bankrupt and in a desperate bid to avert current decline began its transformation along lines which had seen success in German towns such as Baden-Baden, Wiesbaden and Homburg, namely focussing on become a resort location and in particular by setting up a casino. In the beginning Monaco's gambling enterprise was not successful as it was hard to reach both by land and by sea. After numerous owners, the casino passed into the hands of twin brothers Francois and Louis Blanc in 1863, for US\$1.7mio, who through gambling and speculating in stocks, via inside information and corruption had made enough money to first open a gambling business in Homburg in Germany, which became the most popular gambling resort in Europe. Under the brothers leadership, the casino in Monaco was lavishly decorated and new hotels and villas were built. A railway connection and increased ferry services connected Monaco to the rest of Europe. The Casino was located in a town in Monaco called "Les Spelugues" which meant "a den of thieves" and so this was changed to commemorate the then Prince Charles, renaming Les Spelugues as "Monte Carlo" – "Mount Charles". In the next 30 years the progress of Monaco was little short of marvelous thanks to grandiose success of Casino Monte Carlo. The number of hotels in the Principality grew from 2 to 48. The number of jewelers and florists increased from 3 to 15 and from 1 to 15 respectively. In 1900 there were 85 wine merchants against 17 in 1870. The service and retail industries went through a prolonged boom. The Opera house and the famous Oceanographic Museum were established. At the end of the 19th century almost a million tourists were visiting annually Monaco and casino Monte Carlo, when in 1850s the number was less than 200. Monte Carlo became a favorite playground and gambling Mecca for players, aristocracy and members of the Royal families, self-made millionaires and great artists. Whilst the casino continues to be successful, a gambler, Charles Wells was able to "break the bank" on two separate occasions, winning very large amounts in 1891 playing roulette. He played numbers lower than 10 and pocketed 1,000,000 gold francs. Song-writers in London wrote a song called "The Man who Broke the Bank in Monte-Carlo". On his return, he bet on number 5 and left with 3,000,000 francs. He was later convicted of cheating in another matter and would be imprisoned but the mystery of his amazing success in Monte Carlo was never revealed. In 1931, the casino introduced slot machines, which had become popular in the

US to go alongside the traditional gambling tables.

21. CIA Report on NGOs With Terror Links: 1996 (online) Available at: <http://en.wikisource.org/wiki/CIA_Report_on_NGOs_With_Terror_Links> Accessed 14 April 2013. According to wikileaks the 1996 CIA report stated as follows: International Islamic charities have established a presence in nearly every country around the world that has a substantial Muslim population. For both traditional and more activist Muslims, aiding Muslims in distress is a religious duty. Islamic activists dominate the leadership of the largest charities, and prominent members of some smaller organisations have been identified as extremists. The main objectives of these organisations include proselytizing, helping the needy, and defending Muslim communities from enemies. Where Muslims are engaged in armed conflict, some Islamic organisations provide military aid as part of a "humanitarian" package. The main Islamic charities maintain headquarters and raise money in a few regional centers, the most important being in the Arabian Peninsula and Sudan. Smaller organisations — important because of their support to extremist groups — often have headquarters in Europe and offices in North America. Private donors retain a major influence on each group's policies. Governments in the Islamic world generally support the major charities' religious activities and finance them, but are unable to monitor the groups or control how they use their money. These governments rely on the NGOs to collect and distribute much of the humanitarian aid given to refugees and displaced persons. Leaders of countries where Islamic NGOs are based or operate are unlikely to take major steps to stop the organisations' activities unless they believe that these groups threaten their own stability or are damaging important bilateral or multilateral relationships. All of the major and most of the minor Islamic charities are significant players in the former Yugoslavia, particularly in aiding Bosnian Muslims. Their contributions represent a significant proportion of humanitarian aid in Bosnia. According to the US embassy in Riyadh, Saudi nationals alone gave \$150 million through Islamic NGOs for aid to Bosnia in 1994. Most of the offices of NGOs active in Bosnia are located in Zagreb, Sarajevo, Zenica, and Tuzla. Their field operations appear to be confined to the Muslim areas of Northeastern and Central Bosnia. The NGOs' charitable activities include delivery of food, clothing, and medicine; support to orphanages, schools, hospitals, and refugee camps; and housing construction, infrastructure support, and agricultural projects. Many of these organisations also support foreign Mujahideen fighters in Bosnia. Coordination councils based in Zagreb and Sarajevo, coordinate the activities of the most important organisations. These councils may function like a similar one established in Peshawar, Pakistan, which organises arms shipments and aid to military training camps, and provides humanitarian aid to refugees, according to a clandestine source. A growing body of reporting indicates that some of these charities are being used to aid Islamic extremist groups that engage in terrorism. We have information that nearly one third of the Islamic NGOs in the Balkans have facilitated the activities of Islamic groups that engage in terrorism, including the Egyptian Al-Gama'at Al-Islamiyya, Palestinian Hamas, Algerian Groups, and Lebanese Hezbollah. Some of the terrorist groups, such as Al-Gama'at, have access to credentials for the UN High Commission for Refugees and other UN staff in the former Yugoslavia. Efforts by governments to counter terrorist groups' use of NGOs are complicated by domestic and international political concerns, legal constraints, and the size and flexibility of the international extremist network. Domestic Islamic organisations — and sometimes foreign governments — have accused host governments of attacking legitimate Islamic institutions and intentionally hampering relief efforts. The following 15 organisations employ members or otherwise facilitate the activities of terrorist

- groups operating in Bosnia...and some... not included in this list, have terrorist connections outside of the Balkans: Al- Haramain Islamic Foundation; Human Appeal International Foundation; Human Concern International; Human Relief International; International Humanitarian Relief Organisation (Hilfsorganisation); International Islamic Relief Organisation; Islamic Relief Agency; Kuwait Joint Relief Committee; Islamic Charity Committee; (Probably a subsidiary of the Saudi-based Muslim World League); Human Services Organisation; Muwafaq Foundation; Qatar Charitable Society/Committee; Red Crescent Iran; The Saudi High Commission (Zagreb, Sarajevo, and Tuzla. Operates in Zenica, Mostar, and Split); The Third World Relief Agency and the Islamic World Committee.

28. Bitcoin is 5 years old and has become the flagship of digital currencies, coming of age over the last 12 months, achieving unprecedented attention and increasing legitimacy, but at the same time, still some concern being raised. The popularity of this virtual currency has prompted frantic speculation, as its value has increased from USD 13 at the start of 2013, to a high of over USD 1'200 in November 2013. The future of Bitcoin, as well as other digital currencies which are attempting to gain traction (including ripple, litecoin and others) is likely to depend very much on actions taken in 2014, with many State actors considering how to regulate these new digital currencies. Concerns around the level of anonymity do exist as well as the ability to monitor activity in the currency. Bitcoin is different things to different people: for the purists, it is a functional, free market addendum to an increasingly virtual lifestyle; for others it is merely the opportunity to get rich quick on a currency unassociated with governments and completely unregulated; for others, the ability to conduct almost completely anonymous financial transactions allows a liberation - to launder money and conduct illicit transactions, such as for drugs, weapons or pornography and online sexual services; or as a recent FAQ on the Bitcoin summarized it: "a gigantic goddam mess of idiocy, greed and bad decisions." However, Bitcoin need not be just an instrument for illicit behavior. Bitcoin is often seen to hold greatest value for those developing countries where currency and capital controls are censorious. Some of the more idealistic of supporters also hope that the digital economy can bring social inclusion to those without access to the mainstream financial sector. There are a number of main ways to get Bitcoin: i) there are Exchanges, where you can buy and sell Bitcoin for normal currencies such as in USD and Euros; ii) or you can mine your own via running a computer programme to produce your own, (though this is for most people unlikely as too demanding an exercise demanding significant computing power). Once you have Bitcoins and a Bitcoins wallet (which you can keep online or on your device) you can buy and sell and trade Bitcoins with other Bitcoins users, you can also sell your services to acquire Bitcoins; Copperlark (CLR) - Copperlark is different from other virtual currencies as it uses a completely new algorithm (Keccak, SHA3). It offers faster block times than Bitcoin (4 minutes) and the difficulty re-targets much faster (every 24 hours). CLR can only be mined with a CPU or a GPU through the client. Mining ASICs which are made for SHA256 will not work due to the usage of a new algorithm. There has been a pre-mine of 2 million coins, the developers state that this was to give CLR physical value at the very beginning. Half of the pre-mined coins will be used to promote the currency through banners, articles and ads, the other half will be used for venture investors; Feathercoin (FTC) - Feathercoin is based on Bitcoin's open source software. One of Feathercoins's advantages is that it uses the Scrypt hashing algorithm. This is different from Bitcoin which uses a SHA-256 based hashing algorithm. Scrypt is currently the only viable solution for GPU miners as Bitcoin mining is now dominated by professional ASIC mining hardware. ASICs are expensive but outperforms GPU mining by far. Thus the Scrypt based FTC is safe guarded from the effects of the current available ASIC mining hardware. One of the other big differences over most virtual currencies is the support for Advanced checkpointing. Advanced Check-

pointing allows FTC to send out checkpoints without having to redistribute the Feathercoin software. This works by having a 'master node' which checkpoints each block it sees on the network protecting it from the attacker. This checkpoint is then picked up by all the other clients on the network which will then ignore any blocks generated by a 51% attack. This protects merchants from transaction reversal and miners from losing their newly minted coins. With Advanced Checkpointing, FTC is one of the most secure of all the Scrypt cryptographic currencies; Litecoin (LTC) - Litecoin is the result of some of the Bitcoin community who joined together on IRC in an effort to create a real alternative currency similar to Bitcoin. They wanted to make a virtual currency that is considered silver to Bitcoin's gold. Litecoin aimed to maintain the unique traits and attributes of Bitcoin, while adding to the mixture GPU-resistant mining and a 2.5 minute block rate. This meant that Litecoin wouldn't have a reason to compete with Bitcoin for the used up computational cycles of a graphics card, but working independently on your processor instead. Litecoin uses a memory hard hashing algorithm called scrypt. The algorithm utilises SHA256 and a stream function called salsa20 to force devices that mine it to use a lot of memory or dramatically more ALU cycles to perform a hash. Litecoin was stated to be GPU resistant and started out to be a CPU only coin. However, in late 2011 a solidcoin programmer made the reaper miner which was capable of mining using the GPU at good hashrates. The performance gain was not as big as with Bitcoin but a decent GPU can mine at least 5-10 times faster than a CPU. Since then more and more GPU miners started to move to Litecoin, the coin is still pretty small with low and volatile exchange rates but has a good chance to grow. Litecoin is now a good alternative to Bitcoin where the FPGAs and ASICs are moving in raising the network difficulty so much that mining Bitcoin with a GPU is becoming less profitable; Megacoin (MEC) - Megacoin is a new type of decentralized currency. Not minted or endorsed by any nation, but by users across the globe. Anywhere there is internet, you can send or receive MEC. Even in outer space. There are very little rules for Megacoin. To prevent inflation only a limited supply of 42 million MEC will ever exist. MEC's are mined by users at a set rate for decades into the future. You can get MEC for free by mining or trading for them on an exchange; Mincoin (MNC) - Mincoin is a peer-to-peer virtual currency using the scrypt as a proof-of-work algorithm. MNC has a block target of 1 minute which means it is 10 times faster than Bitcoin and 2.5 times faster than Litecoin. There will only be 2 million coins generated in total which is generally lower than other virtual currencies. MNC was introduced to being Bronze where Bitcoin is Gold. Compared to Litecoin this cryptocurrency does not add any other special features other than a 1 minute block target where Litecoin has a block target of 2.5 minutes; Namecoin (NMC)

- Namecoin is an alternative distributed Domain Name System (DNS) on the basis of Bitcoin software. It expands the software so that transactions for registering, updating, and transferring domains to serve. Like Bitcoin, Namecoin is a peer-to-peer system, which, assuming an honest majority of participants can not be controlled by a single state or a company. Changes to the namespace of the rightful owner of a domain with a public key signature method and distributed to all peer-to-peer users. The inclusion in the block chain-, as the eternal logfile is used, the transactions are authentic. The block chain grows whenever new transactions, if any of the participants through a fairly intense proof-of-work process, a matching result of a cryptographic hash function has found what may be verified by all other participants. The falsification of a longer chain block is, due to the computational effort, impractical. Currently, the top-level domain-bit used in the official domain name system is not awarded. To resolve domain name either the current block chain or use a public name server that participates in the Namecoin system is required. Namecoin uses a separate block of Bitcoin chain. The software is open source and is hosted on GitHub; Novacoin (NVC) - Novacoin is a virtual currency, just like LTC it uses scrypt hashing and thus it can be mined in the same way as Litecoin by CPU and GPU. It has been created by Bitcointalk user Balthazar. Currently it is performing pretty well, selling for higher prices than LTC with lower difficulty on the network; PPCoin (PPCoin) - PPCoin is a virtual currency which has forked from Bitcoin. PPCoin aims to achieve high energy-efficiency while keeping as much as the official Bitcoin properties as possible. PPCoin works with Stake/Proof-of-Stake, this is a term referring to the use of the currency itself to achieve certain goals. PPCoin uses proof-of-stake to provide minting and transaction processing of place of proof-of-work. Unlike Bitcoin ppcoin does not require the use of energy to sustain the network. Proof-of-work currently remains the most practical way of providing initial minting of a virtual currency so it was decided to keep it as part of the hybrid design. Until v0.2, central checkpointing was a critical part of the protocol. The main purpose of this is to defend the network during the growth period and to ensure a smooth upgrade path if any critical vulnerabilities are found. Central checkpointing will slowly be weakened and should eventually be removed from the coin. Unlike Bitcoin there is no hard cap on the amount of coins that will be created. Bitcoin is limited to 21 million coins where PPCoin only has a hard cap of 2 billion coin in the code. There is no intention to limit the amount of coins that can be generated; Phenixcoin (PXC) - Phenixcoin was developed as an internal testing coin for use with various sites. It is based on Litecoin using scrypt as a proof of work scheme. The coin is currently used at a coin based poker site PhenixPoker.com. There are several projects currently

under development which are planned to use the Phenixcoin as their main currency. Because there is already ways to spend Phenixcoin it has more potential then some other virtual currencies; Primecoin (XPM) - Primecoin is the first virtual currency on the market with non-hashcash proof-of-work, generating additional potential scientific value from the mining work. This research is meant to pave the way for other proof-of-work types with diverse scientific computing values to emerge. Several new virtual currencies have been released adopting other hash functions or composition of hash functions for hashcash proof-of-work. It appears there are market forces at play such that diversification of proof-of-work types is inevitable. It could prove difficult for any single type of proof-of-work to maintain dominance in the long term; Protoshares (PTS) - Protoshares uses a new Momentum Proof of Work (POW) algorithm that is designed to be GPU and ASIC resistant. To back this up there is currently a US\$5000 reward for anyone who can prove it is vulnerable to GPUs or ASICs. As well as being an altcoin, Protoshares is a way to own BitShares before they are launched. When BitShares are launched, the genesis block will award one BitShare for every Protoshare held; Quarkcoin (QRK) - Quarkcoin is currently one of the most secure coins as it uses multiple hashing functions. It uses 9 rounds of hashing from 6 hashing functions. 3 rounds will apply a random hashing function. Due to the block reward halving every 3 weeks most coins have been mined already by the early adopters making mining useless at the current price; Terracoin (TRC) - Just like Bitcoin, Terracoin is a peer-to-peer decentralized virtual currency. It has no central issuer but is regulated by a peer-to-peer network instead. Balances, transactions and issuance are all regulated by the network. Other then Bitcoin, Terracoin is going to have a maximum of 42 million coins offering 20 coins per block. This block reward will automatically be halved every 1050000 blocks (4 years). Block generation is also faster then with Bitcoin, the blocks are created every 2 minutes instead of 10 minutes. The first Terracoin blockchain was created on October 26th 2012 making the block reward going down at October 26th 2016 to 10 coins per block; Worldcoin (WDC) - Worldcoin was designed to be the currency of the future. It is very fast but also very secure for day to day transactions. The major goal of worldcoin is to become the virtual currency of choice for merchants and consumer for their everyday transactions, whether it is to buy a cup of coffee or a bigger item. The coin is also apparently based on sound money principals which is supposed to make it the smart choice for wealth preservation. It is designed to appreciate in value over time, unlike paper currencies, this is due to the fact that only 265 million coins will ever be produced.

30. Claims that Congolese diamonds are sought and bought by terrorist groups are difficult to prove, but according to Greg Campbell, "Radical Islamic groups funnel millions of dollars made from Congolese diamond sales to their organisations back home [...] members of Hezbollah and other terrorist groups buy diamonds from Congolese miners and middlemen at low cost and smuggle them out of the country." - tbc

31. Global Witness. 2010. 'Conflict diamond scheme must resolve Zimbabwe impasse' [online] Available at: <<http://www.globalwitness.org/library/conflict-diamond-scheme-must-resolve-zimbabwe-impasse>> [Accessed 15 July 2013]

32. The Kimberley Process called for an international certification system on the export and import of diamonds, legislation in all countries to accept only officially sealed packages of diamonds, for countries to impose criminal charges on anyone trafficking in conflict diamonds, and instituted a ban on any individual found trading in conflict diamonds from the diamond bourses of the World Federation of Diamond Bourses. The Kimberley Process was led by the diamond-producing African countries themselves. Also in tourist states like Dubai, before gemstone could be allowed through their airport to other countries, the Kimberley Certification must be presented by the gem's owner. Whilst the KCPS initiative has undoubtedly made life harder for criminals, it has nevertheless failed to stem the flow of blood diamonds, leading key proponents such as Global Witness to publicly abandon the scheme, as they believe that there is no guarantee that diamonds with a Kimberley Process Certification are in fact conflict free, due in large part to corrupt government officials in the leading diamond producing countries, who are prepared to certify that blood diamonds are Kimberley Process Certified. Global Witness stated in 2011 that, "The Kimberley Process's refusal to evolve and address the clear links between diamonds, violence and tyranny has rendered it increasingly outdated, said the group. Despite intensive efforts over many years by a coalition of NGOs, the scheme's main flaws and loopholes have not been fixed and most of the governments that run the scheme continue to show no interest in reform," and "the scheme has failed three tests: it failed to deal with the trade in conflict diamonds from Côte d'Ivoire, was unwilling to take serious action in the face of blatant breaches of the rules over a number of years by Venezuela and has proved unwilling to stop diamonds fuelling corruption and violence in Zimbabwe. It has become an accomplice to diamond laundering, whereby dirty diamonds are mixed in with clean gems." Global Witness. 2011. 21. Bulge Bracket as a phrase came from the way investment banks are listed on the "tombstone", or public notification of a financial transaction or deal. The bank responsible for control of allocation of securities to investors, known as the book running manager is listed above the others and on the cover of the prospectus. The font size of the name of this bank, or banks if there are co-book running managers, is larger and it may "bulge" out. There is often debate over which banks are considered to belong to the bulge bracket. Membership implies prestige but there are no precise criteria for inclusion, and financial power is transient. Various rankings are often cited, such as Thomson Reuters League Tables, Bloomberg 20, or other league tables. In the late 1960s and early 1970s, the top tier of Investment Banks called the bulge bracket, consisted of Morgan Stanley; First Boston; Kuhn, Loeb; and Dillon, Read." By the middle of the 1970s, Kuhn, Loeb; and Dillon, Read would be replaced with Salomon Brothers, Goldman Sachs, and Merrill Lynch. Just prior to the Global Financial crisis in 2007, the Bulge Bracket firms were, alphabetically: Bear Stearns, Citigroup, Credit Suisse, Deutsche Bank, Goldman Sachs, JP Morgan Chase, Lehman Brothers, Merrill Lynch, Morgan Stanley, and UBS. This list has changed as a result of the 2008 subprime mortgage crisis, with Lehman Brothers having filed for bankruptcy (later having their core US investment bank acquired by Barclays), Bear Stearns collapsing and being sold to JP Morgan Chase at \$2 per share and Merrill Lynch being purchased by Bank of America. Bank of America Merrill Lynch gained Bulge Bracket status after its acquisition. The following acquisitions led to the demise and rise of the current crop of Bulge Bracket firms: S.G Warburg & Co and then Dillon, Read & Co., acquired by Swiss Bank Corporation (eventually UBS) in 1995 & 1997 respectively. First Boston, acquired by Credit Suisse in 1988 and branded Credit Suisse First Boston, later renamed to Credit Suisse. Kuhn, Loeb & Co., merged with Lehman Brothers in 1977, forming Lehman Brothers, Kuhn, Loeb Inc. Lehman Brothers, declared bankrupt in September 2008. The Asian and European operations were bought by Nomura. Barclays acquired the North American Lehman operations. Merrill Lynch, acquired by Bank of America in September 2008. UK's Morgan, Grenfell & Co., acquired by Deutsche Bank in 1990, and Bankers Trust in 1998. Salomon Brothers, acquired by Travellers Group (eventually Citigroup) in 1998

25. Warren Buffett writing about his 1998 acquisition of General Reinsurance Corp (pp7/8) <http://www.berkshire-hathaway.com/letters/2002pdf.pdf> [accessed 21/05/13] - Buffett's perspective may well have been driven by his own experience with some derivative positions he inherited as a result of Berkshire's \$22 billion purchase of General Reinsurance Corporation in 1998 (the largest US property and casualty reinsurer at the time). General Reinsurance Securities, a subsidiary of General Reinsurance initiated in 1990, was a derivatives dealer tied to global financial markets. Unfortunately, this relationship had unpredictable consequences. Buffett wanted to sell the subsidiary, but he could not find an agreeable counterparty (buyer). So, he decided to close it, which was easier said than done, as this decision required him to unwind the subsidiary's derivative positions. He likens this unwinding task to entering hell, stating that derivatives positions were "easy to enter and almost impossible to exit." As a result, General Reinsurance recorded a \$173 million pre tax loss in 2002.
26. Chinese Walls are an ethical barrier between different divisions of a financial institution to avoid conflicts of interest such as between corporate advisory activity on the one hand and trading / brokering on the other. This separates those giving corporate advice on takeovers from those advising clients about buying shares. The "wall" is established to prevent leaks of material non-public information which could influence the advice given to clients making investments and allow staff to take advantage of facts that are not yet known to the general public...see also (a) <http://www.investopedia.com/terms/c/chinesewall.asp> <http://fshandbook.info/FS/html/handbook/SYSC/10/2> [21/05/13] and Financial Conduct Authority, Bank of England. 2013. 30. The UN Office on Drugs and Crime (UNODC) issued a report on 25 October 2011 entitled "Estimating illicit financial flows resulting from drug trafficking and other transnational organised crime," which estimated that criminal proceeds, excluding tax evasion, would amount to some \$2.1 trillion or 3.6% of GDP in 2009, with US\$1.6 trillion being laundered. Of this total, the proceeds of transnational organised crime, such as drug trafficking, counterfeiting, human trafficking and small arms smuggling, would amount to 1.5% of 2009 global GDP, 70% of which or would likely have been laundered through the financial system. The Report stated that only 0.2% of illicit financial flows are currently being seized and frozen. UNODC [online]. 2011. Risk Assessment

1. Bank for International Settlements. 2013. 'Sound management of risks related to money laundering and financing of terrorism - consultative document' June 2013 [online] Available at: <<http://www.bis.org/publ/bcbs252.htm>> [Accessed 14 July 2013]

2. FFEIC Manual - [online] Available at: <http://www.ffeic.gov/bsa_aml_infobase/pages_manual/OLM_005.htm> [Accessed 24 July 2013]. According to the FFEIC Manual, "a well-developed risk assessment will assist in identifying the bank's BSA/AML risk profile. Understanding the risk profile enables the bank to apply appropriate risk management processes to the BSA/AML compliance programme to mitigate risk. This risk assessment process enables management to better identify and mitigate gaps in the bank's controls. The risk assessment should provide a comprehensive analysis of the BSA/AML risks in a concise and organised presentation and should be shared and communicated with all business lines across the bank, board of directors, management, and appropriate staff; as such, it is a sound practice that the risk assessment be reduced to writing. There are many effective methods and formats used in completing a BSA/AML risk assessment; therefore, examiners should not advocate a particular method or format. Bank management should decide the appropriate method or format, based on the bank's particular risk profile. Whatever format management chooses to use for its risk assessment, it should be easily understood by all appropriate parties. The development of the BSA/AML risk assessment generally involves two steps: first, identify the specific risk categories (i.e., products, services, customers, entities, transactions, and geographic locations) unique to the bank; and second, conduct a more detailed analysis of the data identified to better assess the risk within these categories." The FFEIC Manual also states that...." in reviewing the risk assessment during the scoping and planning process, the examiner should determine whether management has considered all products, services, customers, entities, transactions, and geographic locations, and whether management's detailed analysis within these specific risk categories was adequate. If the bank has not developed a risk assessment, this fact should be discussed with management. For the purposes of the examination, whenever the bank has not completed a risk assessment, or the risk assessment is inadequate, the examiner must complete a risk assessment based on available information." The FFEIC manual then goes on to say that..."An examiner must review the bank's BSA/AML compliance programme with sufficient knowledge of the bank's BSA/AML risks in order to determine whether the BSA/AML compliance programme is adequate and provides the controls necessary to mitigate risks. For example, during the examination scoping and planning process, the examiner may initially determine that the bank has a high-risk profile, but during the examination, the examiner may determine that the bank's BSA/AML compliance programme adequately mitigates these risks. Alternatively, the examiner may initially determine that

the bank has a low- or moderate- risk profile; however, during the examination, the examiner may determine that the bank's BSA/AML compliance programme does not adequately mitigate these risks."....and, "In evaluating the risk assessment, an examiner should not necessarily take any single indicator as determinative of the existence of a lower or higher BSA/AML risk. The assessment of risk factors is bank-specific, and a conclusion regarding the risk profile should be based on a consideration of all pertinent information. Banks may determine that some factors should be weighed more heavily than others. For example, the number of funds transfers is certainly one factor to be considered in assessing risk; however, in order to effectively identify and weigh the risks, the examiner should look at other factors associated with those funds transfers, such as whether they are international or domestic, the dollar amounts involved, and the nature of the customer relationships." The Manual then goes on to identify specific risk factors and states....."the first step of the risk assessment process is to identify the specific products, services, customers, entities, and geographic locations unique to the bank. Although attempts to launder money, finance terrorism, or conduct other illegal activities through a bank can emanate from many different sources, certain products, services, customers, entities, and geographic locations may be more vulnerable or have been historically abused by money launderers and criminals. Depending on the specific characteristics of the particular product, service, or customer, the risks are not always the same. Various factors, such as the number and volume of transactions, geographic locations, and nature of the customer relationships, should be considered...the differences in the way a bank interacts with the customer (face-to-face contact versus electronic banking) also should be considered." On products and services, the Manual states that..."Certain products and services offered by banks may pose a higher risk of money laundering or terrorist financing depending on the nature of the specific product or service offered. Such products and services may facilitate a higher degree of anonymity, or involve the handling of high volumes of currency or currency equivalents. Some of these products and services are listed below, but the list is not all inclusive: Electronic funds payment services — electronic cash (e.g., prepaid and payroll cards), funds transfers (domestic and international), payable upon proper identification (PUPID) transactions, third-party payment processors, remittance activity, automated clearing house (ACH) transactions, and automated teller machines (ATM). Electronic banking; Private banking (domestic and international); Trust and asset management services; Monetary instruments; Foreign correspondent accounts (e.g., bulk shipments of currency, pouch activity, payable through accounts (PTA), and U.S. dollar drafts); Trade finance; Services provided to third party payment processors or senders; Foreign exchange; Special use or concentration accounts; Lending activities, particularly loans secured by cash collateral and marketable securities; Non-deposit account services (e.g., nondeposit investment products and insurance). On Customers and Entities, the Manual states that..."Although any type of account is potentially vulnerable to money laundering or terrorist financing, by the nature of their business, occupation, or anticipated transaction activity, certain customers and entities may pose specific risks. At this stage of the risk assessment process, it is essential that banks exercise judgment and neither define nor treat all members of a specific category of customer as posing the same level of risk. In assessing customer risk, banks should consider other variables, such as services sought and geographic locations." The Manual highlights in particular Customers and Entities posing increased inherent risks As follows: "Foreign financial institutions, including banks and foreign money services providers (e.g., casas de cambio, currency exchanges, and money transmitters). Nonbank financial institutions (e.g., money services businesses; casinos and card clubs; brokers/dealers in securities; and dealers in precious metals, stones, or jewels). Senior foreign political figures and their immediate family members and close associates (collectively known as politically exposed persons (PEP)); Nonresident alien and accounts of foreign individuals; Foreign corporations and domestic business entities, particularly offshore corporations (such as domestic shell companies and Private Investment Companies (PIC) and international business corporations (IBC) located in higher-risk geographic locations; Deposit brokers, particularly foreign deposit brokers. Cash-intensive businesses (e.g., convenience stores, restaurants, retail stores, liquor stores, cigarette distributors, privately owned ATMs, vending machine operators, and parking garages); Nongovernmental organisations and charities (foreign and domestic). Professional service providers (e.g., attorneys, accountants, doctors, or real estate brokers). On Geographic Locations, the Manual states that..."Identifying geographic locations that may pose a higher risk is essential to a bank's BSA/AML compliance programme. U.S. banks should understand and evaluate the specific risks associated with doing business in, opening accounts for customers from, or facilitating transactions involving certain geographic locations. However, geographic risk alone does not necessarily determine a customer's or transaction's risk level, either positively or negatively. Higher-risk geographic locations can be either international or domestic. International higher-risk geographic locations generally include: Countries subject to OFAC sanctions, including state sponsors of terrorism. Countries identified as supporting international terrorism under section 6(j) of the Export Administration Act of 1979, as determined by the Secretary of State; Jurisdictions determined to be "of primary money laundering concern" by the Secretary of the Treasury, and jurisdictions subject to special

measures imposed by the Secretary of the Treasury, through FinCEN, pursuant to section 311 of the USA PATRIOT Act. Jurisdictions or countries monitored for deficiencies in their regimes to combat money laundering and terrorist financing identified as non-cooperative by international entities such as the Financial Action Task Force on Money Laundering (FATF). Major money laundering countries and jurisdictions identified in the U.S. Department of State's annual International Narcotics Control Strategy Report (INCSR), in particular, countries which are identified as jurisdictions of primary concern; Offshore financial centers (OFC); Other countries identified by the bank as higher-risk because of its prior experiences or other factors (e.g., legal considerations, or allegations of official corruption); Domestic higher-risk geographic locations may include, but are not limited to, banking offices doing business within, or having customers located within, a U.S. government-designated higher-risk geographic location. The Manual then goes on to explain what should happen next...."the second step of the risk assessment process entails a more detailed analysis of the data obtained during the identification stage in order to more accurately assess BSA/AML risk. This step involves evaluating data pertaining to the bank's activities (e.g., number of domestic and international funds transfers; private banking customers; foreign correspondent accounts; PTAs; and domestic and international geographic locations of the bank's business area and customer transactions) in relation to Customer Identification Programme (CIP) and customer due diligence (CDD) information. The Manual explains that..."the detailed analysis is important because.....it....gives management a better understanding of the bank's risk profile in order to develop the appropriate policies, procedures, and processes to mitigate the overall risk," and once the risk profile of the firm is understood, management..."should structure the bank's BSA/AML compliance programme to adequately address its risk profile, as identified by the risk assessment,"for example...."the bank's monitoring systems to identify, research, and report suspicious activity should be risk-based, with particular emphasis on higher-risk products, services, customers, entities, and geographic locations as identified by the bank's BSA/AML risk assessment." The Manual also reminds as to the implementation of consolidated or partially consolidated BSA/AML compliance programmes and so recommends that risk assessments should be carried out within business lines and across all activities and legal entities in a consolidated group adopting a consistent methodology..." Aggregating BSA/AML risks on a consolidated basis for larger or more complex organisations may enable an organisation to better identify risks and risk exposures within and across specific lines of business or product categories. Consolidated information also assists senior management and the board of directors in understanding and appropriately mitigating risks across the organisation." As to frequency the Manual states that..."To avoid having an outdated understanding of the BSA/AML risk exposures, the banking organisation should continually reassess its BSA/AML risks and communicate with business units, functions, and legal entities. The identification of a BSA/AML risk or deficiency in one area of business may indicate concerns elsewhere in the organisation, which management should identify and control,"and.... an effective risk assessment should be an ongoing process, not a one-time exercise. Management should update its risk assessment to identify changes in the bank's risk profile, as necessary (e.g., when new products and services are introduced, existing products and services change, higher-risk customers open and close accounts, or the bank expands through mergers and acquisitions). Even in the absence of such changes, it is a sound practice for banks to periodically reassess their BSA/AML risks at least every 12 to 18 months."

3. According to FINTRAC the Canadian FIU an AML Risk Assessment is one of the fundamental components of the risk based approach and critical pillar in designing and implementing an anti-money laundering compliance Programme. In its "Guideline 4: Implementation of a Compliance Regime issued in May 2011 [online] Available at <<http://www.fintrac-canafe.gc.ca/publications/guide/Guide4/4-eng.asp#s661>> [Accessed on 23 July 2013], FINTRAC state that a risk assessment is an analysis of potential threats and vulnerabilities to money laundering and terrorist financing to which your business is exposed.....that the complexity of the assessment depends on the size and risk factors of your business....and....you have to document and consider the following factors in your assessment: your products and services and the delivery channels through which you offer them; the geographic locations where you conduct your activities and the geographic locations of your clients; other relevant factors related to your business; and your clients and the business relationships you have with them." For products, services and delivery channels..."you have to be aware of and recognise products and services or combinations of them that may pose higher risks of money laundering or terrorist financing. Legitimate products and services can be used to mask illegal origins of funds, to move funds to finance terrorist acts or to hide the true identity of the actual owner or beneficiary of the product or service. Products and services that can support the movement and conversion of assets into, through and out of the financial system may pose a high risk. For example, these could include a money laundering related sale of high value goods that resulted in a cheque payable to a bearer which is then deposited into another individual's account to make the transaction difficult to trace and detect. In addition, you may also consider services identified by regulators, governmental authorities or other credible sources as being potentially high risk for

money laundering or terrorist financing. For example, international correspondent banking services, international private banking services, or services involving banknote and precious metal trading and delivery. You have to consider, in a manner that is appropriate to you, the channels used to deliver your products or services. In today's economy and global market, many delivery channels do not bring the client into direct face-to-face contact with you (for example, Internet, telephone or mail), and are accessible 24 hours a day, 7 days a week, from almost anywhere. The more remote a client is from you, the more likely you will have to depend on a third party to deliver your products or services. The remoteness of some of these distribution channels can also be used to obscure the true identity of a client or beneficial owners and can therefore pose higher risks. In addition, you should consider new or innovative services or delivery channels that you may use to deliver your products or services. For geographic locations...."you have to consider, in a manner that is appropriate to you, whether geographic locations in which you operate or undertake activities pose a potentially higher risk for money laundering and terrorist financing. Depending on your business and operations, geographic locations can range from your immediate surroundings, whether rural or urban to a province or territory, multiple jurisdictions within Canada (domestic) or other countries. For example, large entities that operate in a number of domestic jurisdictions may refine the geographic locations factor to differentiate between urban locations having known higher crime rates in comparison to other urban or rural districts. Smaller entities that restrict their activities to a single geographic location or district may not need to make that distinction." For other relevant factors...."you need to consider, in a manner that is appropriate to you, any other factors that are relevant to you, your business or sector. For example, you may offer products or services that can be used to convert funds to a more liquid form, such as electronic wallet, internet payment services or mobile payments. Your business activities may also be more attractive to launder money or fund terrorist activity...and for...Client's and other business relationships...."you have to consider the nature and business of your clients and their relationships with you to determine the level of risk of money laundering and terrorist financing. In other words, you have to know your clients to perform a risk assessment. Knowing your clients is not limited to identification or record keeping requirements. It is about understanding your clients, including their activities, transaction patterns, how they operate and so on. Other elements, such as the magnitude of a client's assets or the number of transactions involved, might also be relevant. Although you should obtain this information through your dealings with the client, it does not necessarily mean that you have to ask the client for additional information or identification documents. You should consider clients you do not know as higher risk than those that you know. Completing a client risk assessment should be appropriate where there is an ongoing relationship. In addition to assessing risk regarding existing clients, for new clients, it is recommended that you perform a risk assessment at the beginning of a client relationship, although a comprehensive risk profile may only become evident once the client has conducted financial transactions with you. However, if you decide to complete a risk rating of new clients, the client identification and information gathering measures at account opening should be robust enough to provide the information needed to feed into your client risk assessment. When assessing a client relationship, consider its duration, the client's number of accounts (if applicable), the products and services used and the client's activities. You may also consider third parties that can be involved in the client's relationship for their impact on the client's risk if you are required to make third party determination. Furthermore, you also have to consider the beneficial owners of an entity for their impact on risk if you are required to obtain this information. Situations where you facilitate a transaction for which a client is acting on behalf of a third party but does not know anything about the third party, may lead you to consider that client as a higher risk. Similarly, a client acting on behalf of an entity who is not aware of the entity's beneficial owners (such as the names of the entity's directors or the individuals controlling the entity for example), may lead you to consider that client as a higher risk. If you know that your client is a politically exposed foreign person (even when you are not required to make the determination or keep related records), you should consider that client as being a higher risk. You should also consider unusual circumstances, cash-intensive businesses and other indicators as potential high risks."

4. For Austrac, the relevant risks for ML/TF are business risk and regulatory risk. "Business risk" is the risk that the business may be used for ML/TF and "Regulatory risk" is associated with not meeting obligations under applicable AML/CTF Regulations." Whilst Austrac do not recommend any one method, and they recognise alternative methods exist and may be appropriate, they have designed and published a methodology for conducting an AML Risk Assessment and a tool to go with it for possible use by businesses though they recognise that reporting entities may choose an alternative method which is appropriate to their business (size, nature and complexity) and the money laundering and/or terrorism financing. The Austrac Methodology for Risk Assessment is made up of four phases; Risk Identification; Risk Assessment; Risk Treatment and Monitoring and Review. Phase 1 is the Risk identification Phase, where the main ML/TF risks and the Regulatory risks are to be identified across the following risk categories: customers; products & services; business practices/delivery methods and with the countries you do business with.

Phase 2 is the Risk assessment/measurement Phase, where the size & importance of the risks identified are measured. Measurement is carried out by considering the likelihood, i.e. the chance of the risk happening and multiplying this by the impact, i.e. the amount of loss or damage if the risk happened. Phase 3 is the Risk Treatment Phase where the intention is to utilise the risk scores obtained to ensure these risks now properly evaluated receive appropriate responses in order to effectively manage and minimize the risks to an acceptable level. Phase 4 is the Monitor and Review Phase in order to keep the methodology and the process and results current. Keeping records and performing a regular evaluation of the risk plan and AML/CTF programme is essential. The risk management plan and AML/CTF programme cannot remain static as risks change over time; for example, changes to the customer base, products and services, business practices and the regulations. Once documented, the methodology and process should be regularly checked and updated. Austrac provide tables and examples of how risk assessments can work. For more details see [online]: Available at <http://www.austrac.gov.au/risk_management.html>. [Accessed 23 July 2013]

5. The UK Joint Money Laundering Steering Group Guidance Notes outlines some of the considerations that should be taken into account when conducting a risk assessment, with taking a risk based approach being a core theme. [online]: Available at: <<http://www.jmlsg.org.uk/industry-guidance/article/jmlsg-guidancecurrent>>. [Accessed 24 July 2013]

6. This scenario approach seems to be the one favoured by Austrac, the Australian FIU. Austrac believes, "that as "risk" can be defined as the combination of the probability of an event and its consequences or in simple terms risk can be seen as a combination of the chance that something may happen and the degree of damage or loss that may result if it does occur. "Risk management" is the process of recognising risk and developing methods to both minimise and manage the risk. This requires the development of a method to identify, measure and treat (deal with) risk exposures. This method is the "risk assessment" where the risks are assessed against the likelihood (chance) of them occurring and the severity or amount of loss or damage (impact) which may result if they do happen.

 33. In a draft paper for a National Defense University journal, former Washington Post reporter and International Assessment and Strategy Center (IASC) fellow Douglas Farah argues that Mexican transnational criminal organisations (TCOs) have consolidated in Guatemala, Honduras, and El Salvador, also known as the Northern Triangle, to the extent that they have become the de facto authority, making the state "almost non-functional." In Farah's view, this has the potential to turn the Northern Triangle countries into criminal, rather than simply weak, states. His key points include: 1. Real power now rests with the TCOs and their allies. Mexican criminal groups have co-opted already weak government structures in the three countries through contacts in corrupt security, justice and government bodies. This in turn has paved the way for the entry of other TCOs such as Colombian guerrillas from the FARC, the Spanish separatist group ETA, and even Hezbollah. "There are virtually no 'ungoverned spaces' in the region," Farah writes. "What has changed is that the authority is less and less often the state." This is reflected in decreasing state resources and accessible to citizens, as well as citizen perceptions of state incompetence, Farah states. In contrast with the transport groups that existed in the Northern Triangle prior to the infiltration of Mexican criminal groups, the TCOs work to control territory, which they use to set up power bases and front businesses, including private security firms. According to Farah, territorial control is a key element of TCO power consolidation, allowing them to fulfill functions traditionally associated with the state. He notes that this is less true in El Salvador, where the street gangs, or "maras," not the TCOs, have the most power. 2. The states themselves have allowed this power shift to happen. "The state itself at times becomes a part of the criminal enterprise," writes Farah, adding that Central America's Northern Triangle is particularly attractive to criminal groups because TCOs are drawn to weak rather than failed states. While a failed state may have no real institutional structure to work with, weak state institutions provide the opportunity to co-opt security bodies, law enforcement officials, judicial officials, and politicians.. Criminals work with the state through what Farah calls a "transactional paradigm" -- for example, police perform executions in exchange for money. According to Farah, this paradigm helps to explain "anomalies" present in these states, such as the persistence of extremely high homicide rates despite extremely high levels of incarceration. 3. The US sees the risk, but is taking inappropriate measures. The US recognises that it will be affected by a loss of rule of law in Central America, not least because of the large amount of US-bound cocaine flowing through the region. However, the US has continued to funnel money into anti-drug efforts in these corrupt, weak states, which are unable or unwilling to effectively use these funds, Farah says. The US also lacks trustworthy public officials with whom to build relationships in these countries. Farah notes that the US has helped directly contribute to the problem, deporting thousands of gang members back to these already weak and overburdened states. Meanwhile, Mexico and other Central American governments have increasingly shifted their focus to violence reduction over anti-drug efforts, a strategy which is arguably based on the assumption that large-scale criminal structures will always exist. The US has also shifted policy somewhat, focusing more on economic and trade issues in the region.
 34. The CFZ serves as a transhipment point for some goods bought with drugs proceeds .This is often dollars obtained in the US and through Colombian Black Market Peso Exchange mechanisms. According to the CFZ's own website it has over 2,600 business, 25 bank branches, and employs approximately 25,000 personnel. Moving

Counterfeit goods is another, often compounding, problem in the Free Zone. The ports of Panama handle over 4 million twenty-foot equivalent units (TEUs) of container traffic per year.

36. According to the Peruvian government, drug trafficking accounted for almost 17% of GDP in 2009. Environmental Campaigners are also concerned about the damage coca growing and cocaine production is having on the rainforests, both because of deforestation and the dumping of the chemicals involved in the drug's manufacture. Cocaine is transported over land to neighbouring countries, and onwards to Europe, the Far East, Mexico, the Caribbean, and the US using a variety of ships and commercial air flights. Maritime smuggling is the primary method for transporting multi-ton loads of cocaine. Colombians and Mexicans operate drug transportation networks in Peru, shipping cocaine to Colombia, Mexico, and the Caribbean mainly using seaborne smuggling US law enforcement agencies and their counterparts in Australia, Hong Kong, Japan, Malaysia, and Thailand have also reported that cocaine trafficking and transportation organisations from Peru operate in the Far East. Peru is also a major importer of the precursor chemicals used for cocaine production. Peru is not regarded as a major regional financial centre Peru's financial intelligence unit (Unidad de Inteligencia Financiera del Perú F.U.) has estimated that approximately US\$3billion of illegal proceeds passes through Peruvian financial organisations each year, accounting for approximately 2% of Peru's GDP. Drug trafficking and related businesses account for 84% of this amount and the remaining relates to tax fraud, corruption, and illegal arms trading. As a consequence large scale laundering occurs that includes casinos, property sales, business investments, construction, export businesses, hotels, and restaurants. Peru's economy is very cash-based with a heavy use of the US dollar in a large informal sector. Pervasive corruption, informal money exchange and wire transfer services also encourage money laundering. Gambling is also highly susceptible to money laundering and there are no restrictions on cash-to-cash, cash-to-cheque, or cash-to-wire transfer transactions in casinos. It is estimated that currently 700 establishments are licensed. Like other states in the region there is a black market for pirated and smuggled goods in which cash transactions are the norm. Corruption is a major problem in Peru with the Government estimating that the budget loses 15% per year due to corruption. Peru is a source of, and destination for labour and sex trafficking with several thousand persons, mainly male are estimated to be subjected to conditions of forced labour within Peru, mainly in mining, logging, agriculture, and domestic service. Women and girls are recruited and forced into prostitution in the clubs, bars, and brothels of the country's cities and mining centres. . Peruvian women are also, to a lesser extent, forced into prostitution in Ecuador, Spain, Italy, Japan, and the US, and forced labour in neighbouring states. Indigenous persons are particularly vulnerable to debt bondage. Forced child labour is a problem, particularly in informal gold mines. Child sex tourism is present in Cuzco and Lima. Peru also is a destination country for some Ecuadorian, Bolivian, and Chinese women and girls subjected to sex trafficking.

Reviews of this Book

"For anyone wanting to delve into the background of financial crime and money laundering, this book is a fine starting point. John Cusack has assembled an amazing amount of information, from types of crime to particular threats faced by individual countries. I would have been a much better informed President of FATF if John's book had been available a few years ago."

Lord James Sassoon, former Commercial Secretary to the Treasury (UK) (2010-2013) and President of the Financial Action Task Force (2007/2008)

"Impressive. A multifaceted reference book containing a wealth of information on a challenging subject."

Boudewijn Verhelst, Head Belgian FIU and Former Chair until 2013 of the Egmont Group of Financial Intelligence Units

"An impressive book indeed, by size and by content from a man who knows what he is talking about and who has been dedicated to the fight against money laundering for at least two decades."

Alexander Karrer, Deputy State Secretary, State Secretariat for International finance, Swiss Federal Department of Finance

"John Cusack's "Red Alert" deserves to become the global standard textbook on AML and CFT for banking practitioners, compliance officers as well as regulators and academics. This is the first publication on the subject written by a true professional and experienced senior AML responsible. John's "Red Alert" accumulates the collective knowledge of some the best compliance officers of our generation. Reflecting 18 years of professional insight and responsibility the book can give profound and practical guidance to experts and shared experience to new joiners. The collection of facts and cases is unique. Everybody should read the introductory five recommendations to "Effectively" combat Money Laundering which sounds like John's message that if we want to win the fight against financial crime all of us have to think about and decide on fundamental changes to the current approach which has come to its limits and, at least partially, failed to achieve what it was originally intended for. Time has come for unbiased reviews and to develop a far more integrated approach. This core message alone and the considerations and facts that lead to it make this book compulsory reading for all those who count in the industry. A great achievement. Congratulations."

Hans-Peter Bauer, Board Member of the Basel Institute, founder member and first Chairman of the Wolfsberg Group and currently senior adviser to the Group.

"Anti-money laundering efforts, both in the prosecution of those engaged in the illicit activities, as well as financial institutions, who are at the forefront of the fight to keep illicit funds from flowing through the financial sector, has become increasingly complex. Attempting to understand all of the potential risks, as well as possible avenues to prevent money laundering and related financial crimes, also has become quite difficult. John's book Red Alert, is an excellent and comprehensive compilation of existing risks and potential solutions, with detailed narratives on how to effectively implement. In addition, John has included a significant number of summaries of actual cases, which provide an excellent framework for anyone truly interested in understanding the root cause of some significant money laundering matters. Understanding the how money laundering occurred, provides for the ability to identify and implement meaningful solutions. While others may have been able to research and bring together some of this information, no one is more uniquely qualified than John to bring together all relevant information in one publication. This a book that will serve as a primary reference for most all things money laundering and financial crime related."

Rick Small, Vice President, enterprise-wide AML and Sanctions Risk Management, American Express. Formerly served as global AML leader for GE Money, Managing Director of Global Anti-Money Laundering at Citigroup and prior to that, as special counsel at the Federal Reserve System with responsibility for all Bank Secrecy Act and money laundering matters. Rick is also a former Co-Chair of the Wolfsberg Group.

"John Cusack is one of the "elders" of the Anti-Money Laundering compliance community. He witnessed the emergence of the discipline more than 20 years ago and he has occupied a leading role in the evolution of the practice of AML compliance ever since. I just wish he looked his age like the rest of us. In Red Alert, John has done the anti-money laundering compliance community and anyone interested in the global fight against financial and organised crime a great service. His book is a valuable resource for practitioners and anyone interested in learning about the origins, challenges and current practice of global AML compliance. Red Alert also provides thoughtful and provocative ideas and concrete proposals to advance the goal of global anti-money laundering law: the interdiction of the vast market in criminal proceeds derived from organised crime, corruption and a wide range of financial crimes. As anyone working in the field of anti-money laundering compliance knows the pace and scale of regulatory AML enforcement against financial institutions has reached historic levels and has been sustained for longer than ever before. AML and financial crime have become significant operational risks for financial institutions throughout the world. John has provided a resource that I predict will find a comfortable place on the bookshelves or e-book devices of compliance officers all over the world."

Kevin J Ford, Managing Director BrightLine GRC LLC New York. Formerly Deputy Commissioner of Investigation for the City of New York and Special Assistant US Attorney for the Southern District of New York, Associate General Counsel in the Business Intelligence Group and Goldman Sachs' first UK Money Laundering Reporting Officer, former Managing Director and Chief Compliance Officer for Regulatory DataCorp (RDC). Mr. Ford is also a member of the Board of Transparency International USA and a member of Interpol's Group of Experts on Corruption.

"The private sector and its Banks play an important role in and contribute to fighting financial crime in many ways. With ever increasing demands and expectations placed upon Banks, John Cusack's excellent Book is a timely and essential resource for financial crime professionals that both demonstrates his own contribution and reflects the nature and extent of contribution from the industry to date."

Sally Scutt, Deputy Chief Executive, British Bankers' Association and Managing Director, International Banking Federation (IBFD)

"For many years now the fight against financial crime and the detection of the proceeds of such activities has been one of the major challenges facing the financial markets. Increasingly financial institutions, financial centres, regulators and governments themselves are at risk of severe reputational damage if they fail to detect such activity. Individuals are also at risk of public censure or worse if they fail to instigate systems and controls to combat the risk of money laundering the proceeds of crime and to prevent their organisation being used by criminals and terrorists. Against this background John Cusack's book is very timely. I do not think anybody is better qualified to address this topic, he has been at the forefront of the fight against financial crime for most of his career and his wisdom and practical approach is very evident throughout. I commend this book to those working in the financial services industry, to the lawyers and compliance personnel who work with them and of course to their regulators, law enforcement agencies and policy makers."

Neil Stocks, former Global Head of Compliance UBS

"John Cusack has been at the leading edge of the banking industry's anti-money laundering agenda for well over a decade. He has compiled here a comprehensive picture of the legislative and regulatory history and international standards that have brought us to where we are today, along with subject matter analysis of cases, typologies, enforcements, and perpetrators. In all this is the 'must have' compendium for anyone constructing or assessing their AML programme, and is a fitting and worthy tribute to Matt Cooper's work."

Alan Williams, Global Head of Financial Crime, Royal Bank of Scotland

"John Cusack offers the reader an insight into a world which is unfortunately only too real, though one many rarely see, in any event with up front clarity and precision drawing from his many years of experience. UBS is only one of many stakeholders who can help in the fight to combat money laundering, a fight that John rightly identified requires still much greater focus on effectiveness and more resourceful co-operation between public and private parties. This at a time when co-operation and trust evidently requires renewed investment. We need to always remember that TRUST IS THE SUM OF ALL PROMISES. Accordingly John lays bare the harms and very significant threats we all face in not working together and in allowing trust to wither. I thank all readers to take this to heart."

Markus Diethelm, UBS Global General Counsel

"This weighty tome amply demonstrates why financial crime deserves a higher priority in both thought and resources, as Mr. Cusack exhorts. All those involved in the challenge should either read this book, or know it already - which given its encyclopaedic quality, is somewhat unlikely."

John Mair, Head of Project Integrity, EBRD; former Group Financial Crime Director, Lloyds Banking Group.

"Perhaps best described as the 'The ultimate guide to Money Laundering detection and prevention'... even experienced Anti-Financial Crime professionals will gain some unique insights from this book on aspects they may have not dealt with (so frequently). The author and contributors are the top of the top in their field and this is a must have reference guide, if you are serious about combating financial crimes. You want to spice up your next presentation with some juicy insights... look no further!"

Markus Schulz, Chief Compliance Officer GE Capital International and former Group Financial Crime Officer Zurich Insurance

"One of the most striking things that comes through on reading John Cusack's excellent book is how often in the financial services industry in particular firms repeat the same mistakes. The similarities between our own recent "rogue trader" and Jerome Kerviel's exploits at Soc Gen is but one striking example. Our greatest weapon to combat such failure is the education of the professionals in the industry and John's book is a major contribution in this regard. It is an invaluable tool for all in the industry, regulator or regulated."

Andrew Williams, General Counsel UBS Wealth Management Retail & Corporates and former UBS Global Head of Compliance

"A compendium, a digest , a manifesto: 'Red Alert ' represents an essential tool for anyone interested in Financial Crime. Whether you are an AML professional, an academic, a regulator, a consultant or just interested in knowing more about how money laundering works , how financial institutions are impacted by it and the ways they try to prevent and detect it, you will find this book invaluable. Written by one of the financial industry's most respected practitioners, it represents an excellent resource as well as advocating practical ways in which the fight against financial crime could be made more effective."

Chris Davies, APAC General Counsel, SocGen, former SocGen Group Compliance Head and Wolfsberg Group Co-Chair (2010-2013)

"John Cusack's reputation as a leading thinker and practitioner in the bank compliance field is well-established and will be re-inforced by this path breaking volume. Perhaps less appreciated is John's more longstanding membership in a less saintly trade. The broad thematic treatment and trenchant case study analysis displayed here derive in large part from his legal background. The one-two punch this book delivers sets John apart, and commends this work to compliance and legal professionals. Indeed one submits that lawyers may have the most to learn from perusing it."

Marc Cohen, Partner, Regulatory & Financial Crime, Mayer Brown

"All you ever needed to know about financial crime"

Heidi Suila, Head of Financial Crime Compliance, Nordea

"Everything you always wanted to know about money laundering but were too afraid to ask". John Cusack's book is not only an impressive and exhaustive compilation of facts and figures about the global fight against money laundering: it is the key to understand what is really at stake in this fight. A must read for anyone really interested in understanding and combating money laundering."

Stephane Tourette, Head Legal Wealth Management, Banque Pictet & Cie

"John Cusack's magnificent treatise on money laundering and financial crime reminds those of us who are daily following our respective firms' anti-money laundering procedures why we are doing this. With only a 1% detection rate, the war on financial crime, drug dealing and terrorism has a long way to go. Just one example from the many John identifies: although the former President Marcos of the Philippines is believed to have stolen \$5 billion to \$10 billion from the country,

and yet some 28 years later, less than \$700 million has been recovered. To prevent crime, criminals need to know that crime does not pay. Money, and the flow of money through banks and other institutions and corporates, is the life blood of crime. Hence the need for strong and effective global anti-money laundering programmes.

John's book will undoubtedly become the "go to" reference work for anyone involved in anti-money laundering procedures and the wider fraud community of professionals . This is deservedly so, as it is well researched, well evidenced and of enormous breadth and depth. John is to be congratulated for his determination and stamina in completing such a work."

Noel Campbell, Partner, Head of the Fraud & Insolvency Group, Holman Fenwick Willan LLP
